Actemra

Prior Authorization Guideline

Guideline ID	GL-132948
Guideline Name	Actemra
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	11/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	01/21/2021 ; 04/21/2021 ; 06/16/2021 ; 09/15/2021 ; 04/20/2022 ; 09/21/2022 ; 01/18/2023 ; 05/25/2023 ; 9/20/2023

1. Indications

Drug Name: Actemra (tocilizumab), Actemra ACTPen (tocilizumab)

Rheumatoid Arthritis Indicated for the treatment of adult patients with moderately to severely active rheumatoid arthritis who have had an inadequate response to one or more disease-modifying anti-rheumatic drugs (DMARDs).

Giant Cell Arteritis Indicated for giant cell arteritis in adult patients.

Polyarticular Juvenile Idiopathic Arthritis Indicated for the treatment of active polyarticular juvenile idiopathic arthritis (PJIA) in patients 2 years of age and older.

Active Systemic Juvenile Idiopathic Arthritis Indicated for the treatment of active systemic juvenile idiopathic arthritis (SJIA) in patients 2 years of age and older.

Systemic Sclerosis-Associated Interstitial Lung Disease Indicated for slowing the rate of decline in pulmonary function in adult patients with systemic sclerosis-associated interstitial

lung disease (SSc-ILD).

2. Criteria

Product Name: Actemra or Actemra ACTPen [a]	
Diagnosis	Giant Cell Arteritis (GCA)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of giant cell arteritis

AND

2 - Patient is not receiving Actemra or Actemra ACTPen in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]

AND

3 - Prescribed by or in consultation with a rheumatologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Actemra or Actemra ACTPen [a]

Diagnosis	Giant Cell Arteritis (GCA)	
Approval Length	12 month(s)	
Therapy Stage	Reauthorization	
Guideline Type	Prior Authorization	
Approval Criteria 1 - Documentation of positive clinical response to Actemra or Actemra ACTPen therapy		
AND		
2 - Patient is not receivi following:	ng Actemra or Actemra ACTPen in combination with any of the	
 Biologic DMARD [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)] Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)] Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)] 		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

Product Name: Actemra or Actemra ACTPen [a]	
Diagnosis	Rheumatoid Arthritis (RA)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of moderately to severely active rheumatoid arthritis

AND

2 - One of the following:

2.1 History of failure to a 3 month trial of one non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial)

OR

2.2 Patient has been previously treated with a biologic or targeted synthetic DMARD FDAapproved for the treatment of rheumatoid arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]

AND

3 - One of the following:

3.1 History of failure, contraindication, or intolerance to two of the following preferred products (Document drug, date, and duration of trial):

- Cimzia (certolizumab)
- One of the formulary adalimumab products [b]
- Simponi (golimumab)
- Olumiant (baricitinib)
- Rinvoq (upadacitinib)
- Xeljanz/Xeljanz XR (tofacitinib)

OR

3.2 Both of the following:

3.2.1 Patient is currently on Actemra or Actemra ACTPen therapy as documented by claims history or submission of medical records (Document date and duration of therapy)

AND

3.2.2 Patient has not received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Genentech sponsored Actemra Access Solutions program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Actemra or Actemra ACTPen*

AND

4 - Patient is not receiving Actemra or Actemra ACTPen in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]

AND

5 - Prescribed by or in consultation with a rheumatologist

Notes	*Patients requesting initial authorization who were established on thera py via the receipt of a manufacturer supplied sample at no cost in the p rescriber's office or any form of assistance from the Genentech sponso red Actemra Access Solutions program shall be required to meet initial authorization criteria as if patient were new to therapy.
	 [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y. [b] For a list of formulary adalimumab products please reference drug c overage tools.

Product Name: Actemra or Actemra ACTPen [a]		
Diagnosis	Systemic sclerosis-associated interstitial lung disease	
Approval Length	12 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	

1 - Diagnosis of systemic sclerosis-associated interstitial lung disease (SSc-ILD) as documented by all of the following criteria:[4]

1.1 One of the following:

1.1.1 Skin thickening of the fingers of both hands extending proximal to the metacarpophalangeal joints

OR

1.1.2 At least two of the following:

- Skin thickening of the fingers (e.g., puffy fingers, sclerodactyly of the fingers)
- Fingertip lesions (e.g., digital tip ulcers, fingertip pitting scars)
- Telangiectasia
- Abnormal nailfold capillaries
- Pulmonary arterial hypertension
- Raynaud's phenomenon
- SSc-related autoantibodies (e.g., anticentromere, anti-topoisomerase I, anti-RNA polymerase III)

AND

1.2 Presence of interstitial lung disease as determined by finding evidence of pulmonary fibrosis on HRCT, involving at least 10% of the lungs

AND

2 - Patient is not receiving Actemra or Actemra ACTPen in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]

AND

3 - Prescribed by or in consultation with a pulmonologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl v.
	y.

Product Name: Actemra or Actemra ACTPen [a]

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Actemra (tocilizumab) or Actemra ACTPen (tocilizumab) is an interleukin-6 (IL-6) receptor antagonist, available in both an intravenous and a subcutaneous formulation. Both formulations of Actemra are indicated for the treatment of adult patients with moderately to severely active rheumatoid arthritis who have had an inadequate response to one or more disease-modifying anti-rheumatic drugs (DMARDs). [1,2] Examples of DMARDs commonly used in the treatment of rheumatoid arthritis include methotrexate, leflunomide, and sulfasalazine. [3,4] Both formulations are also indicated for giant cell arteritis in adult patients. Both formulations are also indicated for the treatment of active polyarticular juvenile idiopathic arthritis (PJIA) and active systemic juvenile idiopathic arthritis (SJIA), in patients 2 years of age and older. The intravenous formulation is also indicated for the treatment of adults and pediatric patients 2 years of age and older with chimeric antigen receptor (CAR) T cell-induced severe or life-threatening cytokine release syndrome. The subcutaneous formulation is also indicated for slowing the rate of decline in pulmonary function in adult patients with systemic sclerosis-associated interstitial lung disease (SSc-ILD). [1]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

9/20/2023	Updated step therapy requirement to match adalimumab policy langua ge in selecting formulary agent.

Actimmune

Prior Authorization Guideline

Guideline ID	GL-126556	
Guideline Name	Actimmune	
Formulary	UnitedHealthcare Government Programs Exchange Formulary SP	

Guideline Note:

Effective Date:	8/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	06/17/2020 ; 02/19/2021 ; 06/16/2021 ; 06/15/2022 ; 6/21/2023

1. Indications

Drug Name: Actimmune (interferon gamma-1b)

Chronic granulomatous disease Indicated for the treatment of chronic granulomatous disease to reduce the frequency and severity of serious infections.

Osteopetrosis Indicated in the treatment of severe, malignant osteopetrosis to delay the time to progression.

Other Uses: The National Cancer Comprehensive Network (NCCN) recommends use of Actimmune in mycosis fungoides (MF) and Sezary syndrome (SS). [2]

2. Criteria

Product Name: Actimmune [a]	
Diagnosis	Chronic Granulomatous Disease (CGD)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of chronic	granulomatous disease
--------------------------	-----------------------

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	---

Product Name: Actimmune [a]	
Diagnosis	Chronic Granulomatous Disease (CGD)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Patient does not show evidence of progressive disease while on Actimmune

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apple
	y.

Product Name: Actimmune [a]	
Diagnosis	Osteopetrosis
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
	·

Approval Criteria	
1 - Diagnosis of severe, malignant osteopetrosis	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Actimmune [a]

Product Name: Actimmune [a]

Diagnosis	ICCN Recommended Regimens	
Approval Length	12 month(s)	
Therapy Stage	Reauthorization	
Guideline Type	Prior Authorization	

1 - Documentation of positive clinical response to Actimmune therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	---

3. Background

Benefit/Coverage/Program Information

Background:

Actimmune (interferon gamma-1b) is indicated for reducing the frequency and severity of serious infections associated with chronic granulomatous disease (CGD). It is also indicated for delaying time to disease progression in patients with severe, malignant osteopetrosis (SMO). [1] The National Cancer Comprehensive Network (NCCN) recommends use of Actimmune in mycosis fungoides (MF) and Sézary syndrome (SS). [2]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may apply.

Adalimumab

Prior Authorization Guideline

Guideline ID	GL-145564	
Guideline Name	Adalimumab	
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP 	

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	05/21/2021 ; 05/20/2022 ; 09/21/2022 ; 01/18/2023 ; 06/21/2023 ; 08/18/2023 ; 12/13/2023 ; 4/17/2024

1. Indications

Drug Name: Adalimumab

Rheumatoid Arthritis Indicated for reducing signs and symptoms, inducing major clinical response, inhibiting the progression of structural damage, and improving physical function in adult patients with moderately to severely active rheumatoid arthritis. [1]

Polyarticular Juvenile Idiopathic Arthritis Indicated for reducing signs and symptoms of moderately to severely active polyarticular juvenile idiopathic arthritis in pediatric patients 2 years of age and older. [1]

Psoriatic Arthritis Indicated for reducing signs and symptoms, inhibiting the progression of structural damage, and improving physical function in adult patients with active psoriatic arthritis. [1]

Ankylosing Spondylitis Indicated for reducing signs and symptoms in adult patients with active ankylosing spondylitis. [1]

Crohn's Disease Indicated for the treatment of moderately to severely active Crohn's disease in adults and pediatric patients 6 years and older. [1]

Ulcerative Colitis Indicated for the treatment of moderately to severely active ulcerative colitis in adults and pediatric patients 5 years and older. [1]

Plaque Psoriasis Indicated for the treatment of adult patients with moderate to severe chronic plaque psoriasis who are candidates for systemic therapy or phototherapy, and when other systemic therapies are medically less appropriate. [1]

Hidradenitis Suppurativa Indicated for the treatment of moderate to severe hidradenitis suppurativa in patients 12 years of age and older. [1]

Uveitis Indicated for the treatment of non-infectious intermediate, posterior and panuveitis in adult and pediatric patients 2 years of age and older. [1]

2. Criteria

Product Name: Adalimumab [a]	
Diagnosis	Rheumatoid Arthritis (RA)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of moderately to severely active rheumatoid arthritis

AND

2 - One of the following:

2.1 History of failure to a 3 month trial of one non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at the maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial)

OR

2.2 Patient has been previously treated with a biologic or targeted synthetic DMARD FDAapproved for the treatment of rheumatoid arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), Simponi (golimumab), Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz/Xeljanz XR (tofacitinib)]

OR

2.3 Both of the following:

2.3.1 Patient is currently on adalimumab therapy as documented by claims history or submission of medical records (Document date and duration of therapy)

AND

2.3.2 Patient has not received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from a manufacturer sponsored program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of adalimumab*

AND

3 - If the request is for a non-formulary adalimumab product, the patient has a history of failure to all formulary adalimumab products unless the prescriber has given a clinical reason or special circumstance why the patient is unable to use a formulary adalimumab product (please document reason/special circumstances) [b]

AND

4 - Patient is not receiving adalimumab in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]

AND

5 - Prescribed by or in consultation with a rheumatologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
	* Patients requesting initial authorization who were established on ther apy via the receipt of a manufacturer supplied sample at no cost in the prescriber's office or any form of assistance from a manufacturer spons ored program shall be required to meet initial authorization criteria as if patient were new to therapy.
	[b] For a list of preferred adalimumab products please reference drug c overage tools.

Product Name: Adalimumab [a]	
Diagnosis	Plaque Psoriasis
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of moderate to severe chronic plaque psoriasis

AND

2 - One of the following:

2.1 All of the following:

2.1.1 Greater than or equal to 3% body surface area involvement, palmoplantar, facial, genital involvement, or severe scalp psoriasis

AND

2.1.2 History of failure to one of the following topical therapies, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial):

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Coal tar

AND

2.1.3 History of failure to a 3 month trial of methotrexate at the maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)

OR

2.2 Patient has been previously treated with a biologic or targeted synthetic DMARD FDAapproved for the treatment of plaque psoriasis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), Otezla (apremilast), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab), Tremfya (guselkumab)]

OR

Product Name: Adalimumab [a]	
Diagnosis	Crohn's Disease (CD)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of moderately to severely active Crohn's disease

AND

2 - One of the following:

2.1 History of failure to one of the following conventional therapies at up to maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial):

- Corticosteroids (e.g., prednisone, methylprednisolone, budesonide)
- 6-mercaptopurine (Purinethol)
- Azathioprine (Imuran)
- Methotrexate (Rheumatrex, Trexall)

OR

2.2 Patient has been previously treated with a biologic DMARD FDA-approved for the treatment of Crohn's disease as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), Stelara (ustekinumb)]

OR

2.3 Both of the following:

2.3.1 Patient is currently on adalimumab therapy as documented by claims history or submission of medical records (Document date and duration of therapy)

AND

2.3.2 Patient has not received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from a manufacturer sponsored program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of adalimumab*

AND

3 - If the request is for a non-formulary adalimumab product, the patient has a history of failure to all formulary adalimumab products unless the prescriber has given a clinical reason or special circumstance why the patient is unable to use a formulary adalimumab product (please document reason/special circumstances) [b]

AND

4 - Patient is not receiving adalimumab in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]

AND

5 - Prescribed by or in consultation with a gastroenterologist

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
у.

* Patients requesting initial authorization who were established on ther apy via the receipt of a manufacturer supplied sample at no cost in the prescriber's office or any form of assistance from a manufacturer spons ored program shall be required to meet initial authorization criteria as if patient were new to therapy.

Product Name: Adalimumab [a]	
Diagnosis	Hidradenitis Suppurativa (HS)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of moderate to severe hidradenitis suppurativa (i.e., Hurley Stage II or III)

AND

2 - One of the following:

2.1 History of failure to at least one oral antibiotic (e.g., doxycycline, clindamycin, rifampin) at maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial)

2.2 Both of the following:

2.2.1 Patient is currently on adalimumab therapy as documented by claims history or submission of medical records (Document date and duration of therapy)

AND

2.2.2 Patient has not received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from a manufacturer sponsored program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of adalimumab*

AND

3 - If the request is for a non-formulary adalimumab product, the patient has a history of failure to all formulary adalimumab products unless the prescriber has given a clinical reason or special circumstance why the patient is unable to use a formulary adalimumab product (please document reason/special circumstances) [b]

AND

4 - Patient is not receiving adalimumab in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]

AND

5 - Prescribed by or in consultation with a dermatologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
	* Patients requesting initial authorization who were established on ther apy via the receipt of a manufacturer supplied sample at no cost in the prescriber's office or any form of assistance from a manufacturer spons ored program shall be required to meet initial authorization criteria as if

patient were new to therapy.
[b] For a list of preferred adalimumab products please reference drug c overage tools.

Product Name: Adalimumab [a]	
Diagnosis	Hidradenitis Suppurativa (HS)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Documentation of positive clinical response to adalimumab therapy

AND

2 - Patient is not receiving adalimumab in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]

-------	--

Product Name: Adalimumab [a]	
Diagnosis	Uveitis (UV)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria 1 - Diagnosis of non-infectious uveitis AND 2 - Uveitis is classified as one of the following: intermediate posterior panuveitis AND 3 - One of the following: **3.1** Both of the following: 3.1.1 History of failure to at least one corticosteroid (e.g., prednisolone, prednisone) at maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial) AND **3.1.2** History of failure to at least one systemic non-biologic immunosuppressant (e.g., methotrexate, cyclosporine, azathioprine, mycophenolate) at up to a maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial) OR **3.2** Both of the following: **3.2.1** Patient is currently on adalimumab therapy as documented by claims history or submission of medical records (Document date and duration of therapy) AND

3.2.2 Patient has not received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from a manufacturer sponsored program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of adalimumab*

AND

4 - If the request is for a non-formulary adalimumab product, the patient has a history of failure to all formulary adalimumab products unless the prescriber has given a clinical reason or special circumstance why the patient is unable to use a formulary adalimumab product (please document reason/special circumstances) [b]

AND

5 - Patient is not receiving adalimumab in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]

AND

6 - Prescribed by or in consultation with one of the following:

- Rheumatologist
- Ophthalmologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
	* Patients requesting initial authorization who were established on ther apy via the receipt of a manufacturer supplied sample at no cost in the prescriber's office or any form of assistance from a manufacturer spons ored program shall be required to meet initial authorization criteria as if patient were new to therapy.

3. Background

Clinical Practice Guidelines

Medication:

Adalimumab: Humira (adalimumab), Abrilada (adalimumab-afzb), Amjevita (adalimumab-atto), Cyltezo, (adalimumab-adbm), Hadlima (adalimumab-bwwd), Hulio (adalimumab-fkjp), Hyrimoz (adalimumab-adaz), Idacio (adalimumab-aacf), Simlandi (adalimumab-ryvk), Yuflyma (adalimumab-aaty), Yusimry (adalimumab-aqvh)

Benefit/Coverage/Program Information

Background:

Adalimumab is a tumor necrosis factor (TNF) blocker indicated for:

• Rheumatoid Arthritis (RA): reducing signs and symptoms, inducing major clinical response, inhibiting the progression of structural damage, and improving physical function in adult patients with moderately to severely active RA. Adalimumab can be used alone or in combination with methotrexate or other non-biologic disease-modifying anti-rheumatic drugs (DMARDs).

• Juvenile Idiopathic Arthritis (JIA): reducing signs and symptoms of moderately to severely active polyarticular JIA in patients 2 years of age and older. Adalimumab can be used alone or in combination with methotrexate.

• Psoriatic Arthritis (PsA): reducing signs and symptoms, inhibiting the progression of structural damage, and improving physical function in adult patients with active PsA.

• Ankylosing Spondylitis (AS): reducing signs and symptoms in adult patients with active AS. Adalimumab can be used alone or in combination with non-biologic DMARDs.

• Crohn's Disease (CD): treatment of moderately to severely active Crohn's disease in adults and pediatric patients 6 years of age and older.

• Ulcerative Colitis (UC): treatment of moderately to severely active ulcerative colitis in adults and pediatric patients 5 years of age and older.

• Plaque Psoriasis (Ps): treatment of adult patients with moderate to severe chronic plaque psoriasis who are candidates for systemic therapy or phototherapy, and when other systemic therapies are medically less appropriate.

• Hidradenitis Suppurativa (HS): treatment of moderate to severe hidradenitis suppurativa in patients 12 years of age and older.

• Uveitis (UV): treatment of non-infectious intermediate, posterior, and panuveitis in adults and pediatric patients 2 years of age and older.

In ulcerative colitis, effectiveness has not been established in patients who have lost response to or were intolerant to TNF blockers.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Afinitor

Prior Authorization Guideline

Guideline ID	GL-132573	
Guideline Name	Afinitor	
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP 	

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	1/20/2021
P&T Revision Date:	05/21/2021 ; 09/15/2021 ; 05/20/2022 ; 10/19/2022 ; 05/25/2023 ; 8/18/2023

1. Indications

Drug Name: Afinitor (everolimus)

Advanced renal cell carcinoma Indicated for adults with advanced renal cell carcinoma (RCC) after failure of treatment with Sutent (sunitinib) or Nexavar (sorafenib). [1]

Subependymal giant cell astrocytoma (SEGA) Indicated for treatment of adult and pediatric patients aged 1 year and older with TSC who have subependymal giant cell astrocytoma (SEGA) that requires therapeutic intervention but cannot be curatively resected. [1]

Progressive neuroendocrine tumors of pancreatic origin (PNET) Indicated for adults with progressive neuroendocrine tumors of pancreatic origin (PNET) and adults with progressive, well-differentiated, non-functional neuroendocrine tumors (NET) of gastrointestinal (GI) or lung origin that are unresectable, locally advanced or metastatic. [1]

Renal angiomyolipoma and tuberous sclerosis complex (TSC) Indicated for adults with renal angiomyolipoma and tuberous sclerosis complex (TSC), not requiring immediate surgery. [1]

Advanced Hormone Receptor-Positive, HER2-Negative Breast Cancer (Advanced HR+ BC) Indicated for postmenopausal women with advanced hormone receptor-positive, HER2negative breast cancer in combination with Aromasin (exemestane) after failure of treatment with Femara (letrozole) or Arimidex (anastrozole). [1]

Tuberous Sclerosis Complex (TSC) Indicated for the adjunctive treatment of adult and pediatric patients aged 2 years and older with TSC associated partial-onset seizures.

NCCN Recommended Regimens The National Cancer Comprehensive Network (NCCN) also recommends use of Afinitor in invasive breast cancer, Waldenström's macroglobulinemia / lymphoplasmacytic lymphoma, neuroendocrine tumors with carcinoid histology, non-clear cell kidney cancer, soft tissue sarcomas, osteosarcomas, dedifferentiated chondrosarcoma, high-grade undifferentiated pleomorphic sarcoma (UPS), thymomas and thymic carcinomas, Hodgkin lymphoma, follicular, Hürthle cell and papillary thyroid carcinomas, meningioma, histiocytic neoplasms, and endometrial carcinoma. [2]

3 - One of the following:

3.1 Disease is hormone receptor (HR)-positive (HR+) [i.e., estrogen-receptor-positive (ER+) or progesterone-receptor-positive (PR+)]

3.2 Both of the following Disease is hormone receptor negative (HR-) • Disease has clinical characteristics that predict a HR+ tumor • AND 4 - Disease is human epidermal growth factor receptor 2 (HER2)-negative AND 5 - One of the following: 5.1 Patient is a postmenopausal woman OR 5.2 Both of the following Patient is a premenopausal woman • Patient is being treated with ovarian ablation/suppression • OR 5.3 Patient is male AND 6 - One of the following 6.1 Both of the following **6.1.1** Used in combination with exemestane AND

6.1.2 One of the following^: 6.1.2.1 Disease progressed while on or within 12 months of non-steroidal aromatase inhibitor [e.g., anastrozole (generic Arimidex), letrozole (generic Femara)] therapy OR 6.1.2.2 Patient was treated with tamoxifen at any time OR 6.2 Used in combination with one of the following: Fulvestrant • Tamoxifen Notes [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl у. ^Tried/failed alternative(s) are supported by FDA labeling and/or NCCN guidelines.

Product Name: Brand Afinitor tablet, everolimus tablet (generic Afinitor) [a]		
Diagnosis	Breast Cancer	
Approval Length	12 month(s)	
Therapy Stage	Reauthorization	
Guideline Type	Prior Authorization	

Approval Criteria

1 - Patient does not show evidence of progressive disease while on therapy

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl v.
y.

Product Name: Brand Afinitor tablet, everolimus tablet (generic Afinitor) [a]		
Diagnosis	Hodgkin Lymphoma	
Approval Length	12 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	

1 - Diagnosis of classical Hodgkin lymphoma

AND

2 - Disease is refractory to at least 3 prior lines of therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Brand Afinitor tablet, everolimus tablet (generic Afinitor) [a]	
Diagnosis	Hodgkin Lymphoma
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Patient does not show evidence of progressive disease while on therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	у.

Product Name: Brand Afinitor tablet, everolimus tablet (generic Afinitor) [a]	
Diagnosis	Soft Tissue Sarcoma

Approval Length	12 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	
Approval Criteria 1 - Diagnosis of PECon		
	OR	
2 - Diagnosis of recurre	2 - Diagnosis of recurrent angiomyolipoma	
	OR	
3 - Diagnosis of lympha	3 - Diagnosis of lymphangioleiomyomatosis	
	OR	
4 - All of the following:		
4.1 Diagnosis of Gastr	rointestinal Stromal Tumor (GIST)	
	AND	
4.2 Disease has progressed after single agent therapy with one of the following [^] :		
 imatinib (generic Gleevec) sunitinib (generic Sutent) Stivarga (regorafenib) 		
AND		
4.3 Used in combination with one of the following:		
• imatinib (generio	c Gleevec)	

 sunitinib (generic Sutent) Stivarga (regorafenib) 	
Notes	 [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. 3. Background

Benefit/Coverage/Program Information

Background:

Afinitor[®] (everolimus) is a kinase inhibitor indicated for the treatment of postmenopausal women with advanced hormone receptor-positive, HER2-negative breast cancer in combination with Aromasin[®] (exemestane) after failure of treatment with Femara[®] (letrozole) or Arimidex[®] (anastrozole); in adults with progressive neuroendocrine tumors of pancreatic origin (PNET) and adults with progressive, well-differentiated, non-functional neuroendocrine tumors (NET) of gastrointestinal (GI) or lung origin that are unresectable, locally advanced or metastatic; adults with advanced renal cell carcinoma (RCC) after failure of treatment with Sutent[®] (sunitinib) or Nexavar[®] (sorafenib); adults with renal angiomyolipoma and tuberous sclerosis complex (TSC), not requiring immediate surgery; treatment of adult and pediatric patients aged 1 year and older with TSC who have subependymal giant cell astrocytoma (SEGA) that requires therapeutic intervention but cannot be curatively resected; and for the adjunctive treatment of adult and

pediatric patients aged 2 years and older with TSC associated partial-onset seizures.¹

Afinitor is not indicated for the treatment of patients with functional carcinoid tumors.

The National Cancer Comprehensive Network (NCCN) also recommends use of Afinitor in invasive breast cancer, Waldenström's macroglobulinemia / lymphoplasmacytic lymphoma, neuroendocrine tumors with carcinoid histology, non-clear cell kidney cancer, soft tissue sarcomas, osteosarcomas, dedifferentiated chondrosarcoma, high-grade undifferentiated pleomorphic sarcoma (UPS), thymomas and thymic carcinomas, Hodgkin lymphoma, follicular, Hürthle cell and papillary thyroid carcinomas, meningioma, histiocytic neoplasms, and endometrial carcinoma.²

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Date	Notes
6/14/2023	Annual review. Changed Ancylostoma/Necatoriasis authorization to six months per CDC recommendation for Albenza. Updated references.
6/14/2023	Annual review. Added Albenza for Anisakiasis and Microsporidiosis per CDC and NIH guidelines, respectively. Added SML and updated refere nces.

Alecensa

Prior Authorization Guideline

Guideline ID	GL-132591
Guideline Name	Alecensa
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	8/18/2023
P&T Revision Date:	

1. Indications

Drug Name: Alecensa

Non-small cell lung cancer (NSCLC) Alecensa (alectinib) is a kinase inhibitor indicated for the treatment of patients with anaplastic lymphoma kinase (ALK)-positive, metastatic non-small cell lung cancer (NSCLC) as detected by an FDA-approved test.

Erdheim-Chester Disease The NCCN also recommends Alecensa for anaplastic lymphoma kinase (ALK)-fusion targeted relapsed/refractory, symptomatic Erdheim-Chester Disease.

Anaplastic large cell lymphoma (ALCL) The NCCN also recommends Alecensa as secondline or initial palliative intent therapy and subsequent therapy for relapsed/refractory ALK+ anaplastic large cell lymphoma (ALCL).

B-cell lymphoma The NCCN also recommends Alecensa for relapsed or refractory ALK-positive large B-Cell lymphoma.

Metastatic brain cancer from NSCLC The NCCN also recommends Alecensa for ALK-positive metastatic brain cancer from NSCLC.

Inflammatory myofibroblastic tumor The NCCN also recommends Alecensa for inflammatory myofibroblastic tumors with ALK translocation.

3. Background

Benefit/Coverage/Program Information

Background:

Alecensa (alectinib) is a kinase inhibitor indicated for the treatment of patients with anaplastic lymphoma kinase (ALK)-positive, metastatic non-small cell lung cancer (NSCLC) as detected by an FDA-approved test. The NCCN also recommends Alecensa for anaplastic lymphoma kinase (ALK)-fusion targeted relapsed/refractory, symptomatic Erdheim-Chester Disease, as second-line or initial palliative intent therapy and subsequent therapy for relapsed/refractory ALK+ anaplastic large cell lymphoma (ALCL), relapsed or refractory ALK-positive large B-Cell lymphoma, ALK-positive metastatic brain cancer from NSCLC, and inflammatory myofibroblastic tumors with ALK translocation.

Additional Clinical Rules:

• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

• Supply limits may be in place.

3. Background

Benefit/Coverage/Program Information

Additional Clinical Programs:

 Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class. • Supply limits may be in place.

Background

Ampyra (dalfampridine) is a potassium channel blocker indicated to improve walking in patients with multiple sclerosis (MS). This was demonstrated by an increase in walking speed.¹

Anticonvulsants

Prior Authorization Guideline

Guideline ID	GL-139599
Guideline Name	Anticonvulsants
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	4/1/2024
P&T Approval Date:	8/15/2020
	07/21/2021 ; 09/15/2021 ; 08/19/2022 ; 08/18/2023 ; 11/17/2023 ; 12/13/2023 ; 2/16/2024

1. Indications

Drug Name: Aptiom (eslicarbazepine acetate)

Partial-onset seizures Indicated in the treatment of partial-onset seizures.

Drug Name: Vimpat (lacosamide)

Partial-onset seizures Indicated in the treatment of partial-onset seizures.

Primary Generalized Tonic-Clonic Seizures Indicated as adjunctive therapy in the treatment of primary generalized tonic-clonic seizures.

Drug Name: Banzel (rufinamide), Onfi (clobazam)

Seizures associated with Lennox-Gastaut syndrome (LGS) Indicated for the adjunctive treatment of seizures associated with Lennox-Gastaut syndrome (LGS). There is some clinical evidence to support the use of Onfi for refractory partial onset seizures.

Drug Name: Diacomit (stripentol)

Seizures Indicated for seizures associated with Dravet syndrome in patients taking clobazam.

Drug Name: Epidiolex (cannabadiol)

Seizures Indicated for seizures associated with Lennox-Gastaut syndrome, Dravet syndrome or tuberous sclerosis complex.

Drug Name: Fycompa (perampanel)

Partial-onset seizures Indicated for the treatment of partial-onset seizures with or without secondarily generalized seizures

Primary generalized tonic-clonic seizures Indicated as adjunctive therapy for the treatment of primary generalized tonic-clonic seizures.

Drug Name: Lamictal ODT, Lamictal ODT Kit (lamotrigine)

Seizures Indicated as adjunctive therapy in patients with partial-onset seizures, primary generalized tonic-clonic seizures, and generalized seizures of Lennox-Gastaut syndrome, and as conversion to monotherapy in patients with partial-onset seizures who are receiving treatment with carbamazepine, phenytoin, phenobarbital, primidone, or valproate as the single antiepileptic drug.

Drug Name: Sabril (vigabatrin), Vigadrone (vigabatrin), Vigpoder (vigabatrin)

Refractory complex partial seizures Indicated as adjunctive therapy for refractory complex partial seizures in patients who have inadequately responded to several alternative treatments and for infantile spasms for whom the potential benefits outweigh the risk of vision loss.

Drug Name: Motpoly XR (lacosamide)

Partial-onset seizures Indicated for the treatment of partial-onset seizures in adults and in pediatric patients weighing at least 50 kg.

2. Criteria

Product Name: Aptiom [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

- **1** ONE of the following:
 - Diagnosis of partial-onset seizures
 - For continuation of prior therapy for a seizure disorder

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Aptiom (eslicarbazepine acetate) and Vimpat (lacosamide) are indicated in the treatment of partial-onset seizures. Vimpat is also indicated as adjunctive therapy in the treatment of primary generalized tonic-clonic seizures.

Banzel (rufinamide) and Onfi (clobazam) are indicated for the adjunctive treatment of seizures associated with Lennox-Gastaut syndrome (LGS). There is some clinical evidence to support the use of clobazam for refractory partial onset seizures.

Epidiolex (cannabidiol solution) is indicated for seizures associated with Lennox-Gastaut syndrome, Dravet syndrome, or tuberous sclerosis complex.

Diacomit (stiripentol) is indicated for seizures associated with Dravet syndrome in patients taking clobazam.

Fycompa (perampanel) is indicated for the treatment of partial-onset seizures with or without secondarily generalized seizures and as adjunctive therapy for the treatment of primary generalized tonic-clonic seizures.

Lamictal ODT and Lamictal ODT Kit (lamotrigine) are indicated as adjunctive therapy in patients with partial-onset seizures, primary generalized tonic-clonic seizures, and generalized seizures of Lennox-Gastaut syndrome; as conversion to monotherapy in patients with partial-onset seizures who are receiving treatment with carbamazepine, phenytoin, phenobarbital primidone, or valproate as the single antiepileptic drug; and as maintenance treatment of bipolar I disorder.

Motpoly XR is indicated for the treatment of partial-onset seizures in adults and

in pediatric patients weighing at least 50 kg.

Sabril (vigabatrin), Vigadone (vigabatrin), Vigpoder (vigabatrin) are indicated as adjunctive therapy for refractory complex partial seizures in patients who have inadequately responded to several alternative treatments and for infantile spasms for whom the potential benefits outweigh the risk of vision loss.

Adjunctive therapy is defined as treatment administered in addition to another therapy. Coverage will not be provided for Banzel as primary treatment.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

Arikayce

Prior Authorization Guideline

Guideline ID	GL-141138
Guideline Name	Arikayce
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	4/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 02/18/2022 ; 02/17/2023 ; 2/16/2024

1. Indications

Drug Name: Arikayce (amikacin liposome inhalation suspension)

Mycobacterium avium complex (MAC) lung disease Indicated in adults who have limited or no alternative treatment options, for the treatment of Mycobacterium avium complex (MAC) lung disease as part of a combination antibacterial drug regimen in patients who do not achieve negative sputum cultures after a minimum of 6 consecutive months of a multidrug background regimen therapy.

Product Name: Arikayce [a]	
Approval Length	6 month(s)

Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
Approval Criteria	
1 - Diagnosis of refra	actory Mycobacterium avium complex (MAC) lung disease
	AND
	edical records (e.g., chart notes, laboratory values) documenting positive for MAC within the previous 6 months.
	AND
	edical records (e.g., chart notes, laboratory values) documenting the on claims history may be used in conjunction as documentation of e, and duration]:
	en receiving a multidrug background regimen containing at least two of the a minimum of 6 consecutive months within the past 12 months:
Macrolide an	itibiotic [e.g., azithromycin, clarithromycin]
EthambutolRifamycin ar	ntibiotic [e.g., rifampin, rifabutin]
	AND
4 - Patient will contir	nue to receive a multidrug background regimen
	AND
	hat the patient has not achieved negative sputum cultures after receipt of a nd regimen for a minimum of 6 consecutive months
	AND

6 - In vitro susceptibility testing of recent (within 6 months) positive culture documents that the MAC isolate is susceptible to amikacin with a minimum inhibitory concentration (MIC) of less than or equal to 64 mcg/mL

AND

7 - Prescribed by or in consultation with one of the following:

- Infectious disease specialist
- Pulmonologist

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
у.

Product Name: Arikayce [a]	
Approval Length	6 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

- **1** One of the following:
- **1.1** Documentation that the patient has achieved negative respiratory cultures

OR

1.2 All of the following:

1.2.1 Patient has not achieved negative respiratory cultures while on Arikayce

AND

1.2.2 Physician attestation that patient has demonstrated clinical benefit while on Arikayce

AND

1.2.3 In vitro susceptibility testing of most recent (within 6 months) positive culture with available susceptibility testing documents that the MAC isolate is susceptible to amikacin with a minimum inhibitory concentration (MIC) of < 64 mcg/mL

AND

1.2.4 Patient has not received greater than 12 months of Arikayce therapy with continued positive respiratory cultures

AND

2 - Submission of medical records (e.g., chart notes, laboratory values) documenting that the patient continues to receive a multidrug background regimen containing at least two of the following agents [prescription claims history may be used in conjunction as documentation of medication use, dose, and duration]:

- Macrolide antibiotic [e.g., azithromycin, clarithromycin]
- Ethambutol
- Rifamycin antibiotic [e.g., rifampin, rifabutin]

AND

3 - Prescribed by, or in consultation with one of the following:

- Infectious disease specialist
- Pulmonologist

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
у.

3. Background

Benefit/Coverage/Program Information

Background

Arikayce is an aminoglycoside antibacterial indicated in adults who have limited or no alternative treatment options, for the treatment of *Mycobacterium avium* complex (MAC) lung disease as part of a combination antibacterial drug regimen in patients who do not achieve negative sputum cultures after a minimum of 6 consecutive months of a multidrug background regimen therapy. As only limited clinical safety and effectiveness data for Arikayce are currently available, reserve Arikayce for use in adults who have limited or no alternative treatment options. This drug is indicated for use in a limited and specific population of patients. [1]

This indication is approved under accelerated approval based on achieving sputum culture conversion (defined as 3 consecutive negative monthly sputum cultures) by Month 6. Clinical benefit has not yet been established. [1]

Arikayce has only been studied in patients with refractory MAC lung disease defined as patients who did not achieve negative sputum cultures after a minimum of 6 consecutive months of a multidrug background regimen therapy. The use of Arikayce is not recommended for patients with non-refractory MAC lung disease. [1]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

	y.

Product Name: Austedo or Austedo® XR [a]	
Diagnosis	Chorea associated with Huntington's disease
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria	
1 - Documentation of po	ositive clinical response to therapy
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Austedo and Austedo XR are a vesicular monoamine transporter 2 (VMAT2) inhibitor indicated in adults for the treatment of chorea associated with Huntington's disease and for the treatment of tardive dyskinesia.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

6/21/2023	Added coverage criteria for Austedo XR formulation per prescribing inf ormation. Updated background and references. Added SML.

Prior Authorization Guideline

Guideline ID	GL-133848
Guideline Name	Belbuca_Butrans
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	12/1/2023
P&T Approval Date:	12/16/2020
P&T Revision Date:	05/21/2021 ; 09/15/2021 ; 12/14/2022 ; 10/18/2023

1. Indications

Drug Name: Belbuca (buprenorphine) buccal film, Butrans (buprenorphine) transdermal patch

Pain Indicated for the management of pain severe enough to require daily, around-the-clock, long-term opioid treatment for which alternative treatment options are inadequate.

Product Name: Belbuca, Brand Butrans, generic buprenorphine [a]	
Diagnosis	Cancer/Hospice/End of Life related pain
Approval Length	12 month(s)
Guideline Type	Prior Authorization

1 - The patient is being treated for cancer, hospice or end of life related pain

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	If the member is currently taking the requested long-acting opioid for at least 30 days and does not meet the medical necessity authorization c riteria requirements for treatment with an opioid, a denial should be iss ued and a maximum 60-day authorization may be authorized one time for the requested drug/strength combination up to the requested quanti ty for transition to an alternative treatment.

Product Name: Belbuca, Brand Butrans, generic buprenorphine [a]	
Diagnosis	Non-cancer pain/Non-hospice/Non-end of life care pain
Approval Length	6 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

- **1** Prescriber attests to BOTH of the following:
 - Patient has been screened for substance abuse/opioid dependence
 - Pain is moderate to severe and expected to persist for an extended period of time (chronic)

AND

2 - Treatment goals are defined and include estimated duration of treatment (must document treatment goals)

AND

3 - Patient has been screened for underlying depression and/or anxiety. If applicable, any

underlying conditions have been or will be addressed AND 4 - ONE of the following: The patient has a history of failure, contraindication or intolerance to a trial of tramadol IR, unless the patient is already receiving chronic opioid therapy prior to surgery for postoperative pain, or if the postoperative pain is expected to be moderate to severe and persist for an extended period of time Patient is new to plan and currently established on Belbuca or Butrans for at least the • past 30 days AND 5 - If the request for neuropathic pain (examples of neuropathic pain include neuralgias or neuropathies), BOTH of the following: Unless it is contraindicated, the patient has not exhibited an adequate response to 8 weeks of treatment with gabapentin titrated to a therapeutic dose. (Document date of trial) Unless it is contraindicated, the patient has not exhibited an adequate response to at least 6 weeks of treatment with a tricyclic antidepressant titrated to the maximum tolerated dose. (Document drug and date of trial). [a] State mandates may apply. Any federal regulatory requirements an Notes d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl ٧. If the member is currently taking the requested long-acting opioid for at least 30 days and does not meet the medical necessity authorization c riteria requirements for treatment with an opioid, a denial should be iss ued and a maximum 60-day authorization may be authorized one time for the requested drug/strength combination up to the requested quanti ty for transition to an alternative treatment.

Product Name: Belbuca, Brand Butrans, generic buprenorphine [a]	
Diagnosis	Non-cancer pain/Non-hospice/Non-end of life care pain
Approval Length	6 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Documented meaningful improvement in pain and function when assessed against treatment goals (Document improvement in function or pain score improvement).

AND

2 - Document rationale for not tapering or discontinuing opioid if treatment goals are not being met

AND

3 - Prescriber attest to BOTH of the following:

- Patient has been screened for substance abuse/opioid dependence
- Pain is moderate to severe and expected to persist for an extended period of time (chronic)

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	If the member is currently taking the requested long-acting opioid for at least 30 days and does not meet the medical necessity authorization c riteria requirements for treatment with an opioid, a denial should be iss ued and a maximum 60-day authorization may be authorized one time for the requested drug/strength combination up to the requested quanti ty for transition to an alternative treatment.

3. Background

Benefit/Coverage/Program Information

Additional Clinical Rules:

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-

10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Background:

Buprenorphine is a partial opioid agonist. Belbuca and Butrans are buprenorphine products indicated for the management of pain severe enough to require daily, around-the-clock, long-term opioid treatment for which alternative treatment options are inadequate. Similar to other long-acting opioids, the use of Butrans and Belbuca should be reserved for use in patients for whom alternative treatment options (e.g. non-opioid analgesics or immediate-release opioids) are ineffective, not tolerated, or inadequate to provide sufficient management of pain. Belbuca and Butrans are not indicated as as-needed (prn) analgesics.

UnitedHealthcare employs opioid safety edits at point-of-sale (POS) to prompt prescribers and pharmacists to conduct additional safety reviews to determine if the member's opioid use is appropriate and medically necessary. Development of opioid safety edit specifications, to include cumulative MME thresholds, are determined by the plan taking into consideration clinical guidelines, regulatory/state requirements, utilization and P&T Committee feedback.

3. Background

Benefit/Coverage/Program Information

Background:

Benlysta is a B-lymphocyte stimulator (BLyS)-specific inhibitor indicated for the treatment of patients aged 5 years and older with active systemic lupus erythematosus (SLE) who are receiving standard therapy and in patients aged 5 years and older with active lupus nephritis who are receiving standard therapy.

Limitations of Use: The efficacy of Benlysta has not been evaluated in patients with severe active central nervous system lupus. Use of Benlysta is not recommended in this situation.

This program applies to the subcutaneous formulation of belimumab.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

Benznidazole

Prior Authorization Guideline

Guideline ID	GL-122916
Guideline Name	Benznidazole
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	5/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	03/17/2021 ; 03/16/2022 ; 3/15/2023

1. Indications

Drug Name: Benznidazole

Chagas disease (American trypanosomiasis) Indicated in pediatric patients 2 to 12 years of age for the treatment of Chagas disease (American trypanosomiasis), caused by Trypanosoma cruzi. [1]

Product Name: Benznidazole [a]	
Diagnosis	Chagas disease (American trypanosomiasis)
Approval Length	60 Day(s)
Guideline Type	Prior Authorization

1 - Diagnosis of Chagas disease (American trypanosomiasis) due to Trypanosoma cruzi

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl v.
	y.

3. Background

Benefit/Coverage/Program Information

Background

Benznidazole, a nitroimidazole antimicrobial, is indicated in pediatric patients 2 to 12 years of age for the treatment of Chagas disease (American trypanosomiasis), caused by *Trypanosoma cruzi*. [1]

This indication is approved under accelerated approval based on the number of treated patients who became Immunoglobulin G (IgG) antibody negative against the recombinant antigens of T. cruzi. Continued approval for this indication may be contingent upon verification and description of clinical benefit in confirmatory trials.

Antiparasitic treatment is indicated for all cases of acute or reactivated Chagas disease and for chronic *Trypanosoma cruzi (T. cruzi)* infection in children up to 18 years old. Congenital infections are considered acute disease. Treatment is strongly recommended for adults up to 50 years old with chronic infection who do not already have advanced Chagas cardiomyopathy. For adults older than 50 years with chronic *T. cruzi* infection, the decision to treat with antiparasitic drugs should be individualized, weighing the potential benefits and risks for the patient. Physicians should consider factors such as the patient's age, clinical status, preference, and overall health. [2]

Additional clinical Rules

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

NCCN Recommended Regimens	
12 month(s)	
Reauthorization	
Prior Authorization	

1 - Documentation of positive clinical response to Bosulif therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may apply.

3. Background

Benefit/Coverage/Program Information

Background:

Bosulif (bosutinib) is a kinase inhibitor indicated for the treatment of adult and pediatric patients 1 year of age and older with chronic phase Philadelphia-positive chronic myelogenous leukemia (Ph+ CML), newly diagnosed or resistant or intolerant to prior therapy. Bosulif is also indicated for the treatment of adult patients with accelerated, or blast phase Ph+ CML with resistance or intolerance to prior therapy. [1]

The National Comprehensive Cancer Network (NCCN) recommends use of Bosulif in follow-up therapy in CML after primary treatment with imatinib, dasatinib, or nilotinib. NCCN also recommends Bosulif as primary treatment of CML in accelerated phase, in combination with

induction chemotherapy for lymphoid blast phase or myeloid blast phase, in combination with steroids for CML in lymphoid blast phase, for CML in myeloid blast phase as a single agent if not a candidate for induction chemotherapy, as maintenance therapy with consolidation chemotherapy for non-candidates for allogeneic hematopoietic stem cell transplant (HCT) in remission for BP-CML, or for CML patients that are post-transplant experiencing a cytogenic or molecular relapse, for Philadelphia-positive acute lymphoblastic leukemia, and for treatment of myeloid/lymphoid neoplasms with eosinophilia and tyrosine kinase fusion genes. [2]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Background:

Bylvay[®] (odevixibat) is an ileal bile acid transporter inhibitor indicated for the treatment of pruritis in patients aged 3 months or older with progressive familial intrahepatic cholestasis (PFIC). Bylvay is also indicated for the treatment of pruritis in patients 12 months of age and older with Alagille syndrome (ALGS).

PFIC is a heterogeneous group of liver disorders of autosomal recessive inheritance, characterized by an early onset of cholestasis (usually during infancy) with pruritus and malabsorption, which rapidly progresses and ends up as liver failure. Pruritus is the most obvious and the most unbearable symptom in cholestasis. It has been proposed that it is induced by the stimulation of nonmyelinated subepidermal free nerve ends because of increased serum bile acids.

ALGS is a rare genetic disorder caused by a mutation in the JAG1 or Notch2 genes which are involved in embryonic development in utero. In ALGS patients, multiple organ systems may be affected by the mutation. In the liver, the mutation causes the bile ducts to abnormally narrow, malform and reduce in number, leading to bile acid accumulation, cholestasis, and ultimately progressive liver disease. The cholestatic pruritus experienced by patients with ALGS is among

the most severe in any chronic liver disease and is present in most affected children by the third year of life.

Conventional treatments for pruritis associated with cholestasis include bile acid sequestrants (e.g., cholestyramine), rifampin, naltrexone, sertraline, and phenobarbital.

Limitation of Use:

Bylvay may not be effective in PFIC type 2 patients with ABCB11 variants resulting in nonfunctional or complete absence of bile salt export pump protein (BSEP-3).

Cabometyx

Prior Authorization Guideline

Guideline ID	GL-135610
Guideline Name	Cabometyx
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	03/17/2021 ; 11/19/2021 ; 08/19/2022 ; 11/18/2022 ; 08/18/2023 ; 11/17/2023

1. Indications

Drug Name: Cabometyx (cabozantinib)

Renal cell carcinoma (RCC) Indicated for the treatment of patients with advanced renal cell carcinoma. Cabometyx is also indicated for the treatment of patients with advanced renal cell carcinoma as a first-line treatment in combination with Opdivo (nivolumab). [1]

Hepatocellular carcinoma (HCC) Indicated for the treatment of patients with hepatocellular carcinoma who have been previously treated with Nexavar (sorafenib).

Differentiated Thyroid Cancer Indicated for the treatment of adult and pediatric patients 12 years of age and older with locally advanced or metastatic differentiated thyroid cancer (DTC) that has progressed following prior VEGFR-targeted therapy and who are radioactive iodine-refractory or ineligible.

Other Uses: The National Cancer Comprehensive Network (NCCN) recommends Cabometyx for the treatment of non-small cell lung cancer (NSCLC) with RET gene rearrangement and HCC as a single agent for progressive disease. Cabometyx is also recommended in NCCN as

second line therapy in both osteosarcoma and Ewing sarcoma, as well as gastrointestinal stromal tumors (GIST), kidney cancer, and endometrial carcinoma.

Calquence

Prior Authorization Guideline

Guideline ID	GL-125420
Guideline Name	Calquence
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	7/1/2023
P&T Approval Date:	9/15/2021
P&T Revision Date:	05/20/2022 ; 5/25/2023

1. Indications

Drug Name: Calquence (acalabrutinib)

Mantle cell lymphoma Indicated for the treatment of adult patients with mantle cell lymphoma (MCL) who have received at least one prior therapy.

Chronic Lymphocytic Leukemia or Small Lymphocytic Lymphoma Indicated for the treatment of adult patients with chronic lymphocytic leukemia (CLL) or small lymphocytic lymphoma (SLL).

2. Criteria

Product Name: Calquence [a]	
Diagnosis	Mantle Cell Lymphoma (MCL)

Approval Length	12 month(s)		
Therapy Stage	Initial Authorization		
Guideline Type	Prior Authorization		
Approval Criteria	Approval Criteria		
1 - Diagnosis of mantle cell lymphoma (MCL)			
	AND		
2 - Patient has received at least one prior therapy for MCL [e.g., Rituxan (rituximab)]^			
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y. ^ Tried/failed alternative(s) are supported by FDA labeling and/or NC CN guidelines.		

Product Name: Calquence [a]	
Diagnosis	Mantle Cell Lymphoma (MCL)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on Calquence therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl y.

Product Name: Calquence [a]	
Diagnosis	Chronic Lymphocytic Leukemia/Small Lymphocytic Lymphoma

3. Background

Benefit/Coverage/Program Information

Background

Calquence[®] (acalabrutinib) is a kinase inhibitor indicated for the treatment of adult patients with mantle cell lymphoma (MCL) who have received at least one prior therapy. This indication is approved under accelerated approval based on overall response rate. Continued approval for this indication may be contingent upon verification and description of clinical benefit in confirmatory trials. It is also approved for the treatment of adult patients with chronic lymphocytic leukemia (CLL) or small lymphocytic lymphoma (SLL). [1]

The National Comprehensive Cancer Network (NCCN) recommends the use of Calquence for the treatment of B-cell lymphomas, including splenic and nodal marginal zone lymphoma, extranodal marginal zone lymphoma (EMZL) of the stomach, extranodal marginal zone lymphoma of nongastric sites (noncutaneous), and Waldenström macroglobulinemia/lymphoplasmacytic lymphoma. [2]

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

Camzyos

Prior Authorization Guideline

Guideline ID	GL-130135 Camzyos	
Guideline Name		
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP 	

Guideline Note:

Effective Date:	10/1/2023
P&T Approval Date:	7/20/2022
P&T Revision Date:	11/18/2022 ; 8/18/2023

1. Indications

Drug Name: Camyzos (mavacamten)

Obstructive hypertrophic cardiomyopathy (HCM) Indicated for the treatment of adults with symptomatic New York Heart Association (NYHA) class II-III obstructive hypertrophic cardiomyopathy (HCM) to improve functional capacity and symptoms.

2. Criteria

Product Name: Camyzos [a]	
Diagnosis	Obstructive hypertrophic cardiomyopathy (HCM)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization

Guideline Type	Non Formulary
Approval Criteria	
1 - Diagnosis of obstruc	ctive hypertrophic cardiomyopathy (HCM)
	AND
2 - Heart failure is class	ified as one of the following:
	Association (NYHA) class II heart failure Association (NYHA) class III heart failure
	AND
3 - Patient has a left ver	ntricular ejection fraction of greater than or equal to 55%
	AND
4 - Patient has a Valsalva left ventricular outflow tract (LVOT) peak gradient greater than or equal to 50 mmHg at rest or with provocation	
	AND
5 - History of inadequat following at a maximally	e response, intolerance, failure, or contraindication to two of the / tolerated dose [2,3]:
	g beta blocker (e.g., atenolol, bisoprolol, metoprolol, nadolol,
propranolol) • Nondihydropyric • Disopyramide	line calcium channel blocker (i.e., diltiazem, verapamil)
	AND
6 - Prescribed by or in c	consultation with a cardiologist
Notes	[a] State mandates may apply. Any federal regulatory requirements an

d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
у.

Product Name: Camyzos [a]	
Diagnosis	Obstructive hypertrophic cardiomyopathy (HCM)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

1 - Documentation of positive clinical response to therapy as supported by one of the following:

- Reduction in NYHA class
- No worsening in NYHA class

AND

2 - Patient has a left ventricular ejection fraction of greater than or equal to 50%

AND

3 - Prescribed by or in consultation with a cardiologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

3. Background

Benefit/Coverage/Program Information

Background:

Camzyos (mavacamten) is a cardiac myosin inhibitor indicated for the treatment of adults with

symptomatic New York Heart Association (NYHA) class II-III obstructive hypertrophic cardiomyopathy (HCM) to improve functional capacity and symptoms. [1]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Cholbam

Prior Authorization Guideline

Guideline ID	GL-132787
Guideline Name	Cholbam
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	03/17/2021 ; 03/16/2022 ; 05/20/2022 ; 05/25/2023 ; 8/18/2023

1. Indications

Drug Name: Cholbam (cholic acid)

Bile acid synthesis disorders (BASDs) Indicated for treatment of bile acid synthesis disorders (BASDs) due to single enzyme defects (SEDs). Limitation of use: The safety and effectiveness of Cholbam on extrahepatic manifestations of bile acid synthesis disorders due to SEDs have not been established.

Peroxisomal disorders (PDs) including Zellweger spectrum disorders Indicated as an adjunctive treatment of peroxisomal disorders (PDs) including Zellweger spectrum disorders in patients who exhibit manifestations of liver disease, steatorrhea or complications from decreased fat soluble vitamin absorption. Limitation of use: The safety and effectiveness of Cholbam on extrahepatic manifestations of bile acid synthesis disorders due PDs including Zellweger spectrum disorders have not been established.

2. Criteria

Product Name: Cholbam [a]		
Approval Length	3 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Non Formulary	
Approval Criteria		
1 - Both of the following	:	
 Diagnosis of a bile acid synthesis disorder Bile acid synthesis disorder is due to single enzyme defects (SEDs) 		
	OR	
2 - All of the following:		
 Patient exhibits decreased fat so 	eroxisomal disorder including Zellweger spectrum disorders manifestations of liver disease, steatorrhea or complications from pluble vitamin absorption g used as adjunctive treatment	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

Product Name: Cholbam [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

1 - Documentation of positive clinical response to Cholbam therapy as evidenced by both of the following:

- Improvement in liver function (e.g., aspartate aminotransferase [AST], alanine aminotransferase [ALT])
- Absence of complete biliary obstruction

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	--

3. Background

Benefit/Coverage/Program Information

Background

Cholbam (cholic acid) is a bile acid indicated for the treatment of bile acid synthesis disorders (BASDs) due to single enzyme defects (SEDs) and as an adjunctive treatment of peroxisomal disorders (PDs) including Zellweger spectrum disorders in patients who exhibit manifestations of liver disease, steatorrhea or complications from decreased fat soluble vitamin absorption.

Cholbam should be discontinued if liver function does not improve within 3 months of starting treatment, if complete biliary obstruction develops, or if there are persistent clinical or laboratory indicators of worsening liver function or cholestasis.

Limitation of use:

The safety and effectiveness of Cholbam on extrahepatic manifestations of bile acid synthesis disorders due to SEDs or PDs including Zellweger spectrum disorders have not been established.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program.
- Supply limitations may be in place

Cibinqo

Prior Authorization Guideline

Guideline ID	GL-144089
Guideline Name	Cibinqo
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	4/20/2022
P&T Revision Date:	07/20/2022 ; 10/19/2022 ; 03/15/2023 ; 09/20/2023 ; 3/20/2024

1. Indications

Drug Name: Cibinqo (abrocitinib)

Atopic Dermatitis Indicated for the treatment of adults and pediatric patients 12 years of age and older with refractory, moderate to severe atopic dermatitis whose disease is not adequately controlled with other systemic drug products, including biologics, or when use of those therapies is inadvisable.

2. Criteria

Product Name: Cibinqo [a]	
Diagnosis	Atopic Dermatitis
Approval Length	12 month(s)

Therapy Stage	Initial Authorization		
Guideline Type	Non Formulary		
Approval Criteria 1 - Diagnosis of moderate-to-severe chronic atopic dermatitis			
	AND		
2 - ONE of the following:			
2.1 BOTH of the follow	ving:		
2.1.1 History of failure, contraindication, or intolerance to BOTH of the following therapeutic classes of topical therapies (document drug, date of trial, and/or contraindication to medication)			
(generic Elocon)	 Medium, high, or very-high potency topical corticosteroids [e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)] Topical calcineurin inhibitor [e.g., tacrolimus (generic Protopic)] 		
AND			
2.1.2 ONE of the follo	wing^:		
2.1.2.1 BOTH of the following:			
 Submission of medical records (e.g., chart notes, laboratory values) documenting a 3 month trial of a systemic drug product for the treatment of atopic dermatitis (prescription claims history may be used in conjunction as documentation of medication use, dose, and duration) Physician attests that the patient was not adequately controlled with the documented systemic drug product 			
OR			
2.1.2.2 Physician attests that systemic treatment with BOTH of the following, FDA-approved chronic atopic dermatitis therapies is inadvisable (Document drug and contraindication rationale) [^]			
Adbry (tralokinu	mab-ldrm)		

Dupixent (dupilumab)

OR

2.1.2.3 Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria) [5]

OR

2.2 BOTH of the following:

2.2.1 Patient is currently on Cibinqo therapy as documented by claims history or submission of medical records (Document date and duration of therapy)

AND

2.2.2 Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Pfizer dermatology patient access program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Cibinqo*

AND

3 - Patient is NOT receiving Cibingo in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]
- Potent immunosuppressant (e.g., azathioprine or cyclosporine)

AND

4 - Prescribed by or in consultation with ONE of the following:

- Dermatologist
- Allergist

Immunologist	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y. * Patients requesting initial authorization who were established on th erapy via the receipt of a manufacturer supplied sample at no cost in th e prescriber's office or any form of assistance from the Pfizer dermatol ogy patient access program shall be required to meet initial authorizati on criteria as if patient were new to therapy. ^Tried/failed alternative(s) are supported by FDA labeling.

Product Name: Cibinqo [a]	
Diagnosis	Atopic Dermatitis
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

1 - Documentation of positive clinical response to Cibinqo therapy

AND

- 2 Patient is not receiving Cibinqo in combination with any of the following:
 - Biologic DMARD [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
 - Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
 - Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]
 - Potent immunosuppressant (e.g., azathioprine or cyclosporine)

Benefit/Coverage/Program Information

Background:

Cibinqo is a Janus kinase (JAK) inhibitor indicated for the treatment of adults and pediatric patients 12 years of age and older with refractory, moderate to severe atopic dermatitis whose disease is not adequately controlled with other systemic drug products, including biologics, or when use of those therapies is inadvisable.

Limitation of Use: Cibinqo is not recommended in combination with other JAK inhibitors, biologic immunomodulators, or with other immunosuppressants.

Class	Drug	Dosage Form	Strength (%)
	Augmented betamethasone dipropionate	Ointment, gel	0.05
Very high potency	Clobetasol propionate	Cream, foam, ointment	0.05
potency	Diflorasone diacetate	Ointment	0.05
	Halobetasol propionate	Cream, ointment	0.05
	Amcinonide	Cream, lotion, ointment	0.1
High	Augmented betamethasone dipropionate	Cream, lotion	0.05
Potency	Betamethasone dipropionate	Cream, foam, ointment, solution	0.05
	Desoximetasone	Cream, ointment	0.25

Table 1: Relative potencies of topical corticosteroids

	Desoximetasone	Gel	0.05
	Diflorasone diacetate	Cream	0.05
	Fluocinonide	Cream, gel, ointment, solution	0.05
	Halcinonide	Cream, ointment	0.1
	Mometasone furoate	Ointment	0.1
	Triamcinolone acetonide	Cream, ointment	0.5
	Betamethasone valerate	Cream, foam, lotion, ointment	0.1

	Triamcinolone acetonide	Cream, ointment, lotion	0.1
	Hydrocortisone butyrate	Cream, ointment, solution	0.1
Lower-	Hydrocortisone probutate	Cream	0.1
medium potency	Hydrocortisone valerate	Cream, ointment	0.2
	Prednicarbate	Cream	0.1
	Alclometasone dipropionate	Cream, ointment	0.05
Low potency	Desonide	Cream, gel, foam, ointment	0.05
. ,	Fluocinolone acetonide	Cream, solution	0.01
Lowest potency	Dexamethasone	Cream	0.1
	Hydrocortisone	Cream, lotion, ointment, solution	0.25, 0.5,
	Hydrocortisone acetate	Cream, ointment	0.5-1

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Cimzia

Prior Authorization Guideline

Guideline ID	GL-125747	
Guideline Name	Cimzia	
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP 	

Guideline Note:

Effective Date:	7/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 05/21/2021 ; 05/20/2022 ; 09/21/2022 ; 5/25/2023

1. Indications

Drug Name: Cimzia (certolizumab)

Crohn's disease (CD) Indicated for reducing signs and symptoms of Crohn's disease (CD) and maintaining clinical response in adult patients with moderately to severely active disease who have had an inadequate response to conventional therapy.

Rheumatoid Arthritis (RA) Indicated for the treatment of adults with moderately to severely active rheumatoid arthritis.

Active Psoriatic Arthritis (PsA) Indicated for the treatment of adult patients with active psoriatic arthritis.

Active Ankylosing Spondylitis (SpA) Indicated for the treatment of adults with active ankylosing spondylitis.

Plaque Psoriasis (PS) Indicated for the treatment of adults with moderate-to-severe plaque psoriasis who are candidates for systemic therapy or phototherapy.

Non-Radiographic Axial Spondyloarthritis (nr-axSpA) Indicated for the treatment of adults with active non-radiographic axial spondyloarthritis with objective signs of inflammation.

2. Criteria

Product Name: Cimzia [a]	
Diagnosis	Crohn's Disease (CD)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of moderately to severely active Crohn's disease

AND

2 - One of the following^:

2.1 History of failure to one of the following conventional therapies at maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial):

- Corticosteroids (e.g., prednisone, methylprednisolone, budesonide)
- 6-mercaptopurine (Purinethol)
- Azathioprine (Imuran)
- Methotrexate (Rheumatrex, Trexall)

OR

2.2 Patient has been previously treated with a biologic DMARD FDA-approved for the treatment of Crohn's disease as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., adalimumab, Stelara (ustekinumb)]

OR

2.3 Both of the following:

2.3.1 Patient is currently on Cimzia therapy as documented by claims history or submission of medical records (Document date and duration of therapy)

AND

2.3.2 Patient has not received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the UCB sponsored CIMplicity® program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Cimzia*

AND

3 - Patient is not receiving Cimzia in combination with any of the following:

- Biologic DMARD [e.g., adalimumab, Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]

AND

4 - Prescribed by or in consultation with a gastroenterologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y. * Patients requesting initial authorization who were established on th erapy via the receipt of a manufacturer supplied sample at no cost in th e prescriber's office or any form of assistance from the UCB sponsored CIMplicity® program shall be required to meet initial authorization crite ria as if patient were new to therapy. ^ Tried/failed alternative(s) are su pported by FDA labeling.

3. Background

Benefit/Coverage/Program Information

Background:

Cimzia (certolizumab) is a tumor necrosis factor (TNF) blocker indicated for reducing signs and symptoms of Crohn's disease (CD) and maintaining clinical response in adult patients with moderately to severely active disease who have had an inadequate response to conventional therapy. Cimzia is also indicated for the treatment of adults with moderately to severely active rheumatoid arthritis (RA), treatment of adult patients with active psoriatic arthritis (PsA), treatment of adults with active spondylitis (SpA), treatment of adults with moderate to severe plaque psoriasis (PS) who are candidates for systemic therapy or phototherapy, and for the treatment of adults with active signs of inflammation.¹

Additional Clinical Rules:

• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-

authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

• Supply limits may be in place.

Cinryze

Prior Authorization Guideline

Guideline ID	GL-143789
Guideline Name	Cinryze
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	8/18/2023
P&T Revision Date:	3/20/2024

1. Indications

Drug Name: Cinryze

Hereditary angioedema (HAE) Cinryze is a plasma-derived C1 esterase inhibitor (human) indicated for routine prophylaxis against angioedema attacks in adults, adolescents, and pediatric patients (6 years of age and older) with hereditary angioedema (HAE).

2. Criteria

Product Name: Cinryze [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

1 - Diagnosis of hereditary angioedema (HAE) as confirmed by ONE of the following:

1.1 C1 inhibitor (C1-INH) deficiency or dysfunction (Type I or II HAE) as documented by ONE of the following (per laboratory standard):

- C1-INH antigenic level below the lower limit of normal
- C1-INH functional level below the lower limit of normal

OR

1.2 HAE with normal C1 inhibitor levels and ONE of the following:

- Confirmed presence of variant(s) in the gene(s) for factor XII, angiopoietin-1, plasminogen-1, kininogen-1, myoferlin, and heparan sulfate-glucosamine 3-O-sulfotransferase 6
- Recurring angioedema attacks that are refractory to high-dose antihistamines with confirmed family history of angioedema
- Recurring angioedema attacks that are refractory to high-dose antihistamines with unknown background de-novo mutation(s) (i.e., no family history) (HAE-unknown)

AND

2 - ALL of the following:

- Prescribed for the prophylaxis of HAE attacks
- Not used in combination with other products indicated for prophylaxis against HAE attacks (e.g., Haegarda, Orladeyo, Takhzyro)
- Prescriber attests that patient has experienced attacks of a severity and/or frequency such that they would clinically benefit from prophylactic therapy with Cinryze

AND

3 - Submission of medical records documenting a history of failure, contraindication, or intolerance to Haegarda (C1 esterase inhibitor, human)

AND

4 - Prescribed by ONE of the following:

 Immunologist
 Allergist

 Notes

 [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Cinryze [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

Approval Criteria

1 - Documentation of positive clinical response to Cinryze therapy

AND

2 - Reduction in the utilization of on-demand therapies used for acute attacks (e.g., Berinert, Firazyr, Ruconest) as determined by claims information, while on Cinryze therapy

AND

3 - BOTH of the following:

- Prescribed for the prophylaxis of HAE attacks
- Not used in combination with other products indicated for prophylaxis against HAE attacks (e.g., Haegarda, Orladeyo, Takhzyro)

AND

4 - Prescribed by ONE of the following:

- Immunologist
- Allergist

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Cinryze is a plasma-derived C1 esterase inhibitor (human) indicated for routine prophylaxis against angioedema attacks in adults, adolescents, and pediatric patients (6 years of age and older) with hereditary angioedema (HAE).[1]

Additional Clinical Programs:

• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

• Supply limits may be in place.

3/1/2024	Annual review with update to diagnostic criteria for HAE with normal C 1 inhibitor levels. Simplified reauthorization criteria. Updated reference.

Clomid

Prior Authorization Guideline

Guideline ID	GL-144760
Guideline Name	Clomid
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	4/17/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	10/20/2021 ; 08/19/2022 ; 12/14/2022 ; 08/18/2023 ; 4/17/2024

1. Indications

Drug Name: Clomid (clomiphene citrate)

Ovulatory dysfunction Indicated for the treatment of ovulatory dysfunction in women desiring pregnancy. Impediments to achieving pregnancy must be excluded or adequately treated before beginning clomiphene therapy. Those patients most likely to achieve success with clomiphene therapy include patients with polycystic ovary syndrome, amenorrhea-galactorrhea syndrome, psychogenic amenorrhea, certain cases of secondary amenorrhea of undetermined etiology, and post-oral contraceptive amenorrhea.

2. Criteria

Product Name: Clomid, clomiphene tabs [a]	
Diagnosis	Ovulation Induction

Approval Length	6 month(s)	
Guideline Type	Prior Authorization	
Approval Critoria		
Approval Criteria		
1 - Diagnosis of ovula	atory dysfunction	
	AND	
2 - ONE of the followi	ing exists:	
 Anovulation Oligo-ovulation Amenorrhea 		
	AND	
3 - Other specific causative factors (e.g., thyroid disease, hyperprolactinemia) have been excluded or treated		
	AND	
4 - Infertility is not due to primary ovarian failure		
AND		
5 - For induction of ovulation		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

Product Name: Clomid, clomiphene tabs [a]	
Diagnosis	Controlled Ovarian Stimulation**
Approval Length	2 month(s)

Guideline Type	Prior Authorization	
Approval Criteria 1 - Diagnosis of infertility		
	AND	
2 - ONE of the follow	ing exists:	
 Unexplained infertility Endometriosis Male factor infertility Diminished ovarian reserve Unilateral tubal factor infertility 		
	AND	
${f 3}$ - For the development of one or more follicles (controlled ovarian stimulation)		
	AND	
4 - Will be used in co	njunction with intrauterine insemination (IUI)	
Notes	 **Requests for an infertility related diagnosis other than ovulation induc tion for members in New Jersey, North Carolina, Kansas and Texas sh ould be denied as a benefit exclusion. [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y. 	

Product Name: Clomid, clomiphene tabs [a]	
Diagnosis	Clomiphene Challenge Test**
Approval Length	1 month(s)
Guideline Type	Prior Authorization

Approval Criteria 1 - To be used to condu	uct a clomiphene challenge test
Notes	 **Requests for an infertility related diagnosis other than ovulation induc tion for members in New Jersey, North Carolina, Kansas and Texas sh ould be denied as a benefit exclusion. [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

Product Name: Clomid, clomiphene tabs [a]	
Diagnosis	Male Factor Infertility/Oligospermia [off-label]**
Approval Length	6 month(s)
Guideline Type	Prior Authorization

- **1** Diagnosis of one of the following:
 - Mild, moderate, or severe male factor infertility
 - Oligospermia

AND

2 - At least ONE of the following exists on at least 2 separate semen analyses obtained at least 4 weeks apart:

- Sperm concentration is < 15 million/mL (milliliter)
- Progressive motility < 40%
- Sperm preparation techniques result in a sperm concentration of < 1 million motile sperm/mL

AND

3 - Patient condition has not improved despite an adequate trial (two to three months) of positive lifestyle changes (e.g., weight loss, healthy diet, smoking cessation, reduction of alcohol intake)

Notes	 **Requests for an infertility related diagnosis other than ovulation induc tion for members in New Jersey, North Carolina, Kansas and Texas sh ould be denied as a benefit exclusion. [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	---

3. Background

Benefit/Coverage/Program Information

Background:

This program is designed to provide coverage for these medications to be used in conjunction with Assisted Reproductive Technologies (ART, i.e., in vitro fertilization).

Clomiphene citrate is a nonsteroidal fertility agent used to induce ovulation in infrequently ovulating or anovulatory women, including patients with polycystic ovary syndrome (PCOS). It is also used for controlled ovarian stimulation in ovulatory women. The drug is effective at producing ovulation in patients with an intact hypothalamic-pituitary-ovarian axis and with ovaries that are capable of functioning normally. Clomiphene therapy is not effective in patients with primary pituitary or ovarian failure. Dosage should generally not exceed 100 mg daily for 5 days. If ovulation has not occurred after 3 courses of therapy, the patient should be reevaluated. If pregnancy does not occur within a total of 6 cycles, clomiphene should be discontinued as prolonged administration is not recommended. [1-5]

Clomiphene citrate is indicated for the treatment of ovulatory dysfunction in women desiring pregnancy. Impediments to achieving pregnancy must be excluded or adequately treated before beginning CLOMIPHENE therapy. Those patients most likely to achieve success with clomiphene therapy include patients with polycystic ovary syndrome, amenorrhea-galactorrhea syndrome, psychogenic amenorrhea, certain cases of secondary amenorrhea of undetermined etiology, and post-oral contraceptive amenorrhea. [6]

Clomiphene may be used to evaluate a woman's ovulation and egg quality in what is referred to as the Clomiphene Challenge Test. [8,9] When given early in a woman's menstrual cycle for 5 days, clomiphene elevates a woman's follicle-stimulating hormone (FSH) level. On the next day, an FSH blood level that has dropped back to normal is a sign of a normal ovarian reserve and ovulation. An elevated FSH is a sign of low ovarian reserve. Women who have a diminished ovarian reserve can use donor eggs, which greatly improves their chances of giving

birth to a healthy child.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

CNS Stimulants

Prior Authorization Guideline

Guideline ID	GL-141342
Guideline Name	CNS Stimulants
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	4/1/2024
P&T Approval Date:	8/15/2020
P&T Revision Date:	02/19/2021 ; 10/06/2021 ; 10/20/2021 ; 10/20/2021 ; 05/20/2022 ; 12/14/2022 ; 2/16/2024

1. Indications

Drug Name: CNS stimulants

Attention Deficit Hyperactivity Disorder (ADHD) FDA approved indication for Attention Deficit Hyperactivity Disorder (ADHD)

Attention Deficit Disorder (ADD) FDA approved indication for Attention Deficit Disorder (ADD)

Narcolepsy FDA approved indication for narcolepsy

<u>Off Label Uses:</u> Idiopathic hypersomnolence There is evidence for off label use for idiopathic hypersomnolence.

Fatigue associated with multiple sclerosis There is evidence for off label use for fatigue associated with multiple sclerosis.

Mental fatigue secondary to traumatic brain injury There is evidence for off label use for mental fatigue secondary to traumatic brain injury.

Depression There is evidence for off label use for depression.

Weight Loss (Not Covered Benefit) The potential use of these agents for weight loss is not a covered benefit.

Drug Name: Vyvanse

Moderate to Severe Binge Eating Disorder (BED) Indicated for Moderate to Severe Binge Eating Disorder (BED).

Attention Deficit Hyperactivity Disorder (ADHD) Indicated for the treatment of Attention Deficit Hyperactivity Disorder (ADHD) in adults and pediatric patients 6 years and older.

2. Criteria

Product Name: (Includes both brand and generic versions of the listed products unless otherwise noted: Products containing amphetamine, dexmethylphenidate, dextroamphetamine, methamphetamine, methylphenidate, serdexmethylphenidate or any combinations of the mentioned products) [a]		
Approval Length	12 month(s)	
Guideline Type	Prior Authorization	
Approval Criteria		
1 - ONE of the following	j:	
1.1 The patient is less than 18 years of age		
	OR	
1.2 BOTH of the following:		
1.2.1 The patient is 18 years of age or older		
AND		

1.2.2 The patient has ONE of the following diagnoses:

- Attention-deficit hyperactivity disorder (ADHD) or attention-deficit disorder (ADD)
- Depression
- Narcolepsy
- Other hypersomnia of central origin
- Autism Spectrum Disorder
- Mental fatigue secondary to traumatic brain injury (e.g. post-concussion syndrome)
- Fatigue associated with medical illness in patients in palliative or end of life care
- Fatigue associated with multiple sclerosis

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	--

Product Name: Brand Vyvanse, generic lisdexamfetamine [a]	
Approval Length	12 month(s)
Guideline Type	Prior Authorization

Approval Criteria

- 1 ONE of the following:
- 1.1 The patient is less than 18 years of age

OR

1.2 BOTH of the following:

1.2.1 The patient is 18 years of age or older

AND

1.2.2 The patient has ONE of the following diagnoses:

- Attention-deficit hyperactivity disorder (ADHD) or attention-deficit disorder (ADD)
- Depression
- Narcolepsy
- Other hypersomnia of central origin

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

This program will allow coverage for diagnoses supported by FDA labeling and clinical evidence. The CNS stimulants have a variety of FDA approved labeled indications, such as Attention Deficit Hyperactivity Disorder (ADHD), Attention Deficit Disorder (ADD), and narcolepsy. There is evidence for off label use for the stimulants in idiopathic hypersomnolence, fatigue associated with multiple sclerosis, mental fatigue secondary to traumatic brain injury, and depression. The potential use of these agents for weight loss is not a covered benefit. Because of the high abuse potential for this class of medications, their use should be closely monitored in certain age groups. In addition, if the member is less than 18 years of age, the prescription will automatically process without a coverage review.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply Limits may also be in place

2 - One of the following: 2.1 Each active ingredient in the compound is/are FDA-approved for the requested indication OR 2.2 If requested for an off-label indication, the Off-Label guideline approval criteria have been met for the requested indication AND 3 - If a drug included in the compound requires prior authorization and/or step therapy, all drug specific clinical criteria must also be met AND 4 - If the drug component is no longer available commercially it must not have been withdrawn for safety reasons AND 5 - One of the following: 5.1 A unique vehicle is required OR 5.2 A unique dosage form is required for a commercially available product due to patient's age, weight, or inability to take a solid dosage form OR 5.3 A unique formulation is required for a commercially available product due to an allergy or intolerance to an inactive ingredient in the commercially available product

OR

5.4 There is a shortage of the commercially available product per the FDA Drug Shortage database or the ASHP Current Drug Shortages tracking log

AND

6 - Coverage for compounds and bulk powders will NOT be approved for any of the following:

6.1 For topical compound preparations (e.g., creams, ointments, lotions, or gels to be applied to the skin for transdermal, transcutaneous, or any other topical route), if the requested compound contains any FDA approved ingredient that is not FDA approved for TOPICAL use

OR

6.2 Requested compound contains topical fluticasone. Topical fluticasone will NOT be approved unless:

6.2.1 Topical fluticasone is intended to treat a dermatologic condition. Scar treatments are considered cosmetic and will not be covered

AND

6.2.2 Patient has a contraindication to all commercially available topically fluticasone formulations

OR

6.3 Requested compound is for cosmetic use or contains any ingredients when used for cosmetic purposes (see Appendix for examples)

OR

6.4 Requested compound does NOT contain any ingredients which are on the FDA's Do Not Compound List

(https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfcfr/CFRSearch.cfm?fr=216.24)

AND

7 - The use is not excluded as documented in the limitations and exclusions section of the certificate of coverage (see technician note in Background for the Exclusions and Limitations Grid URL)

AND

8 - One of the following:

8.1 If the request has one or more ACA/HCR ingredients, ACA/HCR criteria within the ACA/HCR Administrative guideline are met for ALL ingredients*

OR

8.2 The request does not contain any ACA/HCR ingredients^

Notes	Only ingredients that are available on formulary in one of the formulary tiers, or has a non-formulary status are approvable and should be inclu ded in the effectuation. If an approved compound contains an excluded drug such as OTC products, excipients, inactive ingredient that is a B ULK chemical, injectable drugs covered under the medical benefit, etc. these ingredients should not be included in the effectuation. If the com pound request includes an active ingredient that is a BULK chemical, t he request should be denied as benefit exclusion. Injectable products (such as IV antibiotics, infusions, etc.) may be covered under the medic al benefit and are excluded from the pharmacy benefit. These should b e denied as benefit exclusion. *If compound and ACA/HCR criteria are met, approve the compound at \$0 cost share. If only compound criteria are met and not ACA/HCR criteria, deny the request for not meeting ACA/HCR and approve the com pound at regular cost share. ^If all compound criteria are met, approve the compound at share.

2. Background

Benefit/Coverage/Program Information

Background:

Compounded drugs that exceed \$50 in cost or contain an ingredient that is commercially available but is never supported by the standard references to be compounded will reject at point of sale as product service not covered. These compounds may be approved if criteria are met.

Appendix:

Example topical compound preparations (e.g., creams, ointments, lotions or gels to be applied to the skin for transdermal, transcutaneous or any other topical route) that contain any FDA approved ingredient that are not FDA approved for TOPICAL use, including but NOT LIMITED TO the following:

- (1) Ketamine
- (2) Gabapentin
- (3) Flurbiprofen (topical ophthalmic use not included)
- (4) Ketoprofen
- (5) Morphine
- (6) Nabumetone
- (7) Oxycodone
- (8) Cyclobenzaprine
- (9) Baclofen
- (10) Tramadol
- (11) Hydrocodone
- (12) Meloxicam
- (13) Amitriptyline
- (14) Pentoxifylline
- (15) Orphenadrine
- (16) Piroxicam
- (17) Levocetirizine
- (18) Amantadine
- (19) Oxytocin
- (20) Sumatriptan
- (21) Chorionic gonadotropin (human)

- (22) Clomipramine
- (23) Dexamethasone
- (24) Hydromorphone
- (25) Methadone
- (26) Papaverine
- (27) Mefenamic acid
- (28) Promethazine
- (29) Succimer DMSA
- (30) Tizanidine
- (31) Apomorphine
- (32) Carbamazepine
- (33) Ketorolac
- (34) Dimercaptopropane-sulfonate
- (35) Dimercaptosuccinic acid
- (36) Duloxetine
- (37) Fluoxetine
- (38) Bromfenac (topical ophthalmic use not included)
- (39) Nepafenac (topical ophthalmic use not included)

Example compounds that contain ingredients for cosmetic purposes:

- (1) Hydroquinone
- (2) Acetyl hexapeptide-8
- (3) Tocopheryl Acid Succinate
- (4) PracaSil TM-Plus
- (5) Chrysaderm Day Cream
- (6) Chrysaderm Night Cream
- (7) PCCA Spira-Wash
- (8) Lipopen Ultra
- (9) Versapro

- (10) Fluticasone
- (11) Mometasone
- (12) Halobetasol
- (13) Betamethasone
- (14) Clobetasol
- (15) Triamcinolone
- (16) Minoxidil
- (17) Tretinoin
- (18) Dexamethasone
- (19) Spironolactone
- (20) Cycloserine
- (21) Tamoxifen
- (22) Sermorelin
- (23) Mederma Cream
- (24) PCCA Cosmetic HRT Base
- (25) Sanare Scar Therapy Cream
- (26) Scarcin Cream
- (27) Apothederm
- (28) Stera Cream
- (29) Copasil
- (30) Collagenase
- (31) Arbutin Alpha
- (32) Nourisil
- (33) Freedom Cepapro
- (34) Freedom Silomac Andydrous
- (35) Retinaldehyde
- (36) Apothederm

Example ingredients on the FDA's Do Not Compound List:

- (1) 3,3',4',5-tetrachlorosalicylanilide
- (2) Adenosine phosphate
- (3) Adrenal cortex
- (4) Alatrofloxacin mesylate
- (5) Aminopyrine
- (6) Astemizole
- (7) Azaribine
- (8) Benoxaprofen
- (9) Bithionol
- (10) Camphorated oil
- (11) Carbetapentane citrate
- (12) Casein, iodinated
- (13) Cerivastatin sodium
- (14) Chlormadinone acetate
- (15) Chloroform
- (16) Cisapride
- (17) Defenfluramine hydrochloride
- (18) Diamthazole dihydrochloride
- (19) Dibromsalan
- (20) Dihydrostreptomycin sulfate
- (21) Dipyrone
- (22) Encainide hydrochloride
- (23) Etretinate
- (24) Fenfluramine hydrochloride
- (25) Flosequinan
- (26) Glycerol, iodinated
- (27) Grepafloxacin
- (28) Mepazine
- (29) Metabromsalan

- (30) Methapyrilene
- (31) Methopholine
- (32) Methoxyflurane
- (33) Mibefradil dihydrochloride
- (34) Nomifensine maleate
- (35) Novobiocin sodium
- (36) Oxyphenisatin acetate
- (37) Oxyphenisatin
- (38) Pemoline
- (39) Pergolide mesylate
- (40) Phenacetin
- (41) Phenformin hydrochloride
- (42) Phenylpropanolamine
- (43) Pipamazine
- (44) Potassium arsenite
- (45) Propoxyphene
- (46) Rapacuronium bromide
- (47) Rofecoxib
- (48) Sibutramine hydrochloride
- (49) Sparteine sulfate
- (50) Sulfadimethoxine
- (51) Sweet spirits of nitre
- (52) Tegaserod maleate
- (53) Temafloxacin hydrochloride
- (54) Terfenadine
- (55) Ticrynafen
- (56) Tribromsalan
- (57) Trichloroethane
- (58) Troglitazone

(59) Trovafloxacin mesylate:

- (60) Urethane
- (61) Valdecoxib

(62) Zomepirac sodium

Additional Clinical Rules:

• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

• Supply limits may be in place.

Consensi

Prior Authorization Guideline

Guideline ID	GL-107109
Guideline Name	Consensi
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	7/1/2022
P&T Approval Date:	5/20/2022
P&T Revision Date:	

1. Indications

Drug Name: Consensi (amlodipine/celecoxib)

Hypertension and Osteoarthritis Indicated in adult patients for whom treatment with both amlodipine for hypertension and celecoxib for osteoarthritis are appropriate.

2. Criteria

Product Name: Consensi [a]	
Approval Length	12 month(s)
Guideline Type	Prior Authorization

- **1** Both of the following:
 - Diagnosis of hypertension
 - Diagnosis of osteoarthritis

AND

2 - History of failure, contraindication, or intolerance to both of the following taken concurrently:

- Amlodipine (generic Norvasc)
- Celecoxib (generic Celebrex)

AND

3 - Physician has provided rationale for needing to use fixed-dose combination therapy instead of taking individual products in combination

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage	
	criteria. Other policies and utilization management programs may apply.	

3. Background

Benefit/Coverage/Program Information

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program.
- Supply limitations may be in place

Background

Consensi is indicated in adult patients for whom treatment with both amlodipine for hypertension and celecoxib for osteoarthritis are appropriate.

Corlanor

Prior Authorization Guideline

Guideline ID	GL-135628
Guideline Name	Corlanor
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	10/30/2023
-----------------	------------

1. Indications

Drug Name: Corlanor (ivabradine)

Heart failure in adult patients Indicated to reduce the risk of hospitalization for worsening of heart failure in adult patients with stable, symptomatic chronic heart failure with left ventricular ejection fraction less than or equal to 35%, who are in sinus rhythm with resting heart rate greater than or equal to 70 beats per minute and either are on maximally tolerated doses of beta-blockers or have a contraindication to beta-blocker use.

Heart failure in pediatric patients Indicated for the treatment of stable symptomatic heart failure due to dilated cardiomyopathy (DCM) in pediatric patients aged 6 months and older, who are in sinus rhythm with an elevated heart rate.

2. Criteria

Product Name: Corlanor [a]	
Diagnosis	Symptomatic Chronic Heart Failure

Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
Approval Criteria 1 - One of the follow	ing:
1.1 All of the follow	ing:
	eart failure in a diagnosis of stable, symptomatic chronic [e.g. New York IYHA) class II, III or IV] heart failure
	AND
1.1.2 Patient has a	a left ventricular ejection fraction (EF) less than or equal to 35%
	AND
1.1.3 The patient is	s in sinus rhythm
	AND
1.1.4 Patient has a	a resting heart rate greater than or equal to 70 beats per minute
	AND
1.1.5 One of the fo	llowing:
tolerated beta	a stabilized dose and receiving concomitant therapy with a maximum a blocker (e.g., carvedilol, metoprolol succinate, bisoprolol) a contraindication or intolerance to beta-blocker therapy
	AND

1.1.6 One of the following:

- Patient is on a stabilized dose and receiving concomitant therapy with Jardiance or Farxiga (includes combination products containing empagliflozin and dapagliflozin)
- Patient has a contraindication or intolerance to SGLT2 inhibitor therapy

AND

1.1.7 One of the following:

1.1.7.1 Patient is on a stabilized dose and receiving concomitant therapy with one of the following:

- Angiotensin-converting enzyme (ACE) inhibitor (e.g., captopril, enalapril)
- Angiotensin II receptor blocker (ARB) (e.g., candesartan, valsartan)
- Angiotensin receptor-neprilysin inhibitor (ARNI) (e.g., Entresto)

OR

1.1.7.2 Patient has a contraindication or intolerance to ACE inhibitors, ARBs, and ARNIs

AND

- **1.1.8** One of the following:
 - Patient is on a stabilized dose and receiving concomitant therapy with a maximally tolerated aldosterone antagonist (e.g., eplerenone, spironolactone)
 - Patient has a contraindication or intolerance to aldosterone antagonist therapy

AND

1.1.9 Prescribed by or in consultation with a cardiologist

OR

1.2 All of the following:

 Diagnosis of stable symptomatic heart failure due to dilated cardiomyopathy (DCM) Patient is in sinus rhythm

 Patient has an elevated heart rate Prescribed by or in consultation with a cardiologist 		
	OR	
1.3 All of the following:		
1.3.1 Diagnosis of ina	ppropriate sinus tachycardia (IST)	
	AND	
1.3.2 Patient is in sinus rhythm		
	AND	
1.3.3 One of the follow	ving:	
	and failed or had an inadequate response to a beta blocker (e.g.,	
 carvedilol, metoprolol succinate, bisoprolol) Patient has a contraindication or intolerance to beta-blocker therapy 		
OR		
1.4 Patient is currently	established on Corlanor therapy	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	
	-	

Product Name: Corlanor [a]	
Diagnosis	Symptomatic Chronic Heart Failure
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria	
1 - Documentation of po	ositive clinical response to Corlanor therapy
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Corlanor (ivabradine) is a hyperpolarization-activated cycle nucleotide-gated channel blocker indicated to reduce the risk of hospitalization for worsening of heart failure in patients with stable, symptomatic chronic heart failure with left ventricular ejection fraction \leq 35%, who are in sinus rhythm with resting heart rate \geq 70 beats per minute and either are on maximally tolerated doses of beta-blockers or have a contraindication to beta-blocker use. It is also indicated to treat stable symptomatic heart failure due to dilated cardiomyopathy (DCM) in pediatric patients aged 6 months and older, who are in sinus rhythm with an elevated heart rate. Also, although not an FDA-approved indication, Corlanor has also shown to have efficacy in treating inappropriate sinus tachycardia (IST).

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply Limits may be in place.

Cotellic

Prior Authorization Guideline

Guideline ID	GL-135552
Guideline Name	Cotellic
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	11/17/2023
P&T Revision Date:	02/19/2021 ; 11/19/2021 ; 11/18/2022 ; 11/17/2023

1. Indications

Drug Name: Cotellic (cobimetinib)

Melanoma Indicated for the treatment of patients with unresectable or metastatic melanoma with a BRAF V600E or V600K mutation, in combination with Zelboraf (vemurafenib) and as a single agent for the treatment of patients with histiocytic neoplasms. [1]

NCCN recommendations Indicated in combination with Zelboraf (vemurafenib) as treatment for Central Nervous System (CNS) Cancers.

2. Criteria

Product Name: Cotellic [a]	
Diagnosis	Melanoma

Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
Approval Criteria	
1 - Diagnosis of meland	oma
	AND
2 - Disease is one of th	e following:
UnresectableMetastatic	
	AND
3 - Disease is positive f	or one of the following mutations:
BRAF V600EBRAF V600K	
	AND
4 - Used in combination	with Zelboraf (vemurafenib)
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Cotellic [a]	
Diagnosis	Melanoma
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on Cotellic therapy

AND

2 - Used in combination with Zelboraf (vemurafenib)	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Cough and Cold

Prior Authorization Guideline

Guideline ID	GL-144128
Guideline Name	Cough and Cold
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	12/16/2020
P&T Revision Date:	02/19/2021 ; 08/20/2021 ; 09/15/2021 ; 03/15/2023 ; 3/20/2024

1. Criteria

Product Name: Opioid Containing Cough and Cold Products for Patients Younger than 18 Years* [a]	
Approval Length	1 month(s)
Guideline Type	Prior Authorization

Approval Criteria

1 - Prescriber attests they are aware of FDA labeled contraindications regarding use of opioid containing cough and cold products in patients less than 18 years of age and feels the treatment with the requested product is medically necessary (Document rationale for use).

AND

2 - Patient does not have a comorbid condition that may impact respiratory depression (e.g., asthma or other chronic lung disease, sleep apnea, body mass index greater than 30)

AND

3 - Patient has tried and failed at least one non-opioid containing cough and cold remedy

Notes	*Includes both brand and generic versions of the listed products unless otherwise noted: Products containing codeine or hydrocodone in combinations with one or more of the following: homatropine, chlorpheniramine, guaifenesin, p yrilamine, brompheniramine, phenylephrine, triprolidine, dexchlorphenir amine, promethazine, pseudoephedrine.
	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Opioid Containing Cough and Cold Products*	
Diagnosis	Requests Exceeding the Plan's Quantity Limit
Approval Length	Authorization will be issued for up to 30 days. The authorization should be entered for the quantity requested.
Guideline Type	Administrative

Approval Criteria

1 - Requests exceeding the quantity limit will be approved based on BOTH of the following:

1.1 Doses exceeding the quantity limit will be approved up to the requested amount if the prescriber attests that a larger quantity is medically necessary

AND

1.2 The requested dose is within FDA maximum dose per day, where an FDA maximum dose per day exists	
Notes	*Includes both brand and generic versions of the listed products unless otherwise noted: Products containing codeine or hydrocodone in combinations with one or more of the following: homatropine, chlorpheniramine, guaifenesin, p yrilamine, brompheniramine, phenylephrine, triprolidine, dexchlorphenir amine, promethazine, pseudoephedrine.

2. Background

Benefit/Coverage/Program Information

Background

Opioid (codeine or hydrocodone) containing cough and cold products are FDA labeled for use in adults 18 years of age and older. Use of prescription opioid cough and cold medicines containing codeine or hydrocodone should be limited in children younger than 18 years old due to serious risks associated with use. Coverage for patients age 18 or greater will process automatically.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

Cuvrior

Prior Authorization Guideline

Guideline ID	GL-124706
Guideline Name	Cuvrior
Formulary	UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	6/1/2023
P&T Approval Date:	1/1/2023
P&T Revision Date:	

1. Indications

Drug Name: Cuvrior (trientine tetrahydrochloride)

Wilson's Disease Indicated for the treatment of adult patients with Wilson's disease who are de-coppered and tolerant to penicillamine.

2. Criteria

Product Name: Cuvrior		
Approval Length	3 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Non Formulary	

Approval Criteria
1 - Diagnosis of Wilson's disease
AND
2 - Patient is de-coppered [i.e., serum non-ceruloplasmin copper (NCC) level greater than or equal to 25 and less than or equal to 150 mcg/L]
AND
3 - Patient is tolerant to penicillamine
AND
4 - Prescriber provides a reason or special circumstance why the patient cannot use penicillamine
AND
5 - Patient will not use penicillamine in conjunction with Cuvrior

Product Name: Cuvrior		
Approval Length	6 month(s)	
Therapy Stage	Reauthorization	
Guideline Type	Non Formulary	
Approval Criteria		

1 - Documentation of positive clinical response to Cuvrior therapy

3. Background

Benefit/Coverage/Program Information

Background:

Cuvrior (trientine tetrahydrochloride) is a copper chelator indicated for the treatment of adult patients with Wilson's disease who are de-coppered and tolerant to penicillamine.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place

P&T Revision Date:	02/19/2021 ; 11/19/2021 ; 11/18/2022 ; 11/17/2023

1. Indications

Drug Name: Daliresp (roflumilast)

Chronic obstructive pulmonary disease (COPD) Indicated for reducing the risk of chronic obstructive pulmonary disease (COPD) exacerbations in patients with severe COPD associated with chronic bronchitis and a history of exacerbations

Product Name: Daliresp, generic roflumilast	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of severe to very severe COPD (i.e., FEV1 less than or equal to 50 percent of predicted)

AND

2 - COPD is associated with chronic bronchitis

AND

3 - History COPD exacerbation(s)

Product Name: Daliresp, generic roflumilast	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Documentation of positive clinical response to therapy

3. Background

Benefit/Coverage/Program Information

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Background:

Daliresp (roflumilast) is a phosphodiesterase-4 inhibitor indicated for reducing the risk of chronic obstructive pulmonary disease (COPD) exacerbations in patients with severe COPD associated with chronic bronchitis and a history of exacerbations.

Daraprim

Prior Authorization Guideline

Guideline ID	GL-125863
Guideline Name	Daraprim
Formulary	UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	7/1/2023
P&T Approval Date:	11/13/2020
P&T Revision Date:	05/21/2021 ; 09/15/2021 ; 05/20/2022 ; 5/25/2023

1. Indications

Drug Name: Daraprim (pyrimethamine)Treatment of toxoplasmosis Indicated for the treatment of toxoplasmosis when used
conjointly with a sulfonamide, since synergism exists with this combination. [1]

Product Name: Brand Daraprim, pyrimethamine (generic Daraprim) [a]	
Approval Length	12 months*
Guideline Type	Prior Authorization

Approval Criteria 1 - Daraprim will be approved based on submission of medical record (e.g., chart notes) documenting one of the following criteria: **1.1** Treatment of severe acquired toxoplasmosis, including toxoplasmic encephalitis OR 1.2 Treatment of congenital toxoplasmosis OR **1.3** Secondary prophylaxis of toxoplasmic encephalitis OR **1.4** All of the following: **1.4.1** Primary Pneumocystis pneumonia (PCP) prophylaxis in HIV-infected patients or as secondary prophylaxis in HIV-infected patients who have been treated for an acute episode of Pneumocystis pneumonia AND 1.4.2 Patient has experienced intolerance to prior prophylaxis with trimethoprimsulfamethoxazole (TMP-SMX) AND **1.4.3** One of the following: Patient has been re-challenged with trimethoprim-sulfamethoxazole (TMP-SMX) using a • desensitization protocol and is still unable to tolerate Evidence of moderately severe or life threatening-reaction to trimethoprim-• sulfamethoxazole (TMP-SMX) in the past (e.g., toxic epidermal necrolysis (TEN),

Stevens-Johnson syndrome) OR **1.5** All of the following: 1.5.1 Primary prophylaxis of toxoplasmic encephalitis AND 1.5.2 Toxoplasma IgG positive AND 1.5.3 CD4 is less than or equal to 100 cells/mm3 if initiating prophylaxis or CD4 is less than 100-200 cells/mm3 if reinstituting prophylaxis AND 1.5.4 Will be used in combination with dapsone or atovaquone AND 1.5.5 Patient has experienced intolerance to prior prophylaxis with trimethoprimsulfamethoxazole (TMP-SMX) AND **1.5.6** One of the following: Patient has been re-challenged with trimethoprim-sulfamethoxazole (TMP-SMX) using a • desensitization protocol and is still unable to tolerate Evidence of moderately severe or life threatening-reaction to trimethoprim-• sulfamethoxazole (TMP-SMX) in the past (e.g., toxic epidermal necrolysis (TEN), Stevens-Johnson syndrome)

Notes	* Consider discontinuation of primary prophylaxis if CD4 is greater than 200 cells/mm3 for greater than 3 months after institution of combinatio n antiretroviral therapy. [a] State mandates may apply. Any federal reg ulatory requirements and the member specific benefit plan coverage m ay also impact coverage criteria. Other policies and utilization manage ment programs may apply.
-------	--

3. Background

Benefit/Coverage/Program Information

Background:

Daraprim (pyrimethamine) is indicated for the treatment of toxoplasmosis when used conjointly with a sulfonamide, since synergism exists with this combination. [1]

The use of pyrimethamine for the treatment or prophylaxis of malaria is no longer recommended in the CDC Guidelines for the Treatment of Malaria in the United States. For the treatment of malaria, contact the CDC Malaria Hotline: (770) 488-7788 or (855) 856-4713 toll-free Monday-Friday 9 am to 5 pm EST - (770) 488-7100 after hours, weekends and federal holiday [2-3]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

Limitations of Use:

Outpatient medication access to Daraprim is available exclusively through the Daraprim Direct program in partnership with Optime Care, Inc. [4]

Daybue

Prior Authorization Guideline

Guideline ID	GL-145646
Guideline Name	Daybue
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	5/25/2023
P&T Revision Date:	4/17/2024

1. Indications

Drug Name: Daybue (trofinetide)

Rett syndrome (RTT) Indicated for the treatment of Rett syndrome (RTT) in adults and pediatric patients aged 2 years and older.

Product Name: Daybue [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of Rett Syndrome (RTT) confirmed by ONE of the following:

1.1 ALL of the following clinical signs and symptoms:

- A pattern of development, regression, then recovery or stabilization
- Partial or complete loss of purposeful hand skills such as grasping with fingers, reaching for things, or touching things on purpose
- Partial or complete loss of spoken language
- Repetitive hand movements, such as wringing the hands, washing, squeezing, clapping, or rubbing
- Gait abnormalities, including walking on toes or with an unsteady, wide-based, stifflegged gait

OR

1.2 Confirmed genetic mutation in the MECP2 gene

AND

2 - Prescribed by, or in consultation with, ONE of the following:

- Geneticist
- Pediatrician who specializes in childhood neurological or developmental disorders
- Neurologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Daybue [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria	
1 - Documentation of positive clinical response to Daybue therapy	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Daybue is a synthetic analog of the amino-terminal tripeptide of insulin-like growth factor-1 (IGF-1) indicated for the treatment of Rett syndrome (RTT) in adults and pediatric patients aged 2 years and older.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

Diabetic Meters and Test Strips - PA, NF, QL

Prior Authorization Guideline

Guideline ID	GL-114586
Guideline Name	Diabetic Meters and Test Strips - PA, NF, QL
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	1/1/2023
P&T Approval Date:	1/20/2021
P&T Revision Date:	09/15/2021

Note:

NOTE: Continuous Glucose Monitoring (CGM) devices and Glucose Sensors (GPI: 97202012*****) are a medical benefit. They are not the same as Glucose Meters and Test Strips and should not be reviewed using this guideline.

Product Name: Test Strips and Glucose Meters (preferred and non-preferred)	
Approval Length	12 month(s)
Guideline Type	Prior Authorization, Non Formulary
Approval Criteria	

1 - One of the following reasons that a preferred Test Strip/Glucometer (Accu-Chek or OneTouch strip/meter) cannot be used:

- The member has a vision problem/blindness that requires the use of a special glucometer/test strip
- The member is currently on an insulin pump or an insulin delivery device (e.g., OmniPod) that requires a specific glucometer/test strip
- There is a medically necessary justification (e.g., an impairment of manual dexterity) requiring use of a special monitoring system and/or test strip

Notes	NOTE: a) Before approving/denying a product, please check for a previ ous approval on file for the member for a non-preferred product. If an a pproval is on file, an automatic approval is appropriate. b) If a non-pref erred test strip/meter is approved for a member, future requests for non -preferred test strip/meter products should also be approved. NOTE: Continuous Glucose Monitoring (CGM) devices and Glucose S ensors (GPI: 97202012*****) are a medical benefit. They are not the s ame as Glucose Meters and Test Strips and should not be reviewed us ing this guideline.

Product Name: Test Strips (preferred and non-preferred)	
Approval Length	12 month(s)
Guideline Type	Quantity Limit

Approval Criteria

1 - Quantities exceeding the plan's limit of 100 test strips per 30 days are approved for one of the following:

- The patient is insulin dependent or pregnant and the physician confirms the patient requires a greater quantity because of more frequent blood glucose testing (e.g., patients on intravenous insulin infusions)
- The patient is experiencing or is prone to hypoglycemia or hyperglycemia and requires additional testing to achieve glycemic control
- The patient's physician is adjusting medications and the patient requires additional blood glucose testing during this time
- The patient's physician is adjusting MNT (medical nutrition therapy) and the patient requires additional blood glucose testing during this time
- The patient requires additional testing due to fluctuations in blood glucose due to physical activity/exercise
- Other circumstances where prescribing physician confirms that the patient requires a greater quantity because of more frequent blood glucose testing (clinical review required by UnitedHealthcare reviewing pharmacist and/or medical director)

NOTE: Effectuate approvals with quantity limit that corresponds to the approved MDD (max daily dose) for test strips to the requested quantit
у.

2. Background

Benefit/Coverage/Program Information

Background:

Preferred test strips and meters are Accu-Chek and OneTouch. All other brands are nonpreferred. All preferred and non-preferred test strips have a quantity limit of 100 strips per 30 days. In addition, all preferred and non-preferred meters have a quantity limit of one per 365 days.

Date	Notes
9/29/2022	Annual review. Administrative change to background information.

Dojolvi

Prior Authorization Guideline

Guideline ID	GL-120451
Guideline Name	Dojolvi
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	3/1/2023
P&T Approval Date:	12/16/2020
P&T Revision Date:	02/19/2021 ; 05/20/2022

1. Indications

Drug Name: Dojolvi (triheptanoin)

Long-chain fatty acid oxidation disorders (LC-FAOD) Dojolvi (triheptanoin) is a mediumchain triglyceride indicated as a source of calories and fatty acids for the treatment of pediatric and adult patients with molecularly confirmed long-chain fatty acid oxidation disorders (LC-FAOD).

Product Name: Dojolvi	
Approval Length	6 month(s)
Therapy Stage	Initial Authorization

Guideline Type	Non Formulary	
Approval Critoria		
Approval Criteria		
	cal records confirming the diagnosis of long-chain fatty acid oxidation vith at least two of the following diagnostic criteria:	
 Disease specific elevation of acylcarnitines on a newborn blood spot or in plasma Low enzyme activity in cultured fibroblasts 		
	own pathogenic mutations in CPT2, ACADVL, HADHA, or HADHB	
	AND	
2 - Patient is not receivi (MCT) products	ing Dojolvi in combination with any other medium-chain triglyceride	
	AND	
3 - Prescribed by a board certified medical geneticist experienced in the treatment of long-chain fatty acid oxidation disorders (LC-FAOD)		
	AND	
4 - Target recommende daily caloric intake (DC	ed daily dosage does not exceed 35% of the patient's total prescribed l)	
AND		
5 - Patient is receiving disease related dietary management		
	AND	
•	newborn screening, patient has a history of clinical manifestations of idation disorders LC-FAOD (e.g., rhabdomyolysis)	

Product Name: Dojolvi	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary
Approval Criteria	
	ositive clinical response to Dojolvi therapy (e.g., increased cardiac eff ventricular wall mass, decreased incidence of rhabdomyolysis, etc.)
	AND
2 - Patient is not receiv (MCT) products	ing Dojolvi in combination with any other medium-chain triglyceride
	AND
3 - Prescribed by a boa fatty acid oxidation disc	ard certified medical geneticist experienced in the treatment of long-chain orders (LC-FAOD)
	AND
4 - Target recommende daily caloric intake (DC	ed daily dosage does not exceed 35% of the patient's total prescribed
	AND

5 - Patient is receiving disease related dietary management

3. Background

Benefit/Coverage/Program Information

Background

Dojolvi (triheptanoin) is a medium-chain triglyceride indicated as a source of calories and fatty acids for the treatment of pediatric and adult patients with molecularly confirmed long-chain fatty acid oxidation disorders (LC-FAOD).

Additional Clinical Rules:

- Supply limits may be in place
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Guideline ID	GL-143795
Guideline Name	Dupixent
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	1/20/2021
	06/16/2021 ; 08/20/2021 ; 10/20/2021 ; 12/15/2021 ; 01/19/2022 ; 02/18/2022 ; 04/20/2022 ; 07/20/2022 ; 11/18/2022 ; 03/15/2023 ; 07/19/2023 ; 08/18/2023 ; 3/20/2024

1. Indications

Drug Name: Dupixent (dupilumab)

Moderate to Severe Atopic Dermatitis Indicated for treatment of patients aged 6 years and older with moderate to severe atopic dermatitis whose disease is not adequately controlled with topical prescription therapies or when those therapies are not advisable.

Moderate-to-Severe Asthma Indicated as an add-on maintenance treatment in patients with moderate-to-severe asthma aged 6 years and older with an eosinophilic phenotype or with oral corticosteroid dependent asthma.

Chronic Rhinosinusitis with Nasal Polyposis Indicated as an add-on maintenance treatment in adult patients with inadequately controlled chronic rhinosinusitis with nasal polyposis (CRSwNP).

Eosinophilic Esophagitis Indicated for treatment of adult and pediatric patients aged 1 year and older, weighing at least 15 kg, with eosinophilic esophagitis (EoE).

Prurigo nodularis (PN) Indicated for the treatment of adult patients with prurigo nodularis (PN).

2. Criteria

Product Name: Dupixent [a]	
Diagnosis	Atopic Dermatitis
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of moderate-to-severe chronic atopic dermatitis

AND

2 - ONE of the following:

2.1 History of failure, contraindication, or intolerance to BOTH of the following therapeutic classes of topical therapies (document drug, date of trial, and/or contraindication to medication)⁴:

- Medium, high, or very-high potency topical corticosteroids [e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)]
- Topical calcineurin inhibitor [e.g., tacrolimus (generic Protopic)]

OR

2.2 BOTH of the following:

2.2.1 Patient is currently on Dupixent therapy as documented by claims history or submission of medical records (Document date and duration of therapy)

AND

2.2.2 Patient has not received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Sanofi and Regeneron Pharmaceuticals sponsored Dupixent MyWay program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Dupixent*

AND

3 - Patient is not receiving Dupixent in combination with EITHER of the following:

- Biologic immunomodulator [e.g., Adbry (tralokinumab-ldrm)]
- Janus kinase inhibitor [e.g., Rinvoq (upadacitinib), Xeljanz/XR (tofacitinib), Opzelura (topical ruxolitinib), Cibinqo (abrocitinib)]

AND

4 - Prescribed by or in consultation with ONE of the following:

- Dermatologist
- Allergist
- Immunologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	*Patients requesting initial authorization who were established on thera py via the receipt of a manufacturer supplied sample at no cost in the p rescriber's office or any form of assistance from the Sanofi and Regene ron Pharmaceuticals sponsored Dupixent MyWay program shall be req uired to meet initial authorization criteria as if patient were new to thera
	py. ^Tried/failed alternative(s) are supported by FDA labeling.

Product Name: Dupixent [a]	
Diagnosis	Asthma
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of moderate-to-severe asthma

у.

AND

2 - ONE of the following:

2.1 ALL of the following:

2.1.1 Classification of asthma as uncontrolled or inadequately controlled as defined by at least ONE of the following:

- Poor symptom control (e.g., Asthma Control Questionnaire [ACQ] score consistently greater than 1.5 or Asthma Control Test [ACT] score consistently less than 20)
- Two or more bursts of systemic corticosteroids for at least 3 days each in the previous 12 months
- Asthma-related emergency treatment (e.g., emergency room visit, hospital admission, or unscheduled physician's office visit for nebulizer or other urgent treatment)
- Airflow limitation (e.g., after appropriate bronchodilator withhold forced expiratory volume in 1 second [FEV1] less than 80% predicted [in the face of reduced FEV1/forced vital capacity [FVC] defined as less than the lower limit of normal])
- Patient is currently dependent on oral corticosteroids for the treatment of asthma

AND

2.1.2 Dupixent will be used in combination with one of the following:

2.1.2.1 ONE maximally dosed (appropriately adjusted for age) combination inhaled corticosteroid (ICS)/long-acting beta2 agonist (LABA) [e.g., fluticasone propionate/salmeterol, Symbicort (budesonide/formoterol), Breo Ellipta (fluticasone furoate/vilanterol)]

OR

2.1.2.2 Combination therapy including BOTH of the following:

- ONE maximally dosed (appropriately adjusted for age) ICS product [e.g., ciclesonide (Alvesco), mometasone furoate (Asmanex), beclomethasone diproprionate (QVAR)]
- ONE additional asthma controller medication [e.g., LABA olodaterol (Striverdi) or salmeterol (Serevent); leukotriene receptor antagonist – montelukast (Singulair); theophylline]

AND

2.1.3 ONE of the following:

2.1.3.1 Submission of medical records (e.g., chart notes, laboratory values, etc.) documenting that asthma is an eosinophilic phenotype as defined by a baseline (pre-dupilumab treatment) peripheral blood eosinophil level greater than or equal to 150 cells/uL (microliter) OR 2.1.3.2 Patient is currently dependent on oral corticosteroids for the treatment of asthma OR 2.2 BOTH of the following: **2.2.1** Patient is currently on Dupixent therapy AND **2.2.2** Patient has not received a manufacturer supplied sample at no cost in prescriber office, or any form of assistance from the Sanofi and Regeneron Pharmaceuticals sponsored Dupixent MyWay program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Dupixent* AND 3 - Patient is not receiving Dupixent in combination with ANY of the following: Anti-interleukin-5 therapy [e.g., Cingair (resilizumab), Fasenra (benralizumab), Nucala • (mepolizumab)] Anti-IgE therapy [e.g., Xolair (omalizumab)] • Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)] • AND 4 - Prescribed by or in consultation with ONE of the following: Allergist Immunologist • Pulmonologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl v.

Product Name: Dupixent [a]	
Diagnosis	Asthma
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Documentation of positive clinical response to Dupixent therapy as demonstrated by at least ONE of the following:

- Reduction in the frequency of exacerbations
- Decreased utilization of rescue medications
- Increase in percent predicted FEV1 from pretreatment baseline
- Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing, etc.)
- Reduction in oral corticosteroid requirements

AND

2 - Dupixent is being used in combination with an ICS-containing maintenance medication [e.g., Advair/AirDuo (fluticasone/salmeterol), Breo Ellipta (fluticasone furoate/vilanterol), Symbicort (budesonide/ formoterol), Trelegy Ellipta (fluticasone furoate/umeclidinium/vilanterol)]

AND

3 - Patient is not receiving Dupixent in combination with any of the following:

 Anti-interleukin-5 therapy [e.g., Cinqair (resilizumab), Fasenra (benralizumab), Nucala (mepolizumab)] Anti-IgE therapy [e.g., Xolair (omalizumab)] Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)] 		
	AND	
4 - Prescribed by or in consultation with ONE of the following:		
AllergistImmunologistPulmonologist

Product Name: Dupixent [a]	
Diagnosis	Chronic Rhinosinusitis with Nasal Polyposis
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - ONE of the following:

1.1 Diagnosis of chronic rhinosinusitis with nasal polyposis (CRSwNP) defined by ALL of the following:

1.1.1 TWO OR MORE of the following symptoms for longer than 12 weeks duration:

- Nasal mucopurulent discharge
- Nasal obstruction, blockage, or congestion
- Facial pain, pressure, and/or fullness
- Reduction or loss of sense of smell

AND

1.1.2 ONE of the following findings using nasal endoscopy and/or sinus computed tomography (CT):

- Purulent mucus or edema in the middle meatus or ethmoid regions
- Polyps in the nasal cavity or the middle meatus
- Radiographic imaging demonstrating mucosal thickening or partial or complete opacification of paranasal sinuses

AND

1.1.3 ONE of the following:

- Presence of bilateral nasal polyposis
- Patient has previously required surgical removal of bilateral nasal polyps

AND

1.1.4 ONE of the following:

1.1.4.1 Patient has required prior sinus surgery

OR

1.1.4.2 Patient has required systemic corticosteroids (e.g., prednisone, methylprednisolone) for CRSwNP in the previous 2 years

OR

1.1.4.3 Patient has been unable to obtain symptom relief after trial of TWO of the following classes of agents:

- Nasal saline irrigations
- Intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)
- Antileukotriene agents (e.g., montelukast, zafirlukast, zileuton)

OR

1.2 ALL of the following:

1.2.1 Diagnosis of chronic rhinosinusitis with nasal polyposis (CRSwNP)

AND

1.2.2 Patient is currently on Dupixent therapy

AND

1.2.3 Patient has not received a manufacturer supplied sample at no cost in prescriber office, or any form of assistance from the Sanofi and Regeneron Pharmaceuticals sponsored Dupixent MyWay program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Dupixent*

AND

2 - Patient will receive Dupixent as add-on maintenance therapy in combination with intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)

AND

3 - Patient is NOT receiving Dupixent in combination with any of the following:

- Anti-interleukin-5 therapy [e.g., Cinqair (resilizumab), Fasenra (benralizumab), Nucala (mepolizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

AND

4 - Prescribed by or in consultation with ONE of the following:

- Allergist
- Immunologist
- Otolaryngologist
- Pulmonologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl v.

Product Name: Dupixent [a]	
Diagnosis	Eosinophilic Esophagitis
Approval Length	6 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of eosinophilic esophagitis

AND

2 - Patient is experiencing symptoms related to esophageal dysfunction (e.g., dysphagia, food impaction, chest pain that is often centrally located and may not respond to antacids, gastroesophageal reflux disease-like symptoms/refractory heartburn, upper abdominal pain)

AND

3 - Submission of medical records (e.g., chart notes, laboratory values, etc.) documenting eosinophil-predominant inflammation on esophageal biopsy, consisting of a peak value of greater than or equal to 15 intraepithelial eosinophils per high power field (HPF) (or 60 eosinophils per mm^2)

AND

4 - Secondary causes of esophageal eosinophilia have been ruled out AND 5 - Mucosal eosinophilia is isolated to the esophagus and symptoms have persisted after an 8week trial of at least one of the following: Proton pump inhibitors (e.g., pantoprazole, omeprazole) • Topical (esophageal) corticosteroids (e.g., budesonide, fluticasone) AND 6 - Patient is not receiving Dupixent in combination with any of the following: Anti-interleukin-5 therapy [e.g., Cinqair (resilizumab), Fasenra (benralizumab), Nucala • (mepolizumab)] Anti-IgE therapy [e.g., Xolair (omalizumab)] • Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)] AND 7 - Prescribed by ONE of the following: Allergist Gastroenterologist Notes [a] State mandates may apply. Benefit/Cove	erage/Program Information			

Background:

Dupixent (dupilumab) is an interleukin-4 receptor alpha antagonist indicated for treatment of patients aged 6 months and older with moderate-to-severe atopic dermatitis whose disease is not adequately controlled with topical prescription therapies or when those therapies are not advisable. Dupixent can be used with or without topical corticosteroids. Dupixent is also indicated as an add-on maintenance treatment in patients with moderate-to-severe asthma aged 6 years and older with an eosinophilic phenotype or with oral corticosteroid dependent asthma, as an add-on maintenance treatment in adult patients with inadequately controlled chronic rhinosinusitis with nasal polyposis (CRSwNP), for the treatment of adult and pediatric patients aged 1 year and older, weighing at least 15 kg, with eosinophilic esophagitis (EoE), and for adult patients

with prurigo nodularis (PN).

Limitation of Use: Dupixent is not for the relief of acute bronchospasm or status asthmaticus.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limitations may be in place.

1 - Documentation of positive clinical response (e.g., improvement in visceral adipose tissue [VAT], decrease in waist circumference, belly appearance) while on Egrifta SV therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

3. Background

Benefit/Coverage/Program Information

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Background

Egrifta SV (tesamorelin) is a growth hormone releasing factor (GHRF) analog indicated for the

reduction of excess abdominal fat in HIV-infected patients with lipodystrophy.

Limitations of Use:

- Long-term cardiovascular safety of Egrifta SV has not been established.
- Not indicated for weight loss management.
- There are no data to support improved compliance with anti-retroviral therapies in HIVpositive patients taking Egrifta SV.

Emflaza

Prior Authorization Guideline

Guideline ID	GL-134438
Guideline Name	Emflaza
Formulary	UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	12/1/2023
P&T Approval Date:	10/20/2021
P&T Revision Date:	10/18/2023

1. Indications

Drug Name: Emflaza (deflazacort)

Duchenne muscular dystrophy (DMD) Indicated for the treatment of Duchenne muscular dystrophy (DMD) in patients 2 years of age and older.

2. Criteria

Product Name: Emflaza [a]	
Diagnosis	Duchenne Muscular Dystrophy
Guideline Type	Prior Authorization

1 - Published clinical evidence shows Emflaza is likely to produce equivalent therapeutic results as other available corticosteroids (e.g., prednisone); therefore, Emflaza is NOT MEDICALLY NECESSARY for treatment of Duchenne muscular dystrophy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	у.

3. Background

Benefit/Coverage/Program Information

Background

Emflaza (deflazacort) is a corticosteroid indicated for the treatment of Duchenne muscular dystrophy (DMD) in patients 2 years of age and older. [1]

In a report from the Guideline Development Subcommittee of the American

Academy of Neurology, regarding selection of prednisone versus deflazacort in the treatment of DMD, the following statement is made: "prednisone and deflazacort are possibly equally effective for improving motor function in patients with DMD (2 Class III studies). There is insufficient evidence to directly compare the effectiveness of prednisone vs deflazacort in cardiac function in patients with DMD (1 Class III study of a combined cohort).[2] The UnitedHealthcare Pharmacy and Therapeutics Committee has determined that Emflaza is Therapeutically Equivalent to prednisone in the treatment of DMD.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

Date	Notes
10/6/2023	Annual review, added SML, no changes to coverage criteria.

Empaveli

Prior Authorization Guideline

Guideline ID	GL-139888
Guideline Name	Empaveli
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	4/1/2024
P&T Approval Date:	2/18/2022
P&T Revision Date:	08/18/2023 ; 2/16/2024

1. Indications

Drug Name: Empaveli	
Paroxysmal Nocturnal Hemoglobinuria (PNH) Indicated for the treatment of adult patient	ts
with paroxysmal nocturnal hemoglobinuria (PNH).	

2. Criteria

Product Name: Empaveli [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

1 - Submission of medical records (e.g., chart notes, laboratory values, etc.) documenting the diagnosis of paroxysmal nocturnal hemoglobinuria (PNH) as confirmed by BOTH of the following:

- Flow cytometry analysis confirming presence of PNH clones
- Laboratory results, signs, and/or symptoms attributed to PNH (e.g., abdominal pain, anemia, dyspnea, extreme fatigue, smooth muscle dystonia, unexplained/unusual thrombosis, hemolysis/hemoglobinuria, kidney disease, pulmonary hypertension, etc.)

AND

2 - BOTH of the following:

2.1 Patient will not be prescribed Empaveli in combination with another complement inhibitor used for the treatment of PNH (e.g., Fabhalta, Soliris, Ultomiris)

AND

2.2 ONE of the following:

- Patient is not currently receiving a complement inhibitor medication used for the treatment of PNH (e.g., Fabhalta, Soliris, Ultomiris)
- Patient is currently receiving Soliris (eculizumab) which will be discontinued after an initial 4 week overlap period with Empaveli
- Patient is currently receiving Ultomiris (ravulizumab-cwvz) which will be stopped and Empaveli will be initiated no more than 4 weeks after the last dose

AND

3 - Prescribed by, or in consultation with, one of the following:

- Hematologist
- Oncologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Empave	Product Name: Empaveli [a]	
Approval Length	12 month(s)	
Therapy Stage	Reauthorization	
Guideline Type	Non Formulary	
Approval Criteria		
1 - Documentation of positive clinical response to Empaveli therapy (e.g., increased or stabilization of hemoglobin levels, reduction in transfusions, improvement in hemolysis, decrease in LDH, increased reticulocyte count, etc.)		
AND		
2 - Patient is not receiving Empaveli in combination with another complement inhibitor used for the treatment of PNH (e.g., Fabhalta, Soliris, Ultomiris)		
AND		
 3 - Prescribed by, or in consultation with, one of the following: Hematologist 		
Oncologist		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

3. Background

Benefit/Coverage/Program Information

Background:

Empaveli (pegcetacoplan) is a complement inhibitor indicated for the treatment of adult

patients with paroxysmal nocturnal hemoglobinuria (PNH).

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

1/30/2024	Added Fabhalta to list of examples of other complement inhibitors use d for the treatment of PNH. Revised initial authorization to 12 months. I ncluded criteria for therapeutic duplicationUpdated references.

Entresto

Prior Authorization Guideline

Guideline ID	GL-135553
Guideline Name	Entresto
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 04/21/2021 ; 08/19/2022 ; 10/19/2022 ; 11/17/2023

1. Indications

Drug Name: Entresto (valsartan-sacubitril)

Heart Failure Indicated to reduce the risk of cardiovascular death and hospitalization for heart failure. Benefits are most clearly evident in patients with left ventricular ejection fraction (LVEF) below normal. It is also indicated for the treatment of symptomatic heart failure with systemic left ventricular systolic dysfunction in pediatric patients aged one year and older.

2. Criteria

Product Name: Entresto [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria	
1 - As continuation of therapy initiated during an inpatient stay	
OR	
2 - Both of the following:	
 Diagnosis of pediatric heart failure with systemic left ventricular systolic dysfunction which is symptomatic Prescribed by or in consultation with a cardiologist 	
OR	
3 - All of the following:	
3.1 Diagnosis of heart failure (with or without hypertension)	
AND	
3.2 One of the following:	
3.2.1 Ejection fraction is less than or equal to 40 percent	
OR	
3.2.2 Both of the following:	
 Ejection fraction greater than 40 percent Patient has structural heart disease (i.e. left atrial enlargement (LAE) or left ventricular hypertrophy (LVH) 	
AND	
3.3 Heart failure is classified as one of the following:	

New York Heart	Association Class II Association Class III Association Class IV	
	AND	
3.4 Patient does not ha	ave a history of angioedema	
	AND	
	inue any use of concomitant ACE Inhibitor or ARB before initiating ACE inhibitors must be discontinued at least 36 hours prior to initiation	
	AND	
3.6 Patient is not concomitantly on aliskiren therapy		
AND		
3.7 Entresto is prescril	bed by, or in consultation with, a cardiologist	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

Product Name: Entresto [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - The Entresto dose has been titrated to a dose of 97 mg/103 mg twice daily or the maximum

labeled dose for pediatric patients, or to a maximum dose as tolerated by the patient	
AND	
2 - Documentation of positive clinical response to therapy	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply Limits may be in place.

Background:

Entresto (valsartan-sacubitril) is indicated to reduce the risk of cardiovascular death and hospitalization for heart failure. Erleada

Prior Authorization Guideline

Guideline ID	GL-136043
Guideline Name	Erleada
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 11/19/2021 ; 08/19/2022 ; 11/18/2022 ; 11/18/2022 ; 11/17/2023

1. Indications

Drug Name: Erleada (apalutamide)

Prostate cancer Indicated for the treatment of patients with non-metastatic castration-resistant prostate cancer. It is also indicated for the treatment of metastatic castration-sensitive prostate cancer.

2. Criteria

Product Name: Erleada [a]	
Diagnosis	Prostate Cancer
Approval Length	12 month(s)

Therapy Stage	Initial Authorization		
Guideline Type	Prior Authorization		
Approval Criteria			
1 - Diagnosis of prostate cancer			
	AND		
2 - One of the following	:		
2.1 Both of the following:			
Disease is castration-resistant or recurrent			
	Disease is non-metastatic		
	OR		
2.2 Both of the followir	na:		
Disease is castration-sensitive or naiveDisease is metastatic			
AND			
3 - One of the following			
3.1 Used in combination with a gonadotropin-releasing hormone (GnRH) analog [e.g. Lupron (leuprolide), Zoladex (goserelin), Trelstar (triptorelin), Vantas (histrelin), Firmagon (degarelix)]			
OR			
3.2 Patient has had bilateral orchiectomy			
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.		

Product Name: Erleada [a]	
Diagnosis	Prostate Cancer
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization
Approval Criteria	
1 - Patient does not show evidence of progressive disease while on Erleada therapy	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Erleada [a]	
Diagnosis	NCCN Recommended Regimens

Esbriet, Ofev

Prior Authorization Guideline

Guideline ID	GL-144130
Guideline Name	Esbriet, Ofev
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	04/21/2021 ; 09/15/2021 ; 04/20/2022 ; 09/21/2022 ; 03/15/2023 ; 08/18/2023 ; 3/20/2024

1. Indications

Drug Name: Esbriet (pirfenidone)

Idiopathic Pulmonary Fibrosis (IPF) Indicated for the treatment of idiopathic pulmonary fibrosis (IPF).

Drug Name: Ofev (nintedanib)

Idiopathic Pulmonary Fibrosis (IPF) Indicated for in the treatment of idiopathic pulmonary fibrosis (IPF).

Systemic Sclerosis-Associated Interstitial Lung Disease (SSc-ILD) Indicated for slowing the rate of decline in pulmonary function in patients with systemic sclerosis-associated interstitial lung disease (SSc-ILD).

Chronic Fibrosing Interstitial Lung Diseases (ILDs) with a Progressive Phenotype Indicated for the treatment of chronic fibrosing interstitial lung diseases (ILDs) with a progressive phenotype

2. Criteria

Product Name: Brand Esbriet, Ofev, generic pirfenidone [a]	
Diagnosis	Idiopathic pulmonary fibrosis [a]
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of idiopathic pulmonary fibrosis (IPF) as documented by ALL of the following criteria:

1.1 Exclusion of other known causes of interstitial lung disease (e.g., domestic and occupational environmental exposures, connective tissue disease, and drug toxicity), as documented by the following:

• ICD-10 Code J84.112 (Idiopathic pulmonary fibrosis)

AND

1.2 ONE of the following:

1.2.1 In patients NOT subjected to surgical lung biopsy, the presence of a usual interstitial pneumonia (UIP) pattern on high-resolution computed tomography (HRCT) revealing IPF or probable IPF [5]

OR

1.2.2 In patients subjected to a lung biopsy, both HRCT and surgical lung biopsy pattern reveal IPF or probable IPF [5]

AND

2 - ONE of the following:

- If request is for Esbriet, Esbriet is not being used in combination with Ofev
- If the request is for Ofev, Ofev is not being used in combination with Esbriet.

AND

3 - The prescriber is a pulmonologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Brand Esbriet, Ofev, generic pirfenidone, [a]	
Diagnosis	Idiopathic pulmonary fibrosis [a]
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Documentation of positive clinical response to therapy

AND

2 - ONE of the following:

- If request is for Esbriet, Esbriet is not being used in combination with Ofev
- If the request is for Ofev, Ofev is not being used in combination with Esbriet

Product Name: Ofev [a]	
Diagnosis	Systemic sclerosis-associated interstitial lung disease [a]
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of systemic sclerosis-associated interstitial lung disease (SSc-ILD) as documented by all of the following criteria:

1.1 ONE of the following:

1.1.1 Skin thickening of the fingers of both hands extending proximal to the metacarpophalangeal joints

OR

1.1.2 At least TWO of the following:

- Skin thickening of the fingers (e.g., puffy fingers, sclerodactyly of the fingers)
- Fingertip lesions (e.g., digital tip ulcers, fingertip pitting scars)
- Telangiectasia
- Abnormal nailfold capillaries
- Pulmonary arterial hypertension
- Raynaud's phenomenon
- SSc-related autoantibodies (e.g., anticentromere, anti-topoisomerase I, anti-RNA polymerase III)

AND

1.2 Presence of interstitial lung disease as determined by finding evidence of pulmonary fibrosis on HRCT, involving at least 10% of the lungs

AND

2 - Ofev is not being used in combination with Esbriet or pirfenidone

AND

3 - The prescriber is a pulmonologist	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Ofev [a]	
Diagnosis	Systemic sclerosis-associated interstitial lung disease [a]
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Documentation of positive clinical response to Ofev therapy

AND

2 - Ofev is not being used in combination with Esbriet or pirfenidone

AND

3 - The prescriber is a pulmonologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Ofev [a]	
Diagnosis	Chronic fibrosing interstitial lung disease with a progressive phenotype [a]
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of chronic fibrosing interstitial lung disease (ILD) with a progressive phenotype as documented by BOTH of the following criteria:

1.1 Presence of fibrotic ILD as determined by finding evidence of pulmonary fibrosis on HRCT, involving at least 10% of the lungs

AND

1.2 Patient is presenting with clinical signs of progression as defined by ONE of the following in the previous 24 months:

1.2.1 Forced vital capacity (FVC) decline of greater than 10%

OR

1.2.2 TWO of the following:

- FVC decline of greater than or equal to 5%, but less than 10%
- Patient is experiencing worsening respiratory symptoms
- Patient is exhibiting increasing extent of fibrotic changes on chest imaging

AND

2 - Ofev is not being used in combination with Esbriet or pirfenidone

AND

3 - The prescriber is a pulmonologist	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Esbriet (pirfenidone) is a pyridone inhibitor and Ofev (nintedanib) is a kinase inhibitor that are indicated for the treatment of idiopathic pulmonary fibrosis (IPF). Ofev is also indicated for slowing the rate of decline in pulmonary function in patients with systemic sclerosis-associated interstitial lung disease (SSc-ILD) and for the treatment of chronic fibrosing interstitial lung diseases (ILDs) with a progressive phenotype.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Evrysdi

Prior Authorization Guideline

Guideline ID	GL-129931
Guideline Name	Evrysdi
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	10/1/2023
P&T Approval Date:	7/20/2022
P&T Revision Date:	08/19/2022 ; 8/18/2023

1. Indications

Drug Name: Evrysdi (risdiplam)

Spinal muscular atrophy (SMA) Indicated for the treatment of spinal muscular atrophy (SMA) in pediatric and adult patients.

2. Criteria

Product Name: Evrysdi [a]	
Diagnosis	Spinal muscular atrophy (SMA)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization

Guideline Type	Non Formulary		
Approval Criteria			
1 - Diagnosis of spinal r	nuscular atrophy (SMA)		
	AND		
	cal records (e.g., chart notes, laboratory values) confirming the mutation chromosome 5q resulting in one of the following:		
	ene deletion or mutation of SMN1 gene (e.g., homozygous deletion of		
	5q13) rozygous mutation of SMN1 gene (e.g., deletion of SMN1 exon 7 [allele of SMN1 [allele 2])		
	AND		
3 - Patient is not depend	dent on either of the following:		
	 Invasive ventilation or tracheostomy Use of non-invasive ventilation beyond use for naps and nighttime sleep 		
	AND		
4 - Patient is not receiving concomitant chronic survival motor neuron (SMN) modifying therapy [e.g., Spinraza (nusinersen)]			
	AND		
5 - Patient has not previously received gene replacement therapy for the treatment of SMA [e.g., Zolgensma (onasemnogene abeparvovec-xioi)]			
	AND		
6 - Submission of medic	cal records (e.g., chart notes, laboratory values) documenting the		

baseline assessment of at least one of the following exams (based on patient age and motor ability) to establish baseline motor ability (baseline motor function analysis could include assessments evaluated prior to receipt of previous chronic SMN modifying therapy if transitioning therapy)*:

- Children's Hospital of Philadelphia Infant Test of Neuromuscular Disorders (CHOP INTEND)
- Hammersmith Infant Neurological Exam Part 2 (HINE-2)
- Hammersmith Functional Motor Scale Expanded (HFMSE)
- Upper Limb Module (ULM) Test
- Motor Function Measure 32 (MFM-32) Scale

AND

7 - Prescribed by a neurologist with expertise in the treatment of SMA

Notes	* Baseline assessments for patients less than 2 months of age requesti ng Evrysdi are not necessary in order to not delay access to initial ther apy in recently diagnosed infants. Initial assessments shortly post-ther apy can serve as baseline with respect to efficacy reauthorization asse ssment.
	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Evrysdi [a]	
Diagnosis	Spinal muscular atrophy (SMA)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

Approval Criteria

1 - Submission of medical records (e.g., chart notes, laboratory values) with the most recent results documenting a positive clinical response to Evrysdi compared to pretreatment baseline status (inclusive of baseline assessments prior to receipt of previous chronic SMN modifying therapy) as demonstrated by at least one of the following exams:

1.1 CHOP INTEND: One of the following:

• Improvement or maintenance of previous improvement of at least a 4 point increase in

score from pretreatment baseline Patient has achieved and maintained any new motor milestone from pretreatment baseline when they would otherwise be unexpected to do so OR **1.2** HINE-2: One of the following: Improvement or maintenance of previous improvement of at least 2 point (or maximal score) increase in ability to kick Improvement or maintenance of previous improvement of at least 1 point increase in any other HINE-2 milestone (e.g., head control, rolling, sitting, crawling, etc.), excluding voluntary grasp The patient exhibited improvement, or maintenance of previous improvement in more • HINE motor milestones than worsening, from pretreatment baseline (net positive improvement) Patient has achieved and maintained any new motor milestones when they would • otherwise be unexpected to do so OR 1.3 HFMSE: One of the following Improvement or maintenance of previous improvement of at least a 3 point increase in score from pretreatment baseline Patient has achieved and maintained any new motor milestone from pretreatment • baseline when they would otherwise be unexpected to do so OR **1.4** ULM: One of the following: Improvement or maintenance of previous improvement of at least a 2 point increase in • score from pretreatment baseline Patient has achieved and maintained any new motor milestone from pretreatment • baseline when they would otherwise be unexpected to do so OR

1.5 MFM-32: One of the following:

score from pretPatient has ach	r maintenance of previous improvement of at least a 3 point increase in treatment baseline nieved and maintained any new motor milestone from pretreatment they would otherwise be unexpected to do so		
	AND		
2 - Patient is not depen	2 - Patient is not dependent on either of the following:		
	AND		
	3 - Patient is not receiving concomitant chronic survival motor neuron (SMN) modifying therapy [e.g., Spinraza (nusinersen)]		
AND			
4 - Patient has not previously received gene replacement therapy for the treatment of SMA [e.g., Zolgensma (onasemnogene abeparvovec-xioi)]			
AND			
5 - Prescribed by a neurologist with expertise in the treatment of SMA			
Notes	 * Baseline assessments for patients less than 2 months of age requesting Evrysdi are not necessary in order to not delay access to initial ther apy in recently diagnosed infants. Initial assessments shortly post-ther apy can serve as baseline with respect to efficacy reauthorization assessment. [a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. 		

3. Background

Benefit/Coverage/Program Information

Background:

Evrysdi is a survival of motor neuron 2 (SMN2) splicing modifier indicated for the treatment of spinal muscular atrophy (SMA) in pediatric and adult patients.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Fabhalta

Prior Authorization Guideline

Guideline ID	GL-140206
Guideline Name	Fabhalta
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	4/1/2024
P&T Approval Date:	2/16/2024
P&T Revision Date:	

1. Indications

Drug Name: Fabhalta (iptacopan)

Paroxysmal Nocturnal Hemoglobinuria Indicated for the treatment of adults with paroxysmal nocturnal hemoglobinuria (PNH)

2. Criteria

Product Name: Fabhalta [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

Approval Criteria

1 - Submission of medical records (e.g., chart notes, laboratory values, etc.) documenting the diagnosis of paroxysmal nocturnal hemoglobinuria (PNH) as confirmed by BOTH of the following [2,3,4,5]:

- Flow cytometry analysis confirming presence of PNH clones
- Laboratory results, signs, and/or symptoms attributed to PNH (e.g., abdominal pain, anemia, dyspnea, extreme fatigue, smooth muscle dystonia, unexplained/unusual thrombosis, hemolysis/hemoglobinuria, kidney disease, pulmonary hypertension, etc.)

AND

2 - BOTH of the following:

2.1 Patient will not be prescribed Fabhalta in combination with another complement inhibitor used for the treatment of PNH (e.g., Empaveli, Soliris, Ultomiris)

AND

2.2 ONE of the following:

- Patient is not currently receiving a complement inhibitor medication used for the treatment of PNH (e.g., Empaveli, Soliris, Ultomiris)
- Patient is currently receiving Soliris (eculizumab) which will be stopped and Fabhalta will be initiated no more than 1 week after the last dose of Soliris
- Patient is currently receiving Ultomiris (ravulizumab-cwvz) which will be stopped and Fabhalta will be initiated no more than 6 weeks after the last dose of Ultomiris

AND

3 - Prescribed by, or in consultation with one of the following:

- Hematologist
- Oncologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Fabhalta [a]		
Approval Length	12 month(s)	
Therapy Stage	Reauthorization	
Guideline Type	Non Formulary	
Approval Criteria		
1 - Documentation of positive clinical response to Fabhalta therapy (e.g., increased or stabilization of hemoglobin levels, reduction in transfusions, improvement in hemolysis, decrease in LDH, increased reticulocyte count, etc.)		
AND		
2 - Patient is not receiving Fabhalta in combination with another complement inhibitor used for the treatment of PNH (e.g., Empaveli, Soliris, Ultomiris)

Fasenra

Prior Authorization Guideline

Guideline ID	GL-127955 Fasenra	
Guideline Name		
Formulary	UnitedHealthcare Government Programs Exchange Formulary SP	

Guideline Note:

Effective Date:	9/1/2023
P&T Approval Date:	7/21/2021
P&T Revision Date:	11/19/2021 ; 12/15/2021 ; 02/18/2022 ; 02/17/2023 ; 7/19/2023

1. Indications

Drug Name: Fasenra (benralizumab) prefilled auto-injector

Severe Asthma Indicated for the add-on maintenance treatment of patients with severe asthma aged 12 years and older, and with an eosinophilic phenotype.

2. Criteria

Product Name: Fasenra	Product Name: Fasenra (benralizumab) prefilled auto-injector [a]	
Diagnosis	Severe Asthma	
Approval Length	12 month(s)	
Therapy Stage	Initial Authorization	

Guideline Type	Non Formulary	
Approval Criteria		
1 - All of the following:		
1.1 Patient has been e UnitedHealthcare prior	established on therapy with Fasenra for severe asthma under an active authorization	
	AND	
1.2 Documentation of least one of the following	positive clinical response to Fasenra therapy as demonstrated by at ng:	
 Decreased utiliz 	Decreased utilization of rescue medications	
 Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing, etc.) Reduction in oral corticosteroid requirements 		
	AND	
1.3 Fasenra is being used in combination with an inhaled corticosteroin (ICS)-containing maintenance medication [e.g., Advair/AirDuo (fluticasone/salmeterol), Breo Ellipta (fluticasone furoate/vilanterol), Symbicort (budesonide/ formoterol), Trelegy Ellipta (fluticasone furoate/umeclidinium/vilanterol)]		
AND		
1.4 Patient is not receiving Fasenra in combination with any of the following:		
 Anti-IgE therapy 	5 therapy [e.g., Cinqair (resilizumab), Nucala (mepolizumab)] / [e.g., Xolair (omalizumab)]	
	4 therapy [e.g., Dupixent (dupilumab)] Iymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]	

AND

1.5 Prescribed by one of the following:	
 Pulmonologist Allergist Immunologist 	
OR	
2 - All of the following:	
2.1 Diagnosis of severe asthma	
AND	
2.2 Classification of asthma as uncontrolled or inadequately controlled as defined by at least one of the following:	
 Poor symptom control ((e.g., Asthma Control Questionnaire [ACQ] score consistently greater than 1.5 or Asthma Control Test [ACT] score consistently less than 20) Two or more bursts of systemic corticosteroids for at least 3 days each in the previous 12 months 	
 Asthma-related emergency treatment (e.g., emergency room visit, hospital admission, or unscheduled physician's office visit for nebulizer or other urgent treatment) Airflow limitation (e.g., after appropriate bronchodilator withhold forced expiratory volume in 1 second [FEV1] less than 80% predicted [in the face of reduced FEV1/forced vital capacity [FVC] defined as less than the lower limit of normal]) Patient is currently dependent on oral corticosteroids for the treatment of asthma 	
AND	
2.3 Submission of medical records (e.g., chart notes, laboratory values, etc.) confirming asthma is an eosinophilic phenotype as defined by a baseline (pre-treatment) peripheral blood eosinophil level \geq 150 cells/µL	
AND	
2.4 Fasenra will be used in combination with one of the following:	
2.4.1 One maximally dosed (appropriately adjusted for age) combination inhaled corticosteroid (ICS)/long-acting beta2 agonist (LABA) [e.g., Advair/AirDuo Respiclick (fluticasone propionate/salmeterol), Symbicort (budesonide/formoterol), Breo Ellipta	

(fluticasone furoate/vilanterol)] OR **2.4.2** Combination therapy including both of the following: One maximally dosed (appropriately adjusted for age) ICS product [e.g., ciclesonide • (Alvesco), mometasone furoate (Asmanex), beclomethasone dipropionate (QVAR)] One additional asthma controller medication [e.g., LABA - olodaterol (Striverdi) or • indacaterol (Arcapta); leukotriene receptor antagonist – montelukast (Singulair); theophylline] AND **2.5** Patient is not receiving Fasenra in combination with any of the following: Anti-interleukin 5 therapy [e.g., Cinqair (resilizumab), Nucala (mepolizumab)] • Anti-IgE therapy [e.g., Xolair (omalizumab)] • Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)] • Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)] • AND **2.6** Prescribed by one of the following: Pulmonologist • Allergist Immunologist Notes [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl

Product Name: Fasenra (benralizumab) prefilled auto-injector [a]	
Diagnosis	Severe Asthma
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

у.

Approval Criteria

1 - Documentation of positive clinical response to Fasenra therapy as demonstrated by at least one of the following:

- Reduction in the frequency of exacerbations
- Decreased utilization of rescue medications
- Increase in percent predicted FEV1 from pretreatment baseline
- Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing, etc.)
- Reduction in oral corticosteroid requirements

AND

2 - Fasenra is being used in combination with an ICS-containing maintenance medication [e.g., Advair/AirDuo (fluticasone/salmeterol), Breo Ellipta (fluticasone furoate/vilanterol), Symbicort (budesonide/ formoterol), Trelegy Ellipta (fluticasone furoate/umeclidinium/vilanterol)]

AND

3 - Patient is not receiving Fasenra in combination with any of the following:

- Anti-interleukin 5 therapy [e.g., Cinqair (resilizumab), Nucala (mepolizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

	у.

3. Background

Benefit/Coverage/Program Information

Background:

Fasenra (benralizumab) is an interleukin-5 receptor alpha-directed cytolytic monoclonal

antibody indicated for the add-on maintenance treatment of patients with severe asthma aged 12 years and older, and with an eosinophilic phenotype.

Fasenra is not used for treatment of other eosinophilic conditions or for relief of acute bronchospasm or status asthmaticus. [1]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.
- The prefilled syringe is typically covered under the medical benefit. Please refer to the United Healthcare Medical Benefit Drug Policy: "Respiratory Interleukins (Cinqair[®], Fasenra[®], and Nucala[®])".

5. Revision History

Date	Notes
7/20/2023	Annual review with no updates to coverage criteria. Updated reference s.
7/20/2023	Updated coverage criteria for severe asthma to align with GINA & ERS /ATS guidelines. Added/updated examples of ICS-containing maintena nce medications, removed requirement that peripheral blood eosinophi I level must be within 6 weeks, and removed bypass of eosinophilic ph enotype requirement for patients currently dependent on maintenance therapy with oral corticosteroids. Updated references.

Fentanyl Transmucosal

Prior Authorization Guideline

Guideline ID	GL-124373	
Guideline Name	Fentanyl Transmucosal	
Formulary	UnitedHealthcare Government Programs Exchange Formulary	

Guideline Note:

Effective Date:	6/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 09/15/2021 ; 02/18/2022 ; 4/19/2023

1. Indications

Drug Name: Actiq (fentanyl lozenge), Fentora (fentanyl buccal tablet), fentanyl buccal tablet (authorized generic of Fentora), Lazanda (fentanyl nasal spray), Subsys (fentanyl sublingual spray)

Breakthrough cancer pain Indicated for the management of breakthrough cancer pain in patients who are already receiving and have developed tolerance to around-the-clock opioid therapy for their underlying persistent cancer pain.

2. Criteria

Product Name: Brand Actiq, fentanyl lozenge (generic Actiq), brand Fentora, fentanyl buccal tablet (AG of Fentora), Lazanda, or Subsys [a]	
Approval Length	12 month(s)

Guideline Type	Prior Authorization	
Approval Critoria		
Approval Criteria		
1 - One of the following		
1.1 Submission of med	dical records demonstrating all of the following:	
	anagement of breakthrough pain associated with a cancer diagnosis be documented in the medical record).	
	AND	
1.1.2 Patient must hat demonstrate tolerance to	ve at least a one week history of one of the following medications to to opioids:	
 Morphine sulfate at a dose of greater than or equal to 60 mg/day Fentanyl transdermal patch at a dose of greater than or equal to 25 mcg/hr Oxycodone at a dose of greater than or equal to 30 mg/day Oral hydromorphone at a dose of greater than or equal to 8 mg/day Oral oxymorphone at a dose of greater than or equal to 25 mg/day An alternative opioid at an equianalgesic dose (e.g., oral methadone greater than or equal to 20 mg/day) 		
	AND	
1.1.3 The patient is currently taking a long-acting opioid around the clock for cancer pain.		
	AND	
1.1.4 One of the follow	wing:	
1.1.4.1 The patient is not concurrently receiving an alternative transmucosal fentanyl product.		
	OR	
	currently receiving an alternative transmucosal fentanyl product AND sting the termination of all current authorizations for alternative	

transmucosal fentanyl products in order to begin treatment with the requested medication. Only one transmucosal fentanyl product will be approved at a time. If previous authorizations cannot be terminated, the PA request will be denied.

OR

1.2 The patient is currently taking Actiq, fentanyl lozenge (generic Actiq), Fentora, fentanyl buccal tablet (AG of Fentora), Lazanda or Subsys and does not meet the prior authorization criteria requirements based on the FDA-approved indication for breakthrough cancer pain (a one-time fill may be approved for transition to an alternative treatment).

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Actiq, Fentora, Lazanda, and Subsys, are rapid-acting opioid analgesics indicated for the management of breakthrough cancer pain in patients who are already receiving and have developed tolerance to around-the-clock opioid therapy for their underlying persistent cancer pain. Patients considered opioid tolerant are those who are taking at least 60 mg of oral morphine daily, at least 25 mcg/hour of transdermal fentanyl, at least 30 mg of oxycodone daily, at least 8 mg of oral hydromorphone daily, at least 25 mg of oral oxymorphone daily or an equianalgesic dose of another opioid for a week or longer. Patients must remain on around-the-clock opioids while taking a rapid-acting fentanyl product. Actiq, Fentora, Lazanda, and Subsys must not be used in opioid non-tolerant patients because life-threatening hypoventilation could occur at any dose in patients not on a chronic regimen of opiates.

Additional Clinical Programs:

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Filspari

Prior Authorization Guideline

Guideline ID	GL-124150
Guideline Name	Filspari
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	6/1/2023
P&T Approval Date:	4/19/2023
P&T Revision Date:	

1. Indications

Drug Name: Filspari

immunoglobulin A nephropathy (IgAN) Indicated to reduce proteinuria in adults with primary immunoglobulin A nephropathy (IgAN) at risk of rapid disease progression, generally a urine protein-to-creatinine ratio (UPCR) \geq 1.5 g/g.

2. Criteria

Product Name: Filspari [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

Approval Criteria 1 - Diagnosis of primary immunoglobulin A nephropathy (IgAN) confirmed by renal biopsy AND 2 - Patient is at risk of rapid disease progression [e.g., generally a urine protein-to-creatinine ratio (UPCR) greater than or equal to 1.5 g/g, or by other criteria such as clinical risk scoring using the International IgAN Prediction Tool] AND 3 - Used to reduce proteinuria AND 4 - Estimated glomerular filtration rate (eGFR) ≥ 30 mL/min/1.73 m2 AND **5** - Both of the following: **5.1** Patient is on a maximized stable dose with one of the following prior to initiating therapy: maximally tolerated angiotensin converting enzyme (ACE) inhibitor (e.g., captopril, enalapril) maximally tolerated angiotensin II receptor blocker (ARB) (e.g., candesartan, valsartan) AND 5.2 Use of renin-angiotensin-aldosterone system (RAAS) inhibitors (e.g., ACE inhibitors, ARBs), endothelin receptor antagonists [(ERAs) e.g., Letairis, Opsumit, Tracleer)], and Tekturna will be discontinued prior to initiating treatment

AND

6 - History of failure, contraindication or intolerance to a 30-day trial of a glucocorticoid (e.g., methylprednisolone, prednisone)

AND

7 - Prescribed by or in consultation with a nephrologist

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl v.
criteria. Other policies and utilization management programs may apply.

Product Name: Filspari [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

Approval Criteria

1 - Documentation of positive clinical response demonstrated by a reduction in proteinuria

[a] State mandates may apply. Any federal regulatory requirements an
d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background

Filspari (sparsentan) is indicated to reduce proteinuria in adults with primary immunoglobulin A nephropathy (IgAN) at risk of rapid disease progression, generally a urine protein-to-creatinine ratio (UPCR) \geq 1.5 g/g.

This indication is approved under accelerated approval based on a reduction in proteinuria. It

has not been established whether Filspari slows kidney function decline in patients with IgAN. Continued approval for this indication may be contingent upon verification and description of clinical benefit in a confirmatory clinical trial.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program.
- Supply limitations may be in place

4. References

Guideline Type	Prior Authorization	
Approval Criteria		
1 - Diagnosis of here	editary angioedema (HAE) as confirmed by ONE of the following:	
	-INH) deficiency or dysfunction (Type I or II HAE) as documented by ONE laboratory standard):	
0	enic level below the lower limit of normal tional level below the lower limit of normal	
	OR	
1.2 HAE with norm	al C1 inhibitor levels and ONE of the following:	
mutationRecurring an	esence of a FXII, angiopoietin-1, plasminogen gene mutation, or kininogen gioedema attacks that are refractory to high-dose antihistamines with mily history of angioedema	
	AND	
2 - BOTH of the follo	owing:	
2.1 Prescribed for t	he acute treatment of HAE attacks	
	AND	
2.2 Not used in combination with other products indicated for the acute treatment of HAE attacks (e.g., Berinert, Kalbitor, or Ruconest)		
AND		
3 - Prescribed by ON	IE of the following:	

- Immunologist
- Allergist

Product Name: Brand Firazyr, generic icatibant, Sajazir		
Approval Length	12 month(s)	
Therapy Stage	Reauthorization	
Guideline Type	Prior Authorization	

Approval Criteria

1 - Documentation of positive clinical response

AND

2 - BOTH of the following:

2.1 Prescribed for the acute treatment of HAE attacks

AND

2.2 Not used in combination with other products indicated for the acute treatment of HAE attacks (e.g., Berinert, Kalbitor, or Ruconest)

AND

3 - Prescribed by ONE of the following:

- Immunologist
- Allergist

3. Background

Benefit/Coverage/Program Information

Background:

Firazyr (icatibant) is a bradykinin B2 receptor antagonist indicated for treatment of acute attacks of hereditary angioedema (HAE) in adults 18 years of age and older. [1] Sajazir (icatibant) injection is a bradykinin B2 receptor antagonist indicated for treatment of acute attacks of HAE in adults 18 years of age and older.[6]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Forteo

Prior Authorization Guideline

Guideline ID	GL-136318
Guideline Name	Forteo
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	2/1/2024
P&T Approval Date:	1/20/2021
	03/17/2021 ; 03/17/2021 ; 10/20/2021 ; 01/19/2022 ; 01/18/2023 ; 02/17/2023 ; 10/18/2023 ; 11/17/2023

1. Indications

Drug Name: Forteo (teriparatide) and Teriparatide Injection (teriparatide)

Postmenopausal patients with osteoporosis at high risk of fracture Indicated for the treatment of postmenopausal patients with osteoporosis who are at high risk for fracture, defined as a history of osteoporotic fracture, multiple risk factors for fracture, or patients who have failed or are intolerant to other available osteoporosis therapy.

Increase of bone mass in men with primary or hypogonadal osteoporosis at high risk for fracture Indicated to increase bone mass in patients with primary or hypogonadal osteoporosis at high risk for fracture, defined as a history of osteoporotic fracture, multiple risk factors for fracture, or patients who have failed or are intolerant to other available osteoporosis therapy.

Glucocorticoid-induced osteoporosis at high risk for fracture Indicated for the treatment of patients with osteoporosis associated with sustained systemic glucocorticoid therapy (daily dosage equivalent to 5 mg or greater of prednisone) at high risk for fracture, defined as a history of osteoporotic fracture, multiple risk factors for fracture, or patients who have failed or

are intolerant to other available osteoporosis therapy.

2. Criteria

Product Name: Forteo or Teriparatide Injection [a]		
Diagnosis	Osteoporosis	
Approval Length	24 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Non Formulary	
Approval Criteria		
1 - One of the following	diagnoses:	
1.1 Both of the following:		
Patient is femaleDiagnosis of postmenopausal osteoporosis		
	OR	
1.2 Both of the following	ng:	
Patient is maleDiagnosis of ost	teoporosis	
	AND	

2 - One of the following:

Patient is at high risk of fracture [e.g., recent fracture (e.g., within the past 12 months), fractures while on approved osteoporosis therapy, multiple fractures, fractures while on drugs causing skeletal harm (e.g., long-term glucocorticoids), very low T-score (e.g., less than -3.0), high risk for falls or history of injurious falls, and very high fracture probability by FRAX® (fracture risk assessment tool) (e.g., major osteoporosis fracture >30%, hip fracture >4.5%)]

	tory of failure, intolerance or contraindication to other available rapy (e.g., alendronate, denosumab, risedronate, zoledronate)
	AND
3 - One of the following:	
	has not exceeded a total of 24 months of cumulative use of alogs (e.g., Teriparatide Injection, Forteo, Tymlos)
	OR
3.2 Both of the following	g:
(e.g., Teriparatide	ly or has previously been treated with parathyroid hormone analogs a Injection, Forteo, Tymlos) ttests that the patient remains at or has returned to having a high risk
	AND
4 - Patient has a history	of failure, intolerance or contraindication to Tymlos
	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
	^Tried/failed alternative(s) are supported by FDA labeling.

Product Name: Forteo or Teriparatide Injection [a]	
Diagnosis	Osteoporosis
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

1 - Treatment duration of parathyroid hormones (e.g., teriparatide injection, Forteo, Tymlos) has

not exceeded a total of 24 months during the patient's lifetime

OR

2 - Patient remains at or has returned to having a high risk for fracture despite a total of 24 months of use of parathyroid hormones (e.g., teriparatide injection, Forteo, Tymlos)

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Forteo or Teriparatide Injection [a]	
Diagnosis	Osteoporosis Associated with Sustained Systemic Glucocorticoid Therapy
Approval Length	24 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

Approval Criteria

1 - Diagnosis of glucocorticoid-induced osteoporosis

AND

2 - History of prednisone or its equivalent at a dose greater than or equal to 5 mg/day

AND

3 - One of the following:

- Patient is at high risk of fracture [e.g., recent fracture (e.g., within the past 12 months), fractures while on approved osteoporosis therapy, multiple fractures, fractures while on drugs causing skeletal harm (e.g., long-term glucocorticoids), very low T-score (e.g., less than −3.0), high risk for falls or history of injurious falls, and very high fracture probability by FRAX® (fracture risk assessment tool) (e.g., major osteoporosis fracture >30%, hip fracture >4.5%)]
- Patient has a history of failure, intolerance or contraindication to other available

osteoporosis therapy (e.g., alendronate, denosumab, risedronate, zoledronate)

AND

4 - One of the following:

4.1 Treatment duration has not exceeded a total of 24 months of cumulative use of parathyroid hormone analogs (e.g., Teriparatide Injection, Forteo, Tymlos)

OR

4.2 Both of the following:

- Patient is currently or has previously been treated with parathyroid hormone analogs (e.g., Teriparatide Injection, Forteo, Tymlos)
- The prescriber attests that the patient remains at or has returned to having a high risk for fracture

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
y. ^Tried/failed alternative(s) are supported by FDA labeling.

3. Background

Benefit/Coverage/Program Information

Background:

Forteo (teriparatide) and Teriparatide Injection (teriparatide) are recombinant human parathyroid hormone with three FDA approved indications:¹

Treatment of postmenopausal patients with osteoporosis at high risk of fracture :

Forteo and Teriparatide Injection are indicated for the treatment of postmenopausal patients with osteoporosis who are at high risk for fracture, defined as a history of osteoporotic fracture, multiple risk factors for fracture, or patients who have failed or are intolerant to other available osteoporosis therapy.

Increase of bone mass in men with primary or hypogonadal osteoporosis at high risk for fracture:

Forteo and Teriparatide Injection are indicated to increase bone mass in patients with primary or hypogonadal osteoporosis at high risk for fracture, defined as a history of osteoporotic fracture, multiple risk factors for fracture, or patients who have failed or are intolerant to other available osteoporosis therapy.

Treatment of patients with glucocorticoid-induced osteoporosis at high risk for fracture:

Forteo and Teriparatide Injection are indicated for the treatment of patients with osteoporosis associated with sustained systemic glucocorticoid therapy (daily dosage equivalent to 5 mg or greater of prednisone) at high risk for fracture, defined as a history of osteoporotic fracture, multiple risk factors for fracture, or patients who have failed or are intolerant to other available osteoporosis therapy.

The American Association of Clinical Endocrinologists/American College of Endocrinology recommend the use of Tymlos in patients unable to sue oral therapy and as initial therapy for patients at very high fracture risk defined as the following: patients with a recent fracture (e.g., within the past 12 months), fractures while on approved osteoporosis therapy, multiple fractures, fractures while on drugs causing skeletal harm (e.g., long-term glucocorticoids), very low T-score (e.g., less than -3.0), high risk for falls or history of injurious falls, and very high fracture probability by FRAX® (fracture risk assessment tool) (e.g., major osteoporosis fracture

>30%, hip fracture >4.5%) or other validated fracture risk algorithm to be at very high fracture risk.[2]

Because of the unknown relevance of the rodent osteosarcoma findings to humans, cumulative use of Forteo for more than 2 years during a patient's lifetime should only be considered if a patient remains at or has returned to having a high risk for fracture.

The safety and efficacy of Teriparatide Injection and Tymlos have not been evaluated beyond 2 years of treatment. Cumulative use of Forteo and other parathyroid hormone analogs (e.g., Forteo, Teriparatide) for more than 2 years during a patient's lifetime is not recommended. [5-6]

Coverage will be provided for members who meet the above criteria.

Additional Clinical Rules:

 Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

1. Indications

Drug Name: Follistim AQ (follitropin beta)

Induction of ovulation and pregnancy in anovulatory infertile women Indicated for induction of ovulation and pregnancy in anovulatory infertile women in whom the cause of infertility is functional and not due to primary ovarian failure.

Pregnancy in normal ovulatory women Indicated for pregnancy in normal ovulatory women undergoing controlled ovarian stimulation as part of an in vitro fertilization (IVF) or intracytoplasmic sperm injection (ICSI) cycle.

Induction of spermatogenesis in men Indicated in males for induction of spermatogenesis in men with primary and secondary hypogonadotropic hypogonadism (HH) in whom the cause of infertility is not due to primary testicular failure. [3]

Drug Name: Gonal-f (follitropin alfa)

Induction of ovulation and pregnancy in oligo-anovulatory infertile women Indicated for

the induction of ovulation and pregnancy in the oligo-anovulatory infertile patient in whom the cause of infertility is functional and not due to primary ovarian failure.

Development of multiple follicles Indicated for the development of multiple follicles in ovulatory women participating in an Assisted Reproductive Technology (ART) program.

Induction of spermatogenesis in men Indicated for the induction of spermatogenesis in men with primary and secondary hypogonadotropic hypogonadism in whom the cause of infertility is not due to primary testicular failure. [4,5]

Drug Name: Gonal-f RFF (follitropin alfa), Gonal-F RFF Redi-Ject (follitropin alfa)

Induction of ovulation and pregnancy in oligo-anovulatory infertile women Indicated for the induction of ovulation and pregnancy in the oligo-anovulatory infertile patient in whom the cause of infertility is functional and not due to primary ovarian failure.

Development of multiple follicles Indicated for the development of multiple follicles in ovulatory women participating in an Assisted Reproductive Technology (ART) program.

Product Name: Follistim AQ, Gonal-F, Gonal-F RFF, Gonal-F RFF Rediject [a]	
Diagnosis	Controlled Ovarian Stimulation**
Approval Length	2 month(s)
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of infertility

AND

2 - For the development of multiple follicles (controlled ovarian stimulation)

AND

3 - ONE of the following:

3.1 BOTH of the following:		
3.1.1 ONE of the follo	wing exists:	
 Diminished ovar Endometriosis Male factor infer Tubal factor infer Unexplained infer Uterine factor in Ovulatory dysfur Recurrent pregntion Failure to achieve 	rtility ertility fertility nction	
	AND	
3.1.2 Will be used in a	conjunction with assisted reproductive technology (ART)	
	OR	
3.2 BOTH of the follow	ving:	
3.2.1 ONE of the follo	wing exists:	
 Diminished ovarian reserve Mild to moderate male factor infertility Minimal to mild endometriosis Unilateral tubal factor infertility Unexplained infertility 		
AND		
3.2.2 Will be used in conjunction with intrauterine insemination (IUI)		
Notes	**Requests for an infertility related diagnosis other than ovulation induc tion for members in New Jersey, North Carolina, Kansas, and Texas sh ould be denied as a benefit exclusion.	
	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

Product Name: Follistin	n AQ, Gonal-F [a]
Diagnosis	Male Hypogonadotropic Hypogonadism**
Approval Length	2 month(s)
Guideline Type	Prior Authorization
Approval Criteria	
1 - ONE of the following	g:
1.1 Diagnosis of male	primary hypogonadotropic hypogonadism
	OR
1.2 Diagnosis of male secondary hypogonadotropic hypogonadism	
	AND
2 - For induction of spermatogenesis	
	AND
3 - Infertility is not due t	o primary testicular failure
Notes	**Requests for an infertility related diagnosis other than ovulation induc tion for members in New Jersey, North Carolina, Kansas and Texas sh ould be denied as a benefit exclusion.
	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

The body produces two types of gonadotropins, follicle-stimulating hormone (FSH) and luteinizing hormone (LH), both of which play a role in fertility and human reproduction. After they are produced by the pituitary gland, gonadotropins trigger production of other sex hormones which then promote production of egg and sperm. Gonadotropins are used in the treatment of infertility, a disease of the reproductive system defined by the failure to achieve a clinical pregnancy after 12 months or more of regular unprotected sexual intercourse or therapeutic donor insemination. [1,2,14]

Follistim AQ (follitropin beta) is indicated for induction of ovulation and pregnancy in anovulatory infertile women in whom the cause of infertility is functional and not due to primary ovarian failure. It is also indicated for pregnancy in normal ovulatory women undergoing controlled ovarian stimulation as part of an in vitro fertilization (IVF) or intracytoplasmic sperm injection (ICSI) cycle. In males, Follistim AQ is indicated for induction of spermatogenesis in men with primary and secondary hypogonadotropic hypogonadism (HH) in whom the cause of infertility is not due to primary testicular failure. [3]

Gonal-f, Gonal-f RFF and Gonal-f RFF Redi-Ject (follitropin alfa) are indicated for the induction of ovulation and pregnancy in oligo-anovulatory infertile women in whom the cause of infertility is functional and not due to primary ovarian failure. Gonal-f, Gonal-f RFF, and Gonal-f RFF Redi-ject are also indicated for the development of multiple follicles in ovulatory women participating in an Assisted Reproductive Technology (ART) program. Gonal-f is indicated for the induction of spermatogenesis in men with primary and secondary hypogonadotropic hypogonadism for whom the cause of infertility is not due to primary testicular failure. [4,5]

The clinically appropriate dosing for FSH agents is 450 IU/day or less when used for an ART cycle, or 225 IU/day or less when used for ovulation induction or controlled ovarian stimulation, for not more than 14 days of treatment. Exceeding this daily dose and duration of treatment has not been proven to be efficacious in terms of pregnancy outcome. [9,13]

Additional Clinical Programs:

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Furoscix

Prior Authorization Guideline

Guideline ID	GL-144131
Guideline Name	Furoscix
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	3/15/2023
P&T Revision Date:	3/20/2024

1. Indications

Drug Name: Furoscix (furosemide injection)

Chronic Heart Failure Indicated for the treatment of congestion due to fluid overload in adults with NYHA Class II/III chronic heart failure.

2. Criteria

Product Name: Furoscix	
Approval Length	1 month(s)
Guideline Type	Non Formulary

Approval Criteria
1 - Diagnosis of chronic heart failure
AND
2 - Heart failure is classified as ONE of the following:
 New York Heart Association (NYHA) class II heart failure New York Heart Association (NYHA) class III heart failure
AND
3 - Patient has signs or symptoms of congestion due to fluid overload
AND
4 - Patient is established on background loop diuretic therapy (e.g., furosemide, torsemide, bumetanide)
AND
5 - BOTH of the following:
 Patient does not require ongoing emergency care or hospitalization for heart failure, acute pulmonary edema, or other conditions Patient is currently a candidate for parenteral diuresis outside of the hospital
AND
6 - Patient has an estimated creatine clearance greater than 30ml/min
AND
7 - Furoscix is prescribed by or in consultation with a cardiologist

3. Background

Benefit/Coverage/Program Information

Background:

Furoscix (furosemide injection) is indicated for the treatment of congestion due to fluid overload in adults with NYHA Class II/III chronic heart failure. [1]

Limitations of use:

Furoscix is not indicated for emergency situations or in patients with acute pulmonary edema.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

Gleevec

Prior Authorization Guideline

Guideline ID	GL-133975
Guideline Name	Gleevec
Formulary	UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	12/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 10/20/2021 ; 10/19/2022 ; 10/18/2023

1. Indications

Drug Name: Gleevec (Imatinib mesylate)

Philadelphia positive chronic myeloid leukemia (Ph+ CML) Indicated for the treatment of Philadelphia positive chronic myeloid leukemia (Ph+ CML) in chronic phase, blast crisis, or accelerated phase after failure of interferon-alpha therapy and for newly diagnosed adult and pediatric patients with Philadelphia chromosome positive chronic myeloid leukemia (Ph+ CML) in chronic phase

Philadelphia positive acute lymphoblastic leukemia (Ph+ ALL) Indicated for the treatment of relapsed or refractory Philadelphia positive acute lymphoblastic leukemia (Ph+ ALL) and for newly diagnosed Ph+ ALL in combination with chemotherapy

Myelodysplastic/myeloproliferative (MDS/MPD) disease Indicated for the treatment of myelodysplastic/myeloproliferative (MDS/MPD) disease associated with platelet-derived growth factor receptor (PDGFR) gene re-arrangements

Aggressive systemic mastocytosis (ASM) Indicated for the treatment of aggressive systemic mastocytosis (ASM) without the D816V c-Kit mutation or with c-Kit mutational status unknown

Hypereosinophilic syndrome (HES)/chronic eosinophilic leukemia (CEL) Indicated for the treatment of patients with hypereosinophilic syndrome (HES)/chronic eosinophilic leukemia (CEL) who have the FIP1L1-PDGFRα fusion kinase (mutational analysis or FISH demonstration of CHIC2 allele deletion) and for patients with HES and/or CEL who are FIP1L1-PDGFRα fusion kinase negative or unknown

Dermatofibrosarcoma protuberans (DFSP) Indicated for the treatment of unresectable, recurrent and/or metastatic dermatofibrosarcoma protuberans (DFSP)

Gastrointestinal stromal tumors (GIST) Indicated for the treatment of Kit (CD117) positive unresectable and/or metastatic malignant gastrointestinal stromal tumors (GIST) or adjuvant treatment of patients following resection of Kit (CD117) positive GIST.

<u>Off Label Uses:</u> Other indications The National Cancer Comprehensive Network (NCCN) also recommends the use of imatinib mesylate (Gleevec) for AIDS-related Kasposi sarcoma, desmoid tumors, chordomas, pigmented villonodular synovitis/tenosynovial giant cell tumor (PVNS/TGCT), C-KIT mutated melanoma, primary and follow-up chronic myelogenous/myeloid leukemia (CML) in all phases, steroid-refractory graft-versus-host disease (GVHD), and myeloid/lymphoid neoplasms. Product Name: Brand Gleevec, generic imatinib [a]	
Diagnosis	Acute Lymphoblastic Leukemia (ALL)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of Philadelphia chromosome-positive acute lymphoblastic leukemia (Ph+ALL)

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Brand Gleevec, generic imatinib [a]	
Acute Lymphoblastic Leukemia (ALL)	
12 month(s)	
Reauthorization	
Prior Authorization	

Approval Criteria	
1 - Patient does not show evidence of progressive disease while on Gleevec therapy	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Brand Gleevec, generic imatinib [a]	
Diagnosis	Myelodysplastic Disease (MDS) / Myeloproliferative Disease (MPD)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of myelodysplastic/myeloproliferative disease (MDS/MPD)

AND

2 - Platelet-derived growth factor receptor (PDGFR) gene re-arrangements

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl y.

Product Name: Brand Gleevec, generic imatinib [a]	
Diagnosis	Myelodysplastic Disease (MDS) / Myeloproliferative Disease (MPD)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Patient does not show evidence of progressive disease while on Gleevec therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Brand Gleevec, generic imatinib [a]	
Diagnosis	Aggressive Systemic Mastocytosis (ASM)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of aggressive systemic mastocytosis (ASM)

AND

2 - One of the following:

- KIT D816V mutation negative or unknown
- Well-differentiated SM [WDSM]
- Eosinophilia is present with FIP1L1-PDGFRA fusion gene

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Brand Gleevec, generic imatinib [a]		
Diagnosis	Aggressive Systemic Mastocytosis (ASM)	
Approval Length	12 month(s)	
Therapy Stage	Reauthorization	
Guideline Type	Prior Authorization	

Approval Criteria

1 - Patient does not show evidence of progressive disease while on Gleevec therapy	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Brand Gleevec, generic imatinib [a]	
Diagnosis	Hypereosinophilic Syndrome (HES) / Chronic Eosinophilic Leukemia (CEL)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Г

1 - Diagnosis of at least one of the following:

- •
- Hypereosinophilic syndrome (HES) Chronic eosinophilic leukemia (CEL) •

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information Background: Imatinib mesylate (Gleevec) is a kinase inhibitor indicated for the treatment of: [1] Newly diagnosed adult and pediatric patients with Philadelphia chromosome positive chronic myeloid leukemia (Ph+ CML) in chronic phase Philadelphia chromosome positive chronic myeloid leukemia (Ph+ CML) in chronic phase. blast crisis, or accelerated phase after failure of interferon-alpha therapy Relapsed or refractory Philadelphia chromosome positive acute lymphoblastic leukemia • (Ph+ALL) Newly diagnosed Ph+ ALL in combination with chemotherapy Myelodysplastic / myeloproliferative (MDS/MPD) diseases associated with plateletderived growth factor receptor (PDGFR) gene re-arrangements Aggressive systemic mastocytosis (ASM) without the D816V c-Kit mutation or with c-Kit • mutational status unknown Hypereosinophilic syndrome (HES) and/or chronic eosinophilic leukemia (CEL) who have the FIP1L1-PDGFRα fusion kinase (mutational analysis or FISH demonstration of CHIC2 allele deletion) and for patients with HES and/or CEL who are FIP1L1-PDGFRa fusion kinase negative or unknown

- Unresectable, recurrent and/or metastatic dermatofibrosarcoma protuberans (DFSP)
- Kit (CD117) positive unresectable and/or metastatic malignant gastrointestinal stromal tumors (GIST)
- Adjuvant treatment of patients following resection of Kit (CD117) positive GIST

The National Cancer Comprehensive Network (NCCN) also recommends the use of imatinib mesylate (Gleevec) for AIDS-related Kasposi sarcoma, desmoid tumors, chordomas, pigmented villonodular synovitis/tenosynovial giant cell tumor (PVNS/TGCT), C-KIT mutated melanoma, primary and follow-up chronic myelogenous/myeloid leukemia (CML) in all phases, steroid-refractory graft-versus-host disease (GVHD), and myeloid/lymphoid neoplasms.²

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

GLP1 Receptor Agonists

Prior Authorization Guideline

Guideline ID	GL-133189
Guideline Name	GLP1 Receptor Agonists
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	12/14/2022
P&T Revision Date:	8/18/2023

1. Indications

Drug Name: Mounjaro (tirzepatide), Ozempic (semaglutide), Rybelsus (semaglutide), and Trulicity (dulaglutide)

Type 2 Diabetes Mellitus Indicated as an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus.

Drug Name: Bydureon BCise (exenatide extended-release), and Victoza (liraglutide)

Type 2 Diabetes Mellitus Indicated as an adjunct to diet and exercise to improve glycemic control in patients 10 years of age and older with type 2 diabetes mellitus.

Drug Name: Ozempic (semaglutide), Trulicity (dulaglutide), and Victoza (liraglutide)

Type 2 Diabetes Mellitus Indicated to reduce the risk of major adverse cardiovascular events (cardiovascular death, non-fatal myocardial infarction, or non-fatal stroke) in adults with type 2 diabetes mellitus and established cardiovascular disease.

2. Criteria

Product Name: Bydureon BCise, Mounjaro, Ozempic, Rybelsus, Trulicity, Victoza [a]			
Approval Length	12 month(s)		
Guideline Type	Prior Authorization		
Approval Criteria			
1 - Diagnosis of type 2 diabetes mellitus			
	OR		
2 - Trial of one product from any of the following drugs/classes: alpha-glucosidase inhibitors, amylin analogs, biguanides, Cycloset (bromocriptine 0.8mg), DPP-4 inhibitors, DPP-4 inhibitor combinations, glycemic agents (e.g., glucagon), insulins, meglitinides, SGLT2 inhibitors, SGLT2 inhibitors, sGLT2 inhibitor combinations, sulfonylureas, or thiazolidinediones*			
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.		
	*Medications used for the purposes of weight loss are typically exclude d from benefit coverage. Coverage is determined by the member's pre scription drug benefit plan.		

3. Background

Benefit/Coverage/Program Information

Background:

Ozempic (semaglutide), Rybelsus (semaglutide), and Trulicity (dulaglutide), are indicated as an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus. Bydureon BCise (exenatide extended-release) and Victoza (liraglutide) are indicated as an adjunct to diet and exercise to improve glycemic control in patients 10 years of age and older with type 2 diabetes mellitus. Ozempic, Trulicity, and Victoza are also indicated to reduce the risk of major adverse cardiovascular events (cardiovascular death, non-fatal myocardial infarction, or non-fatal stroke) in adults with type 2 diabetes mellitus and established cardiovascular disease.

Mounjaro (tirzepatide) is a glucose-dependent insulinotropic polypeptide (GIP) receptor and glucagon-like peptide-1 (GLP-1) receptor agonist indicated as an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

GnRH Antagonists

Prior Authorization Guideline

Guideline ID	GL-144789
Guideline Name	GnRH Antagonists
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	4/17/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	12/15/2021 ; 09/21/2022 ; 12/14/2022 ; 08/18/2023 ; 08/18/2023 ; 4/17/2024

1. Indications

Drug Name: Cetrotide (cetrorelix acetate), Fyremadel (ganirelix acetate)

Ovulation induction, controlled stimulation Indicated to inhibit premature luteinizing hormone (LH) surges in women undergoing controlled ovarian stimulation followed by insemination or assisted reproductive technology (ART). [1-3,5]

2. Criteria

Product Name: Brand Cetrotide, generic cetrorelix, generic fyremadel, generic ganirelix acetate	
Diagnosis	Controlled Ovarian Stimulation** [a]
Approval Length	2 month(s)

Guideline Type	Prior Authorization
Approval Criteria 1 - Diagnosis of infertility	
	AND
 2 - ONE of the following exists: Unexplained infertility Endometriosis Male factor infertility Tubal factor infertility Diminished ovarian reserve Uterine factor infertility Ovulatory dysfunction Recurrent pregnancy loss Failure to achieve conception with other treatment modalities 	
3 - For the development of one or more follicles (controlled ovarian stimulation)	
AND	
4 - Documentation of an approved assisted reproductive technology (ART) protocol	
Notes	 **Requests for an infertility related diagnosis other than ovulation induc tion for members in New Jersey, North Carolina, Kansas and Texas sh ould be denied as a benefit exclusion. [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Cetrotide (cetrorelix acetate) and ganirelix acetate are synthetic decapeptides with gonadotropin-releasing hormone (GnRH) antagonist activity. These agents are indicated to inhibit premature luteinizing hormone (LH) surges in women undergoing controlled ovarian stimulation followed by insemination or assisted reproductive technology (ART) [1-3,5]

Additional Clinical Programs:

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Growth Hormone

Prior Authorization Guideline

Guideline ID	GL-137373
Guideline Name	Growth hormone
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	2/1/2024
P&T Approval Date:	2/19/2021
P&T Revision Date:	07/21/2021 ; 09/15/2021 ; 01/19/2022 ; 07/19/2023 ; 09/20/2023 ; 09/20/2023 ; 12/13/2023

1. Indications

Drug Name: Somatropin

Growth hormone deficiency Indicated for the treatment of growth hormone deficiency.

Turner syndrome or Noonan syndrome Indicated for short stature associated with Turner syndrome or Noonan syndrome

Short-stature homeobox (SHOX) gene deficiency Indicated for short-stature homeobox (SHOX) gene deficiency

Prader-Willi syndrome Indicated for growth failure due to Prader-Willi syndrome.

Short stature in children small for gestational age Indicated for short stature in children born small for gestational age.

Growth failure in children with chronic renal insufficiency Indicated for growth failure in children with chronic renal insufficiency up to the time of transplant.

Short bowel syndrome Indicated for short bowel syndrome in patients receiving specialized nutritional support.

HIV-associated wasting Indicated for HIV-associated wasting.

Replacement of endogenous growth hormone in adults Indicated for replacement of endogenous growth hormone in adults with confirmed growth hormone deficiency.

Drug Name: Mecasermin (Increlex)

Severe primary insulin-like growth factor-1 (IGF-1) deficiency or growth hormone gene deletion Indicated for the treatment of growth failure in children with severe primary insulin-like growth factor-1 (IGF-1) deficiency or with growth hormone gene deletion who have developed neutralizing antibodies to growth hormone.

Drug Name: Skytrofa (lonapegsomatropin-tcgd)

Pediatric Growth Hormone Deficiency (GHD) Indicated for the treatment of pediatric patients 1 year and older who weigh at least 11.5 kg and have growth failure due to inadequate secretion of endogenous growth hormone (GH).

Drug Name: Ngenla (somatrogon)

Pediatric Growth Hormone Deficiency (GHD) Indicated for treatment of pediatric patients aged 3 years and older who have growth failure due to inadequate secretion of endogenous growth hormone.

Drug Name: Sogroya (somapacitan)

Pediatric Growth Hormone Deficiency (GHD) Indicated for the treatment of pediatric patients aged 2.5 years and older who have growth failure due to inadequate secretion of endogenous growth hormone.

Adult Growth Hormone Deficiency Indicated for the replacement of endogenous GH in adults with growth hormone deficiency (GHD).

2. Criteria

Product Name: Somatropin^{**} [a] (Genotropin, Genotropin Miniquick, Humatrope, Norditropin, Norditropin Flexpro, Nutropin AQ NuSpin, Omnitrope, Saizen, Saizenprep, Zomacton, Zorbtive, and Serostim)

Diagnosis	Pediatric Growth Hormone Deficiency (GHD)
Approval Length	12 month(s)

Therapy Stage	py Stage Initial Authorization	
Guideline Type	line Type Prior Authorization	
Approval Criteria		
1 - ONE of the following	1:	
1.1 ALL of the following:		
 Infant is less than 4 months of age Infant has growth deficiency Prescribed by an endocrinologist 		
	OR	
1.2 BOTH of the follow	ving:	
 History of neonatal hypoglycemia associated with pituitary disease Prescribed by an endocrinologist 		
	OR	
1.3 BOTH of the follow	ving:	
•	nhypopituitarism n endocrinologist	
	OR	
2 - ALL of the following:		
2.1 Diagnosis of pediatric GH deficiency as confirmed by ONE of the following:		
 current channel midparental heig Height is greate and gender) util Growth velocity 	t (as determined by extrapolating pre-treatment growth trajectory along to 18-20 year mark) is greater than 2.0 standard deviations [SD] below ght utilizing age and gender growth charts related to height r than 2.25 SD below population mean (below the 1.2 percentile for age izing age and gender growth charts related to height is greater than 2 SD below mean for age and gender I maturation of greater than 2 SD below mean for age and gender (e.g.,	

delayed greater than 2 years compared with chronological age)

AND

2.2 ONE of the following:

2.2.1 Patient is male and ONE of the following:

- Tanner stage less than IV
- Bone age less than 16 years measured in the past 12 months

OR

2.2.2 Patient is female and ONE of the following:

- Tanner stage less than IV
- Bone age less than 14 years measured in the past 12 months

AND

2.3 Submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following:

2.3.1 BOTH of the following:

2.3.1.1 Patient has undergone TWO of the following provocative GH stimulation tests:

- Arginine
- Clonidine
- Insulin
- Levodopa
- Growth hormone releasing hormone

AND

2.3.1.2 Both GH response values are less than 10 mcg/L

OR

2.3.2 BOTH of the following: **2.3.2.1** Patient is less than 1 year of age AND **2.3.2.2** ONE of the following is below the age and gender adjusted normal range as provided by the physician's lab: Insulin-like Growth Factor 1 (IGF-1/Somatomedin-C) Insulin Growth Factor Binding Protein-3 (IGFBP-3) • AND 2.4 ONE of the following: 2.4.1 Request does not exceed a maximum supply limit of 0.3 mg/kg/week OR 2.4.2 BOTH of the following: Tanner Stage 3 or greater • Request does not exceed a maximum supply limit of 0.7 mg/kg/week AND 2.5 Prescribed by an endocrinologist Note: Documentation of previous height, current height and goal expec Notes ted adult height will be required for renewal. Note: Includes children who have undergone brain radiation. If patient i s a Transition Phase Adolescent or Adult who had childhood onset GH deficiency, utilize criteria for Transition Phase Adolescent or Adult GH Deficiency. **Please Note: The request for growth hormone (GH) injections to treat idiopathic short stature (ISS) is not authorized. There is no consensus in current peer-reviewed medical literature regarding the indications, eff icacy, safety, or long-term consequences of GH therapy in children wit h ISS who are otherwise healthy.

	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

1.2 BOTH of the fo	llowing:
-	panhypopituitarism y an endocrinologist
	OR
2 - ALL of the follow	ing:
2.1 Diagnosis of pe	ediatric GH deficiency as confirmed by ONE of the following:
2.1.1 Projected height (as determined by extrapolating pre-treatment growth trajectory along current channel to 18-20 year mark) is greater than 2.0 standard deviations [SD] below midparental height utilizing age and gender growth charts related to height	
	OR
	ater than 2.25 SD below population mean (below the 1.2 percentile for age age and gender growth charts related to height

OR

2.1.3 Growth velocity is greater than 2 SD below mean for age and gender

OR

2.1.4 Delayed skeletal maturation of greater than 2 SD below mean for age and gender (e.g., delayed greater than 2 years compared with chronological age)

AND

2.2 ONE of the following:

2.2.1 Patient is male and ONE of the following:

- Tanner stage less than IV
- Bone age less than 16 years measured in the past 12 months

OR

2.2.2 Patient is female and ONE of the following:

- Tanner stage less than IV
- Bone age less than 14 years measured in the past 12 months

AND

2.3 Submission of medical records (e.g., chart notes, laboratory values) documenting BOTH of the following:

2.3.1 Patient has undergone TWO of the following provocative GH stimulation tests:

- Arginine
- Clonidine
- Glucagon
- Insulin
- Levodopa
- Growth hormone releasing hormone

	AND	
2.3.2 BOTH GH response values are less than 10 mcg/L		
AND		
2.4 Prescribed by an	endocrinologist	
Notes	Note: Documentation of previous height, current height and goal expec ted adult height will be required for renewal. Note: Includes children wh o have undergone brain radiation. If patient is a Transition Phase Adole scent or Adult who had childhood onset GH deficiency, utilize criteria fo r Transition Phase Adolescent or Adult GH Deficiency.	
	**Please Note: The request for growth hormone (GH) injections to treat idiopathic short stature (ISS) is not authorized. There is no consensus in current peer-reviewed medical literature regarding the indications, eff icacy, safety, or long-term consequences of GH therapy in children wit h ISS who are otherwise healthy.	
	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

Product Name: Skytrofa**[a]		
Diagnosis	Pediatric Growth Hormone Deficiency (GHD)	
Approval Length	12 month(s)	
Therapy Stage	Reauthorization	
Guideline Type	Prior Authorization	

Approval Criteria

1 - Height increase of at least 2 cm/year over the previous year documented by BOTH of the following:

- Previous height and date obtained
- Current height and date obtained

AND

2	- BOT	H of	the	follow	vina:
-	DOI	1101	uic	101101	mg.

- Expected adult height not obtained
- Documentation of expected adult height goal (e.g. genetic potential)

AND

3 - Calculated height (growth) velocity over the past 12 months

AND

4 - Documentation of ONE of the following:

4.1 Patient is male and ONE of the following:

- Tanner stage less than IV
- Bone age less than 16 years measured in the past 12 months

OR

4.2 Patient is female and ONE of the following:

- Tanner stage less than IV
- Bone age less than 14 years measured in the past 12 months

AND

5 - Prescribed by an endocrinologist

Notes	**Please Note: The request for growth hormone (GH) injections to treat idiopathic short stature (ISS) is not authorized. There is no consensus in current peer-reviewed medical literature regarding the indications, eff icacy, safety, or long-term consequences of GH therapy in children wit h ISS who are otherwise healthy.

Diagnosis	Adult Growth Hormone Deficiency
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of adult GH deficiency as a result of ONE of the following:

1.1 Clinical records supporting a diagnosis of childhood-onset GHD

OR

1.2 BOTH of the following

1.2.1 Adult-onset GHD

AND

1.2.2 Clinical records documenting that hormone deficiency is a result of hypothalamicpituitary disease from organic or known causes (e.g., damage from surgery, cranial irradiation, head trauma, or subarachnoid hemorrhage)

AND

2 - Submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following:

2.1 BOTH of the following:

2.1.1 Patient has undergone ONE of the following GH stimulation tests to confirm adult GH deficiency:

- Insulin tolerance test (ITT)
- Arginine & GHRH (GHRH+ARG)
- Glucagon

- Arginine (ARG)
- Macrilen (macimorelin)

AND

2.1.2 ONE of the following peak GH values:

- ITT less than or equal to 5 microgram/L
- GHRH+ARG (less than or equal to 11 microgram/L if body mass index [BMI] less than 25 kg/m²; less than or equal to 8 microgram/L if BMI greater than or equal to 25 and less than 30 kg/m²; less than or equal to 4 microgram/L if BMI greater than or equal to 30 kg/m²)
- Glucagon less than or equal to 3 microgram/L
- ARG less than or equal to 0.4 microgram/L
- Macimorelin less than 2.8 ng/mL 30, 45, 60 and 90 minutes following macimorelin administration

OR

2.2 BOTH of the following:

2.2.1 Submission of medical records (e.g., chart notes, laboratory values) documenting deficiency of THREE of the following anterior pituitary hormones:

- Prolactin
- ACTH
- TSH
- FSH/LH

AND

2.2.2 IGF-1/Somatomedin-C level is below the age and gender adjusted normal range as provided by the physician's lab

AND

3 - ONE of the following:

3.1 Diagnosis of panhypopituitarism

OR

3.2 Other diagnosis AND not used in combination with the following:

- Aromatase inhibitors [e.g., Arimidex (anastrazole), Femara (letrozole)]
- Androgens [e.g., Delatestryl (testoseterone enanthate), Depo-Testosterone (testosterone cypionate)]

AND

4 - Prescribed by an endocrinologist

Notes	**Please Note: The request for growth hormone (GH) injections to treat idiopathic short stature (ISS) is not authorized. There is no consensus in current peer-reviewed medical literature regarding the indications, eff icacy, safety, or long-term consequences of GH therapy in children wit h ISS who are otherwise healthy.

Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
Approval Criteria	
1 - Request does not ex	ceed a maximum supply limit of 0.3 mg/kg/week
	AND
2 - Documentation of O	NE of the following:
Attained expected adult heightClosed epiphyses on bone radiograph	
	AND
3 - Submission of medic the following:	cal records (e.g., chart notes, laboratory values) documenting ONE of
3.1 BOTH of the following:	
3.1.1 Documentation of high risk of GH deficiency due to GH deficiency in childhood from ONE of the following:	
3.1.1.1 Embryopathic/congenital defects	
	OR
3.1.1.2 Genetic muta	tions
	OR

3.1.1.3 Irreversible structural hypothalamic-pituitary disease
OR
3.1.1.4 Panhypopituitarism
OR
 3.1.1.5 Deficiency of THREE of the following anterior pituitary hormones: ACTH TSH Prolactin FSH/LH
AND
3.1.2 ONE of the following:
3.1.2.1 IGF-1/Somatomedin-C level is below the age and gender adjusted normal range as provided by the physician's lab
OR
3.1.2.2 ALL of the following:
3.1.2.2.1 Patient does not have a low IGF-1/Somatomedin C level
AND
3.1.2.2.2 Discontinued GH therapy for at least 1 month
AND
3.1.2.2.3 Patient has undergone ONE of the following GH stimulation tests after discontinuation of therapy for at least 1 month:

• ITT

- GHRH+ARG
- ARG
- Glucagon

AND

3.1.2.2.4 ONE of the following peak GH values:

- ITT less than or equal to 5 microgram/L
- GHRH+ARG (less than or equal to 11 microgram/L if body mass index [BMI] less than 25 kg/m^2; less than or equal to 8 microgram/L if BMI greater than or equal to 25 and less than 30 kg/m^2; less than or equal to 4 microgram/L if BMI greater than or equal to 30 kg/m^2)
- Glucagon less than or equal to 3 microgram/L
- ARG less than or equal to 0.4 microgram/L

OR

3.2 ALL of the following:

3.2.1 At low risk of severe GH deficiency (eg, due to isolated and/or idiopathic GH deficiency)

AND

3.2.2 Discontinued GH therapy for at least 1 month

AND

3.2.3 BOTH of the following:

3.2.3.1 Patient has undergone ONE of the following GH stimulation tests after discontinuation of therapy for at least 1 month:

- ITT
- GHRH+ARG
- ARG
- Glucagon

AND

3.2.3.2 ONE of the following peak GH values:

- ITT less than or equal to 5 microgram/L
- GHRH+ARG (less than or equal to 11 microgram/L if body mass index [BMI] less than 25 kg/m^2; less than or equal to 8 microgram/L if BMI greater than or equal to 25 and less than 30 kg/m^2; less than or equal to 4 microgram/L if BMI greater than or equal to 30 kg/m^2)
- Glucagon less than or equal to 3 microgram/L
- ARG less than or equal to 0.4 microgram/L

AND

4 - Prescribed by an endocrinologist

Notes	**Please Note: The request for growth hormone (GH) injections to treat idiopathic short stature (ISS) is not authorized. There is no consensus in current peer-reviewed medical literature regarding the indications, eff icacy, safety, or long-term consequences of GH therapy in children wit h ISS who are otherwise healthy.
	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Somatropin**[a] (Genotropin, Genotropin Miniquick, Humatrope, Norditropin,
Norditropin Flexpro, Nutropin AQ NuSpin, Omnitrope, Saizen, Saizenprep, Zomacton, Zorbtive,
and Serostim)

Diagnosis	Transition Phase Adolescent Patients
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Documentation of positive response to therapy (e.g., increase in total lean body mass, exercise capacity or IGF-1 and IGFBP-3 levels)

AND

2 - Request does not exceed a maximum supply limit of 0.3 mg/kg/week

AND 3 - Prescribed by an endocrinologist	
Notes	**Please Note: The request for growth hormone (GH) injections to treat idiopathic short stature (ISS) is not authorized. There is no consensus in current peer-reviewed medical literature regarding the indications, eff icacy, safety, or long-term consequences of GH therapy in children wit h ISS who are otherwise healthy.
	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Serostim**[a]	
Diagnosis	Human Immunodeficiency Virus (HIV)-Associated Cachexia (Serostim only)
Approval Length	3 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of HIV-associated wasting syndrome or cachexia

AND

- 2 Documentation of ONE of the following:
- 2.1 Unintentional weight loss of greater than 10% over the last 12 months

2.2 Unintentional weight loss of greater than 7.5% over the last 6 months
OR
2.3 Loss of 5% body cell mass (BCM) within 6 months
OR
2.4 Body mass index (BMI) less than 20 kg/m^2
OR
2.5 ONE of the following:
2.5.1 ALL of the following
 Patient is male BCM less than 35% of total body weight BMI less than 27 kg/m²
OR
2.5.2 ALL of the following:
 Patient is female BCM less than 23% of total body weight BMI less than 27 kg/m²
AND
3 - A nutritional evaluation has been completed since onset of wasting first occurred
AND
4 - Patient has not had weight loss as a result of other underlying treatable conditions (e.g., depression, mycobacterium avium complex, chronic infectious diarrhea, or malignancy with the

exception of Kaposi's sarcoma limited to skin or mucous membranes)

AND

5 - Patient's anti-retroviral therapy has been optimized to decrease the viral load

Notes	**Please Note: The request for growth hormone (GH) injections to treat idiopathic short stature (ISS) is not authorized. There is no consensus in current peer-reviewed medical literature regarding the indications, eff icacy, safety, or long-term consequences of GH therapy in children wit h ISS who are otherwise healthy.
	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Serostim** [a]	
Diagnosis	Human Immunodeficiency Virus (HIV)-Associated Cachexia (Serostim only)
Approval Length	6 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Evidence of positive response to therapy (i.e., greater than or equal to 2% increase in body weight and/or BCM)

AND

2 - ONE of the following targets or goals has not been achieved:

- Weight
- BCM
- BMI

Notes	**Please Note: The request for growth hormone (GH) injections to treat
	idiopathic short stature (ISS) is not authorized. There is no consensus

in current peer-reviewed medical literature regarding the indications, eff icacy, safety, or long-term consequences of GH therapy in children wit h ISS who are otherwise healthy.
[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Zorbtive	e**[a]	
Diagnosis	Short Bowel Syndrome (Zorbtive only)	
Approval Length	4 Week(s)	
Guideline Type	Prior Authorization	
Approval Criteria		
1 - Diagnosis of Short Bowel Syndrome		
AND		
2 - Patient is currently receiving specialized nutritional support (e.g., intravenous parenteral nutrition, fluid, and micronutrient supplements		
	AND	
3 - Patient has not prev	iously received 4 weeks of treatment with Zorbtive	
Notes	Note: Treatment with Zorbtive will not be authorized beyond 4 weeks. Administration for more than 4 weeks has not been adequately studied.	
	**Please Note: The request for growth hormone (GH) injections to treat idiopathic short stature (ISS) is not authorized. There is no consensus in current peer-reviewed medical literature regarding the indications, eff icacy, safety, or long-term consequences of GH therapy in children wit h ISS who are otherwise healthy.	
	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

-	
Diagnosis	Severe Primary IGF-1 Deficiency / Growth Hormone Gene Deletion (Increlex only)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
Approval Criteria 1 - One of the follo	
	on of ALL of the following:
 Height star Basal IGF- Normal or Documentation The patien 	of severe primary IGF-1 deficiency ndard deviation score less than or equal to -3.0 1 standard deviation score less than or equal to -3.0 elevated growth hormone levels ation of open epiphyses on last bone radiograph t will not be treated with concurrent growth hormone therapy by an endocrinologist
	OR
1.2 ALL of the fo	llowing:
to growth h Documenta The patien	of growth hormone gene deletion and has developed neutralizing antibodies normone ation of open epiphyses on last bone radiograph t will not be treated with concurrent growth hormone therapy by an endocrinologist
Notes	Note: Documentation of previous height, current height and goal expected adult height will be required for renewal.
	**Please Note: The request for growth hormone (GH) injections to trea idiopathic short stature (ISS) is not authorized. There is no consensus in current peer-reviewed medical literature regarding the indications, ef icacy, safety, or long-term consequences of GH therapy in children wit h ISS who are otherwise healthy.

d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
у.

Product Name: Increlex**[a]	
Diagnosis	Severe Primary IGF-1 Deficiency / Growth Hormone Gene Deletion (Increlex only)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Height increase of at least 2 cm/year over the previous year of treatment as documented by BOTH of the following:

- Previous height and date obtained
- Current height and date obtained

AND

- 2 Documentation of BOTH of the following:
 - Expected adult height not obtained
 - Expected adult height goal

AND

3 - Patient is not treated with concurrent growth hormone therapy

AND

4 - Prescribed by an endocrinologist

Notes	**Please Note: The request for growth hormone (GH) injections to treat
	idiopathic short stature (ISS) is not authorized. There is no consensus
	in current peer-reviewed medical literature regarding the indications, eff
	icacy, safety, or long-term consequences of GH therapy in children wit

h ISS who are otherwise healthy.
[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Somatropin is indicated for the treatment of growth hormone deficiency (GHD), short stature associated with Turner syndrome or Noonan syndrome, short-stature homeobox (SHOX) gene deficiency, growth failure due to Prader-Willi syndrome, short stature in children born small for gestational age, growth failure in children with chronic renal insufficiency up to the time of transplant, short bowel syndrome in patients receiving specialized nutritional support, and HIV-associated wasting. Somatropin is also indicated for replacement of endogenous growth hormone (GH) in adults with confirmed GHD.

Mecasermin is indicated for the treatment of growth failure in children with severe primary insulin-like growth factor-1 (IGF-1) deficiency or with GH gene deletion who have developed neutralizing antibodies to GH.

Skytrofa (lonapegsomatropin-tcgd) is indicated for the treatment of pediatric patients 1 year and older who weigh at least 11.5 kg and have growth failure due to inadequate secretion of endogenous growth hormone (GH).

Ngenla is indicated for treatment of pediatric patients aged 3 years and older who have growth failure due to inadequate secretion of endogenous GH.

Sogroya is indicated for the treatment of pediatric patients aged 2.5 years and older who have growth failure due to inadequate secretion of endogenous GH. It is also indicated for the replacement of endogenous GD in adults with GHD.

*Educational Statement

Documentation of previous height, current height and goal expected adult height will be required for renewal.

Additional Clinical Rules

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

5. Revision History

Date	Notes
12/12/2023	Removed drug-specific dosing requirements from coverage criteria. Up dated background.

Haegarda

Prior Authorization Guideline

Guideline ID	GL-143801
Guideline Name	Haegarda
Formulary	UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	8/18/2023
P&T Revision Date:	3/20/2024

1. Indications

Drug Name: Haegarda Prophylaxis of HAE attacks Haegarda is a plasma-derived concentrate of C1 Esterase Inhibitor (Human) (C1-INH) indicated for routine prophylaxis to prevent hereditary angioedema (HAE) attacks in patients 6 years of age and older.

2. Criteria

Product Name: Haegarda [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of hereditary angioedema (HAE) as confirmed by ONE of the following:

1.1 C1 inhibitor (C1-INH) deficiency or dysfunction (Type I or II HAE) as documented by ONE of the following (per laboratory standard):

- C1-INH antigenic level below the lower limit of normal
- C1-INH functional level below the lower limit of normal

OR

1.2 HAE with normal C1 inhibitor levels and ONE of the following:

- Confirmed presence of variant(s) in the gene(s) for factor XII, angiopoietin-1, plasminogen-1, kininogen-1, myoferlin, and heparan sulfate-glucosamine 3-O-sulfotransferase 6
- Recurring angioedema attacks that are refractory to high-dose antihistamines with confirmed family history of angioedema
- Recurring angioedema attacks that are refractory to high-dose antihistamines with unknown background de-novo mutation(s) (i.e., no family history) (HAE-unknown)

AND

2 - ALL of the following:

- Prescribed for the prophylaxis of HAE attacks
- Not used in combination with other products indicated for prophylaxis against HAE attacks (e.g., Cinryze, Orladeyo, Takhzyro)
- Prescriber attests that patient has experienced attacks of a severity and/or frequency such that they would clinically benefit from prophylactic therapy with Haegarda

AND

3 - Prescribed by ONE of the following:

- Immunologist
- Allergist

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Haegarda [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Documentation of positive clinical response to Haegarda therapy

AND

2 - Reduction in the utilization of on-demand therapies used for acute attacks (e.g., Berinert, Firazyr, Ruconest) as determined by claims information, while on Haegarda therapy

AND

3 - BOTH of the following:

- Prescribed for the prophylaxis of HAE attacks
- Not used in combination with other products indicated for prophylaxis against HAE attacks (e.g., Cinryze, Orladeyo, Takhzyro)

AND

4 - Prescribed by ONE of the following:

- Immunologist
- Allergist

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl

у.

3. Background

Benefit/Coverage/Program Information

Background:

Haegarda is a plasma-derived concentrate of C1 Esterase Inhibitor (Human) (C1-INH) indicated for routine prophylaxis to prevent hereditary angioedema (HAE) attacks in patients 6 years of age and older.¹

Additional Clinical Programs:

• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

• Supply limitations may be in place.

2024 UnitedHealthcare Individual and Family Plan Clinical Criteria - Kansas

Date	Notes
3/1/2024	Annual review with update to diagnostic criteria for HAE with normal C 1 inhibitor levels. Updated language for reauthorization criteria.

Prior Authorization Guideline

Guideline ID	GL-144790
Guideline Name	HCG
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	4/17/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	10/20/2021 ; 11/19/2021 ; 09/21/2022 ; 08/18/2023 ; 11/17/2023 ; 4/17/2024

1. Indications

Drug Name: Novarel (chorionic gonadotropin), Pregnyl (chorionic gonadotropin)

Ovulation Induction Novarel (chorionic gonadotropin) and Pregnyl (chorionic gonadotropin) are indicated for induction of ovulation and pregnancy in the anovulatory, infertile woman in whom the cause of anovulation is secondary and not due to primary ovarian failure, and who has been appropriately pretreated with human menotropins. They are also indicated for prepubertal cryptorchidism not due to anatomic obstruction and selected cases of hypogonadotropic hypogonadism (hypogonadism secondary to a pituitary deficiency) in males. [4-5]

Drug Name: Ovidrel (choriogonadotropin alfa)

Ovulation Induction Ovidrel (choriogonadotropin alfa) is indicated for the induction of final follicular maturation and early luteinization in infertile women who have undergone pituitary desensitization and who have been appropriately pretreated with follicle stimulating hormones as part of an Assisted Reproductive Technology (ART) program such as in vitro fertilization and embryo transfer. It is also indicated for the induction of ovulation and pregnancy in anovulatory

infertile patients in whom the cause of infertility is functional and not due to primary ovarian failure. [6]

Drug Name: Novarel (chorionic gonadotropin), Pregnyl (chorionic gonadotropin), Ovidrel (choriogonadotropin alfa)

Prepubertal Cryptorchidism hCG may also be used to treat cryptorchidism in boys because hCG is thought to induce testicular descent in situations when descent would have occurred at puberty. hCG thus may help to predict whether or not orchiopexy will be needed in the future. Although, in some cases, descent following hCG administration is permanent, in most cases the response is temporary. [1-3]

Hypogonadotropic Hypogonadism hCG is also used to induce puberty in boys and to treat androgen deficiency in hypogonadotropic hypogonadism. However, the major use of hCG preparations in males is in the initiation and maintenance of spermatogenesis in hypogonadotropic men who desire fertility. [1-3]

2. Criteria

Product Name: Novarel, Chorionic Gonadotropin, Ovidrel, Pregnyl		
Diagnosis	Ovulation Induction [a]	
Approval Length	2 month(s)	
Guideline Type	Prior Authorization	
Approval Criteria		
1 - Diagnosis of anovula	atory infertility	
	AND	
2 - Infertility is not due to primary ovarian failure		
	AND	
3 - For induction of ovulation		

AND

4 - Patient has been pre-treated with a follicular stimulating agent (e.g., gonadotropin, clomiphene citrate, letrozole)

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	у.

Product Name: Novarel, Chorionic Gonadotropin, Ovidrel, Pregnyl	
Diagnosis	Controlled Ovarian Hyperstimulation** [a]
Approval Length	2 month(s)
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of infertility

AND

2 - For the development of multiple follicles (controlled ovarian hyperstimulation)

AND

3 - Patient has been or will be pre-treated with a follicular stimulating agent (e.g., gonadotropin, clomiphene citrate, letrozole)

Notes	 **Requests for an infertility related diagnosis other than ovulation induc tion for members in New Jersey, North Carolina, Kansas and Texas sh ould be denied as a benefit exclusion. [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	y.

Product Name: Novarel, Chorionic Gonadotropin, Ovidrel, Pregnyl	
Diagnosis	Prepubertal Cryptorchidism** [a]

Approval Length	6 Week(s)
Guideline Type	Prior Authorization

1 - Diagnosis of prepubertal cryptorchidism not due to anatomical obstruction

Notes	 **Requests for an infertility related diagnosis other than ovulation induc tion for members in New Jersey, North Carolina, Kansas and Texas sh ould be denied as a benefit exclusion. [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	---

Product Name: Novarel, Chorionic Gonadotropin, Ovidrel, Pregnyl	
Diagnosis	Hypogonadotropic Hypogonadism** [a]
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of hypogonadism secondary to pituitary deficiency

AND

2 - Low testosterone (below normal reference level provided by the physician's laboratory)

AND

3 - ONE of the following:

- Low LH (below normal reference level provided by the physician's laboratory)
- Low FSH (below normal reference level provided by the physician's laboratory)

Notes	 **Requests for an infertility related diagnosis other than ovulation induc tion for members in New Jersey, North Carolina, Kansas and Texas sh ould be denied as a benefit exclusion. [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	---

Product Name: Novarel, Chorionic Gonadotropin, Ovidrel, Pregnyl	
Diagnosis	Hypogonadotropic Hypogonadism** [a]
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Documentation of positive clinical response to therapy

Notes	 **Requests for an infertility related diagnosis other than ovulation induc tion for members in New Jersey, North Carolina, Kansas and Texas sh ould be denied as a benefit exclusion. [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.
	у.

3. Background

Benefit/Coverage/Program Information

Background:

The body produces two types of gonadotropins, <u>follicle-stimulating hormone (FSH)</u> and <u>luteinizing hormone (LH)</u>, both of which play a role in fertility and human reproduction. After they are produced by the <u>pituitary gland</u>, gonadotropins trigger production of other sex hormones which then promote production of egg and sperm. Produced in pregnant women by the placenta and extracted from the urine, human chorionic gonadotropin (hCG) is similar in chemical structure and function to LH. [1-3]

hCG is routinely used to trigger ovulation in the treatment of infertility, a disease of the reproductive system defined by the failure to achieve a clinical pregnancy after 12 months or more of regular unprotected sexual intercourse or therapeutic donor insemination.[1-3]

hCG may also be used to treat cryptorchidism in boys because hCG is thought to induce testicular descent in situations when descent would have occurred at puberty. hCG thus may help to predict whether or not orchiopexy will be needed in the future. Although, in some cases, descent following hCG administration is permanent, in most cases the response is temporary. hCG is also used to induce puberty in boys and to treat androgen deficiency in hypogonadotropic hypogonadism. However, the major use of hCG preparations in males is in the initiation and maintenance of spermatogenesis in hypogonadotropic men who desire fertility.[1-3]

Novarel (chorionic gonadotropin) and Pregnyl (chorionic gonadotropin) are indicated for induction of ovulation and pregnancy in the anovulatory, infertile woman in whom the cause of anovulation is secondary and not due to primary ovarian failure, and who has been appropriately pretreated with human menotropins. They are also indicated for prepubertal cryptorchidism not due to anatomic obstruction and selected cases of hypogonadotropic hypogonadism (hypogonadism secondary to a pituitary deficiency) in males.[4-5]

Ovidrel (choriogonadotropin alfa) is indicated for the induction of final follicular maturation and early luteinization in infertile women who have undergone pituitary desensitization and who have been appropriately pretreated with follicle stimulating hormones as part of an Assisted Reproductive Technology (ART) program such as *in vitro* fertilization and embryo transfer. It is also indicated for the induction of ovulation and pregnancy in anovulatory infertile patients in whom the cause of infertility is functional and not due to primary ovarian failure.[6]

Additional Clinical Rules:

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

1. Criteria

Product Name: OTC and Prescription Non-Formulary and Formulary Contraceptives	
Approval Length	12 month(s)
Guideline Type	Administrative

1 - Requests to waive cost-sharing for a medication not included on a zero-cost-sharing coverage list must meet ALL of the following:

1.1 Patient is using the prescribed drug for contraception

AND

1.2 If the request is for a prescription product that is non-formulary, one of the following:

1.2.1 There must be an appropriate clinical reason why the patient cannot take two (2) products that are covered at the \$0 ACA/HCR preventative cost share+ (i.e., the patient has had an allergic reaction or intolerance to an inactive ingredient or has experienced an inadequate response)

OR

1.2.2 Provider attests the non-formulary contraceptive drug is the preferred product for this patient (e.g., provider attestation that the non-formulary contraceptive is medically necessary, patient is stable on the requested non-formulary contraceptive, patient requires continuation of therapy to complete the course of treatment, transition to another agent could result in destabilization)

If approved, authorizations should have overrides to allow for \$0 cost s hare for non-formulary or formulary drugs. +Products covered at the \$0 ACA/HCR preventative cost share can be identified under the Status column of the Formulary Lookup Tool as ha ving a status of "HCR \$0 copay".
ving a status of "HCR \$0 copay".

2. Background

Benefit/Coverage/Program Information

Background:

The Patient Protection and Affordable Care Act (PPACA) provides for \$0 cost share conditional coverage for contraceptives when used for contraception. Examples of covered products include: OTC contraceptive products (with prescription) including male and female condoms, spermicides, or sponges; OTC emergency contraceptive (with prescription) or prescription emergency contraceptive drug; Contraceptive patch; Contraceptive ring; Injectable contraceptives; Diaphragm or cervical caps; Contraceptive implant; Non-emergency oral contraceptives.

This policy applies to formulary drugs that process at a non-\$0 cost share or are non-formulary.

	If approved, authorizations should have overrides to allow for \$0 cost s
	hare for non-formulary or formulary drugs.

Product Name: Non-Formulary and Formulary HMG-CoA Reductase Inhibitors (statins)	
Approval Length	12 month(s)
Guideline Type	Administrative

1 - Patient is 40 to 75 years old

AND

2 - Patient has one or more CVD risk factors (e.g., dyslipidemia, diabetes, hypertension, smoking, etc.)

AND

3 - Patient has a calculated 10-year risk of a cardiovascular event of 10% or greater

AND

4 - Patient has no history of cardiovascular disease (i.e., symptomatic coronary artery disease or ischemic stroke)

AND

5 - One of the following:

5.1 The request is for a FORMULARY medication

OR

5.2 Both of the following:

5.2.1 The request is for a NON-FORMULARY medication

AND

5.2.2 The patient must try and fail, or have specific medical reason(s) why the number of alternatives specified by the Non-Formulary Alternatives Table is not appropriate (see technician note for NF Alts Table URL)

Notes	If approved, authorizations should have overrides to allow for \$0 cost s
	hare for non-formulary or formulary drugs.

Product Name: Bowel preparation agents for colorectal cancer screening	
Approval Length	Authorization will be issued for one time
Guideline Type	Administrative

Approval Criteria

1 - OTC oral generic - bisacodyl EC 5 mg tablet, magnesium citrate solution, and polyethylene glycol 3350 powder will be approved if the requested product is being prescribed for bowel preparation prior to colon cancer screening

OR

2 - Formulary combination Prep Kits will be approved if both of the following are met:

2.1 Requested product is being prescribed for bowel preparation prior to colon cancer screening

AND

2.2 Appropriate clinical reason provided as to why the patient cannot use two individual generic products (such as separate bisacodyl tablets and polyethylene glycol 3350 powder taken together) that are covered at the \$0 ACA/HCR preventative cost share+ concurrently (i.e., the patient has had an allergic reaction or intolerance to an inactive ingredient or has experienced an inadequate response)

OR

3 - Non-formulary combination Prep Kits will be approved if all of the following are met:

3.1 Requested product is being prescribed for bowel preparation prior to colon cancer screening

AND

3.2 Appropriate clinical reason provided as to why the patient cannot use two individual generic products (such as separate bisacodyl tablets and polyethylene glycol 3350 powder taken together) that are covered at the \$0 ACA/HCR preventative cost share+ concurrently (i.e., the patient has had an allergic reaction or intolerance to an inactive ingredient or has experienced an inadequate response)

AND

3.3 Appropriate clinical reason provided as to why the patient cannot use two formulary combination bowel prep kits

If approved, authorizations should have overrides to allow for \$0 cost s hare for non-formulary or formulary drugs. +Products covered at the \$0 ACA/HCR preventative cost share can be identified under the Status column of the Formulary Lookup Tool as ha
identified under the Status column of the Formulary Lookup Tool as ha
ving a status of "HCR \$0 copay".

Product Name: Fluoride supplementation products	
Approval Length	12 month(s)
Guideline Type	Administrative

Approval Criteria

1 - Patient is between 6 months of age to 16 years of age

AND

2 - The use is for prophylaxis of dental carries

AND

3 - Requested product is a prescription oral fluoride supplementation product (e.g., sodium fluoride tablets, chewable tablets, and drops)

Notes	If approved, authorizations should have overrides to allow for \$0 cost s
	hare for non-formulary or formulary drugs.

Product Name: Folic acid supplementation products	
Approval Length	12 month(s)
Guideline Type	Administrative

Approval Criteria

1 - Patient is pregnant, planning pregnancy, or could become pregnant

AND

2 - Requested product is a prescription or OTC folic acid product (with prescription), including prenatal vitamins containing folic acid

AND

3 - Requested product contains between 0.4 mg to 0.8 mg of folic acid

Notes	If approved, authorizations should have overrides to allow for \$0 cost s
	hare for non-formulary or formulary drugs.

Product Name: Erythromycin 0.5% ophthalmic ointment	
Approval Length	12 month(s)
Guideline Type	Administrative

1 - Member or health care provider intends to administer medication to newborn for the prophylaxis of gonococcal ophthalmia neonatorum*

OR 2 - Newborn is 0-1 month of age	
Notes	If approved, authorizations should have overrides to allow for \$0 cost s hare for non-formulary or formulary drugs. This program is designed to meet Health Care Reform requirements which require coverage of eryt hromycin 0.5% ophthalmic ointment at zero dollar cost share if being u sed for primary prevention of gonococcal ophthalmia neonatorum (GO N) and criteria are met. *Requests may be submitted before the infant's birth and could be requ ested under the mother's account.

2. Background

Benefit/Coverage/Program Information

Background:

The Patient Protection and Affordable Care Act (PPACA) provides for \$0 cost share conditional coverage of preventative medications in the following drug categories:

Drug Category of Prevention*	Example Medications
HIV Pre-Exposure Prophylaxis	Truvada (emtricitabine-tenofovir disoproxil fumarate), emtricitabine-tenofovir disoproxil fumarate (generic Truvada), Viread (tenofovir disoproxil fumarate), tenofovir disoproxil fumarate 300mg (generic Viread), Descovy (emtricitabine-tenofovir alafenamide fumarate)
Aspirin Use for Pregnancy at High Risk of Preeclampsia	OTC aspirin 81 mg
Breast Cancer: Medication Use to Reduce Risk	tamoxifen citrate, tamoxifen citrate solution (generic Soltamox), raloxifene (generic Evista), Aromatase inhibitors [anastrozole (generic Arimidex), exemestane (generic Aromasin), letrozole (generic Femara)]
Immunizations	Diphtheria, tetanus, acellular pertussis (Daptacel,

	Infanrix, Adacel, Boostrix); Hepatitis B (Engerix-B, Recombivax HB); Human papillomavirus (Gardasil); Influenza (Fluzone, Fluad, FluMist Quadrivalent); Zoster (Zostavax, Shingrix)
Cardiovascular Disease in Adults (Statin Use)	atorvastatin 10 & 20 mg (generic Lipitor), lovastatin all strengths (generic Mevacor), and simvastatin 5, 10, 20, 40 mg (generic Zocor)
Bowel preparations for colonoscopy needed for preventive colon cancer screening	OTC oral generic - bisacodyl EC 5mg tablet (Dulcolax), magnesium citrate solution (Citroma), and polyethylene glycol 3350 powder (Miralax)
Fluoride Supplements to Prevent Dental Caries in Children	oral sodium fluoride tablets, chewable tablets, solution, and drops (Ludent, Nafrinse, Floriva)
Folic Acid for the Prevention of Neural Tube Defects	folic acid 400 & 800 mcg, or Prenatal vitamins with 400 - 800 mcg folic acid
Ocular Prophylaxis for Gonococcal Ophthalmia Neonatorum	Erythromycin 0.5% ophthalmic ointment
* The Patient Protection and Affordable Care Act (PPACA) also provides for \$0 cost share for	

* The Patient Protection and Affordable Care Act (PPACA) also provides for \$0 cost share for smoking cessation and contraceptive products. Refer to the Tobacco Cessation Health Care Reform Zero Dollar Cost Share Review guideline for reviews of smoking cessation related products. Refer to the Contraceptives Zero Dollar Cost Share Review guideline for reviews for contraceptive related products.

This policy applies to formulary drugs that process at a non-\$0 cost share or are non-formulary.

Hepatitis C Agents

Prior Authorization Guideline

Guideline ID	GL-136217	
Guideline Name	Hepatitis C Agents	
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP 	

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 08/20/2021 ; 09/15/2021 ; 02/18/2022 ; 06/15/2022 ; 07/20/2022 ; 11/17/2023

1. Indications

Drug Name: Epclusa (sofobuvir/velpatasvir)

Hepatitis C Indicated for the treatment of adult and pediatric patients 3 years of age and older with chronic hepatitis C virus (HCV) genotype 1, 2, 3, 4, 5, or 6 infection without cirrhosis or with compensated cirrhosis, or with decompensated cirrhosis in combination with ribavirin.

Drug Name: Harvoni (ledipasvir/sofosbuvir) and Harvoni Pak

Hepatitis C Indicated for the treatment of HCV in adults and pediatric patients 3 years of age and older for genotype 1, 4, 5, or 6 infection without cirrhosis or with compensated cirrhosis, genotype 1 infection with decompensated cirrhosis, in combination with ribavirin, or with genotype 1 or 4 infection who are liver transplant recipients without cirrhosis or with compensated cirrhosis, in combination with ribavirin.

Drug Name: Mavyret (glecaprevir/pibrentasvir)

Hepatitis C Indicated for the treatment of adult and pediatric patients 3 years and older with

chronic HCV genotype 1, 2, 3, 4, 5, or 6 infection without cirrhosis or with compensated cirrhosis (Child-Pugh A).

Hepatitis C Indicated for the treatment of adult and pediatric patients 3 years and older with HCV genotype 1 infection, who previously have been treated with a regimen containing an HCV NS5A inhibitor or an NS3/4A protease inhibitor, but not both.

Drug Name: Sovaldi (sofosbuvir) and Sovaldi Pak

Hepatitis C Indicated for the treatment of adult patients with genotype 1, 2, 3, or 4 chronic HCV infection without cirrhosis or with compensated cirrhosis as a component of a combination antiviral treatment regimen and pediatric patients 3 years of age and older with genotype 2 or 3 chronic HCV without cirrhosis or with compensated cirrhosis in combination with ribavirin.

Drug Name: Viekira Pak (ombitasvir/paritaprevir/ritonavir/dasabuvir)

Hepatitis C Indicated for the treatment of chronic HCV genotype 1a without cirrhosis or with compensated cirrhosis in combination with ribavirin or genotype 1b in patients without cirrhosis or with compensated cirrhosis.

Drug Name: Vosevi (sofosbuvir/velpatasvir/voxilaprevir)

Hepatitis C Indicated for the treatment of adult patients with chronic HCV infection without cirrhosis or with compensated cirrhosis (Child-Pugh A) who have genotype 1, 2, 3, 4, 5, or 6 infection and have previously been treated with an HCV regimen containing an NS5A inhibitor or genotype 1a or 3 infection and have previously been treated with an HCV regimen containing sofosbuvir without an NS5A inhibitor.

Drug Name: Zepatier (elbasvir/grazoprevir)

Hepatitis C Indicated for treatment of chronic HCV genotype 1 or 4 infection in adult and pediatric patients 12 years of age and older or weighing at least 30 kg.

Hepatitis C Indicated for use with ribavirin in certain patient populations.

2. Criteria

Product Name: Mavyret, Mavyret Pak	
Diagnosis	Chronic Hepatitis C
Approval Length	refer to Chart 1 - Mavyret
Guideline Type	Prior Authorization

Г

Approval Criteria				
1 - Diagnosis of chronic hepatitis C genotype 1, 2, 3, 4, 5, or 6 infection				
AND				
2 - Prescribed by one of the following:				
 Hepatologist Gastroenterologist Infectious Disease Specialist HIV Specialist Certified through the American Academy of HIV Medicine Transplant physician 				
AND				
3 - Physician/provider asserts patient demonstrates treatment readiness, including the ability to adhere to the treatment regimen				
AND				
4 - All of the following:				
4.1 The request is for Mavyret				
AND				
4.2 The patient is without cirrhosis or has compensated cirrhosis (Child-Pugh A)				
AND				
4.3 One of the following:				
4.3.1 Both of the following:				
• Patient is genotype 1, 2, 3, 4, 5, or 6				

Patient is treatment naïve			
OR			
4.3.2 All of the following:			
4.3.2.1 Patient is treatment-experienced			
AND			
4.3.2.2 Patient is genotype 1			
AND			
4.3.2.3 One of the following:			
 Patient previously treated with an NS5A inhibitor [e.g., Daklinza (daclatasvir), Epclusa (sofosbuvir/velpatasvir), Harvoni (ledipasvir/sofosbuvir)] without prior treatment with an NS3/4A protease inhibitor Patient previously treated with an NS3/4 protease inhibitor [e.g., Incivek (teleprevir), Victrelis (boceprevir)] without prior treatment with an NS5A inhibitor 			
OR			
4.3.3 All of the following:			
 Patient is treatment-experienced Patient is genotype 1, 2, 3, 4, 5, or 6 Patient has not been previously treated with any of the following regimens: HCV NS3/4A protease inhibitor [e.g., Incivek (teleprevir), Victrelis (boceprevir), Viekira (dasabuvir/ombitasvir/paritaprevir/ritonavir), Zepatier (elbasvir/grazoprevir)] or NS5A inhibitor [e.g., Daklinza (daclatasvir), Epclusa (sofosbuvir/velpatasvir), Harvoni (ledipasvir/sofosbuvir), Viekira (dasabuvir/ombitasvir/paritaprevir/itonavir), Zepatier (elbasvir/grazoprevir)] 			
AND			
4.4 Patient is not receiving Mavyret in combination with another HCV direct acting antiviral			

agent [e.g., Epclusa (sofosbuvir/velpatasvir), Harvoni (ledipasvir/sofosbuvir), Sovaldi

(sofosbuvir), Zepatier (elbasvir/grazoprevir)]

AND

4.5 The requested regimen is an approvable regimen, as outlined in Chart 1 - Mavyret, based on patient genotype and characteristics

Product Name: Epclusa, sofosbuvir/velpatasvir (AG of Epclusa), Epclusa Pak		
Diagnosis	Chronic Hepatitis C	
Approval Length	refer to Chart 2 -Epclusa	
Guideline Type	Prior Authorization	

Approval Criteria

1 - Diagnosis of chronic hepatitis C genotype 1, 2, 3, 4, 5, or 6 infection

AND

2 - Prescribed by one of the following:

Hepatologist

- Gastroenterologist
- Infectious Disease Specialist
- HIV Specialist Certified through the American Academy of HIV Medicine
- Transplant physician

AND

3 - Physician/provider asserts patient demonstrates treatment readiness, including the ability to adhere to the treatment regimen

AND

4 - All of the following:

4.1 The request is for Epclusa or sofosbuvir/velpatasvir (AG of Epclusa)

4.2 Patient is genotype 1, 2, 3, 4, 5, or 6

AND

4.3 One of the following:

4.3.1 Patient does not have decompensated liver disease

OR

4.3.2 Both of the following

- Patient has decompensated liver disease (Child-Pugh B or C)
- Will be used in combination with ribavirin

AND

4.4 Patient is not receiving Epclusa or sofosbuvir/velpatasvir (AG of Epclusa) in combination with another HCV direct acting antiviral agent [e.g., Harvoni (ledipasvir/sofosbuvir), Mavyret (glecaprevir/pibrentasvir), Sovaldi (sofosbuvir), Zepatier (elbasvir/grazoprevir)]

AND

4.5 The requested regimen is an approvable regimen, as outlined in Chart 2 - Epclusa, based on patient genotype and characteristics

Product Name: Harvoni, ledipasvir/sofosbuvir (AG of Harvoni), or Harvoni Pak		
Diagnosis	Chronic Hepatitis C	
Approval Length	refer to Chart 3 - Harvoni	
Guideline Type	Prior Authorization	

Approval Criteria
1 - Diagnosis of chronic hepatitis C genotype 1, 2, 3, 4, 5, or 6 infection
AND
2 - Prescribed by one of the following:
 Hepatologist Gastroenterologist Infectious Disease Specialist HIV Specialist Certified through the American Academy of HIV Medicine Transplant physician
AND
3 - Physician/provider asserts patient demonstrates treatment readiness, including the ability to adhere to the treatment regimen
AND
4 - All of the following:
4.1 The request is for Harvoni, ledipasvir/sofosbuvir (AG of Harvoni), or Harvoni Pak
AND
4.2 Patient is genotype 1, 4, 5, or 6
AND
4.3 Patient is not receiving Harvoni or ledipasvir/sofosbuvir (AG of Harvoni) in combination with another HCV direct acting antiviral agent [e.g., Epclusa (sofosbuvir/velpatasvir), Mavyret (glecaprevir/pibrentasvir), Sovaldi (sofosbuvir), Zepatier (elbasvir/grazoprevir)]

4.4 The requested regimen is an approvable regimen, as outlined in Chart 3 - Harvoni, based on patient genotype and characteristics

Product Name: Sovaldi or Sovaldi Pak			
Diagnosis	Chronic Hepatitis C		
Approval Length	refer to Chart 4 - Sovaldi		
Guideline Type	Prior Authorization		
Approval Criteria			
1 - Diagnosis of chronic	hepatitis C genotype 1, 2, 3, 4, 5, or 6 infection		
	AND		
 2 - Prescribed by one of the following: Hepatologist Gastroenterologist Infectious Disease Specialist HIV Specialist Certified through the American Academy of HIV Medicine Transplant physician 			
AND			
3 - Physician/provider asserts patient demonstrates treatment readiness, including the ability to adhere to the treatment regimen			
AND			
4 - All of the following			
4.1 The request is for Sovaldi or Sovaldi Pak			

4.2 Patient is not receiving Sovaldi in combination with another HCV direct acting antiviral agent [e.g., Epclusa (sofosbuvir/velpatasvir), Harvoni (ledipasvir/sofosbuvir), Mavyret (glecaprevir/pibrentasvir), Zepatier (elbasvir/grazoprevir)]

AND

4.3 The requested regimen is an approvable regimen, as outlined in Chart 4 - Sovaldi, based on patient genotype and characteristics

Product Name: Viekira Pak		
Diagnosis	Chronic Hepatitis C	
Approval Length	refer to Chart 5 - Viekira Pak	
Guideline Type	Prior Authorization	

Approval Criteria

1 - Diagnosis of chronic hepatitis C genotype 1, 2, 3, 4, 5, or 6 infection

AND

- 2 Prescribed by one of the following:
 - Hepatologist
 - Gastroenterologist
 - Infectious Disease Specialist
 - HIV Specialist Certified through the American Academy of HIV Medicine
 - Transplant physician

AND

3 - Physician/provider asserts patient demonstrates treatment readiness, including the ability to adhere to the treatment regimen

4 - All of the following

4.1 The request is for Viekira Pak

AND

4.2 Patient is not receiving Viekira Pak in combination with another HCV direct acting antiviral agent [e.g., Epclusa (sofosbuvir/velpatasvir), Harvoni (ledipasvir/sofosbuvir), Mavyret (glecaprevir/pibrentasvir), Sovaldi (sofosbuvir), Zepatier (elbasvir/grazoprevir)]

AND

4.3 The requested regimen is an approvable regimen, as outlined in Chart 5 - Viekira Pak, based on patient genotype and characteristics

Product Name: Vosevi	
Diagnosis	Chronic Hepatitis C
Approval Length	refer to Chart 6 - Vosevi
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of chronic hepatitis C genotype 1, 2, 3, 4, 5, or 6 infection

AND

2 - Prescribed by one of the following:

- Hepatologist
- Gastroenterologist
- Infectious Disease Specialist
- HIV Specialist Certified through the American Academy of HIV Medicine
- Transplant physician

3 - Physician/provider asserts patient demonstrates treatment readiness, including the ability to adhere to the treatment regimen

AND

4 - All of the following

4.1 The request is for Vosevi

AND

4.2 The patient is without cirrhosis or has compensated cirrhosis (Child-Pugh A)

AND

4.3 One of the following

4.3.1 Patient is genotype 1, 2, 3, 4, 5, or 6 and had virologic failure after completing previous treatment of at least 4 weeks' duration with an HCV regimen containing an NS5A inhibitor

OR

4.3.2 Patient is genotype 1a or 3 and had virologic failure after completing previous treatment of at least 4 weeks' duration with an HCV regimen containing sofobuvir without an NS5A inhibitor

AND

4.4 Patient is not receiving Vosevi in combination with another HCV direct acting antiviral agent [e.g., Epclusa (sofosbuvir/velpatasvir), Harvoni (ledipasvir/sofosbuvir), Mavyret (glecaprevir/pibrentasvir), Sovaldi (sofosbuvir), Zepatier (elbasvir/grazoprevir)]

3. Background

Benefit/Coverage/Program Information

Chart 1 - Mavyret

Treatment Naïve Patients			
HCV Genotype	enotype Treatment Du		
	No cirrhosis	Compensated cirrhosis (Child-Pugh A)	
1, 2, 3, 4, 5, or 6	8 weeks	8 weeks	

Treatment Experienced Patients

		Treatment Duration		
HCV Genotype	Patients previously treated with a regimen containing:	No cirrhosis	Compensated cirrhosis (Child- Pugh A)	
1	An NS5A inhibitor ¹ without prior treatment with an NS3/4A protease inhibitor	16 weeks	16 weeks	
1	An NS3/4A PI ² without prior treatment with an NS5A inhibitor	12 weeks	12 weeks	
1, 2, 4, 5, or 6	PRS ³	8 weeks	12 weeks	
3	PRS ³	16 weeks	16 weeks	

Kidney or LiverTransplant Recipients

HCV Genotype	Treatment Duration		
	No cirrhosis	Compensated cirrhosis (Child-Pugh A)	
1, 2, 3, 4, 5, or 6	12 week	12 weeks	

1. In clinical trials, subjects were treated with prior regimens containing ledipasvir and sofosbuvir or daclatasvir with pegylated interferon and ribavirin.

2. In clinical trials, subjects were treated with prior regimens containing simeprevir and sofosbuvir, or simeprevir, boceprevir, or telaprevir with pegylated interferon and ribavirin.

3. PRS = prior treatment experience with regimens containing interferon, pegylated

interferon, ribavirin, and/or sofosbuvir, but no prior treatment experience with an HCV NS3/4A PI or NS5A inhibitor.

Chart 2 - Epclusa

Patient Population	Recommended Treatment Regimen
Patients without cirrhosis and patients with compensated cirrhosis (Child-Pugh A)	EPCLUSA for 12 weeks
Patients with decompensated cirrhosisEPCLUSA + ribavirin for 12 weeks(Child-Pugh B and C)	
Chart 3 - Harvoni	

Genotype	Patient Population	Regimen and Duration
Genotype 1	Treatment-naïve without cirrhosis or with compensated cirrhosis (Child-Pugh A)	HARVONI 12 weeks*
	Treatment-experienced without cirrhosis	HARVONI 12 weeks
	Treatment-experienced with compensated cirrhosis (Child- Pugh A)	HARVONI 24 weeks**
	Treatment-naïve and treatment- experienced with decompensated cirrhosis (Child-Pugh B or C)	HARVONI + ribavirin 12 weeks
Genotype 1 or 4	Treatment-naïve and treatment- experienced liver transplant recipients without cirrhosis, or with compensated cirrhosis (Child- Pugh A)	HARVONI + ribavirin 12 weeks
Genotype 4, 5, or 6	Treatment-naïve and treatment- experienced without cirrhosis or with compensated cirrhosis (Child- Pugh A)	HARVONI 12 weeks

*HARVONI for 8 weeks can be considered in treatment-naïve genotype 1 patients without cirrhosis who have pre-treatment HCV RNA less than 6 million IU/mL

**HARVONI + ribavirin for 12 weeks can be considered in treatment-experienced genotype 1 patients with cirrhosis who are eligible for ribavirin

Chart 4 - Sovaldi

	Adult Patient Population	Regimen and Duration
Genotype 1 or 4	Treatment naïve without cirrhosis or with compensated cirrhosis (Child-Pugh A)	SOVALDI + peginterferon alfa + ribavirin 12 weeks
Genotype 2	Treatment naïve and treatment experienced without cirrhosis or with compensated cirrhosis (Child-Pugh A)	SOVALDI + ribavirin 12 weeks
Genotype 3	Treatment naïve and treatment experienced without cirrhosis or with compensated cirrhosis (Child-Pugh A)	SOVALDI + ribavirin 24 weeks

SOVALDI in combination with ribavirin for 24 weeks can be considered for adult patients with genotype 1 infection who are interferon ineligible.

SOVALDI should be used in combination with ribavirin for treatment of HCV in adult patients with hepatocellular carcinoma awaiting liver transplantation for up to 48 weeks or until liver transplantation, whichever occurs first.

Recommended Treatment Regimen and Duration for Pediatric Patients 3 Years of Age and Older

	Pediatric Patient Population 3 Years of Age and Older	Regimen and Duration
Genotype 2	Treatment naïve and treatment experienced without cirrhosis or with compensated cirrhosis (Child-Pugh A)	SOVALDI + ribavirin 12 weeks
Genotype 3	Treatment naïve and treatment experienced without cirrhosis or with compensated cirrhosis (Child-Pugh A)	SOVALDI + ribavirin 24 weeks

Background

Epclusa (sofosbuvir/velpatasvir) is indicated for the treatment of adult and pediatric patients 3 years of age and older with chronic hepatitis C virus (HCV) genotype 1, 2, 3, 4, 5, or 6 infection

without cirrhosis or with compensated cirrhosis, or with decompensated cirrhosis in combination with ribavirin.

Harvoni and Harvoni Pak (ledipasvir/sofosbuvir) are indicated for the treatment of HCV in adults and pediatric patients 3 years of age and older for genotype 1, 4, 5, or 6 infection without cirrhosis or with compensated cirrhosis, genotype 1 infection with decompensated cirrhosis, in combination with ribavirin, or with genotype 1 or 4 infection who are liver transplant recipients without cirrhosis or with compensated cirrhosis, in combination with ribavirin.

Mavyret (glecaprevir/pibrentasvir) is indicated for the treatment of adult and pediatric patients 3 years and older with chronic HCV genotype 1, 2, 3, 4, 5, or 6 infection without cirrhosis or with compensated cirrhosis (Child-Pugh A). Mavyret is also indicated for the treatment of adult and pediatric patients 3 years and older or with HCV genotype 1 infection, who previously have been treated with a regimen containing an HCV NS5A inhibitor or an NS3/4A protease inhibitor, but not both.

Sovaldi and Solvandi Pak (sofosbuvir) are indicated for the treatment of adult patients with genotype 1, 2, 3, or 4 chronic HCV infection without cirrhosis or with compensated cirrhosis as a component of a combination antiviral treatment regimen and pediatric patients 3 years of age and older with genotype 2 or 3 chronic HCV without cirrhosis or with compensated cirrhosis in combination with ribavirin.

Viekira Pak (ombitasvir/paritaprevir/ritonavir tablets/dasabuvir) is indicated for the treatment of chronic HCV genotype 1a without cirrhosis or with compensated cirrhosis in combination with ribavirin or genotype 1b in patients without cirrhosis or with compensated cirrhosis.

Vosevi (sofosbuvir/velpatasvir/voxilaprevir) is indicated for the treatment of adult patients with chronic HCV infection without cirrhosis or with compensated cirrhosis (Child-Pugh A) who have genotype 1, 2, 3, 4, 5, or 6 infection and have previously been treated with an HCV regimen containing an NS5A inhibitor or genotype 1a or 3 infection and have previously been treated with an HCV regimen containing sofosbuvir without an NS5A inhibitor.

Zepatier (elbasvir/grazoprevir) is indicated for treatment of chronic HCV genotype 1 or 4 infection in adult and pediatric patients 12 years of age and older or weighing at least 30 kg. Zepatier is indicated for use with ribavirin in certain patient populations.

Additional Clinical Rules

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply Limits may be in place.

Hetlioz

Prior Authorization Guideline

Guideline ID	GL-138730	
Guideline Name	Hetlioz	
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP 	

Guideline Note:

Effective Date:	3/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	05/21/2021 ; 12/15/2021 ; 12/14/2022 ; 12/14/2022 ; 1/17/2024

1. Indications

Drug Name: Hetlioz (tasimelteon)

Non-24-hour sleep-wake disorder Indicated for the treatment of non-24-hour sleep-wake disorder in adults and nighttime sleep disturbances in Smith-Magenis Syndrome (SMS) in patients 16 years of age and older. Hetlioz LQ is an oral suspension and is indicated for the treatment of nighttime sleep disturbances in SMS in pediatric patients 3 years to 15 years of age.

2. Criteria

Product Name: Hetlioz, generic tasimelteon, Hetlioz LQ [a]	
Approval Length	6 month(s)

Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	
Approval Criteria 1 - ALL of the following:		
 Diagnosis of non-24-hour sleep wake disorder (also known as free-running disorder, free-running or non-entrained type circadian rhythm sleep disorder, or hypernychthemeral syndrome) Patient is totally blind (has no light perception) Prescribed by or in consultation with a specialist in sleep disorders 		
	OR	
2 - BOTH of the following:		
 Diagnosis of nighttime sleep disturbances in Smith-Magenis-Syndrome (SMS) Prescribed by or in consultation with a specialist in sleep disorders 		
Notes	 [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y 	

Product Name: Hetlioz, generic tasimelteon, Hetlioz LQ [a]	
12 month(s)	
Reauthorization	
Prior Authorization	

1 - Documentation of positive clinical response to Hetlioz or Hetlioz LQ therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an	
	d the member specific benefit plan coverage may also impact coverage	
	criteria. Other policies and utilization management programs may appl	l
	У	

3. Background

Benefit/Coverage/Program Information

Background:

Hetlioz is a melatonin receptor agonist indicated for the treatment of non-24-hour sleep-wake disorder in adults and nighttime sleep disturbances in Smith-Magenis Syndrome (SMS) in patients 16 years of age and older. Hetlioz LQ is an oral suspension and is indicated for the treatment of nighttime sleep disturbances in SMS in pediatric patients 3 years to 15 years of age.

Non-24-hour sleep wake disorder is also called free-running disorder, circadian rhythm sleep disorder - free running (or non-entrained) type, and hypernychthemeral syndrome.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Documentation of positive clinical response to therapy

	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
--	---

3. Background

Benefit/Coverage/Program Information

Background:

Hycamtin (topotecan hydrochloride) is a topoisomerase inhibitor indicated for the treatment of patients with relapsed small cell lung cancer. [1] The National Cancer Comprehensive Network (NCCN) also recommends Hycamtin may be considered as single-agent treatment (useful in

certain circumstances) for M1 disseminated disease with or without surgery and/or radiation therapy if anti-PD-L1 or anti-PD-1 therapy is contraindicated or disease has progressed on anti-PD-L1 or anti-PD-1 therapy. [2]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

4. References

Date	Notes
11/6/2023	Annual review. Updated Merkel cell carcinoma criteria based on curren t NCCN recommendations. Updated background and reference.

Ibrance

Prior Authorization Guideline

Guideline ID	GL-140169
Guideline Name	Ibrance
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	4/1/2024
P&T Approval Date:	2/16/2024
P&T Revision Date:	05/21/2021 ; 05/20/2022 ; 08/19/2022 ; 02/17/2023

1. Indications

Drug Name: Ibrance (palbociclib)

Breast cancer Indicated for the treatment of hormone receptor (HR)-positive human epidermal growth factor receptor 2 (HER2)-negative advanced or metastatic breast cancer in combination with an aromatase inhibitor as initial endocrine-based therapy, or in combination with Faslodex (fulvestrant) in patients with disease progression following endocrine therapy.

Other Uses: The use of an aromatase inhibitor in men with breast cancer is ineffective without concomitant suppression of testicular steroidogenesis. The National Comprehensive Cancer Network (NCCN) recommends the use of Ibrance as single-agent therapy for unresectable retroperitoneal well-differentiated/dedifferentiated liposarcoma (WD-DDLS).

2. Criteria

Product Name: Ibrance		
	Breast Cancer	
Diagnosis		
Approval Length	12 month(s)

3. Background

Benefit/Coverage/Program Information

Background:

Iclusig (ponatinib) is a kinase inhibitor indicated for the treatment of patients with T315Ipositive chronic myeloid leukemia (CML) (chronic phase, accelerated phase, or blast phase) or T315I-positive Philadelphia chromosome positive acute lymphoblastic leukemia (Ph+ ALL). It is also indicated for treatment of patients with chronic phase CML with resistance or intolerance to at least two prior kinase inhibitors and accelerated phase or blast phase CML or Ph+ ALL for whom no other tyrosine kinase inhibitors (TKI) are indicated. The National Comprehensive Cancer Network (NCCN) also recommends Iclusig for the treatment of myeloid, lymphoid, or mixed lineage neoplasms with eosinophilia and FGFR1 or ABL1 rearrangements.

Additional Clinical Programs:

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Idhifa (enasidenib) is an isocitrate dehydrogenase-2 inhibitor indicated for the treatment of adult patients with relapsed or refractory acute myeloid leukemia (AML) with an isocitrate dehydrogenase-2 (IDH2) mutation as detected by an FDA-approved test. The National Cancer Comprehensive Network (NCCN) also recommends the use of Idhifa as a single agent, or in combination with azacitidine, in patients with IDH2-mutated AML for treatment induction when not a candidate for intensive induction therapy, as follow-up after induction therapy following response to previous lower intensity therapy with the same regimen, or as consolidation therapy as continuation of low-intensity regimen used for induction.

Idhifa has a black box warning for differentiation syndrome with or without concomitant hyperleukocytosis. Please see full prescribing information for additional details.

Additional Clinical Programs:

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Imbruvica

Prior Authorization Guideline

Guideline ID	GL-134131
Guideline Name	Imbruvica
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	12/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 10/20/2021 ; 10/19/2022 ; 10/18/2023

1. Indications

Drug Name: Imbruvica (ibrutinib)

Chronic Lymphocytic Leukemia/Small Lymphocytic Lymphoma Indicated for the treatment of adult patients with chronic lymphocytic leukemia (CLL)/small lymphocytic lymphoma (SLL).

Chronic Lymphocytic Leukemia/Small Lymphocytic Lymphoma with 17p deletion Indicated for the treatment of adult patients with chronic lymphocytic leukemia (CLL)/small lymphocytic lymphoma (SLL) with 17p deletion

Waldenström's Macroglobulinemia Indicated for the treatment of adult patients with Waldenström's macroglobulinemia.

Chronic Graft versus Host Disease Indicated for the treatment of patients with chronic graft-versus-host disease after failure of one or more lines of systemic therapy. [1]

Other Uses The National Cancer Comprehensive Network (NCCN) also recommends the use of Imbruvica for the B-cell lymphoma types: extranodal marginal zone lymphoma (EMZL) of the stomach and of nongastric sites (noncutaneous), mantle cell lymphoma (MCL),gastric and

nongastric MALT, diffuse large B-cell, AIDSHIV-related B-cell, high grade B-cell lymphoma, and post-transplant lymphoproliferative disorders. NCCN also recommends its use for primary CNS lymphoma and hairy cell leukemia.

2. Criteria

Product Name: Imbruvica [a]		
Diagnosis	B-Cell Lymphoma	
Approval Length	12 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	
Approval Criteria		
1 - BOTH of the followir	ng:	
1.1 Diagnosis of mant	le cell lymphoma (MCL)	
	AND	
1.2 ONE of the following	ng:	
 Patient has received at least one prior therapy for MCL Used in pre-treatment therapy in combination with Rituxan (rituximab) to limit the number of cycles with RHyperCVAD (cyclophosphamide, vincristine, doxorubicin, and dexamethasone) regimen 		
	OR	
2 - Diagnosis of ONE of	f the following:	
 Chronic Lymphocytic Leukemia (CLL) Small Lymphocytic Lymphoma (SLL) 		

OR

3 - BOTH of the following:

- **3.1** Diagnosis of ONE of the following:
 - Histologic transformation to diffuse large B-cell lymphoma
 - Post-transplant lymphoproliferative disorders
 - Extranodal marginal zone lymphoma (EMZL) of the stomach
 - Extranodal Marginal Zone Lymphoma of Nongastric Sites (Noncutaneous)
 - Diffuse large B-cell lymphoma (non-GCB DLBCL and non-candidate for transplant)
 - HIV-related B-cell lymphoma
 - High grade B-cell lymphoma
 - Hairy cell leukemia
 - Nodal or splenic marginal zone lymphoma (MZL)

AND

3.2 Used as second-line or a subsequent therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may apply.

Product Name: Imbruvica [a]	
Diagnosis	B-Cell Lymphoma
Approval Length	12 month(s)

Prior Authorization Guideline

Guideline ID	GL-141358
Guideline Name	Interferon
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	4/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 11/19/2021 ; 08/19/2022 ; 10/19/2022 ; 12/13/2023 ; 2/16/2024

1. Indications

Drug Name: Intron A (Interferon alfa-2b)

Chronic hepatitis C Indicated for the treatment of chronic hepatitis C in patients 18 years of age or older with compensated liver disease who have a history of blood or blood-product exposure and/or are HCV antibody positive.

Chronic hepatitis C with compensated liver disease Indicated for the treatment of chronic hepatitis C in patients 3 years of age and older previously untreated with alpha interferon therapy and in patients 18 years of age and older who have relapsed following alpha interferon therapy.

Chronic hepatitis B Indicated for the treatment of chronic hepatitis B in patients 1 year of age or older with compensated liver disease. Patients who have been serum HBsAg positive for at least 6 months and have evidence of HBV replication (serum HBeAg positive) with elevated serum ALT are candidates for treatment.

Hairy cell leukemia Indicated for the treatment of patients 18 years of age or older with hairy

cell leukemia.

Malignant Melanoma Indicated as adjuvant to surgical treatment in patients 18 years of age or older with malignant melanoma who are free of disease but a high risk for systemic recurrence, within 56 days of surgery.

Follicular Non-Hodgkin's lymphoma Indicated for the initial treatment of clinically aggressive follicular Non-Hodgkin's lymphoma in conjunction with anthracycline-containing combination chemotherapy in patients 18 years of age or older.

Condylomata Acuminata Indicated for intralesional treatment of selected patients 18 years of age or older with condylomata acuminata involving external surfaces of the genital and perianal areas.

AIDS-Related Kaposi's Sarcoma Indicated for the treatment of selected patients 18 years of age or older with AIDS-Related Kaposi's Sarcoma.

The National Comprehensive Cancer Network (NCCN) Recommends use of Intron A for myeloproliferative neoplasms (MPNs) such as essential thrombocytopenia (ET), polycythemia vera (PV), and primary myelofibrosis (PM), adult T-cell leukemia / lymphoma, mycosis fungoides / Sézary syndrome, and systemic mastocytosis.

Drug Name: Pegasys (peginterferon alfa-2a)

Chronic hepatitis C Indicated for the treatment of chronic hepatitis C (CHC) as part of a combination regimen with other hepatitis C virus (HCV) antiviral drugs in patients 5 years of age and older with compensated liver disease. Pegasys monotherapy is indicated for CHC only if patient has contraindication to or significant intolerance to other HCV antiviral drugs.

HBeAg positive and HBeAg negative chronic hepatitis B Indicated in the treatment of adult patients with HBeAg positive and HBeAg negative chronic hepatitis B infection who have compensated liver disease and evidence of viral replication and liver inflammation.

2. Criteria

Product Name: Intron A, Pegasys, Pegasys Proclick [a]	
Diagnosis	Treatment of Chronic Hepatitis B
Approval Length	48 Week(s)
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of chronic Hepatitis B infection

AND

2 - Patient does not have decompensated liver disease*

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	y. *Defined as Child-Pugh Class B or C

Product Name: Intron A, Pegasys, Pegasys Proclick [a]	
Diagnosis	Treatment of Chronic Hepatitis C
Approval Length	48 Week(s)
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of chronic hepatitis C infection

AND

2 - Patient does not have decompensated liver disease*

AND

3 - Will be used as part of a combination antiviral treatment regimen

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
	*Defined as Child-Pugh Class B or C

Product Name: Intron A [a]

Diagnosis	For Diagnoses Other Than Hepatitis
Approval Length	12 month(s)
Guideline Type	Prior Authorization
 AIDS-related Ka Giant cell tumors Mycosis fungoid Primary cutanec Adult T-cell leuk 	nia noma noma noma noma noma noma noma nom
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Pegasys and Pegasys Proclick [a]	
Diagnosis	For Diagnoses Other Than Hepatitis
Approval Length	12 month(s)
Guideline Type	Prior Authorization

- **1** ONE of the following diagnoses:
 - Chronic myeloid leukemia (CML)
 - Hairy cell leukemia
 - Erdheim-Chester disease (ECD)
 - Myeloproliferative neoplasms (MPNs) such as essential thrombocythemia (ET), polycythemia vera (PV), or myelofibrosis (MF)
 - Mycosis fungoides/Sezary syndrome
 - Primary cutaneous CD30+ T-cell lymphoproliferative disorders

Product Name: Intron A, Pegasys, Pegasys Proclick [a]	
Diagnosis	NCCN Recommended Regimens
Approval Length	12 month(s)
Guideline Type	Prior Authorization

1 - The drug will be approved for uses not outlined above if supported by The National Comprehensive Cancer Network (NCCN) Drugs and Biologics Compendium

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	---

3. Background

Benefit/Coverage/Program Information

Background:

Intron A (interferon alfa-2b) is indicated for the treatment of chronic hepatitis C in patients 18 years of age or older with compensated liver disease who have a history of blood or blood-product exposure and/or are HCV antibody positive. Intron A has additional FDA labeling for the treatment of chronic hepatitis C in patients 3 years of age and older with compensated liver disease previously untreated with alpha interferon therapy and in patients 18 years of age and older who have relapsed following alpha interferon therapy. Intron A is also indicated for the treatment of chronic hepatitis B in patients 1 year of age or older with compensated liver disease. Patients who have been serum HBsAg positive for at least 6 months and have evidence of HBV replication (serum HBeAg positive) with elevated serum ALT are candidates for treatment. Intron A is indicated for the treatment of patients 18 years of age or older with hairy cell leukemia. Intron A is indicated as adjuvant to surgical treatment in patients 18 years of age or older with malignant melanoma who are free of disease but a high risk for systemic

recurrence, within 56 days of surgery. It is also indicated for the initial treatment of clinically aggressive follicular Non-Hodgkin's lymphoma in conjunction with anthracycline-containing combination chemotherapy in patients 18 years of age or older. Intron A is indicated for intralesional treatment of selected patients 18 years of age or older with condylomata acuminata involving external surfaces of the genital and perianal areas. It is also indicated for the treatment of selected patients 18 years of age or older with AIDS-Related Kaposi's Sarcoma. [1]

The National Comprehensive Cancer Network (NCCN) also recommends use of Intron A (interferon alfa-2b) for giant cell tumors of the bone, mycosis fungoides / Sézary syndrome, primary cutaneous CD30+ T-cell lymphoproliferative disorders, and adult T-cell leukemia/lymphoma [2]

Pegasys (peginterferon alfa-2a) is an inducer of the innate immune response indicated for the treatment of chronic hepatitis C (CHC) as part of a combination regimen with other hepatitis C virus (HCV) antiviral drugs in patients 5 years of age and older with compensated liver disease. Pegasys monotherapy is indicated for CHC only if patient has contraindication to or significant intolerance to other HCV antiviral drugs. Pegasys is indicated in the treatment of adult patients with HBeAg positive and HBeAg negative chronic hepatitis B (CHB) infection who have compensated liver disease and evidence of viral replication and liver inflammation. It is also indicated for the treatment of non-cirrhotic pediatric patients 3 years of age and older with HBeAg-positive CHB and evidence of viral replication and elevations in serum alanine aminotransferase (ALT). [3]

The National Comprehensive Cancer Network (NCCN) also recommends the use of Pegasys (peginterferon alfa-2a) in patients with chronic myeloid leukemia (CML), Erdheim-Chester disease (ECD), myeloproliferative neoplasms (MPNs) such as essential thrombocytopenia (ET), polycythemia vera (PV), and myelofibrosis (PM), and systemic mastocytosis, as well as mycosis fungoides/Sezary syndrome, hairy cell leukemia, primary cutaneous CD30+ T-cell lymphoproliferative disorders, and adult T-cell leukemia/lymphoma. [2,6-9]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

5. Revision History

Date	Notes
2/9/2024	Removed Pegintron as it is discontinued and added SML.

Iressa

Prior Authorization Guideline

Guideline ID	GL-134439
Guideline Name	Iressa
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	12/1/2023
P&T Approval Date:	9/15/2021
P&T Revision Date:	10/20/2021 ; 10/19/2022 ; 06/21/2023 ; 10/18/2023

1. Indications

Drug Name: Iressa (gefitinib)

Non-small cell lung cancer (NSCLC) Indicated as first-line treatment of patients with metastatic non-small cell lung cancer (NSCLC) whose tumors have epidermal growth factor receptor (EGFR) exon 19 deletions or exon 21 (L858R) substitution mutations.

<u>Off Label Uses:</u> National Cancer Comprehensive Network (NCCN) The National Cancer Comprehensive Network (NCCN) also recommends the use of Iressa in patients with NSCLC with EGFR S768I, L861Q, and/or G719X mutation positive tumors as well as patients with NSCLC with a known sensitizing EGFR mutation and associated brain metastases.

2. Criteria

Product Name: Brand Iressa, generic gefitinib [a]	
Diagnosis	Non-Small Cell Lung Cancer (NSCLC)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of metastatic non-small cell lung cancer (NSCLC)

AND

2 - ONE of the following:

- Tumors are positive for epidermal growth factor receptor (EGFR) exon 19 deletions
- Tumors are positive for exon 21 (L858R) substitution mutations
- Tumors are positive for a known sensitizing EGFR mutation (e.g, exon 20 S768I mutation, exon 18 G719X mutation, exon 21 L861Q mutation)

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	--

Product Name: Brand Iressa, generic gefitinib [a]	
Diagnosis	Non-Small Cell Lung Cancer (NSCLC)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization
Approval Criteria	
1 - Documentation of positive clinical response to Iressa therapy	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl

у.

10/6/2023	Annual review. Updated background and list of examples of sensitizing EGFR mutations per NCCN recommendations. Updated references.

Iron Chelators

Prior Authorization Guideline

Guideline ID	GL-126557
Guideline Name	Iron Chelators
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	8/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 06/16/2021 ; 09/15/2021 ; 06/15/2022 ; 6/21/2023

1. Indications

Drug Name: Exjade (deferasirox), Jadenu (deferasirox)

Chronic iron overload due to blood transfusions (transfusional iron overload) Indicated for the treatment of chronic iron overload due to blood transfusions in patients 2 years of age and older. The safety and efficacy of Exjade and Jadenu, when administered with other iron chelation therapy, have not been established.

Chronic iron overload due to non-transfusion dependent thalassemia syndromes Indicated for the treatment of chronic iron overload in patients 10 years of age and older with non-transfusion dependent thalassemia syndromes and with a liver iron (Fe) concentration (LIC) of at least 5 mg Fe per gram of dry weight (dw) and a serum ferritin greater than 300 mcg/L.

2. Criteria

Product Name: Brand Exjade, Brand Jadenu, generic deferasirox [a]	
Diagnosis	Chronic Iron Overload Due to Blood Transfusions (i.e., Transfusional Iron Overload)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of chronic iron overload (e.g., sickle cell anemia, thalassemia, etc.) due to blood transfusion

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
y.

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl

у.

3. Background

Benefit/Coverage/Program Information

Background:

Exjade (deferasirox) and Jadenu (deferasirox) are iron chelating agents indicated for the treatment of chronic iron overload due to blood transfusions (transfusional hemosiderosis) in patients 2 years of age and older. The safety and efficacy of deferasirox, when administered with other iron chelation therapy, have not been established. It is recommended that therapy with deferasirox be started when a patient has evidence of chronic transfusional iron overload, such as the transfusion of approximately 100 mL/kg of packed red blood cells (approximately 20 units for a 40-kg patient) and a serum ferritin consistently >1000 mcg/L. Deferasirox is also indicated for the treatment of chronic iron overload in patients 10 years of age and older with non-transfusion dependent thalassemia (NTDT) syndromes and with a liver iron (Fe) concentration (LIC) of at least 5 mg Fe per gram of dry weight (mg Fe/g dw) and a serum ferritin greater than 300 mcg/L. This indication is based on achievement of an LIC less than 5 mg Fe/g dw.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Step therapy may be in place.

5. Revision History

2024 UnitedHealthcare Individual and Family Plan Clinical Criteria - Kansas

Date	Notes
6/21/2023	Updated references. Removed formulation notations because policy a pplies to all formulations of targeted drugs.
6/21/2023	Annual review. Added state mandate language.

Jakafi

Prior Authorization Guideline

Guideline ID	GL-137003
Guideline Name	Jakafi
Formulary	UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	03/17/2021 ; 09/15/2021 ; 11/18/2022 ; 11/17/2023

1. Indications

Drug Name: Jakafi (ruxolitinib)

Myelofibrosis Indicated for treatment of patients with intermediate or high-risk myelofibrosis, including primary myelofibrosis (PMF), post-polycythemia vera myelofibrosis and post-essential thrombocythemia myelofibrosis.

Polycythemia vera Indicated in patients with polycythemia vera who have had an inadequate response to or are intolerant of hydroxyurea.

Graft versus host disease (GVHD) Indicated for the treatment of steroid-refractory acute graft-versus-host disease and chronic graft-versus-host disease after failure of one or two lines of systemic therapy in adult and pediatric patients 12 years and older.

2. Criteria

Product Name: Jakafi [a]	
Diagnosis	Myelofibrosis
Approval Length	6 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - One of the following diagnoses:

- Primary myelofibrosis
- Post-polycythemia vera myelofibrosis
- Post-essential thrombocythemia myelofibrosis

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
ly.

Product Name: Jakafi [a]	
Diagnosis	Myelofibrosis
Approval Length	6 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Documentation that patient has evidence of symptom improvement or reduction in spleen volume while on Jakafi

Notes	NOTE: If documentation does not provide evidence of symptom improv ement or reduction in spleen volume while on Jakafi, authorization will be issued for 2 months to allow for dose titration with discontinuation of therapy.
	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Jakafi [a]	
Diagnosis	Polycythemia vera
Approval Length	6 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
Approval Criteria 1 - Diagnosis of polycythemia vera	
	AND
 2 - History of failure, inadequate response, contraindication, or intolerance to one of the following: Hydroxyurea 	
 Interferon therapy (e.g., Intron A, Pegays, Pegintron) 	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Jakafi [a]	
Diagnosis	Essential thrombocythemia
Approval Length	6 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of essential thrombocythemia

AND

2 - Inadequate response or loss of response to ONE of the following:

- Hydroxyurea •
- Pegasys (peginterferon alfa-2a)
 Agrylin (Anagrelide)

V.

Product Name: Jakafi [a]	
Diagnosis	Essential thrombocythemia
Approval Length	6 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Documentation that patient has evidence of symptom improvement or reduction in spleen volume while on Jakafi

Notes	NOTE: If documentation does not provide evidence of symptom improv ement or reduction in spleen volume while on Jakafi, authorization will be issued for 2 months to allow for dose titration with discontinuation of therapy.
	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Jakafi [a]	
Diagnosis	Graft versus host disease (GVHD)
Approval Length	6 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

- **1** BOTH of the following:
 - Diagnosis of acute GVHD
 - Disease is steroid refractory

OR

2 - BOTH of the following:

- Diagnosis of chronic GVHD
- Failure of one or two lines of systemic therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl

у.

Product Name: Jakafi [a]	
Diagnosis	Graft versus host disease (GVHD)
Approval Length	6 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Documentation that patient has symptom improvement while on Jakafi

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	у.

Product Name: Jakafi [a]	
Diagnosis	Myeloid/Lymphoid Neoplasms
Approval Length	6 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of lymphoid, myeloid, or mixed lineage neoplasms with eosinophilia

AND

2 - Patient has a JAK2 rearrangement

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Jakafi [a]	
Diagnosis	Myeloid/Lymphoid Neoplasms
Approval Length	6 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on Jakafi therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apple
	y.

Product Name: Jakafi [a]		
Diagnosis	Myelodysplastic Syndromes	
Approval Length	6 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	
Approval Criteria		
1 - Both of the following:		
1.1 Diagnosis of chronic myelomonocytic leukemia (CMML)-2		
AND		
1.2 Use in combination with a hypomethylating agent (e.g., azacitidine, decitabine)		
OR		
2 - Diagnosis of BCR-ABL negative atypical chronic myeloid leukemia (aCML)		
Notes	[a] State mandates may apply. Any federal regulatory requirements an	

d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
у.

Product Name: Jakafi [a]	
Diagnosis	Myelodysplastic Syndromes
Approval Length	6 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on Jakafi therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	---

Product Name: Jakafi [a]	
Diagnosis	Pediatric Acute Lymphoblastic Leukemia
Approval Length	6 month(s)
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of pediatric acute lymphoblastic leukemia

AND

2 - Used as a component of induction therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Jakafi [a]			
Diagnosis	Immunotherapy-Related Toxicities		
Approval Length	6 month(s)		
Guideline Type	Prior Authorization		
Approval Critoria			
Approval Criteria			
1 - Diagnosis of CAR-T	1 - Diagnosis of CAR-T induced G4 cytokine release syndrome		
AND			
2 - Disease is refractory to high-dose corticosteroids and anti-IL-6 therapy (e.g., Actemra [tocilizumab])			
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.		

Product Name: Jakafi [a]	
Diagnosis	T-Cell Lymphomas
Approval Length	6 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

- **1** Diagnosis of ONE of the following:
 - Peripheral T-Cell Lymphoma not otherwise specified (PTCL-NOS)
 - Enteropathy-associated T-cell lymphoma (EATL)
 - Monomorphic epitheliotropic intestinal T-cell lymphoma (MEITL)
 - Angioimmunoblastic T-cell lymphoma (AITL)
 - Nodal peripheral T-cell lymphoma with T-follicular helper phenotype (PTCL, TFH)
 - Follicular T-cell lymphoma (FTCL)
 - Anaplastic large cell lymphoma (ALCL)
 - Hepatosplenic T-cell lymphoma

AND

2 - Used as initial palliative intent therapy or second-line and subsequent therapy for relapsed/refractory disease

Notes [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Benefit/Coverage/Program Information

Jakafi (ruxolitinib) is a kinase inhibitor indicated for treatment of patients with intermediate or high-risk myelofibrosis, including primary myelofibrosis (PMF), post-polycythemia vera myelofibrosis and post-essential thrombocythemia myelofibrosis. It is also indicated in patients with polycythemia vera who have had an inadequate response to or are intolerant of hydroxyurea. It is also indicated for the treatment of steroid-refractory acute graft-versus-host disease and chronic graft-versus-host disease after failure of one or two lines of systemic therapy in adult and pediatric patients 12 years and older.

The National Cancer Comprehensive Network (NCCN) also recommends Jakafi for the treatment of patients with polycythemia vera who have had an inadequate response to interferon therapy, essential thrombocythemia, lymphoid, myeloid or mixed lineage neoplasms with eosinophilia and JAK2 rearrangement and myelodysplastic syndromes, pediatric acute lymphoblastic leukemia, T-Cell Lymphomas, and management of CAR-T-cell related toxicities.

Additional Clinical Rules:

Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Supply limits may be in place.

3. Background

Benefit/Coverage/Program Information

Background:

Jesduvroq (daprodustat) is a hypoxia-inducible factor prolyl hydroxylase (HIF PH) inhibitor indicated for the treatment of anemia due to chronic kidney disease in adults who have been receiving dialysis for at least four months.

The treatment of anemia includes intravenous (IV) iron and/or treatment with either an erythropoiesis-stimulating agent (ESA) [e.g., Aranesp (darbepoetin), Epogen (epoetin alfa), Procrit (epoetin alfa), Retacrit (epoetin alfa-epbx)] or a hypoxia-inducible factor prolyl hydroxylase inhibitor (HIF PHI) [e.g., Jesduvroq (daprodustat)].

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limit may be in place.

	у.

Product Name: Joenja [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

1 - Documentation of positive clinical response to Joenja therapy (e.g., reduced lymph node size, increased naïve B-cell percentage, decreased frequency or severity of infections, decreased frequency of hospitalizations)

AND

2 - Prescribed by one of the following:

- Hematologist
- Immunologist

AND

3 - Patient weighs greater than or equal to 45 kg

Notes	a] State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply

3. Background

Benefit/Coverage/Program Information

Background:

Joenja (leniolisib) is a kinase inhibitor indicated for the treatment of activated phosphoinositide 3-kinase delta (PI3K δ) syndrome (APDS) in adult and pediatric patients 12 years of age and older.[1]

APDS is a rare primary immunodeficiency caused by variations in the genes encoding subunits of the PI3Kδ enzyme complex and PI3Kδ hyperactivity. PI3Kδ hyperactivity results in altered development of B and T-cell which can lead to severe lymphoproliferation, recurrent infections, autoimmune disorders, and malignancies. APDS can be characterized by a variety of symptoms, including recurrent respiratory tract infections (e.g., pneumonia, otitis media, rhinosinusitis), recurrent herpesvirus infections (e.g., Epstein Barr virus, cytomegalovirus, herpes simplex virus), lymphoproliferation (e.g., lymphadenopathy, hepatosplenomegaly), autoimmune cytopenia and glomerulonephritis, and neurodevelopmental delay. A definitive diagnosis can be made through genetic testing. Current standard of care includes antimicrobial prophylaxis (e.g., trimethoprim/ sulfamethoxazole, azithromycin), immunoglobulin replacement therapy (IRT), immunosuppressive therapy (e.g., glucocorticoids, rituximab), and hematopoietic stem cell transplant (HSCT).[4]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

	criteria. Other policies and utilization management programs may appl	
	у.	

Product Name: Juxtapid [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

Approval Criteria

1 - Patient continues to receive comprehensive counseling regarding appropriate diet

AND

2 - Patient continues to receive other lipid-lowering therapy (e.g., statin, LDL apheresis)

AND

3 - Documentation of a positive clinical response to therapy from pre-treatment baseline

	AND
4 - Prescribed by ONE	of the following:
 Cardiologist Endocrinologist Lipid specialist 	
	AND
5 - Not used in combination with a proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Praluent (alirocumab), Repatha (evolocumab)]	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Juxtapid (lomitapide) is a microsomal triglyceride transfer protein inhibitor indicated as an adjunct to a low-fat diet and other lipid lowering treatments, including LDL apheresis where available, to reduce low-density lipoprotein cholesterol (LDL-C), total cholesterol (TC), apolipoprotein B (apo B), and non-high-density lipoprotein cholesterol (non-HDL-C) in patients with homozygous familial hypercholesterolemia (HoFH). The safety and efficacy of Juxtapid have not been established in patients with hypercholesterolemia who do not have HoFH including those with heterozygous familial hypercholesterolemia (HeFH). The effect of Juxtapid on cardiovascular morbidity and mortality has not been determined.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Kerendia

Prior Authorization Guideline

Guideline ID	GL-132887
Guideline Name	Kerendia
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	11/1/2023
P&T Approval Date:	9/21/2022
P&T Revision Date:	12/14/2022 ; 9/20/2023

1. Indications

Drug Name: Kerendia

Chronic kidney disease associated with type 2 diabetes Indicated to reduce the risk of sustained estimated glomerular filtration rate (eGFR) decline, end-stage kidney disease, cardiovascular death, non-fatal myocardial infarction, and hospitalization for heart failure in adult patients with chronic kidney disease (CKD) associated with type 2 diabetes (T2D).

2. Criteria

Product Name: Kerendia [a]	
Approval Length	6 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

Approval Criteria
1 - Diagnosis of chronic kidney disease
AND
2 - Both of the following:
 Urinary albumin-to-creatinine ratio (UACR) greater than or equal to 30 mg/g An eGFR greater than or equal to 25 mL/min/1.73 m2
AND
3 - History of type 2 diabetes
AND
4 - Used to reduce the risk of any of the following:
 Sustained eGFR decline End-stage kidney disease Cardiovascular death Non-fatal myocardial infarction Hospitalization for heart failure
AND
5 - Serum potassium level is less than or equal to 5 mEQ/L prior to initiating treatment
AND
6 - One of the following:
6.1 Patient is on a stabilized dose and receiving concomitant therapy with one of the following
Maximally tolerated angiotensin converting enzyme (ACE) inhibitor (e.g., captopril,

 enalapril) Maximally tolerated angiotensin II receptor blocker (ARB) (e.g., candesartan, valsartan) 	
	OR
6.2 Patient has an alle	rgy, contraindication, or intolerance to ACE inhibitors and ARBs
	AND
7 - One of the following	
 Patient is on a stabilized dose and receiving concomitant therapy with a SGLT2 inhibitor (e.g., Jardiance, Farxiga) History of failure, contraindication, or intolerance to a SGLT2 inhibitor (e.g., Jardiance, Farxiga)

	criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Kisqali Femara Co-Pack is a co-packaged product containing ribociclib, a kinase inhibitor, and letrozole, an aromatase inhibitor, and is indicated as initial endocrine-based therapy for the treatment of adult patients with hormone receptor (HR)-positive, human epidermal growth factor

receptor 2 (HER2)-negative advanced or metastatic breast cancer.

The National Comprehensive Cancer Network (NCCN) recommends the use of Kisqali similarly for men and premenopausal women receiving ovarian ablation/suppression with recurrent unresectable (local or regional) or metastatic HR-positive HER2-negative breast cancer disease in combination with an aromatase inhibitor or fulvestrant. The use of an aromatase inhibitor in men with breast cancer is ineffective without concomitant suppression of testicular steroidogenesis. The NCCN also recommends Kisqali for estrogen receptor (ER)-positive recurrent or metastatic endometrial carcinoma in combination with letrozole.

Additional Clinical Programs:

- Supply limits may be in place.
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Lenvima

Prior Authorization Guideline

Guideline ID	GL-140207
Guideline Name	Lenvima
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	4/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 11/19/2021 ; 02/18/2022 ; 08/19/2022 ; 02/17/2023 ; 08/18/2023 ; 2/16/2024

1. Indications

Drug Name: Lenvima (lenvatinib)

Thyroid Carcinoma Indicated for the treatment of patients with locally recurrent or metastatic, progressive, radioactive iodine-refractory differentiated thyroid cancer.

Renal Cell Cancer Indicated in combination with everolimus for the treatment of patients with advanced renal cell carcinoma (RCC) following one prior anti-angiogenic therapy. Indicated in combination with pembrolizumab for the first-line treatment of adult patients with advanced RCC.

Hepatocellular Carcinoma Indicated for the first-line treatment of patients with unresectable hepatocellular carcinoma.

Endometrial Carcinoma Indicated in combination with pembrolizumab, for the treatment of patients with advanced endometrial carcinoma that is not microsatellite instability-high (MSI-H) or mismatch repair deficient (dMMR), who have disease progression following prior systemic therapy and are not candidates for curative surgery or radiation.

Other Uses: The National Cancer Comprehensive Network (NCCN) also recommends Lenvima for the treatment of medullary thyroid carcinoma in patients who have experienced disease progression while on Caprelsa (vandetanib) or Cometriq (cabozantinib), as a systemic therapy for recurrent adenoid cystic carcinoma, and for the treatment of metatstatic hepatocellular carcinoma, thymic carcinoma, biliary tract carcinoma and cutaneous melanoma.

2. Criteria

Product Name: Lenvima [a]		
Diagnosis	Thyroid Cancer	
Approval Length	12 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	
Approval Criteria	ntiated thyroid cancer (DTC)	
AND		
2 - Disease is locally recurrent, metastatic, progressive, or symptomatic		
AND		
3 - Disease is radioactive iodine-refractory or ineligible		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

Product Name: Lenvima [a]	
Diagnosis	Thyroid Cancer

Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on Lenvima therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may apply.

Product Name: Lenvima [a]	
Diagnosis	Renal Cell Cancer
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of advanced renal cell carcinoma

AND

2 - ONE of the following:

2.1 BOTH of the following:

2.1.1 History of failure, contraindication, or intolerance to prior anti-angiogenic therapy [e.g., Avastin (bevacizumab), Votrient (pazopanib), Sutent (sunitinib), Nexavar (sorafenib)]

AND

2.1.2 Used in combination with everolimus (generic Afinitor)

2.2 Used in combinati	OR on with Keytruda (pembrolizumab)
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Lenvima [a]

3. Background

Benefit/Coverage/Program Information

Background:

Lenvima (lenvatinib) is a kinase inhibitor indicated for the treatment of patients with locally recurrent or metastatic, progressive, radioactive iodine-refractory differentiated thyroid cancer in combination with Afinitor (everolimus), for the treatment of patients with advanced renal cell carcinoma (RCC) following one prior anti-angiogenic therapy, in combination with Keytruda (pembrolizumab), for the first-line treatment of patients with advanced RCC, for the first-line treatment of patients with unresectable hepatocellular carcinoma, and in combination with pembrolizumab, for the treatment of patients with advanced endometrial carcinoma that is not microsatellite instability-high (MSI-H) or mismatch repair deficient (dMMR), who have disease progression following prior systemic therapy in any setting and are not candidates for curative surgery or radiation. [1]

In addition, the National Cancer Comprehensive Network (NCCN) also recommends Lenvima for the treatment of medullary thyroid carcinoma in patients who have experienced disease progression while on Caprelsa (vandetanib) or Cometriq (cabozantinib), as a systemic therapy for recurrent adenoid cystic carcinoma, and for the treatment of metastatic hepatocellular carcinoma, thymic carcinoma, biliary tract carcinoma and cutaneous melanoma [2].

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Leuprolide

Prior Authorization Guideline

Guideline ID	GL-144791
Guideline Name	Leuprolide
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	4/17/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 10/20/2021 ; 10/20/2021 ; 10/19/2022 ; 12/14/2022 ; 08/18/2023 ; 4/17/2024

1. Indications

Drug Name: Subcutaneously (SC) administered leuprolide acetate (Camcevi, Eligard, and generics)

Advanced prostate cancer Indicated for the palliative treatment of advanced prostate cancer. [1,2]

<u>Off Label Uses:</u> Breast cancer, ovarian cancer The National Cancer Comprehensive Network (NCCN) recommends leuprolide acetate for the treatment of breast cancer and ovarian cancer. [3] However, the NCCN recommendations for these cancers are for the depot formulations of leuprolide, which are covered under the medical benefit.

Central precocious puberty (CPP) While a depot formulation of leuprolide (Lupron Depot-Ped) is FDA labeled for the treatment of central precocious puberty (CPP), [4] clinical evidence supports the use of daily SC administered leuprolide acetate for the same indication. [5] CPP is defined as early onset of secondary sexual characteristics, generally earlier than 8 years of age in girls and 9 years of age in boys, associated with pubertal pituitary gonadotropin activation. Leuprolide prescribing information states that prior to initiation of treatment, a clinical diagnosis of CPP should be confirmed by blood concentration of luteinizing hormone (LH) (basal or stimulated with a GnRH analog) and assessment of bone age versus chronological age.[4] Once therapy is initiated, CPP patients should be evaluated every 3 to 6 months for pubertal development and growth, and bone age should be measured radiographically every 6 to 12 months.[5]

Salivary gland tumors The NCCN recommends leuprolide acetate for the treatment of salivary gland tumors.[2]

Gender dysphoria Clinical evidence supporting the use of GnRH analogs for the treatment of gender dysphoria is limited and lacks long-term safety data. Statistically robust randomized controlled trials are needed to address the issue of whether the benefits outweigh the clinical risk in its use.

Drug Name: Intramuscular (IM) administered leuprolide acetate 22.5 mg injection

Advanced prostate cancer Indicated for the treatment of advanced prostate cancer.

2. Criteria

Product Name: Camcevi, Eligard, leuprolide inj kit 1 mg/0.2 mL, leuprolide acetate 22.5 mg injection [a]	
Diagnosis	Treatment of Prostate Cancer
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - For the palliative treatment of advanced prostate cancer

OR

2 - ALL of the following:

2.1 Disease is asymptomatic

AND

2.2 Life expectancy is less than or equal to 5 years

AND

2.3 ONE of the following:

• Disease is regional

• Disease is metastatic

OR

3 - ALL of the following:

3.1 As a single agent with or without abiraterone (Zytiga) and prednisone or in combination with a first generation antiandrogen (e.g., nilutamide, flutamide, or bicalutamide)

AND

3.2 Patient is in the regional risk group

AND

3.3 ONE of the following:

- Life expectancy is greater than 5 years
- Disease is symptomatic

OR

4 - For patients who progressed on observation of localized disease

OR

5 - BOTH of the following: **5.1** As a single agent or in combination with a first-generation antiandrogen (e.g., nilutamide, flutamide, or bicalutamide) AND 5.2 Patient is in the M0 PSA persistence/recurrence after RP or EBRT risk group OR 6 - BOTH of the following: **6.1** As a single agent or in combination with a first-generation antiandrogen (e.g., nilutamide, flutamide, or bicalutamide) or in combination with docetaxel and concurrent steroid with or without a first-generation antiandrogen or in combination with abiraterone and prednisone AND 6.2 Patient is in the M1 Castration-Naïve/resistant disease risk group Notes [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl ٧.

Approval Criteria	
1 - Patient continues to	use hormone therapy to change physical characteristics
	AND
2 - Documentation of po	ositive clinical response to therapy
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Coverage Criteria:

This criteria provides parameters for coverage of oncology indications based upon the National Comprehensive Cancer Network (NCCN) Drugs & Biologics Compendium. The Compendium lists the appropriate drugs and biologics for specific cancers using US Food and Drug Administration (FDA)-approved disease indications and specific NCCN panel recommendations. Each recommendation is supported by a level of evidence category.

UnitedHealthcare recognizes indications and uses of leuprolide acetate listed in the NCCN Drugs and Biologics Compendium with Categories of Evidence and Consensus of 1, 2A, and 2B as proven and Categories of Evidence and Consensus of 3 as unproven.

Clinical evidence supporting the use of GnRH analogs for the treatment of gender dysphoria is limited and lacks long-term safety data. Statistically robust randomized controlled trials are needed to address the issue of whether the benefits outweigh the clinical risk in its use.

Some states mandate benefit coverage for off-label use of medications for some diagnoses or under some circumstances.

Some states also mandate usage of other Compendium references. Where such mandates apply, they supersede language in the benefit document or in the notification criteria.

Additional Clinical Rules:

Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization

based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Supply limitations may be in place.

Background:

Leuprolide acetate is a synthetic nonapeptide analog of naturally occurring gonadotropin releasing hormone (GnRH) or luteinizing hormone-releasing hormone (LH-RH) which acts as a potent inhibitor of gonadotropin secretion when given continuously in therapeutic doses. Consequently, tissues and functions that depend on gonadal steroids for their maintenance become quiescent.[10]

Subcutaneously (SC) administered leuprolide acetate (Eligard and generics) is FDA-labeled for the palliative treatment of advanced prostate cancer.[1,2]

Intramuscular (IM) administered leuprolide acetate 22.5 mg injection is FDA-labeled for the treatment of advanced prostate cancer.[18]

In addition to prostate cancer, The National Cancer Comprehensive Network (NCCN) recommends leuprolide acetate for the treatment of breast cancer and ovarian cancer.[3] However, the NCCN recommendations for these cancers are for the depot formulations of leuprolide, which are covered under the medical benefit. The NCCN also recommends leuprolide acetate for the treatment of salivary gland tumors.[2]

While a depot formulation of leuprolide (Lupron Depot-Ped) is FDA labeled for the treatment of central precocious puberty (CPP),[4] clinical evidence supports the use of daily SC administered leuprolide acetate for the same indication.[5] CPP is defined as early onset of secondary sexual characteristics, generally earlier than 8 years of age in girls and 9 years of age in boys, associated with pubertal pituitary gonadotropin activation. Leuprolide prescribing information states that prior to initiation of treatment, a clinical diagnosis of CPP should be confirmed by blood concentration of luteinizing hormone (LH) (basal or stimulated with a GnRH analog) and assessment of bone age versus chronological age. [4] Once therapy is initiated, CPP patients should be evaluated every 3 to 6 months for pubertal development and growth, and bone age should be measured radiographically every 6 to 12 months.[5] Fensolvi is a gonadotropin releasing hormone (GnRH) agonist indicated for the treatment of pediatric patients 2 years of age and older with central precocious puberty.

Linzess_Symproic_Zelnorm

Prior Authorization Guideline

Guideline ID	GL-128044
Guideline Name	Linzess_Symproic_Zelnorm
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	9/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 03/17/2021 ; 06/16/2021 ; 09/15/2021 ; 11/18/2022 ; 03/15/2023 ; 04/19/2023 ; 7/19/2023

1. Indications

Drug Name: Linzess (linaclotide)

Chronic idiopathic constipation Indicated for the treatment of chronic idiopathic constipation in adults aged 18 years and older.

Irritable bowel syndrome Indicated for the treatment of irritable bowel syndrome with constipation in adults aged 18 years and older.

Functional constipation (FC) Indicated for treatment of functional constipation (FC) in pediatric patients 6 to 17 years of age.

Drug Name: Symproic (naldemedine)

Opioid-induced constipation Indicated for the treatment of opioid-induced constipation in adult patients with chronic non-cancer pain including patients with chronic pain related to prior cancer or its treatment who do not require frequent (e.g., weekly) opioid dosage escalation

Drug Name: Zelnorm (tegaserod)

Irritable bowel syndrome Indicated for the treatment of irritable bowel syndrome with constipation in adult women less than 65 years of age.

2. Criteria

Product Name: Linzess [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
 Approval Criteria 1 - One of the following: Diagnosis of chronic idiopathic constipation Diagnosis of irritable bowel syndrome with constipation Diagnosis of functional constipation 	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Symproic [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

- **1** One of the following:
 - Diagnosis of opioid-induced constipation in patients being treated for chronic, non-

 cancer pain Diagnosis of opioid-induced constipation in patients with chronic pain related to prior cancer or its treatment who do not require frequent (e.g., weekly) opioid dosage escalation 	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Zelnorm	Product Name: Zelnorm [a]	
Approval Length	12 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	
Approval Criteria		
1 - Diagnosis of irritable	bowel syndrome with constipation	
	AND	
2 - Patient was female at birth		
AND		
3 - History of failure, contraindication or intolerance to lactulose		
AND		
4 - History of failure, contraindication, or intolerance to Linzess		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

Product Name: Symproic, or Zelnorm [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization
Approval Criteria	
1 - Documentation of po	ositive clinical response to therapy
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl

3. Background

Benefit/Coverage/Program Information

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

Background

Zelnorm (tegaserod) is indicated for treatment of irritable bowel syndrome with constipation (IBS-C) in adults; however, Zelnorm is only indicated in adult women less than 65 years. Linzess (linaclotide) is indicated for the treatment of chronic idiopathic constipation and irritable bowel syndrome with constipation in adults aged 18 years and older and for the treatment of functional constipation (FC) in pediatric patients 6 to 17 years of age. Symproic (naldemedine) is an opioid antagonist indicated for the treatment of opioid-induced constipation in adult patients with chronic non-cancer pain including patients with chronic pain related to prior cancer or its treatment who do not require frequent (e.g., weekly) opioid dosage escalation. Physicians and patients should periodically assess the need for continued treatment

with these agents.

Date	Notes
7/20/2023	Removed Amitiza from policy as clinical prior auth has been removed.
7/20/2023	Added new indication for Linzess for functional constipation. Removed Linzess from reauthorization section, will be transitioning to Dx2Rx whi ch will continue to go through the initial authorization criteria for a diag nosis check only. Updated reference.

Litfulo (Ritlecitinib)

Prior Authorization Guideline

Guideline ID	GL-137113
Guideline Name	Litfulo (Ritlecitinib)
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	2/1/2024
P&T Approval Date:	9/20/2023
P&T Revision Date:	09/20/2023 ; 12/13/2023

1. Indications

Drug Name: Litfulo (ritlecitinib)

Alopecia Areata Indicated for the treatment of severe alopecia areata in adults and adolescents 12 years and older.

2. Criteria

Product Name: Litfulo [a]	
Diagnosis	Alopecia Areata
Approval Length	12 month(s)
Therapy Stage	Initial Authorization

Guideline Type	Non Formulary	
Approval Criteria		
1 - Diagnosis of severe	alopecia areata	
	AND	
	AND	
	r loss have been ruled out (e.g., androgenetic alopecia, cicatricial philis, tinea capitis, triangular alopecia, and trichotillomania)	
	AND	
3 - Patient has a curren	t episode of alopecia areata with at least 50% scalp hair loss	
	AND	
4 - Patient is not receivi	ing Litfulo in combination with ANY of the following:	
Simponi (golimuPotent immunos	imab)] suppressant (e.g., azathioprine or cyclosporine) [1]	
 Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)] Janus kinase inhibitor [e.g., Xeljanz/Xeljanz XR (tofacitinib), Rinvoq (upadacitinib), Olumiant (baricitinib)] 		
AND		
5 - Prescribed by or in consultation with a dermatologist		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

Product Name: Litfulo [a]	
Diagnosis	Alopecia Areata

Approval Length	12 month(s)	
Therapy Stage	Reauthorization	
Guideline Type	Non Formulary	
Annual Oritoria		
Approval Criteria		
1 - Documentation of positive clinical response to Litfulo therapy		
	AND	
2 - Patient is not receiving Litfulo in combination with ANY of the following:		
Biologic DMARE	[e.g., Enbrel (etanercept), adalimumab, Cimzia (certolizumab),	
Simponi (golimu		
	uppressant (e.g., azathioprine or cyclosporine) [1]	
	 Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)] Janus kinase inhibitor [e.g., Xeljanz/Xeljanz XR (tofacitinib), Rinvoq (upadacitinib), 	
Olumiant (baricitinib)]		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

3. Background

Benefit/Coverage/Program Information

Background

Litfulo[®] (ritlecitinib) is an oral kinase inhibitor indicated for the treatment of severe alopecia areata in adults and adolescents 12 years and older. Use of Litfulo in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine is not recommended.

Additional Clinical Rules:

 Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD- 10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

• Supply limits may be in place.

Date	Notes
11/29/2023	Removed age requirement and prescriber requirement in reauthorizati on; aligned with commercial medical necessity.

Livmarli

Prior Authorization Guideline

Guideline ID	GL-125870
Guideline Name	Livmarli
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	7/1/2023
P&T Approval Date:	11/19/2021
P&T Revision Date:	01/19/2022 ; 08/19/2022 ; 01/18/2023 ; 5/25/2023

1. Indications

Drug Name: Livmarli	
Cholestatic pruritis in patients with Alagille syndrome Indicated for the treatment of cholestatic pruritis in patients with Alagille syndrome (ALGS) 3 months of age and older.	

2. Criteria

Product Name: Livmarli [a]	
Approval Length	6 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

Approval Criteria

1 - Diagnosis of Alagille syndrome (ALGS) confirmed by presence of the JAG1 or Notch2 gene mutation

AND

2 - One of the following:

- Total serum bile acid > 3x the upper limit of normal
- Conjugated bilirubin > 1 mg/dL
- Fat soluble vitamin deficiency otherwise unexplainable
- GGT > 3x the upper limit of normal
- Intractable pruritus explainable only by liver disease

AND

3 - Patient is experiencing moderate to severe pruritis

AND

4 - Patient has had an inadequate response to at least two medications to treat pruritus (e.g., ursodeoxycholic acid, rifampin, cholestyramine, colesevelam)

AND

5 - Prescribed by a hepatologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Livmarli [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization

Guideline Type	Non Formulary	
Approval Criteria		
1 - Documentation of positive clinical response to Livmarli therapy (e.g., reduced serum bile acids, reduced pruritis severity score)		
	AND	
2 - Prescribed by a hepatologist		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

3. Background

Benefit/Coverage/Program Information

Background:

Livmarli (maralixibat) is an ileal bile acid transporter (IBAT) inhibitor indicated for the treatment of cholestatic pruritis in patients with Alagille syndrome (ALGS) 3 months of age and older.

ALGS is a rare genetic disorder caused by a mutation in the JAG1 or Notch2 genes which are involved in embryonic development in utero. In ALGS patients, multiple organ systems may be affected by the mutation. In the liver, the mutation causes the bile ducts to abnormally narrow, malform and reduce in number, leading to bile acid accumulation, cholestasis, and ultimately progressive liver disease. The cholestatic pruritus experienced by patients with ALGS is among the most severe in any chronic liver disease and is present in most affected children by the third year of life. Conventional treatments for pruritis associated with ALGS include: ursodeoxycholic acid (ursodiol), rifampin, and bile acid sequestrants (e.g., cholestyramine, colesevelam).

Additional Clinical Rules:

 Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD- 10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class

• Supply limits may be in place.

Date	Notes
5/23/2023	Annual review, reworded ULN abbreviations with no changes to intent.
5/23/2023	Updated background with expanded indication in ALGS patients 3 mon ths of age and older. No change to coverage criteria. Updated referenc e.

Lokelma_Veltassa

Prior Authorization Guideline

Guideline ID	GL-126565	
Guideline Name	Lokelma_Veltassa	
Formulary	UnitedHealthcare Government Programs Exchange Formulary	

Guideline Note:

Effective Date:	8/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	06/16/2021 ; 06/15/2022 ; 6/21/2023

1. Indications

Drug Name: Lokelma (sodium zirconium cyclosilicate), Veltassa (patiromer)

Hyperkalemia Indicated for the treatment of hyperkalemia.

2. Criteria

Product Name: Lokelma, Veltassa [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria	
1 - Diagnosis of non-life	e threatening hyperkalemia
	AND
converting enzyme inhi	ropriate, medications known to cause hyperkalemia (e.g. angiotensin- bitor, angiotensin II receptor blocker, aldosterone antagonist, NSAIDs) d or reduced to the lowest effective dose
	AND
3 - Where clinically app failed	ropriate, loop or thiazide diuretic therapy for potassium removal has
	AND
4 - Patient follows a low	potassium diet (less than or equal to 3 grams per day)
Notes	 [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y

Product Name: Lokelma, Veltassa [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Patient has a positive clinical response to Lokelma or Veltassa therapy and continues to require treatment for hyperkalemia

AND

2 - Where clinically appropriate, medications known to cause hyperkalemia (e.g. angiotensinconverting enzyme inhibitor, angiotensin II receptor blocker, aldosterone antagonist, NSAIDs) have been discontinued or reduced to the lowest effective dose

AND

3 - Patient follows a low potassium diet (less than or equal to 3 grams per day)

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl v
У

3. Background

Benefit/Coverage/Program Information

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place

Background:

Lokelma and Veltassa are indicated for the treatment of hyperkalemia. Lokelma and Veltassa should not be used as an emergency treatment for life threatening hyperkalemia because of its delayed onset of action. Non-emergent hyperkalemia is generally treated by addressing the reversible causes, such as removing drugs that may be causing impaired renal function, removing or adjusting medications that directly cause hyperkalemia, and initiating therapies for potassium removal.

Long-Acting Opioids

Prior Authorization Guideline

Guideline ID	GL-144132
Guideline Name	Long-Acting Opioids
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	12/16/2020
P&T Revision Date:	05/21/2021 ; 09/15/2021 ; 05/20/2022 ; 10/19/2022 ; 12/14/2022 ; 03/15/2023 ; 04/19/2023 ; 08/18/2023 ; 3/20/2024

1. Indications

Drug Name: MS Contin (morphine sulfate controlled-release tablets), Duragesic (fentanyl transdermal), Zohydro ER (hydrocodone extended- release), oxymorphone extended-release tablets, morphine sulfate extended-release capsules

Management of moderate to severe pain Indicated for the management of moderate to severe pain when a continuous, around-the-clock opioid is needed for an extended period of time and for which alternative treatment options are not appropriate. They are not intended for use as an as needed analgesic.

Drug Name: Hydromorphone extended-release tablets (generic Exalgo), Hysingla ER (hydrocodone extended-release), Kadian (morphine sulfate sustained-release capsules), Nucynta ER (tapentadol extended-release)

Management of moderate to severe pain Indicated for the management of moderate to severe pain when a continuous, around-the-clock opioid is needed for an extended period of time and for which alternative treatment options are not appropriate. They are not intended for use as an as needed analgesic.

Drug Name: OxyContin (oxycodone controlled-release, includes authorized generic), Xtampza ER (oxycodone extended-release), Dolophine (methadone), tramadol extended release tablets

Management of moderate to severe pain Indicated for the management of moderate to severe pain when a continuous, around-the-clock opioid is needed for an extended period of time and for which alternative treatment options are not appropriate. They are not intended for use as an as needed analgesic.

Drug Name: Conzip (tramadol extended release capsules), levorphanol, methadone 5mg/5mL and 10mg/5mL solution, Methadose (methadone)

Management of moderate to severe pain Indicated for the management of moderate to severe pain when a continuous, around-the-clock opioid is needed for an extended period of time and for which alternative treatment options are not appropriate. They are not intended for use as an as needed analgesic.

2. Criteria

Product Name: Brand Hysingla ER, Oxycodone ER tabs, Xtampza ER, generic fentanyl patches, generic methadone tabs/tbso, generic methadone 5mg/5mL and 10mg/5mL soln, Brand Methadose tbso, generic morphine sulfate ER caps/tabs, generic oxymorphone ER, Conzip, Brand Tramadol ER caps, generic tramadol ER tabs, generic hydrocodone ER tabs, generic hydrocodone ER, generic hydrocodone ER, generic methadone intensol, generic methadone conc, Brand Methadose conc, generic morphine sulfate CR, generic levorphanol tartrate [a]

Diagnosis	Cancer, Hospice, or End of Life Related Pain [a]
Approval Length	12 month(s)
Guideline Type	Prior Authorization

Approval Criteria

1 - ONE of the following:

1.1 Patient is being treated for cancer related pain

OR

1.2 Patient is in hospice or is receiving end of life care

AND

2 - If the request is for fentanyl transdermal, hydrocodone extended-release capsules, hydromorphone extended-release tablets (generic Exalgo), morphine sulfate sustained-release capsules (generic Kadian), Nucynta ER (tapentadol extended-release), methadone (generic Dolophine), levorphanol tablets, methadone 5mg/5mL and 10mg/5mL solution, or Methadose (methadone), ONE of the following:

2.1 The patient has a history of failure, contraindication, or intolerance to a trial of morphine sulfate ER (generic MS Contin)*

OR

2.2 Patient is established on pain therapy with the requested medication for cancer-related pain, hospice related pain, or end of life care related pain, and the medication is not a new regimen for treatment of cancer-related pain, hospice, or end of life care pain (document date regimen was started)

AND

3 - If the request is for oxymorphone extended-release tablets, Hysingla ER (hydrocodone extended-release), OxyContin (oxycodone controlled-release), oxycodone ER (Oxycontin authorized generic), or Xtampza ER (oxycodone extended-release), ONE of the following:

3.1 The patient has a history of failure, contraindication, or intolerance to a trial of morphine sulfate ER (generic MS Contin)*

OR

3.2 The physician attests the patient has risk factors for substance abuse

OR

3.3 Patient is established on pain therapy with the requested medication for cancer-related pain, hospice related pain, or end of life care related pain, and the medication is not a new regimen for treatment of cancer-related pain, hospice, or end of life care pain (document date regimen was started)

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl v.
	If the patient is currently taking the requested long-acting opioid for at I east 30 days and does not meet the medical necessity authorization cri teria requirements for long-acting opioids, a denial should be issued an d a maximum 60-day authorization may be authorized one time for the requested drug/strength combination up to the requested quantity for tr ansition to an alternative treatment. *morphine sulfate ER (generic MS Contin) may require prior authorizati on.

Product Name: Brand Hysingla ER, Oxycodone ER tabs, Xtampza ER, generic fentanyl patches, generic methadone tabs/tbso, generic methadone 5mg/5mL and 10mg/5mL soln, Brand Methadose tbso, generic morphine sulfate ER caps/tabs, generic oxymorphone ER, Conzip, Brand Tramadol ER caps, generic tramadol ER tabs, generic hydrocodone ER tabs, generic hydrocodone ER, generic hydrocodone ER, generic methadone intensol, generic methadone conc, Brand Methadose conc, generic morphine sulfate CR, generic levorphanol tartrate [a]

Diagnosis	Non-Cancer, Non-Hospice or Non-End of Life pain [a]
Approval Length	6 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

- 1 The prescriber attests to BOTH of the following:
 - Patient has been screened for substance abuse/opioid dependence
 - Pain is moderate to severe and expected to persist for an extended period of time (chronic)

AND

2 - Treatment goals are defined and include estimated duration of treatment (must document treatment goals)

AND

3 - Patient has been screened for underlying depression and/or anxiety. If applicable, any underlying conditions have been or will be addressed

AND

4 - One of the following:

4.1 Prior to the start of therapy with the long-acting opioid, the patient has failed an adequate (minimum of 2 week) trial of a short-acting opioid within the last 30 days (document drug(s), and date of trial), unless the patient is already receiving chronic opioid therapy prior to surgery for postoperative pain, or in the postoperative pain is expected to be moderate to severe and persist for an extended period of time

OR

4.2 Patient is new to plan and currently established on long-acting opioid therapy for at least the past 30 days

AND

5 - If the request is for neuropathic pain (examples of neuropathic pain include neuralgias and neuropathies), one of the following:

5.1 Both of the following:

5.1.1 Unless it is contraindicated, the patient has not exhibited an adequate response to 8 weeks of treatment with gabapentin titrated to a therapeutic dose (document date of trial)

AND

5.1.2 Unless it is contraindicated, the patient has not exhibited an adequate response to at least 6 weeks of treatment with a tricyclic antidepressant titrated to the maximum tolerated dose (document drug and duration of trial)

OR

5.2 The patient is new to the plan and is currently established on the requested long-acting opioid therapy for at least the past 30 days

AND

6 - If the request is for fentanyl transdermal, hydrocodone extended-release capsules, hydromorphone extended-release tablets (generic Exalgo), morphine sulfate sustained-release capsules (generic Kadian), Nucynta ER (tapentadol extended-release), methadone (generic Dolophine), levorphanol, methadone 5mg/5mL and 10mg/5mL solution, or Methadose (methadone), the patient has a history of failure, contraindication, or intolerance to a trial of morphine sulfate ER (generic MS Contin)*

AND

7 - If the request is for oxymorphone extended-release tablets, Hysingla ER (hydrocodone extended-release), OxyContin (oxycodone controlled-release), oxycodone ER (Oxycontin authorized generic), Xtampza ER (oxycodone extended-release), ONE of the following:

7.1 The patient has a history of failure, contraindication, or intolerance to a trial of morphine sulfate ER (generic MS Contin)*

OR

7.2 The physician attests the patient has risk factors for substance abuse

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
	If the patient is currently taking the requested long-acting opioid for at I east 30 days and does not meet the medical necessity authorization criteria requirements for long-acting opioids, a denial should be issued an d a maximum 60-day authorization may be authorized one time for the requested drug/strength combination up to the requested quantity for tr ansition to an alternative treatment. *morphine sulfate ER (generic MS Contin) may require prior authorization.

Product Name: Brand Hysingla ER, Oxycodone ER tabs, Xtampza ER, generic fentanyl patches, generic methadone tabs/tbso, generic methadone 5mg/5mL and 10mg/5mL soln, Brand Methadose tbso, generic morphine sulfate ER caps/tabs, generic oxymorphone ER, Conzip, Brand Tramadol ER caps, generic tramadol ER tabs, generic hydrocodone ER tabs, generic hydromorphone ER, generic hydrocodone ER caps, Brand MS Contin, Oxycontin, Nucynta ER, generic methadone intensol, generic methadone conc, Brand Methadose conc, generic morphine sulfate CR, generic levorphanol tartrate [a]

Diagnosis	Non-Cancer, Non-Hospice or Non-End of Life pain [a]
Approval Length	6 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Documented meaningful improvement in pain and function when assessed against treatment goals (document improvement in function or pain score improvement)

AND

2 - Document rationale for not tapering or discontinuing opioid if treatment goals are not being met

AND

3 - Prescriber attests to BOTH of the following:

- Patient has been screened for substance abuse/opioid dependence
- Pain is moderate to severe and expected to persist for an extended period of time (chronic)

AND

4 - If the request is for fentanyl transdermal, hydrocodone extended-release capsules, hydromorphone extended-release tablets (generic Exalgo), morphine sulfate sustained-release capsules (generic Kadian), Nucynta ER (tapentadol extended-release), methadone (generic Dolophine), levorphanol, methadone 5mg/5mL and 10mg/5mL solution, or Methadose (methadone), the patient has a history of failure, contraindication, or intolerance to a trial of morphine sulfate ER (generic MS Contin)*

AND

5 - If the request is for oxymorphone extended-release tablets, Hysingla ER (hydrocodone extended-release), OxyContin (oxycodone controlled-release), oxycodone ER (Oxycontin authorized generic), or Xtampza ER (oxycodone extended-release), ONE of the following:

5.1 The patient has a history of failure, contraindication, or intolerance to a trial of morphine sulfate ER (generic MS Contin)*

OR

5.2 The physician attests the patient has risk factors for substance abuse

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
	If the patient is currently taking the requested long-acting opioid for at I east 30 days and does not meet the medical necessity authorization cri teria requirements for long-acting opioids, a denial should be issued an d a maximum 60-day authorization may be authorized one time for the requested drug/strength combination up to the requested quantity for tr ansition to an alternative treatment. *morphine sulfate ER (generic MS Contin) may require prior authorization.

3. Background

Benefit/Coverage/Program Information

Background:

Long-acting opioid analgesics are indicated for the management of moderate to severe pain when a continuous, around-the-clock opioid is needed for an extended period of time and for which alternative treatment options are not appropriate. They are not intended for use as an as needed analgesic

Long-acting opioids are not indicated for pain in the immediate postoperative period (the first 12-24 hours following surgery), or if the pain is mild, or not expected to persist for an extended period of time. They are only indicated for postoperative use if the patient is already receiving the drug prior to surgery or if the postoperative pain is expected to be moderate to severe and persist for an extended period of time. Physicians should individualize treatment, moving from parenteral to oral analgesics as appropriate.

Long-acting opioids should not be used in treatment naïve patients. Physicians should individualize treatment in every case, initiating therapy at the appropriate point along a progression from non-opioid analgesics, such as non-steroidal anti-inflammatory drugs and

acetaminophen to opioids in a plan of pain management.

UnitedHealthcare employs opioid safety edits at point-of-sale (POS) to prompt prescribers and pharmacists to conduct additional safety reviews to determine if the member's opioid use is appropriate and medically necessary. Development of opioid safety edit specifications, to include cumulative MME thresholds, are determined by the plan taking into consideration clinical guidelines, regulatory/state requirements, utilization and P&T Committee feedback.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on prevoius claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Lonsurf

Prior Authorization Guideline

Guideline ID	GL-124448
Guideline Name	Lonsurf
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	6/1/2023
P&T Approval Date:	9/15/2021
P&T Revision Date:	04/20/2022 ; 08/19/2022 ; 4/19/2023

1. Indications

Drug Name: Lonsurf (trifluridine/tipiracil)

Colorectal cancer Indicated for the treatment of patients with metastatic colorectal cancer (mCRC) who have been previously treated with fluoropyrimidine-, oxaliplatin- and irinotecanbased chemotherapy, an anti-VEGF biological therapy, and if RAS wild-type, an anti-EGFR therapy.

Gastric cancer Indicated for the treatment of patients with metastatic gastric or gastroesophageal junction adenocarcinoma previously treated with at least two prior lines of chemotherapy that included a fluoropyrimidine, a platinum, either a taxane or irinotecan, and if appropriate, HER2/neu-targeted therapy.

2. Criteria

Product Name: Lonsurf	[a]	
Diagnosis	Colorectal Cancer	
Approval Length	12 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	
Approval Criteria		
1 - Diagnosis of metast	atic colorectal cancer (mCRC)	
	AND	
2 - History of failure, co	ntraindication, or intolerance to treatment with all of the following^:	
 Fluoropyrimidine-based chemotherapy Oxaliplatin-based chemotherapy Irinotecan-based chemotherapy Anti-VEGF biological therapy 		
	AND	
3 - One of the following	:	
3.1 Tumor is RAS mut	ant-type	
	OR	
3.2 Both of the following	ng:	
 Tumor is RAS wild-type History of failure, contraindication, or intolerance to anti-EGFR therapy^ 		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y. ^Tried/failed alternative(s) are supported by FDA labeling.	

Product Name: Lonsurf [a]	
Diagnosis	Colorectal Cancer
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on Lonsurf therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	у.

Product Name: Lonsurf [a]	
Diagnosis	Gastric/Gastroesophageal Junction Adenocarcinoma
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of one of the following:

- Metastatic gastric cancer
- Metastatic gastroesophageal junction adenocarcinoma

AND

2 - History of failure, contraindication, or intolerance to treatment with at least two prior lines of chemotherapy that consisted of the following agents^:

- Fluoropyrimidine (e.g, fluorouracil)
- Platnium (e.g., carboplatin, cisplatin, oxaliplatin)
- Taxane (e.g, docetaxel, paclitaxel) or irinotecan

HER2/neu-tar	geted therapy (e.g., trastuzumab) (if HER2 overexpression)
Notes	 [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y. ^Tried/failed alternative(s) are supported by FDA labeling.

Product Name: Lonsurf [a]	
Diagnosis	Gastric/Gastroesophageal Junction Adenocarcinoma
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on Lonsurf therapy

[a] State mandates may apply. Any federal regulatory requirements an
d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
у.

Product Name: Lonsurf [a]	
Diagnosis	NCCN Recommended Regimen
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Lonsurf will be approved for uses not outlined above if supported by The National Comprehensive Cancer Network (NCCN) Drugs and Biologics Compendium

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	y.

Product Name: Lonsurf [a]	
Diagnosis	NCCN Recommended Regimen
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
Approval Criteria	ositive clinical response to Lonsurf therapy
Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Lonsurf (trifluridine/tipiracil) is a combination of trifluridine, a nucleoside metabolic inhibitor, and tipiracil, a thymidine phosphorylase inhibitor, indicated for the treatment of adult patients with:

- Metastatic colorectal cancer who have been previously treated with fluoropyrimidine-, oxaliplatin-, and irinotecan-based chemotherapy, an anti-VEGF biological therapy, and if RAS wild-type, an anti-EGFR therapy.
- Metastatic gastric or gastroesophageal junction adenocarcinoma previously treated with at least two prior lines of chemotherapy that included a fluoropyrimidine, a platinum, either a taxane or irinotecan, and if appropriate, HER2/neu-targeted therapy.

In addition, the National Cancer Comprehensive Network (NCCN) also recommends the use of Lonsurf for the treatment of colorectal cancer as a single agent or in combination with bevacizumab for advanced or metastatic disease not previously treated with Lonsurf in patients who have progressed through all available regimens besides Stivarga or Lonsurf.

Additional Clinical Programs:

• Supply limits may be in place.

 Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Documentation of positive clinical response to Lorbrena therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	--

3. Background

Benefit/Coverage/Program Information

Background:

Lorbrena (lorlatinib) is a kinase inhibitor indicated for the treatment of adult patients with anaplastic lymphoma kinase (ALK)-positive metastatic non-small cell lung cancer (NSCLC).

In addition, the National Cancer Comprehensive Network (NCCN) recommends Lorbrena for the treatment of patients with ALK-positive recurrent and advanced NSCLC and in patients with ROS1 rearrangement positive recurrent, advanced, or metastatic NSCLC.

The use of Lorbrena is also recommended by the NCCN for the treatment of Erdheim-Chester Disease (ECD) with symptomatic or relapsed/refractory disease, treatment of advanced, recurrent/metastatic, or inoperable uterine sarcoma, treatment of limited and extensive brain metastases in patients with ALK rearrangement-positive NSCLC, treatment of inflammatory myofibroblastic tumor (IMT) with ALK translocation, and treatment of relapsed or refractory ALK-positive peripheral T-Cell and large B-Cell lymphoma.

Additional Clinical Rules:

• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-

authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

• Supply limits may be in place.

Guideline Name	Medical Foods, Nutritional Supplements, Enteral Nutrition
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	05/21/2021 ; 09/15/2021 ; 04/19/2023 ; 8/18/2023

1. Criteria

Product Name: RCF, Calcilo XD, Phenex Chews, Cyclinex-1, Cyclinex-2, Elecare, Elecare DHA/ARA Infant, Elecare JR, Elecare/DHA/ARA, Glutarex-1, Glutarex-2, Hominex-1, Hominex-2, I-Valex-1, I-Valex-2, Ketonex-1, Ketonex-2, Phenex-1, Phenex-2, Propimex-1, Propimex-2, Provimin, Tyrex-1, Tyrex-2, Puramino DHA/ARA, Alfamino Infant, Neocate Syneo Infant, Neocate Infant DHA/ARA [a]

Approval Length	12 month(s)
Guideline Type	Non Formulary

Approval Criteria

1 - Being used as part of disease or disorder specific treatment

AND

2 - Requested product has been proven effective for the patient's specific disease or disorder. This includes, but is not limited to:

2.1 Inherited diseases of amino acid and/or organic acid metabolism (e.g., glutaric aciduria type I, vitamin B6-nonresponsive homocystinuria or hypermethioninemia, disorder of leucine catabolism, PKU, MSUD, propionic or methylmalonic acidemia, tyrosinemia types I, II, or III)

OR

2.2 Patients who require a formula modified in carbohydrate, fat, and/or increased protein: abetalipoproteinemia; cholestasis; chylothorax; fatty acid oxidation defects; glutaric aciduria type II; hyperlipoproteinemia type I (fasting chylomicronemia); hypobetalipoproteinemia; lymphangiectasis, intestinal malabsorption of carbohydrate and/or fat; supplement for any patient who requires increased protein, minerals, and vitamins; X-linked adrenoleukodystrophy

OR

2.3 Hypercalcemia, as may occur in infants with Williams syndrome, osteopetrosis, and primary neonatal hyperparathyroidism

OR

2.4 Urea cycle disorder, gyrate atrophy of the choroid and retina, or HHH syndrome

OR

2.5 ONE of the following:

2.5.1 Infants or children who cannot tolerate intact or hydrolyzed protein, or unable to tolerate the type or amount of carbohydrate in milk or infant formulas

OR

2.5.2 The child has not been responsive to trials of standard non-cow milk-based formulas,

including soybean and goat milk		
	OR	
2.6 Infants or children	with multiple, severe food allergies	
	OR	
2.7 Immunoglobulin E	and non-immunoglobulin E-mediated allergies to multiple food proteins	
	OR	
2.8 Severe food protei	n induced enterocolitis syndrome	
	OR	
2.9 Eosinophilic disorders		
	OR	
	on of nutrients caused by disorders affecting the absorptive surface, otility of the gastrointestinal tract	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

2. Background

Benefit/Coverage/Program Information

Background:

The intent of this program is to provide coverage for specialized foods (including nutritional supplements), for specific medical conditions, including, but not limited to, inherited enzymatic

disorders, inherited metabolic diseases, severe protein allergic conditions, severe protein induced entercolitis, eosinophlic disorders, impaired absorption disorders, conditions requiring amino acid-based modified elemental formulas, and formulas necessary for phenylketonuria.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

1. Indications

Drug Name: Mekinist

Melanoma Indicated, as a single agent in BRAF-inhibitor treatment-naïve patients or in combination with dabrafenib, for the treatment of patients with unresectable or metastatic melanoma with BRAF V600E or V600K mutations. Mekinist is also indicated, in combination with dabrafenib, for the adjuvant treatment of patients with melanoma with BRAF V600E or V600K mutations and involvement of lymph node(s) following complete resection.

Non-small cell lung cancer Indicated, in combination with dabrafenib, for the treatment of patients with metastatic non-small cell lung cancer (NSCLC) with BRAF V600E mutation.

Anaplastic thyroid cancer Indicated, in combination with dabrafenib, for the treatment of patients with locally advanced or metastatic anaplastic thyroid cancer (ATC) with BRAF V600E mutation and with no satisfactory locoregional treatment options.

Solid Tumors Indicated for the treatment of adult and pediatric patients 6 years of age and older with unresectable or metastatic solid tumors with BRAF V600E mutation who have progressed following prior treatment and have no satisfactory alternative treatment options.

BRAF V600E Mutation-Positive Low-Grade Glioma Indicated, in combination with Tafinlar, for the treatment of pediatric patients 1 year of age and older with low-grade glioma (LGG) with a BRAF V600E mutation who require systemic therapy

Other Uses: The National Comprehensive Cancer Network (NCCN) also recommends use of Mekinist in combination with Tafinlar for the adjuvant treatment of anaplastic thyroid cancer with BRAF V600E mutations following resection; for the treatment of follicular, oncocytic, and papillary thyroid carcinomas with a BRAF mutation; for the treatment of central nervous system (CNS) cancer in patients with melanoma or infiltrative supratentorial astrocytoma/oligodendroglioma; distant metastatic uveal melanoma; epithelial ovarian cancer/fallopian tube cancer/primary peritoneal cancer with persistent disease, recurrence in BRAF V600E positive tumors, or recurrence of low-grade serous carcinoma; pancreatic and ampullary adenocarcinomas if BRAF V600E mutation positive; and certain BRAF V600E mutation positive histiocytic neoplasms and hepatobiliary cancers.

Benefit/Coverage/Program Information

Background:

Mekinist (trametinib) is a kinase inhibitor indicated as a single agent or in combination with Tafinlar (dabrafenib) for treatment of patients with unresectable or metastatic melanoma with BRAF V600E or BRAF V600K mutations as detected by an FDA-approved test. It is also indicated in combination with Tafinlar for the treatment of metastatic non-small cell lung cancer (NSCLC) with BRAF V600E mutation as detected by an FDA approved test, for the adjuvant treatment of melanoma with BRAF V600E or BRAF V600K mutations, as detected by an FDAapproved test, involving the lymph nodes following resection, and for the treatment of locally advanced or metastatic anaplastic thyroid cancer with BRAF V600E mutation with no satisfactory locoregional treatment options, and for the treatment of adult and pediatric patients 6 years of age and older with unresectable or metastatic solid tumors with BRAF V600E mutation who have progressed following prior treatment and have no satisfactory alternative treatment options. The latter indication is approved under accelerated approval based on overall response rate and duration of response. Continued approval for this indication may be contingent upon verification and description of clinical benefit in a confirmatory trial(s). [1] Mekinist, in combination with Tafinlar, is also indicated for the treatment of pediatric patients 1 year of age and older with low-grade glioma (LGG) with a BRAF V600E mutation who require systemic therapy.

The National Comprehensive Cancer Network (NCCN) also recommends use of Mekinist in combination with Tafinlar for the adjuvant treatment of anaplastic thyroid cancer with BRAF V600E mutations following resection; for the treatment of follicular, oncocytic, and papillary thyroid carcinomas with a BRAF mutation; for the treatment of central nervous system (CNS) cancer in patients with melanoma or infiltrative supratentorial astrocytoma/oligodendroglioma; distant metastatic uveal melanoma; epithelial ovarian cancer/fallopian tube cancer/primary peritoneal cancer with persistent disease, recurrence in BRAF V600E positive tumors, or recurrence of low-grade serous carcinoma; pancreatic and ampullary adenocarcinomas if BRAF V600E mutation positive; and certain BRAF V600E mutation positive histiocytic neoplasms and hepatobiliary cancers. [2]

Information on FDA-approved tests for the detection of BRAFV600 mutations in melanoma may be found at: <u>http://www.fda.gov/CompanionDiagnostics.[1]</u>

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

1. Indications

Drug Name: Menopur

This program is designed to provide coverage for these medications to be used in conjunction with Assisted Reproductive Technologies (ART, i.e., in vitro fertilization). Menopur (menotropins) is indicated for the development of multiple follicles and pregnancy in ovulatory women participating in an assisted reproductive technology (ART) program. [3] hMG is used for the treatment of ovulation induction in women with ovulatory dysfunction including polycystic ovary syndrome (PCOS) who failed on clomiphene as well as for ovulation induction in the setting of hypogonadotropic hypogonadism. hMG is also used for induction of spermatogenesis in men with primary and secondary hypogonadotropic hypogonadism in whom the cause of infertility is not due to primary testicular failure. [4-13]

2. Criteria

Benefit/Coverage/Program Information

Background:

This program is designed to provide coverage for these medications to be used in conjunction with Assisted Reproductive Technologies (ART, i.e., in vitro fertilization).

Menopur (menotropins) is indicated for the development of multiple follicles and pregnancy in ovulatory women participating in an assisted reproductive technology (ART) program. [3] hMG is used for the treatment of ovulation induction in women with ovulatory dysfunction including polycystic ovary syndrome (PCOS) who failed on clomiphene as well as for ovulation induction in the setting of hypogonadotropic hypogonadism. hMG is also used for induction of spermatogenesis in men with primary and secondary hypogonadotropic hypogonadism in whom the cause of infertility is not due to primary testicular failure. [4-13]

The clinically appropriate dosing for hMG agents when used in an ART cycle without an FSH product is 450 IU/day or less for not more than 14 days of treatment. When used as part of a mixed stimulation protocol (hMG + FSH) or when used alone for ovulation induction or controlled ovarian stimulation the clinically appropriate maximum dosing for hMG agents is 225 IU/day and 150 IU/day respectively. Exceeding this daily dose and duration of treatment has not been proven to be efficacious in terms of pregnancy outcome. [9,13]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Effective Date:	3/1/2023
P&T Approval Date:	
P&T Revision Date:	11/18/2022 ; 2/17/2023

1. Criteria

Product Name: Brand Mifeprex 200mg, mifepristone (generic Mifeprex) 200 mg	
Approval Length	1 month(s)
Guideline Type	Administrative

Approval Criteria

1 - Provider attests patient requires treatment for purposes identified in the Hyde amendment and any applicable state laws and regulations

Benefit/Coverage/Program Information

Background:

Effective January 3, 2023, the Risk Evaluation and Mitigation Strategy (REMS) program for Mifeprex (mifepristone) was revised to allow the product to be dispensed by certified retail and mail order pharmacies. Previously, this product was only available when ordered, prescribed, and dispensed by or under the supervision of a healthcare provider.

These products are standardly covered without prior authorization. The purpose of this program is to determine coverage of Mifeprex 200mg and mifepristone (generic Mifeprex) 200mg when variations to our standard are present in plan benefit documents (e.g., required by state mandate, etc.). The Hyde amendment prohibits abortion with the exception of abortion of pregnancies that are the result of rape, incest, or where the life of the mother is at risk. [1]

Additional Clinical Rules:

 Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Motofen

Prior Authorization Guideline

Guideline ID	GL-113384
Guideline Name	Motofen
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	11/1/2022
P&T Approval Date:	9/15/2021
P&T Revision Date:	9/21/2022

1. Indications

Drug Name: Motofen

Diarrhea Indicated as adjunctive therapy in management of acute nonspecific diarrhea and acute exacerbations of chronic functional diarrhea.

2. Criteria

Product Name: Motofen [a]	
Approval Length	1 month(s)
Guideline Type	Prior Authorization

Approval Criteria	Approval Criteria	
1 - Used as adjunctive therapy		
	AND	
2 - Used for the management of acute nonspecific diarrhea or acute exacerbations of chronic functional diarrhea		
	AND	
3 - History of failure, co	ntraindication, or intolerance to both of the following:	
diphenoxylate/atropine (generic Lomotil)loperamide		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

Benefit/Coverage/Program Information

Background:

Motofen is indicated as adjunctive therapy in management of acute nonspecific diarrhea and acute exacerbations of chronic functional diarrhea.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

MS Agents

Prior Authorization Guideline

Guideline ID	GL-138752
Guideline Name	MS Agents
Formulary	UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	3/1/2024
P&T Approval Date:	12/16/2020
	02/19/2021 ; 09/15/2021 ; 05/20/2022 ; 09/21/2022 ; 12/14/2022 ; 02/17/2023 ; 02/17/2023 ; 1/17/2024

1. Indications

Drug Name: Avonex and Rebif(interferon β -1a), Betaseron and Extavia(interferon β -1b), Plegridy(peginterferon β -1a), Copaxone and Glatopa(glatiramer acetate), Aubagio(teriflunomide)

Relasping forms of multiple sclerosis Indicated for the treatment of relapsing forms of multiple sclerosis (MS), to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in adults.

Drug Name: Mayzent (siponimod), Tecfidera (dimethyl fumarate), Bafiertam (monomethyl fumarate), Kesimpta (ofatumumab), Ponvory (Ponesimod), Vumerity (diroximel fumarate)

Relasping Forms of Multiple Sclerosis Indicated for the treatment of relapsing forms of multiple sclerosis (MS), to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in adults.

Drug Name: Gilenya (fingolimod)

Relapsing forms of multiple sclerosis Indicated for the treatment of patients 10 years of age and older with relapsing forms of multiple sclerosis.

Drug Name: Mavenclad (cladribine)

Relapsing forms of multiple sclerosis Indicated for the treatment of relapsing forms of multiple sclerosis, including relapsing-remitting (RRMS) and active secondary progressive disease in adults who have had inadequate response or are intolerant to other therapies for multiple sclerosis.

Drug Name: Tascenso ODT (fingolimod)

Relapsing forms of multiple sclerosis Indicated for the treatment of relapsing forms of multiple sclerosis, to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in pediatric patients 10 years of age and older.

2. Criteria

Product Name: Brand Aubagio, generic teriflunomide, Avonex, Avonex Pen, Bafiertam, Betaseron, Brand Copaxone, generic glatiramer, Extavia, Brand Gilenya, generic fingolimod, Glatopa, Kesimpta, Mavenclad, Mayzent, Plegridy, Plegridy Pen, Ponvory, Rebif, Tascenso ODT, Brand Tecfidera, generic dimethyl fumerate, Vumerity

Approval Length	12 month(s)
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of multiple sclerosis (MS)

3. Background

Benefit/Coverage/Program Information

Additional Clinical Rules:

 Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD- 10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

• Supply limits may be in place.

Background:

Aubagio (teriflunomide), Avonex (interferon β -1a), Bafiertam (monomethyl fumarate), Betaseron (interferon β -1b), Copaxone (glatiramer acetate), Extavia (interferon β -1b), Glatopa (glatiramer acetate), Kesimpta (ofatumamab), Mayzent (siponimod), Plegridy (Peginterferon Beta-1a), Ponvory (ponesimod), Rebif (interferon β -1a), Tecfidera (dimethyl fumarate), and Vumerity (diroximel fumarate) are indicated for the treatment of relapsing forms of multiple sclerosis (MS), to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in adults. [1-3, 5, 6]

Mavenclad (cladribine) is indicated for the treatment of relapsing forms of multiple sclerosis, including relapsing-remitting (RRMS) and active secondary progressive disease in adults who have had inadequate response or are intolerant to other therapies for multiple sclerosis. Mavenclad is also indicated for the treatment of active hairy cell leukemia as defined by clinically significant anemia, neutropenia, thrombocytopenia, or disease-related symptoms.

Gilenya (fingolimod) is indicated for the treatment of patients with relapsing forms of multiple sclerosis, to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in patients 10 years of age and older. [4] _Tascenso ODT[™] (fingolimod) is indicated for the treatment of relapsing forms of multiple sclerosis, to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in pediatric patients 10 years of age and older. [16] Due to the risk of a decrease in heart rate and/or atrioventricular conduction after the first dose of Gilenya, all patients should be observed for signs and symptoms of bradycardia for at least 6 hours after their first dose. First-dose monitoring should also be performed when restarting Gilenya after discontinuation for more than 14 days and with dose increases. Novartis, the manufacturer of Gilenya, provides a First-Dose Observation program at no cost to the patient through the GILENYA Go Program. To find a first-dose observation center, visit http://www.gilenya.com/c/ms-pill/first-day or http://maps.concentra.com/gilenya-fdo/.

Mulpleta

Prior Authorization Guideline

Guideline ID	GL-120452
Guideline Name	Mulpleta
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	3/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021

1. Indications

Drug Name: Mulpleta
Thrombocytopenia Indicated for the treatment of thrombocytopenia in adult patients with chronic liver disease who are scheduled to undergo a procedure.

2. Criteria

Product Name: Mulpleta	
Diagnosis	Thrombocytopenia
Approval Length	1 month(s)
Guideline Type	Prior Authorization

Approval Criteria
1 - Diagnosis of thrombocytopenia
AND
2 - Patient has chronic liver disease
AND
3 - Patient is scheduled to undergo a procedure

Benefit/Coverage/Program Information

Background:

Mulpleta (lusutrombopag) is a thrombopoietin receptor agonist indicated for the treatment of thrombocytopenia in adult patients with chronic liver disease who are scheduled to undergo a procedure. [1]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

Multaq

Prior Authorization Guideline

Guideline ID	GL-113387
Guideline Name	Multaq
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	11/1/2022
P&T Approval Date:	8/14/2020
P&T Revision Date:	07/21/2021 ; 9/21/2022

1. Indications

Drug Name: Multaq (dronedarone)

Atrial fibrillation Indicated to reduce the risk of hospitalization for atrial fibrillation in patients in sinus rhythm with a history of paroxysmal or persistent atrial fibrillation.

2. Criteria

Product Name: Multaq	
Approval Length	12 month(s)
Guideline Type	Prior Authorization
	•

Approval Criteria
1 - One of the following:
1.1 All of the following criteria:
1.1.1 Diagnosis of a history of one of the following:
 Paroxysmal atrial fibrillation (AF) Persistent AF defined as AF less than 6 months duration
AND
1.1.2 One of the following:
 Patient is in sinus rhythm Patient is planned to undergo cardioversion to sinus rhythm
AND
1.1.3 Patient has none of the following:
 NYHA Class IV heart failure Symptomatic heart failure with recent decompensation requiring hospitalization
OR
1.2 For continuation of current therapy

Benefit/Coverage/Program Information

Background:

Multaq is an antiarrhythmic drug indicated to reduce the risk of hospitalization for atrial fibrillation in patients in sinus rhythm with a history of paroxysmal or persistent atrial fibrillation.

Multaq carries a black box warning for increased risk of death, stroke, and heart failure in

patients with decompensated heart failure or permanent atrial fibrillation. It is contraindicated in patients with symptomatic heart failure with recent decompensation requiring hospitalization or NYHA Class IV heart failure, as Multaq doubles the risk of death in these patients. Multaq is also contraindicated in patients in atrial fibrillation who will not or cannot be cardioverted into normal sinus rhythm. In patients with permanent atrial fibrillation, Multaq doubles the risk of death, stroke and hospitalization for heart failure.

Patients currently on Multaq therapy will be allowed to remain on therapy.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

Myalept

Prior Authorization Guideline

Guideline ID	GL-126576
Guideline Name	Myalept
Formulary	UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	8/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	05/21/2021 ; 05/20/2022 ; 6/21/2023

1. Indications

Drug Name: Myalept (metreleptin)

Generalized lipodystrophy Indicated as an adjunct to diet as replacement therapy to treat the complications of leptin deficiency in patients with congenital or acquired generalized lipodystrophy. [1]

2. Criteria

Product Name: Myalept [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of congenital or acquired generalized lipodystrophy associated with leptin deficiency

AND

2 - Myalept is being used as an adjunct to diet modification

AND

3 - Prescribed by an endocrinologist

AND

4 - Patient has at least one of the following:

4.1 Diabetes mellitus or insulin resistance with persistent hyperglycemia (HgbA1C greater than 7.0) despite both of the following:

- Dietary intervention
- Optimized insulin therapy at maximum tolerated doses

OR

4.2 Persistent hypertriglyceridemia (TG greater than 250) despite both of the following:

- Dietary intervention
- Optimized therapy with at least two triglyceride-lowering agents from different classes (e.g., fibrates, statins) at maximum tolerated doses

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl y.

Product Name: Myalept [a]			
Approval Length	12 month(s)		
Therapy Stage	Reauthorization		
Guideline Type	Prior Authorization

2 - Myalept is being used as an adjunct to diet modification			
AND			
3 - Prescribed by an endocrinologist			
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.		

Benefit/Coverage/Program Information

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Background:

Myalept (metreleptin) is a leptin analog indicated as an adjunct to diet as replacement therapy to treat the complications of leptin deficiency in patients with congenital or acquired generalized lipodystrophy. [1]

Myalept is available only through a restricted distribution program under a Risk Evaluation and Mitigation Strategy (REMS), called the Myalept REMS program, because of the risks associated with the development of anti-metreleptin antibodies that neutralize endogenous leptin and the risk of lymphoma.

New to Therapy (NTT) and Morphine Milligram Equivalents (MME)

Prior Authorization Guideline

Guideline ID	GL-134428
Guideline Name	New to Therapy (NTT) and Morphine Milligram Equivalents (MME)
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	12/1/2023
P&T Approval Date:	9/15/2021
P&T Revision Date:	09/21/2022 ; 10/18/2023

1. Criteria

Product Name: Reques	ted opioid pain medication (Formulary and non-formulary)
Diagnosis	New to Therapy: Criteria for Opioid Naïve Members. An opioid-naïve member is defined as not having filled an opioid in the past 60 days. Patients will be limited to a 7 day supply for their initial opioid fill
Approval Length	Authorization for cancer, end of life, palliative care, or sickle cell pain will be issued for 12 months. All other approvals will be issued for the requested duration, not to exceed one month.
Guideline Type	Administrative
Approval Criteria	

1 - Opioid naïve members (defined as not having filled an opioid in the past 60 days) may receive greater than the supply limit based on the following:

1.1 If the request is for greater than the supply limit ONE of the following:

- Cancer diagnosis
- End of life care, including hospice care
- Palliative care
- Sickle cell anemia
- Long term care
- A written or verbal statement is received from the requesting prescriber saying that it is medically necessary for the patient to take the opioid drug for more than 7 days

Notes	NOTE: This section applies to all formulary and non-formulary medicati
	ons

	ne Milligram Equivalents (MME) Reviews: For Requests Exceeding the reshold^ (Formulary and non-formulary)
Diagnosis	Cancer, Hospice, End of Life, Long-Term Care, Palliative Care, or Sickle Cell related pain
Approval Length	12 month(s)
Guideline Type	Administrative

Approval Criteria

1 - Doses exceeding the cumulative morphine mg equivalent (MME) of 90 mg will be approved up to the requested amount for all opioid products if one of the following conditions is met:

- Cancer diagnosis
- End of life diagnosis, including hospice
- Sickle cell anemia diagnosis
- Long-term care
- Palliative care

Notes	^The authorization should be entered for an MME of 99999.99 so as to prevent future disruptions in therapy if the patient's dose is increased. NOTE: This section applies to all formulary and non-formulary medicati
	ons

Product Name: Morphine Milligram Equivalents (MME) Reviews: For Requests Exceeding the 90MME Cumulative Threshold^ (Formulary and non-formulary)

Diagnosis	Non-cancer, non-hospice, non-end of life, non-long-term care, non- palliative care, non-sickle cell related pain
Approval Length	6 month(s)
Therapy Stage	Initial Authorization
Guideline Type	MEDcDUR

1 - If the dose exceeds the maximum cumulative MME of 90mg, must meet ALL of the following:

1.1 Prescriber attest the patient has been screened for substance abuse/opioid dependence

AND

1.2 Treatment goals are defined and include estimated duration of treatment (must document treatment goals)

AND

1.3 Patient has been screened for underlying depression and/or anxiety. If applicable, any underlying conditions have been or will be addressed

AND

1.4 ONE of the following:

- Opioid medication doses of less than 90MME have been tried and did not adequately control pain (document drug regimen or MME and dates of therapy)
- Patient is new to plan and currently established on the requested MME for at least the past 30 days

Notes ^Authorization will be issued for 6 months for non-cancer/non-hosp	
non-end of life/non-long-term care/non-palliative care/non-sickle ce ated pain up to the current requested MME plus 90 MME. NOTE: If the member has been established on the requested MME e for at least 30 days and does not meet the medical necessity auth ation criteria requirements, a denial should be issued and a maxim 60-day authorization may be authorized one time for the requested	re/non-sickle cell rel MME. requested MME dos al necessity authoriz ed and a maximum

E dose. NOTE: This section applies to all formulary and non-formulary medi- ons.
--

Product Name: Morphine Milligram Equivalents (MME) Reviews: For Requests Exceeding the 90MME Cumulative Threshold^ (Formulary and non-formulary)	
Diagnosis	Non-cancer, non-hospice, non-end of life, non-long-term care, non- palliative care, non-sickle cell related pain
Approval Length	6 month(s)
Therapy Stage	Reauthorization
Guideline Type	Administrative

1 - If the dose exceeds the maximum cumulative MME of 90mg, must meet ALL of the following:

1.1 Prescriber attest the patient has been screened for substance abuse/opioid dependence

AND

1.2 Document rationale for not tapering or discontinuing opioid if treatment goals are not being met

AND

1.3 Documented meaningful improvement in pain and function when assessed against treatment goals (Document improvement in function or pain score improvement)

Notes	^Authorization will be issued for 6 months for non-cancer/non-hospice/ non-end of life/non-long-term care/non-palliative care/non-sickle cell rel ated pain up to the current requested MME plus 90 MME. NOTE: If the member has been established on the requested MME dos e for at least 30 days and does not meet the medical necessity authoriz ation criteria requirements, a denial should be issued and a maximum 60-day authorization may be authorized one time for the requested MM E dose. NOTE: This section applies to all formulary and non-formulary medicati ons.
-------	---

2. Background

Benefit/Coverage/Program Information

Background:

UnitedHealthcare employs opioid safety edits at point-of-sale (POS) to prompt prescribers and pharmacists to conduct additional safety reviews to determine if the member's opioid use is appropriate and medically necessary. Development of opioid safety edit specifications, to include cumulative MME thresholds, are determined by the plan taking into consideration clinical guidelines, regulatory/state requirements, utilization and P&T Committee feedback.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Benefit/Coverage/Program Information

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limit may be in place.

Background

Nexavar[®] (sorafenib tosylate) is a kinase inhibitor indicated for the treatment of unresectable hepatocellular carcinoma, advanced renal cell carcinoma and locally recurrent or metastatic, progressive, differentiated thyroid carcinoma refractory to radioactive iodine treatment.

The National Comprehensive Cancer Network also recommends the use of Nexavar for the treatment of chordoma, osteosarcoma, ovarian cancer/fallopian tube cancer/primary peritoneal cancer soft tissue sarcoma, gastrointestinal stromal tumors (GIST), acute myeloid leukemia (AML), myeloid/lymphoid neoplasms with tyrosine kinase gene fusions, and salivary gland tumors.

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

3. Background

Benefit/Coverage/Program Information

Background

Nocdurna (desmopressin acetate) sublingual tablets are indicated for the treatment of nocturia due to nocturnal polyuria in adults who awaken at least 2 times per night to void. In clinical trials, nocturnal polyuria was defined as nighttime urine production exceeding one-third of the 24-hour urine production. Prior to initiating treatment with Nocdurna, patients should be evaluated for possible causes of nocturia and to optimize the treatment of underlying conditions that may be contributing to the nocturia.

Desmopressin should be avoided in older adults (those 65 or older) due to the risk of hyponatremia. This medication is included in the American Geriatrics Society Beers Criteria. Nocdurna have a Black Box Warning for hyponatremia listed in the FDA prescribing information. Nocdurna use is contraindicated in patients with hyponatremia or a history of hyponatremia, SIADH, eGFR <50 mL/min/1.7m², uncontrolled hypertension, and New York Heart Association Class II – IV congestive heart failure. See package insert for full listing of

contraindications and safety warnings.

Nocdurna has not been studied in patients less than 18 years of age.

This prior authorization program is intended to ensure appropriate prescribing of Nocdurna prior to initiating therapy.

Additional Clinical Rules

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

1. Criteria

Product Name: Non-Formulary Medications (other than contraceptive products) [a]

Approval Length	12 month(s)
Guideline Type	Administrative
Approval Criteria	drug-specific non-formulary guideline that has been approved by the
	de the non-formulary exceptions process, the following guideline will be
1.1 One of the followi	ng:
1.1.1 Both of the follo	owing:
1.1.1.1 Requested c	drug is FDA-approved for the condition being treated
	AND
prescribing information	equirements listed in the "Indications and Usage" sections of the n (or package insert) have been met (e.g.: first line therapies have been sting requirements have been met, etc.)
	OR
1.1.2 Meets Off-Labe	el Administrative guideline criteria
	AND
1.2 One of the followi	ing:
must try and fail, or ha	ug is NOT listed on the Non-Formulary Alternatives table, then the patient ve specific medical reason(s) why a maximum of five (5) equivalent termined by the PA pharmacist are not appropriate
	OR
try and fail, or have sp	ug is listed on the Non-Formulary Alternatives table, then the patient must ecific medical reason(s) why the number of alternatives* specified by the atives Table is not appropriate (see technician note for NF Alts Table

URL)		
OR		
1.2.3 No formulary drug is appropriate to treat the patient's condition		
AND		
	cluded as documented in the limitations and exclusions section of the (see technician note for the Exclusions and Limitations Grid URL)	
Notes	 [a] Formulary: 2024 UnitedHealthcare Government Programs Exchang e Formulary. If approved, the non-formulary drug will be covered at tier 5 for 6-tiered formularies, at tier 4 for 5-tiered formularies, or tier 3 for 4 -tiered formularies. *If an alternative is the generic equivalent of the non-formulary target dr ug, then it must be one of the required alternatives the patient must try and fail or have a specific medical reason why the alternative is not ap propriate. 	

Product Name: Non-Formulary Contraceptive Medications	
Approval Length	12 month(s)
Guideline Type	Administrative

1 - In the absence of a drug-specific non-formulary guideline that has been approved by the P&T Committee to guide the non-formulary exceptions process, the following guideline will be used to establish medical necessity:

1.1 One of the following:

1.1.1 Both of the following [a]:

1.1.1.1 Diagnosis of contraception

AND

1.1.1.2 One of the following:

- If the contraceptive drug is NOT listed on the Non-Formulary Alternatives table, then the patient must try and fail, or have specific medical reason(s) why a maximum of two (2) equivalent formulary drugs, as determined by the PA pharmacist are not appropriate
- If the contraceptive drug is listed on the Non-Formulary Alternatives table, then the
 patient must try and fail, or have specific medical reason(s) why two (2) alternatives*
 specified by the Non-Formulary Alternatives Table is not appropriate (see technician
 note for NF Alts Table URL)
- Provider attests the non-formulary contraceptive drug is the preferred product for this
 patient (e.g., provider attestation that the non-formulary contraceptive is medically
 necessary, patient is stable on the requested non-formulary contraceptive, patient
 requires continuation of therapy to complete the course of treatment, transition to
 another agent could result in destabilization)

OR

1.1.2 All of the following [b]:

1.1.2.1 Drug is requested for a non-contraception use

AND

1.1.2.2 One of the following:

- Requested drug is FDA-approved for the condition being treated
- Meets Off-Label Administrative guideline criteria

AND

1.1.2.3 One of the following:

- If the target drug is NOT listed on the Non-Formulary Alternatives table, then the patient must try and fail, or have specific medical reason(s) why a maximum of five (5) equivalent formulary drugs, as determined by the PA pharmacist are not appropriate
- If the target drug is listed on the Non-Formulary Alternatives table, then the patient must try and fail, or have specific medical reason(s) why the number of alternatives* specified by the Non-Formulary Alternatives Table is not appropriate (see technician note for NF Alts Table URL)
- No formulary drug is appropriate to treat the patient's condition

1.1.2.4 The use is not excluded as documented in the limitations and exclusions section of the certificate of coverage (see technician note for the Exclusions and Limitations Grid URL)		
Notes	[a] If used for contraceptive purpose and approved, authorizations sho uld have overrides to allow for \$0 cost share for non-formulary drugs. [b] Formulary: 2024 UnitedHealthcare Government Programs Exchang e Formulary. If used for non-contraceptive purpose and approved, the non-formulary drug will be covered at tier 5 for 6-tiered formularies, at ti er 4 for 5-tiered formularies, or tier 3 for 4-tiered formularies. *If an alternative is the generic equivalent of the non-formulary target dr ug, then it must be one of the required alternatives the patient must try and fail or have a specific medical reason why the alternative is not ap propriate.

Г

Non-formulary medications will have a Tier 8/non-formulary status on the RxWeb Formulary Lookup tool. This guideline applies to these Tier 8 medications. If a medication has a non-formulary status and a PA flag of yes, apply the criteria within the drug-specific guideline as well as the non-formulary alternatives grid in the link in the technician note.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Formulary Note:

Termination date of non-formulary exception authorizations approved pursuant to this guideline is 12 months from date of approval

1. Criteria

Product Name: Sotylize, Tiglutik, generic naproxen susp, Tirosint-Sol, Thyquidity, generic
sucralfate susp [a]Approval Length12 month(s)Guideline TypePrior Authorization

Approval Criteria

1 - Patient is unable to ingest a solid dosage form (e.g., an oral tablet or capsule) due to one of the following:

- age
- oral/motor difficulties
- dysphagia

• uyspilagia		
	OR	
2 - Patient utilizes a feeding tube for medication administration		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

2. Background

Benefit/Coverage/Program Information

Background:

Coverage criteria outlined below are for patients unable to ingest a solid oral dosage form. Claims for patients under the age of 6 will process automatically for Naproxen (generic for Naprosyn) suspension, Sotylize, sucralfate suspension, Tiglutik, Thyquidity, and Tirosint-Sol.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

Nucala

Prior Authorization Guideline

Guideline ID	GL-128200
Guideline Name	Nucala
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	9/1/2023
P&T Approval Date:	7/21/2021
P&T Revision Date:	09/15/2021 ; 11/19/2021 ; 12/15/2021 ; 01/19/2022 ; 02/18/2022 ; 06/21/2023 ; 7/19/2023

1. Indications

Drug Name: Nucala (mepolizumab) prefilled autoinjector and prefilled syringe

Severe Asthma Indicated for the add-on maintenance treatment of patients with severe asthma 6 years and older, and with an eosinophilic phenotype.

Eosinophilic Granulomatosis with Polyangiitis Indicated for the treatment of adult patients with eosinophilic granulomatosis with polyangiitis (EGPA).

Hypereosinophilic Syndrome Indicated for the treatment of adult and pediatric patients aged 12 years and older with hypereosinophilic syndrome (HES) for ≥6 months without an identifiable non-hematologic secondary cause.

Maintenance Treatment of Chronic Rhinosinusitis with Nasal Polyps Indicated for add-on maintenance treatment of adult patients 18 years and older with chronic rhinosinusitis with nasal polyps (CRSwNP) and an inadequate response to nasal corticosteroids.

2. Criteria

Product Name: Nucala (mepolizumab) prefilled autoinjector and prefilled syringe [a]	
Diagnosis Eosinophilic granulomatosis with polyangiitis (EGPA)	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

Approval Criteria

1 - All of the following:

1.1 Patient has been established on therapy with Nucala for EGPA under an active UnitedHealthcare prior authorization

AND

1.2 Documentation of positive clinical response to Nucala therapy as demonstrated by at least one of the following:

- Reduction in the frequency and/or severity of relapses
- Reduction or discontinuation of doses of corticosteroids and/or immunosuppressant
- Disease remission
- Reduction in severity or frequency of EGPA-related symptoms

AND

1.3 Patient is not receiving Nucala in combination with any of the following:

- Anti-interleukin 5 therapy [e.g., Cinqair (resilizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

AND

1.4 Prescribed by one of the following:

- Allergist
- Immunologist
- Pulmonologist
- Rheumatologist

OR

2 - All of the following:

2.1 Diagnosis of relapsing or refractory EGPA as defined by all of the following:

2.1.1 Diagnosis of EGPA

AND

2.1.2 Past medical history or presence of asthma

AND

2.1.3 Presence of at least two of the following characteristics typical of EGPA:

- Histopathological evidence of: Eosinophilic vasculitis, Perivascular eosinophilic infiltration, Eosinophil-rich granulomatous inflammation
- Neuropathy, mono or poly (motor deficit or nerve conduction abnormality)
- Pulmonary infiltrates, non-fixed
- Sino-nasal abnormality
- Cardiomyopathy (established by echocardiography or MRI)
- Glomerulonephritis (hematuria, red cell casts, proteinuria)
- Alveolar hemorrhage
- Palpable purpura
- Anti-neutrophil cytoplasmic antibody (ANCA) positive

AND

2.1.4 History of relapsing or refractory disease defined as one of the following:

 Relapsing disease as defined as a past history (within the past 2 years) of at least one EGPA relapse (requiring additional or dose escalation of corticosteroids or immunosuppressant, or hospitalization) Refractory disease as defined as failure to attain remission within the prior 6 months following induction treatment with standard therapy regimens
AND
2.2 Patient is currently taking standard therapy [i.e., systemic glucocorticoids (e.g., prednisone, methylprednisolone)] with or without immunosuppressive therapy (e.g., cyclophosphamide, rituximab)]
AND
2.3 Patient is not receiving Nucala in combination with any of the following:
 Anti-interleukin 5 therapy [e.g., Cinqair (resilizumab), Fasenra (benralizumab)] Anti-IgE therapy [e.g., Xolair (omalizumab)] Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)] Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]
AND
2.4 Prescribed by one of the following:
 Allergist Immunologist Pulmonologist Rheumatologist
Notes [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Nucala (mepolizumab) prefilled autoinjector and prefilled syringe [a]	
Diagnosis	Eosinophilic granulomatosis with polyangiitis (EGPA)
Approval Length	12 month(s)

Approval Criteria 1 - Documentation of positive clinical response to Nucala therapy as demonstrated by at least one of the following:		
 Reduction in the frequency and/or severity of relapses Reduction or discontinuation of doses of corticosteroids and/or immunosuppressant Disease remission Reduction in severity or frequency of EGPA-related symptoms 		
AND		
2 - Patient is not receive	ing Nucala in combination with any of the following:	
 Anti-IgE therapy Anti-interleukin 4 	5 therapy [e.g., Cinqair (resilizumab), Fasenra (benralizumab)] / [e.g., Xolair (omalizumab)] 4 therapy [e.g., Dupixent (dupilumab)] Iymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

Product Name: Nucala (mepolizumab) prefilled autoinjector and prefilled syringe [a]	
Severe Asthma	
12 month(s)	
Initial Authorization	
Non Formulary	

Approval Criteria

1 - All of the following:

1.1 Patient has been established on therapy with Nucala for severe asthma under an active

UnitedHealthcare prior authorization

AND

1.2 Documentation of positive clinical response to Nucala therapy as demonstrated by at least one of the following:

- Reduction in the frequency of exacerbations
- Decreased utilization of rescue medications
- Increase in percent predicted FEV1 from pretreatment baseline
- Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing, etc.)
- Reduction in oral corticosteroid requirements

AND

1.3 Nucala is being used in combination with an inhaled corticosteroid (ICS)-containing maintenance medication [e.g., Advair/AirDuo (fluticasone/salmeterol), Breo Ellipta (fluticasone furoate/vilanterol), Symbicort (budesonide/ formoterol), Trelegy Ellipta (fluticasone furoate/umeclidinium/vilanterol)]

AND

1.4 Patient is not receiving Nucala in combination with any of the following:

- Anti-interleukin 5 therapy [e.g., Cinqair (resilizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

AND

1.5 Prescribed by one of the following:

- Allergist
- Immunologist
- Pulmonologist

2 - All of the following:

2.1 Diagnosis of severe asthma

AND

2.2 Classification of asthma as uncontrolled or inadequately controlled as defined by at least one of the following:

- Poor symptom control (e.g., Asthma Control Questionnaire [ACQ] score consistently greater than 1.5 or Asthma Control Test [ACT] score consistently less than 20)
- Two or more bursts of systemic corticosteroids for at least 3 days each in the previous 12 months
- Asthma-related emergency treatment (e.g., emergency room visit, hospital admission, or unscheduled physician's office visit for nebulizer or other urgent treatment)
- Airflow limitation (e.g., after appropriate bronchodilator withhold forced expiratory volume in 1 second [FEV1] less than 80% predicted [in the face of reduced FEV1/forced vital capacity [FVC] defined as less than the lower limit of normal])
- Patient is currently dependent on oral corticosteroids for the treatment of asthma

AND

2.3 Submission of medical records (e.g., chart notes, laboratory values, etc.) confirming asthma is an eosinophilic phenotype as defined by a baseline (pre-treatment) peripheral blood eosinophil level \geq 150 cells/µL

AND

2.4 Nucala will be used in combination with one of the following:

2.4.1 One maximally dosed (appropriately adjusted for age) combination inhaled corticosteroid (ICS)/long-acting beta2 agonist (LABA) [e.g., Advair/AirDuo Respiclick (fluticasone propionate/salmeterol), Symbicort (budesonide/formoterol), Breo Ellipta (fluticasone furoate/vilanterol)]

OR

2.4.2 Combination therapy including both of the following:

• One maximally dosed (appropriately adjusted for age) ICS product [e.g., ciclesonide

(Alvesco), mometasone furoate (Asmanex), beclomethasone dipropionate (QVAR)] One additional asthma controller medication [e.g., LABA - olodaterol (Striverdi) or

indacaterol (Arcapta); leukotriene receptor antagonist – montelukast (Singulair); theophylline]

AND

2.5 Patient is not receiving Nucala in combination with any of the following:

- Anti-interleukin 5 therapy [e.g., Cinqair (resilizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

3. Background

Benefit/Coverage/Program Information

Background:

Nucala (mepolizumab) is an interleukin-5 receptor antagonist indicated for add-on maintenance treatment of patients aged 6 years and older with severe asthma and with an eosinophilic phenotype, for add-on maintenance treatment of adult patients 18 years and older with chronic rhinosinusitis with nasal polyps (CRSwNP) and an inadequate response to nasal corticosteroids, the treatment of adult patients with eosinophilic granulomatosis with polyangiitis (EGPA), and the treatment of adult and pediatric patients aged 12 years and older with hypereosinophilic syndrome (HES) for \geq 6 months without an identifiable non-hematologic secondary cause[1].

Limitations of use:

Nucala is not for relief of acute bronchospasm of status asthmaticus.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.
- The single-dose vial is typically covered under the medical benefit. Please refer to the United Healthcare Medical Benefit Drug Policy: "Respiratory Interleukins (Cinqair[®], Fasenra[®], and Nucala[®])".

5. Revision History

Date	Notes
7/26/2023	Updated prescriber formatting. Added Tezspire to list of agents not to b e used in combination with Nucala. Updated references. Minor formatti ng updates throughout.
7/26/2023	Annual review. Updated examples of standard therapy for EGPA and a dded examples of oral corticosteroids within Asthma criteria. Updated background and references
7/26/2023	Updated EGPA standard therapy examples. Updated coverage criteria for severe asthma to align with GINA & ERS/ATS guidelines. Added/up dated examples of ICS-containing maintenance medications, removed requirement that peripheral blood eosinophil level must be within 6 we eks, and removed bypass of eosinophilic phenotype requirement for pa tients currently dependent on maintenance therapy with oral corticoster oids. Updated references.

Nuedexta

Prior Authorization Guideline

Guideline ID	GL-109415
Guideline Name	Nuedexta
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	9/1/2022
P&T Approval Date:	8/14/2020
P&T Revision Date:	07/21/2021 ; 09/15/2021 ; 7/20/2022

1. Indications

Drug Name: Nuedexta (dextromethorphan/quinidine)

Pseudobulbar affect (PBA) Indicated for the treatment of pseudobulbar affect (PBA). PBA occurs secondary to a variety of neurologic conditions, and is characterized by involuntary, sudden, and frequent episodes of laughing and/or crying.

2. Criteria

Product Name: Nuedexta	
Approval Length	6 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

Approval Criteria
1 - Diagnosis of pseudobulbar affect
AND
2 - One of the following
 Amyotrophic lateral sclerosis (ALS) Alzheimer's disease Multiple sclerosis (MS) Parkinson's disease Stroke Traumatic brain injury
AND
3 - Documented absence of cardiac rhythm disorders
AND

4 - Prescribed by or in consultation with a neurologist

Product Name: Nuedexta	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary
Approval Criteria	
1 - Documentation of positive clinical response to therapy	

3. Background

Benefit/Coverage/Program Information

Background:

Nuedexta, a combination product containing dextromethorphan hydrobromide and quinidine sulfate, is indicated for the treatment of pseudobulbar affect (PBA). PBA occurs secondary to a variety of neurologic conditions, and is characterized by involuntary, sudden, and frequent episodes of laughing and/or crying. PBA episodes typically occur out of proportion or are inappropriate to the underlying emotional state. PBA is a specific condition, distinct from other types of emotional lability that may occur in patients with neurological disease or injury.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

Nuvigil_Provigil

Prior Authorization Guideline

Guideline ID	GL-133271	
Guideline Name	Nuvigil_Provigil	
Formulary	UnitedHealthcare Government Programs Exchange Formulary	

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	10/06/2021 ; 10/20/2021 ; 03/16/2022 ; 06/21/2023 ; 08/18/2023 ; 8/18/2023

1. Indications

Drug Name: Modafinil (Provigil) and armodafinil (Nuvigil)

Narcolepsy, obstructive sleep apnea/hypopnea syndrome, shift work sleep disorder. To improve wakefulness in patients with excessive sleepiness associated with narcolepsy, obstructive sleep apnea/hypopnea syndrome, and shift work sleep disorder

Drug Name: Modafinil

<u>Off Label Uses:</u> Idiopathic hypersomnia, fatigue associated with multiple sclerosis, depression augmentation Has been shown to be beneficial in the treatment of excessive sleepiness in patients with idiopathic hypersomnia, treatment of fatigue associated with multiple sclerosis, and in the augmentation therapy for the treatment of depression.

2. Criteria

Product Name: Brand Provigil, generic modafinil, Brand Nuvigil, generic armodafinil [a]	
Approval Length	12 month(s)
Guideline Type	Prior Authorization
Approval Criteria	
1 - One of the following	
 Diagnosis of narcolepsy Diagnosis of idiopathic hypersomnia Diagnosis of excessive sleepiness due to obstructive sleep apnea Diagnosis of excessive sleepiness due to shift work disorder Diagnosis of fatigue associated with multiple sclerosis Diagnosis for the treatment of major depressive disorder or bipolar depression 	
AND	
2 - If the request is for armodafinil (generic Nuvigil), the patient has a history of failure, contraindication, or intolerance to modafinil (generic Provigil)	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Modafinil (Provigil) and armodafinil (Nuvigil) are wakefulness-promoting agents for oral administration. Both products are approved by the Food and Drug Administration (FDA) to improve wakefulness in patients with excessive sleepiness associated with narcolepsy, obstructive sleep apnea and shift work disorder. Modafinil has been shown to be beneficial in the treatment of excessive sleepiness in patients with idiopathic hypersomnia, treatment of fatigue associated with multiple sclerosis, and in the augmentation therapy for the treatment of depression.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

tment guidelines.

Product Name: Ocaliva	[a]	
Approval Length	12 month(s)	
Therapy Stage	Reauthorization	
Guideline Type	Prior Authorization	
Approval Criteria		
1 - Submission of medical records (e.g., laboratory values) documenting a reduction in ALP level from pre-treatment baseline (i.e., prior to Ocaliva therapy) while on Ocaliva therapy		
AND		
 2 - One of the following: Patient does not have cirrhosis Patient has compared airrhosis without evidence of particl hypertension 		
 Patient has compensated cirrhosis without evidence of portal hypertension AND 		
 3 - Prescribed by one of the following: Hepatologist Gastroenterologist 		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

3. Background

Benefit/Coverage/Program Information

Background:

Ocaliva (obeticholic acid), a farnesoid X receptor (FXR) agonist, is indicated for the treatment of primary biliary cholangitis (PBC), without cirrhosis or with compensated cirrhosis without evidence of portal hypertension, in combination with ursodeoxycholic acid (UDCA) in adults with an inadequate response to UDCA, or as monotherapy in adults unable to tolerate UDCA. This indication is approved under accelerated approval based on a reduction in alkaline phosphatase (ALP). An improvement in survival or disease-related symptoms has not been established. Continued approval for this indication may be contingent upon verification and description of clinical benefit in confirmatory trials. [1]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

4. References

1. Criteria

Product Name: All medications requested for off-label indications		
Approval Length	12 month(s)	
Guideline Type	Administrative Off-Label	

1 - A request for an off-label indication will be approved based on one of the following:

1.1 The diagnosis is supported in DRUGDEX and one of the following:

1.1.1 The drug has a Strength of Recommendation in the FDA Uses/Non-FDA Uses section rating of Class I, Class IIa, or Class IIb (see DRUGDEX Strength of Recommendation table in Background section)

OR

1.1.2 Both of the following:

- The drug has a Strength of Recommendation of III or Class Indeterminate (see DRUGDEX Strength of Recommendation table in Background section)
- Efficacy is rated as "Effective" or "Evidence Favors Efficacy" (see DRUGDEX Efficacy Rating and Prior Authorization Approval Status table in Background section)

OR

1.1.3 The diagnosis is supported in any other section in DRUGDEX. (Note: Supported use is considered to mean positive language in any section of the compendia that clearly indicates the drug has efficacy or is beneficial for an off-label use. If there is conflicting evidence, [e.g., use is not supported in the FDA Uses/Non-FDA Uses sections of DRUGDEX but has favorable support elsewhere within DRUGDEX] the favorable support would take precedence and the use would be accepted as a supported use)

OR

1.2 The diagnosis is supported as a use in Clinical Pharmacology

OR

1.3 The diagnosis is supported as a use in American Hospital Formulary Service Drug Information (AHFS DI)

OR **1.4** The diagnosis is supported as a use in the National Comprehensive Cancer Network (NCCN) Drugs and Biologics Compendium with a Category of Evidence and Consensus of 1, 2A, or 2B (see NCCN Categories of Evidence and Consensus table in Background section) OR **1.5** The diagnosis is supported as a use in United States Pharmacopoeia-National Formulary (USP-NF) OR 1.6 The diagnosis is supported as a use in Drug Facts and Comparisons OR 1.7 The diagnosis is supported as a use in Wolters Kluwer Lexi-Drugs OR **1.8** The diagnosis is supported in published practice guidelines and treatment protocols OR **1.9** The diagnosis is supported in peer-reviewed medical literature, including randomized clinical trials, outcomes, research data and pharmacoeconomic studies unless there is clear and convincing contradictory evidence presented in a major peer-reviewed medical journal AND 2 - The use is not excluded as documented in the limitations and exclusions section of the certificate of coverage (see technician note for the Exclusions and Limitations Grid URL). Notes Off-label use may be reviewed for medical necessity and denied as suc h if the off-label criteria are not met. Please refer to drug specific PA gu

ideline for off-label criteria if available.

Benefit/Coverage/Program Information

BACKGROUND:

This program is to be administered to medications of various formulary statuses where the requested use is not FDA approved. This policy is intended to ensure that medications subject to prior authorization, including those not listed on the Plan Formulary/PDL, are utilized in accordance with FDA indications and uses found in the compendia of current literature. This policy aims to foster cost-effective, first-line use of available formulary/PDL medications.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Therapy Stage Initial Authorization	Diagnosis	Rheumatoid Arthritis (RA)
	Approval Length	12 month(s)
Guideline Type Prior Authorization	Therapy Stage	Initial Authorization
	Guideline Type	Prior Authorization

1 - Diagnosis of moderately to severely active RA

AND

2 - One of the following:

2.1 Both of the following:

2.1.1 One of the following:

- History of failure to a 3 month trial of one non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial)
- Patient has been previously treated with a biologic or targeted synthetic DMARD FDAapproved for the treatment of rheumatoid arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Rinvoq (upadacitinib), Xeljanz/Xeljanz XR (tofacitinib)]

AND

2.1.2 One of the following:

- History of failure, contraindication, or intolerance to at least one TNF antagonist therapy

 A
- Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria [3])

2.2 Both of the following:

2.2.1 Patient is currently on Olumiant therapy as documented by claims history or submission of medical records (Document date and duration of therapy)

AND

2.2.2 Patient has not received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Eli Lilly sponsored Olumiant Together program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Olumiant*

AND

3 - Patient is not receiving Olumiant in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]
- Potent immunosuppressant (e.g., azathioprine or cyclosporine)

AND

4 - Prescribed by or in consultation with a rheumatologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
	* Patients requesting initial authorization who were established on ther apy via the receipt of a manufacturer supplied sample at no cost in the prescriber's office or any form of assistance from the Eli Lilly sponsored Olumiant Together program shall be required to meet initial authorizati on criteria as if patient were new to therapy.
	^ Tried/failed alternative(s) are supported by FDA labeling.

Product Name: Olumiant [a]	
Diagnosis	Rheumatoid Arthritis (RA)

Approval Length	12 month(s)	
Therapy Stage	Reauthorization	
Guideline Type	Prior Authorization	
Approval Criteria		
1 - Documentation of positive clinical response to Olumiant therapy		
AND		
2 - Patient is not receivi	ng Olumiant in combination with any of the following:	
Biologic DMAR	D [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab),	
Skyrizi (risankiz	umab-rzaa), Stelara (ustekinumab)]	
	nibitor [e.g., Rinvoq (upadacitinib), Xeljanz (tofacitinib)] ase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]	
 Potent immunosuppressant (e.g., azathioprine or cyclosporine)

Notes	 [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y. * Alopecia areata is not considered cosmetic use.

3. Background

Benefit/Coverage/Program Information

Background:

Olumiant (baricitinib) is a Janus Kinase (JAK) inhibitor indicated for the treatment of adult patients with moderately to severely active rheumatoid arthritis who have had an inadequate response to one or more tumor necrosis factor (TNF) antagonist therapies and for the treatment of adult patients with severe alopecia areata. Use of Olumiant in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine is not recommended. Olumiant is also indicated for the treatment of COVID-19 in hospitalized adults requiring supplemental oxygen, non-invasive or invasive mechanical ventilation, or ECMO. [1]

Additional Clinical Rules

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

12/12/2023	Added Litfulo as an example not to be used in combination. Removed prescriber requirement for reauthorization.

Prior Authorization Guideline

Guideline ID	GL-144146
Guideline Name	Omnipod 5 (PA, QL)
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	5/20/2022
P&T Revision Date:	09/21/2022 ; 11/18/2022 ; 04/19/2023 ; 11/17/2023 ; 3/20/2024

1. Criteria

Product Name: Omnipod 5*	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
Approval Criteria	
1 - Diagnosis of diabetes	

AND

2 - ALL of the following:

- Patient regularly tests blood glucose greater than or equal to 4 times/day or utilizes a continuous glucose monitor (CGM) for greater than or equal to 8 weeks
- Patient has completed a diabetes management program
- Patient injects insulin greater than or equal to 3 times/day

AND

- **3** ONE of the following:
 - Unexplained, nocturnal, or severe hypoglycemia
 - Hypoglycemia unawareness
 - Dawn phenomenon blood glucose greater than 200 mg/dL
 - Wide and unpredictable (erratic) swings in blood glucose levels
 - Glycemic targets within individualized range but lifestyle requires increased flexibility of insulin pump use
 - HbA1C greater than 7% or outside individualized targets

AND

4 - BOTH of the following:

- Patient or caregiver is motivated to assume responsibility for self-care and insulin management
- Patient or caregiver demonstrates knowledge of importance of nutrition including carbohydrate counting and meal planning

Notes *If patient meets criteria above, approve using NDC List OMNIPOD5

Product Name: Omnipod 5*	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization
Approval Criteria	

1 - Documentation of positive clinical response	
Notes	*If patient meets criteria above, approve using NDC List OMNIPOD5

Product Name: Omnipod 5 G6 or G7 Pods*	
Approval Length	12 month(s)
Guideline Type	Quantity Limit Exceptions

1 - Quantity requests for Omnipod 5 G6 or G7 pods exceeding the limited amount will be approved based on physician confirmation that the patient requires a greater quantity

*Note: Authorization for quantity limit overrides should be entered at th e NDC level for the requested Omnipod 5 G6 or G7 pods, for the reque
sted quantity.

2. Background

Benefit/Coverage/Program Information

Background:

External insulin pumps are used for managing individuals with type 1 or type 2 diabetes and deliver insulin by continuous subcutaneous infusion. Members will be required to meet the following coverage criteria.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place
- Coverage is not provided for indications unproven per medical benefit drug policy.

Opzelura

Prior Authorization Guideline

Guideline ID	GL-132953
Guideline Name	Opzelura
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	11/1/2023
P&T Approval Date:	4/20/2022
P&T Revision Date:	07/20/2022 ; 09/21/2022 ; 9/20/2023

1. Indications

Drug Name: Opzelura (ruxolitinib)

Atopic Dermatitis (Mild to Moderate) Indicated for the topical short term and non-continuous chronic treatment of mild to moderate atopic dermatitis in non-immunocompromised patients 12 years of age and older whose disease is not adequately controlled with topical prescription therapies or when those therapies are not advisable.

Nonsegmental Vitiligo Indicated for the topical treatment of nonsegmental vitiligo in adult and pediatric patients 12 years of age and older.

2. Criteria

Product Name: Opzelura [a]

Diagnosis	Atopic Dermatitis
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

1 - Diagnosis of mild to moderate atopic dermatitis

AND

2 - One of the following:

2.1 History of failure, contraindication, or intolerance to both of the following therapeutic classes of topical therapies[^]:

2.1.1 One of the following:

- For mild atopic dermatitis: a topical corticosteroid [e.g., desonide (generic DesOwen), hydrocortisone] (any potency)
- For moderate atopic dermatitis: a topical corticosteroid of at least a medium- to highpotency (e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)]

AND

2.1.2 One topical calcineurin inhibitor [e.g., pimecrolimus (generic Elidel), tacrolimus (generic Protopic)]

OR

2.2 Both of the following:

- Patient is currently on Opzelura therapy
- Patient has not received a manufacturer supplied sample at no cost in prescriber office, or any form of assistance from the Incyte sponsored Opzelura IncyteCARES program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Opzelura¥

AND

3 - Patient is not receiving Opzelura in combination with another biologic medication [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)] or JAK inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]

AND

4 - Patient is not receiving Opzelura in combination with a potent immunosuppressant medication (e.g., azathioprine, cyclosporine)

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	¥ Patients requesting initial authorization who were established on ther apy via the receipt of a manufacturer supplied sample at no cost in the prescriber's office or any form of assistance from the Incyte sponsored Opzelura IncyteCARES program shall be required to meet initial author ization criteria as if patient were new to therapy. ^Tried/failed alternative(s) are supported by FDA labeling.

Drug Name: Orkambi (lumacaftor/ivacaftor)

Cystic fibrosis (CF) Indicated for the treatment of cystic fibrosis (CF) in patients aged 1 year and older who are homozygous for the F508del mutation in the CFTR gene. If the patient's genotype is unknown, an FDA-cleared CF mutation test should be used to detect the presence of the F508del mutation on both alleles of the CFTR gene. [1] Limitations of use: The efficacy and safety of Orkambi have not been established in patients with CF other than those homozygous for the F508del mutation. [1]

2. Criteria

Product Name: Orkambi [a]	
Approval Length	6 month(s)

The second Of	Lettel Authorite des	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	
Approval Criteria		
1 - Diagnosis of cystic f	ibrosis (CF)	
	AND	
2 - Submission of laboratory results confirming that patient is homozygous for the F508del mutation in the CFTR gene		
	AND	
3 - The patient is greater than or equal to 1 year of age		
AND		
4 - Prescribed by or in consultation with a provider who specializes in the treatment of CF		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

Product Name: Orkambi [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Documentation of positive clinical response to Orkambi therapy (e.g., improved lung function, stable lung function)

AND

2 - Prescribed by or in consultation with a provider who specializes in the treatment of CF

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
y.

3. Background

Benefit/Coverage/Program Information

Background:

Orkambi is a combination of lumacaftor and ivacaftor, a cystic fibrosis transmembrane conductance regulator (CFTR) potentiator, indicated for the treatment of cystic fibrosis (CF) in patients aged 1 year and older who are homozygous for the F508del mutation in the CFTR gene. If the patient's genotype is unknown, an FDA-cleared CF mutation test should be used to detect the presence of the F508del mutation on both alleles of the CFTR gene. [1]

Limitations of Use:

The efficacy and safety of Orkambi have not been established in patients with CF other than those homozygous for the F508del mutation. [1]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

5. Revision History

Date	Notes
6/14/2023	Annual review. Updated background and criteria with expanded indicati on in patients aged 1 to 2 years. Updated reference.
6/14/2023	Updated prescriber requirement and simplified reauthorization criteria. Added state mandate language. Updated reference.

Orladeyo

Prior Authorization Guideline

Guideline ID	GL-143806
Guideline Name	Orladeyo
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	8/18/2023
P&T Revision Date:	3/30/2024

1. Indications

Drug Name: Orladeyo

Prophylaxis of HAE attacks Orladeyo is a plasma kallikrein inhibitor indicated for prophylaxis to prevent attacks of hereditary angioedema (HAE) in adults and pediatric patients 12 years and older. Orladeyo should not be used for the treatment of acute HAE attacks.

2. Criteria

Product Name: Orladeyo [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

1 - Diagnosis of hereditary angioedema (HAE) as confirmed by ONE of the following:

1.1 C1 inhibitor (C1-INH) deficiency or dysfunction (Type I or II HAE) as documented by ONE of the following (per laboratory standard):

- C1-INH antigenic level below the lower limit of normal
- C1-INH functional level below the lower limit of normal

OR

1.2 HAE with normal C1 inhibitor levels and ONE of the following:

- Confirmed presence of variant(s) in the gene(s) for factor XII, angiopoietin-1, plasminogen-1, kininogen-1, myoferlin, and heparan sulfate-glucosamine 3-O-sulfotransferase 6
- Recurring angioedema attacks that are refractory to high-dose antihistamines with confirmed family history of angioedema
- Recurring angioedema attacks that are refractory to high-dose antihistamines with unknown background de-novo mutation(s) (i.e., no family history) (HAE-unknown)

AND

2 - ALL of the following:

- Prescribed for the prophylaxis of HAE attacks
- Not used in combination with other approved products indicated for prophylaxis against HAE attacks (i.e., Cinryze, Haegarda, Takhzyro)
- Prescriber attests that patient has experienced attacks of a severity and/or frequency such that they would clinically benefit from prophylactic therapy with Orladeyo

AND

3 - Prescribed by ONE of the following:

- Immunologist
- Allergist

AND

4 - Submission of medical records documenting a history of failure, contraindication, or intolerance to Haegarda (C1 esterase inhibitor, human)

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl y.

Product Name: Orladeyo [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

Approval Criteria

1 - Documentation of positive clinical response to Orladeyo therapy

AND

2 - Reduction in the utilization of on-demand therapies used for acute attacks (e.g., Berinert, Firazyr, Ruconest), as confirmed by claims history or submission of medical records, while on Orladeyo therapy

AND

3 - BOTH of the following:

- Prescribed for the prophylaxis of HAE attacks
- Not used in combination with other products indicated for prophylaxis against HAE attacks (i.e., Cinryze, Haegarda, Takhzyro)

AND

4 - Prescribed by ONE of the following:

- Immunologist
- Allergist

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Orladeyo is a plasma kallikrein inhibitor indicated for prophylaxis to prevent attacks of hereditary angioedema (HAE) in adults and pediatric patients 12 years and older. Orladeyo should not be used for the treatment of acute HAE attacks.¹

Additional Clinical Rules:

• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

• Supply limits may be in place.

Date	Notes
3/1/2024	Annual review with update to diagnostic criteria for HAE with normal C 1 inhibitor levels. Updated reauth criteria to match other drugs in the cl ass.

Osphena

Prior Authorization Guideline

Guideline ID	GL-144147
Guideline Name	Osphena
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	1/20/2021
P&T Revision Date:	09/15/2021 ; 03/16/2022 ; 3/20/2024

1. Indications

Drug Name: Osphena (ospemifene)

Moderate to severe dyspareunia Indicated for the treatment of moderate to severe dyspareunia, a symptom of vulvar and vaginal atrophy due to menopause.

Moderate to severe vaginal dryness Indicated for the treatment of moderate to severe vaginal dryness, a symptom of vulvar and vaginal atrophy due to menopause.

2. Criteria

Product Name: Osphena	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization

Guideline Type	Prior Authorization

1 - Treatment of moderate to severe vaginal dryness, a symptom of vulvar and vaginal atrophy (VVA) due to menopause*

Notes	*Note: Medications for the treatment of moderate to severe dyspareuni
	a are excluded and are to be denied as a benefit exclusion.

Product Name: Osphena	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization
Approval Criteria	
1 - Documentation of positive clinical response to therapy*	
Notes	*Note: Medications for the treatment of moderate to severe dyspareuni a are excluded and are to be denied as a benefit exclusion.

3. Background

Benefit/Coverage/Program Information

Background:

Osphena (ospemifene) is indicated for the treatment of moderate to severe dyspareunia, a symptom of vulvar and vaginal atrophy due to menopause and for the treatment of moderate to severe vaginal dryness, a symptom of vulvar and vaginal atrophy (VVA) due to menopause.

Additional Clinical Rules:

- Supply limits may be in place

Otezla

Prior Authorization Guideline

Guideline ID	GL-121440	
Guideline Name	Otezla	
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP 	

Guideline Note:

Effective Date:	4/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	03/18/2020 ; 03/17/2021 ; 02/18/2022 ; 2/17/2023

1. Indications

Drug Name: Otezla (apremilast)

Active psoriatic arthritis Indicated for the treatment of adult patients with active psoriatic arthritis.

Plaque psoriasis Indicated for the treatment of patients with plaque psoriasis who are candidates for phototherapy or systemic therapy.

Behcet's disease Indicated for the treatment of adult patients with oral ulcers associated with Behcet's disease.

2. Criteria

Product Name: Otezla [a]	
Diagnosis	Psoriatic Arthritis (PsA)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
	•

1 - Diagnosis of active psoriatic arthritis

AND

2 - Patient is not receiving Otezla in combination with either of the following:

- Biologic DMARD [e.g., Enbrel (etanercept), adalimumab, Simponi (golimumab), Orencia (abatacept)]
- Janus kinase inhibitor [e.g., Xeljanz (tofacitinib), Rinvoq (upadacitinib)]

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl y.

Product Name: Otezla [a]	
Diagnosis	Psoriatic Arthritis (PsA)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Documentation of positive clinical response to Otezla therapy

AND

2 - Patient is not receiving Otezla in combination with either of the following:

- Biologic DMARD [e.g., Enbrel (etanercept), adalimumab, Simponi (golimumab), Orencia (abatacept)]
- Janus kinase inhibitor [e.g., Xeljanz (tofacitinib), Rinvoq (upadacitinib)]

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	у.

Product Name: Otezla [a]	
Diagnosis	Plaque Psoriasis
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of plaque psoriasis who are candidates for phototherapy or systemic therapy

AND

2 - Patient is not receiving Otezla in combination with either of the following:

- Biologic DMARD [e.g., Enbrel (etanercept), adalimumab, Simponi (golimumab), Orencia (abatacept)]

2/22/2023	Annual review. Updated listed examples from Humira to adalimumab a nd added Rinvoq. Added state mandate footnote.

PAH Agents

Prior Authorization Guideline

Guideline ID	GL-141060
Guideline Name	PAH Agents
Formulary	UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	4/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 06/16/2021 ; 09/15/2021 ; 06/15/2022 ; 07/20/2022 ; 11/18/2022 ; 03/15/2023 ; 08/18/2023 ; 2/16/2024

1. Indications

Drug Name: Adcirca (tadalafil)

Pulmonary arterial hypertension (PAH) Indicated for the treatment of PAH (WHO Group 1) to improve exercise ability. [5]

Drug Name: Adempas (riociguat)

Pulmonary arterial hypertension (PAH) Indicated for the treatment of adults with PAH (WHO Group 1) to improve exercise capacity, improve WHO functional class and to delay clinical worsening.

Chronic thromboembolic pulmonary hypertension (CTEPH) Indicated for the treatment of adults with persistent/recurrent chronic thromboembolic pulmonary hypertension (CTEPH) (WHO Group 4) after surgical treatment or inoperable CTEPH to improve exercise capacity and WHO functional class. [10]

Drug Name: Alyq (tadalafil)

Pulmonary arterial hypertension (PAH) Indicated for the treatment of PAH (WHO Group 1) to improve exercise ability. [13]

Drug Name: Letairis (ambrisentan)

Pulmonary arterial hypertension (PAH) Indicated for the treatment of PAH (WHO Group 1) to improve exercise ability and delay clinical worsening. It is also indicated in combination with tadalafil to reduce the risk of disease progression and hospitalization for worsening PAH, and to improve exercise ability. [2]

Drug Name: Opsumit (macitentan)

Pulmonary arterial hypertension (PAH) Indicated for the treatment of PAH (WHO Group 1) to reduce the risks of disease progression and hospitalization for PAH. [8]

Drug Name: Orenitram (treprostinil)

Pulmonary arterial hypertension (PAH) Indicated for the treatment of pulmonary arterial hypertension (PAH) (WHO Group 1) to delay disease progression and to improve exercise capacity. [9]

Drug Name: Revatio (sildenafil), Liqrev (tadalafil)

Pulmonary arterial hypertension (PAH) Indicated in pediatric patients 1 to 17 years old for the treatment of PAH (WHO Group I) to improve exercise ability and, in pediatric patients too young to perform standardized exercise testing, pulmonary hemodynamics thought to underly improvements in exercise. Revatio is also indicated in adult patients for the treatment of PAH (WHO Group 1) to improve exercise ability and delay clinical worsening. [4]

Drug Name: Tracleer (bosentan)

Pulmonary arterial hypertension (PAH) Indicated for the treatment of PAH (WHO Group 1) to improve exercise ability and to decrease clinical worsening in adult patients, and improve pulmonary vascular resistance, which is expected to result in an improvement in exercise ability in pediatric patients aged 3 years and older. [3]

Drug Name: Tyvaso (treprostinil), Tyvaso DPI (treprostinil)

Pulmonary arterial hypertension (PAH) Indicated for the treatment of PAH (WHO Group 1) to improve exercise ability. [7]

Pulmonary hypertension associated with interstitial lung disease Indicated for the treatment of pulmonary hypertension associated with interstitial lung disease (WHO Group 3) to improve exercise ability. [7, 13]

Drug Name: Ventavis (iloprost)

Pulmonary arterial hypertension (PAH) Indicated for the treatment of PAH (WHO Group 1) to

improve a composite endpoint consisting of exercise tolerance, symptoms (NYHA Class), and lack of deterioration. [6]

Drug Name: Uptravi (selexipag)

Pulmonary arterial hypertension (PAH) Indicated for the treatment of PAH (WHO Group I) to delay disease progression and reduce the risk of hospitalization for PAH. [12]

Drug Name: Tadliq (tadalafil)

Pulmonary arterial hypertension (PAH) Indicated for the treatment of pulmonary arterial hypertension (PAH) (WHO Group 1) to improve exercise ability.

2. Criteria

Product Name: Brand Adcirca, Adempas, Brand Letairis, Opsumit, Brand Tracleer, Ventavis, Orenitram, Tracleer tbso, Tyvaso, Alyq, generic tadalafil 20 mg (PAH) tabs, generic ambrisentan, generic bosentan, Brand Revatio tabs, generic sildenafil 20 mg tabs, Orenitram titration kit, Tyvaso DPI	
Diagnosis	Pulmonary Arterial Hypertension
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - ALL of the following:

- Pulmonary arterial hypertension is symptomatic
- Diagnosis of pulmonary arterial hypertension that is confirmed by right heart catheterization
- The medication is prescribed by or in consultation with a cardiologist, pulmonologist or rheumatologist.

2 - BOTH of the following:

- Patient is currently on any therapy for the diagnosis of pulmonary arterial hypertension
- The medication is prescribed by or in consultation with a cardiologist, pulmonologist or rheumatologist.

Benefit/Coverage/Program Information

Background:

Pulmonary arterial hypertension (PAH) is often a progressive disease characterized by elevated pressure in the vessels that carry blood between the heart and the lungs. This results in ventricular dysfunction, reduced exercise capacity, the potential for right heart failure, and even death.

Several mechanisms have been identified in the pathogenesis of PAH, leading to the development of four classes of medications to treat the disorder. Endothelin receptor antagonists (ERAs), phosphodiesterase-5 (PDE-5) inhibitors, prostacyclin analogs, and soluble guanylate cyclase (sGC) stimulators may be used as monotherapy, sequential combination therapy, or simultaneous combination therapy to treat PAH. [1]

Letairis (ambrisentan), Tracleer (bosentan), and Opsumit (macitentan) are oral endothelin receptor antagonists (ERA). Letairis is indicated for the treatment of PAH (WHO Group 1) to improve exercise ability and delay clinical worsening. It is also indicated in combination with tadalafil to reduce the risk of disease progression and hospitalization for worsening PAH, and to improve exercise ability. [2] Tracleer is indicated for the treatment of PAH (WHO Group 1) to improve exercise ability and to decrease clinical worsening in adult patients, and improve pulmonary vascular resistance, which is expected to result in an improvement in exercise ability in pediatric patients aged 3 years and older. [3] Opsumit is indicated for the treatment of PAH (WHO Group 1) to reduce the risks of disease progression and hospitalization for PAH. [8]

Revatio (sildenafil), Liqrev (tadalafil), Adcirca (tadalafil), Tadliq (tadalafil), and Alyq (tadalafil) are oral PDE-5 inhibitors. Revatio and Liqrev is indicated in pediatric patients 1 to 17 years old for the treatment of PAH (WHO Group 1) to improve exercise ability, in pediatric patients too young to perform standardized exercise testing, pulmonary hemodynamics thought to underly improvements in exercise. Revatio is also indicated in adult patients for the treatment of PAH (WHO Group 1) to improve exercise ability and delay clinical worsening. [4] Adcirca and Alyq are indicated for the treatment of PAH (WHO Group 1) to improve exercise ability. [5, 13]

Ventavis (iloprost) and Tyvaso (treprostinil) are prostacyclin analogs administered as inhalation solutions. Tyvaso DPI (treprostinil) is a prostacyclin analog administered as a powder for inhalation. Ventavis is indicated for the treatment of PAH (WHO Group 1) to improve a composite endpoint consisting of exercise tolerance, symptoms (NYHA Class), and lack of deterioration. [6] Tyvaso and Tyvaso DPI are indicated for the treatment of PAH (WHO Group 1) to improve exercise ability. Theyare also indicated for the treatment of pulmonary hypertension associated with interstitial lung disease (WHO Group 3) to improve exercise ability. [7,13]

Orenitram (treprostinil) is an orally administered prostacyclin analog indicated for the treatment of PAH (WHO Group 1) to delay disease progression and to improve exercise capacity. [9]

Adempas (riociguat) is a soluble guanylate cyclase (sGC) stimulator indicated for the treatment of adults with PAH (WHO Group 1) to improve exercise capacity, improve WHO functional class and to delay clinical worsening. Adempas is also indicated for the treatment of adults with persistent/recurrent chronic thromboembolic pulmonary hypertension (CTEPH) (WHO Group 4) after surgical treatment or inoperable CTEPH to improve exercise capacity and WHO functional class. [10]

Uptravi (selexipag) is a prostacyclin receptor agonist indicated for the treatment of PAH (WHO Group 1) to delay disease progression and reduce the risk of hospitalization for PAH. [12]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limitations may be in place.

Additional Information regarding the endothelin receptor antagonists (Letairis, Opsumit, and Tracleer):

These agents should be used with caution in patients with liver disease. Use is not recommended in moderate to severe hepatic impairment. Tracleer product labeling includes a black box warning regarding the risk of liver injury. Prescribers are cautioned to consider whether benefits of use offset the risk of liver injury in WHO Class II patients. Early liver injury may preclude future use as disease progresses. [3]

Additional Information regarding the oral PDE-5 inhibitors (Revatio, Adcirca, Tadliq, Liqrev and Alyq):

Administration of the oral PDE-5 inhibitors to patients taking any form of organic nitrate, either regularly or intermittently, is contraindicated. [4,5] In addition, the concomitant administration of oral PDE-5 inhibitors with Adempas is contraindicated. [9]

5. Revision History

Date	Notes
2/16/2024	Annual review. Added Liqrev oral suspension for PAH and added a ST generic Revatio suspension for Tadliq and Liqrev. Separated Revatio s uspension section to not have step therapy apply. Updated footnote. U pdated background and references.

Piqray

Prior Authorization Guideline

Guideline ID	GL-143809	
Guideline Name	Piqray	
Formulary	UnitedHealthcare Government Programs Exchange Formulary SP	

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 08/20/2021 ; 09/15/2021 ; 08/19/2022 ; 08/18/2023 ; 3/20/2024

1. Indications

Drug Name: Piqray (alpelisib)

Breast Cancer Indicated for the treatment of hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative, PIK3CA-mutated, advanced or metastatic breast cancer following progression on or after an endocrine-based regimen.

2. Criteria

Product Name: Piqray (alpelisib) [a]	
Diagnosis	Breast Cancer
Approval Length	12 month(s)

Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
Approval Criteria	
1 - Diagnosis of brea	ast cancer
	AND
2 - ONE of the follow	ving:
AdvancedMetastatic	
	AND
3 - Disease is hormo	one receptor (HR)-positive
	AND
4 - Disease is huma	n epidermal growth factor receptor 2 (HER2)-negative
	AND
5 - Presence of one	or more PIK3CA mutations
	AND
6 - Used in combination with fulvestrant	
	AND
7 - Disease has prog	gressed on or after an endocrine-based regimen

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Piqray (alpelisib) [a]	
Diagnosis	Breast Cancer
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on Piqray therapy

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
criteria. Other policies and utilization management programs may appl y.

Product Name: Piqray (alpelisib) [a]	
Diagnosis	NCCN Recommended Regimens
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Piqray will be approved for uses not outlined above if supported by The National Comprehensive Cancer Network (NCCN) Drugs and Biologics Compendium

	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Pomalyst

Prior Authorization Guideline

Guideline ID	GL-125871
Guideline Name	Pomalyst
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	7/1/2023
P&T Approval Date:	9/15/2021
P&T Revision Date:	05/20/2022 ; 5/25/2023

1. Indications

Drug Name: Pomalyst

Multiple myeloma Indicated in combination with dexamethasone, for patients with multiple myeloma (MM) who have received at least two prior therapies including lenalidomide and a proteasome inhibitor and have demonstrated disease progression on or within 60 days of completion of the last therapy.

Kaposi sarcoma Indicated for patients with AIDS-related Kaposi sarcoma (KS) after failure of highly active antiretroviral therapy (HAART) or in patients with KS who are HIV-negative.

Other Uses: The National Comprehensive Cancer Network (NCCN) also recommends use of Pomalyst for the treatment of relapsed/refractory systemic light chain amyloidosis in combination with dexamethasone and, for the treatment of relapsed or refractory primary central nervous system (CNS) lymphoma.

2. Criteria

Product Name: Pomalyst [a]		
Diagnosis	Multiple Myeloma	
Approval Length	12 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	
Approval Criteria 1 - Diagnosis of multiple myeloma		
	AND	
Immunomodula	ntraindication, or intolerance to both of the following^: tory agent [e.g., Revlimid (lenalidomide)] ibitor [e.g.,Velcade (bortezomib)]	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y. ^ Tried/failed alternative(s) are supported by FDA labeling.	
Product Name: Pomaly	st [a]	

Product Name: Pomalyst [a]	
Diagnosis	Multiple Myeloma
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Patient does not show evidence of progressive disease while on Pomalyst therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage

	criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Pomalyst (pomalidomide) is a thalidomide analogue indicated, in combination with dexamethasone, for patients with multiple myeloma who have received at least two prior therapies including Revlimid (lenalidomide) and a proteasome inhibitor [e.g., Velcade® (bortezomib)] and have demonstrated disease progression on or within 60 days of completion of the last therapy. Pomalyst is also indicated for adult patients with AIDS-related Kaposi sarcoma (KS) after failure of highly active antiretroviral therapy (HAART) or in patients with KS who are HIV-negative.[1]

The National Comprehensive Cancer Network (NCCN) also recommends use of Pomalyst for the treatment of relapsed/refractory systemic light chain amyloidosis in combination with dexamethasone and, for the treatment of relapsed or refractory primary central nervous system (CNS) lymphoma.[2]

Due to embryo-fetal risk (pregnancy category X) associated with Pomalyst; it is available only through the Pomalyst Risk Evaluation and Mitigation Strategy (REMS) Program. Prescribers and pharmacies must be certified with the Pomalyst REMS Program by enrolling and complying with the REMS requirements. Patients must sign a Patient-Physician agreement form and comply with the REMS requirements. Specifically, female patients who are not pregnant but can become pregnant must comply with the pregnancy testing and contraception requirements and males must comply with contraception requirements. Pharmacies must only dispense to patients who are authorized to receive the drug and must comply with REMS requirements. Additional information may be found at: https://www.pomalystrems.com/.[3].

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Praluent

Prior Authorization Guideline

Guideline ID	GL-141087	
Guideline Name	Praluent	
Formulary	UnitedHealthcare Government Programs Exchange Formulary	

Guideline Note:

Effective Date:	4/1/2024
P&T Approval Date:	10/20/2021
P&T Revision Date:	06/15/2022 ; 01/18/2023 ; 06/21/2023 ; 10/18/2023 ; 2/16/2024

1. Indications

Drug Name: Praluent

Primary hyperlipidemia Indicated as adjunct to diet, alone or in combination with other lowdensity lipoprotein cholesterol (LDL-C)-lowering therapies (e.g., statins, ezetimibe, LDL apheresis), for the treatment of adults with primary hyperlipidemia (including heterozygous familial hypercholesterolemia) to reduce LDL-C

Cardiovascular Disease Indicated to reduce the risk of myocardial infarction, stroke, and unstable angina requiring hospitalization in adults with established cardiovascular disease.

Homozygous Familial Hypercholesterolemia Indicated as an adjunct to other LDL-Clowering therapies in adult patients with homozygous familial hypercholesterolemia (HoFH) to reduce LDL-C.

2. Criteria

Product Name: Praluent [a]	
Diagnosis	Primary Hyperlipidemia (including heterozygous familial hypercholesterolemia) and ASCVD
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

1 - ONE of the following diagnoses:

1.1 Heterozygous familial hypercholesterolemia (HeFH) as confirmed by ONE of the following:

1.1.1 BOTH of the following: [14-16]

1.1.1.1 Pre-treatment LDL-C greater than or equal to 190 mg/dL (greater than or equal to 155 mg/dL if less than 16 years of age)

AND

1.1.1.2 ONE of the following:

- Family history of myocardial infarction in first-degree relative less than 60 years of age
- Family history of myocardial infarction in second-degree relative less than 50 years of age
- Family history of LDL-C greater than 190 mg/dL in first- or second-degree relative
- Family history of heterozygous or homozygous familial hypercholesterolemia in first- or second-degree relative
- Family history of tendinous xanthomata and/or arcus cornealis in first- or second-degree relative

OR

1.1.2 BOTH of the following: [14-16]

1.1.2.1 Pre-treatment LDL-C greater than or equal to 190 mg/dL (greater than or equal to 155 mg/dL if less than 16 years of age)

AND

1.1.2.2 Submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following:

- Functional mutation in LDL, apoB, or PCSK9 gene
- Tendinous xanthomata
- Arcus cornealis before age 45

OR

1.2 Atherosclerotic cardiovascular disease (ASCVD) as confirmed by ONE of the following:

- Acute coronary syndromes
- History of myocardial infarction
- Stable or unstable angina
- Coronary or other arterial revascularization
- Stroke
- Transient ischemic attack
- Peripheral arterial disease presumed to be of atherosclerotic origin

OR

1.3 Primary hyperlipidemia with pre-treatment LDL-C greater than or equal to 190 mg/dL

AND

2 - Submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following [prescription claims history may be used in conjunction as documentation of medication use, dose, and duration]:

2.1 Patient has been receiving at least 12 consecutive weeks OF HIGH INTENSITY STATIN THERAPY [i.e. atorvastatin 40-80 mg, rosuvastatin 20-40 mg] and will continue to receive a high-intensity statin at maximally tolerated dose

OR

2.2 BOTH of the following:

2.2.1 Patient is unable to tolerate high-intensity statin as evidenced by ONE of the following intolerable and persistent (i.e. more than 2 weeks) symptoms:

- Myalgia [muscle symptoms without creatine kinase (CK) elevations]
- Myositis (muscle symptoms with CK elevations less than 10 times upper limit of normal [ULN])

AND

2.2.2 Patient has been receiving at least 12 consecutive weeks of low-intensity or moderateintensity statin therapy [i.e. atorvastatin 10-20 mg, rosuvastatin 5-10 mg, simvastatin \ge 10 mg, pravastatin \ge 10 mg, lovastatin 20-40 mg, fluvastatin XL 80 mg, fluvastatin 20-40 mg up to 40mg twice daily or Livalo (pitavastatin) \ge 1 mg] and will continue to receive a low-intensity or moderate-intensity statin at maximally tolerated dose

OR

2.3 Patient is unable to tolerate LOW OR MODERATE-, AND HIGH-INTENSITY STATINS as evidenced by ONE of the following:

2.3.1 ONE of the following intolerable and persistent (i.e. more than 2 weeks) symptoms for low or moderate-, and high-intensity statins:

- Myalgia (muscle symptoms without CK elevations)
- Myositis (muscle symptoms with CK elevations less than 10 times upper limit of normal [ULN])

OR

2.3.2 Patient has a labeled contraindication to all statins as documented in medical records

OR

2.3.3 Patient has experienced rhabdomyolysis or muscle symptoms with statin treatment with CK elevations greater than 10 times ULN

AND

3 - ONE of the following:

3.1 Submission of medical records (e.g., laboratory values) documenting ONE of the following

LDL-C values while on maximally tolerated lipid lowering therapy for a minimum of at least 12 weeks within the last 120 days or 120 days prior to starting PCSK9 inhibitor therapy: LDL-C greater than or equal to 100 mg/dL with ASCVD LDL-C greater than or equal to 130 mg/dL without ASCVD • OR **3.2** BOTH of the following: 3.2.1 Submission of medical records (e.g., laboratory values) documenting ONE of the following LDL-C values while on maximally tolerated lipid lowering therapy for a minimum of at least 12 weeks within the last 120 days or 120 days prior to starting PCSK9 inhibitor therapy: LDL-C between 55 mg/dL and 99 mg/dL with ASCVD LDL-C between 100 mg/dL and 129 mg/dL without ASCVD • AND 3.2.2 Submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following [prescription claims history may be used in conjunction as documentation of medication use, dose, and duration]: Patient has been receiving at least 12 consecutive weeks of ezetimibe (Zetia) therapy as adjunct to maximally tolerated statin therapy Patient has a history of contraindication, or intolerance to ezetimibe AND 4 - History of failure, contraindication, or intolerance to Repatha (evolocumab) (document date of trial and list reason for therapeutic failure, contraindication, or intolerance) AND 5 - Patient has received comprehensive counseling regarding appropriate diet AND 6 - Prescribed by ONE of the following:

- Cardiologist
- Endocrinologist
- Lipid specialist

AND

7 - Not used in combination with another proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Repatha (evolocumab)]

AND

8 - Not used in combination with Leqvio (inclisiran)

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apple
	l y.

Product Name: Praluent [a]	
Diagnosis	Primary Hyperlipidemia (including heterozygous familial hypercholesterolemia) and ASCVD
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

Approval Criteria

1 - Prescribed by ONE of the following:

- Cardiologist
- Endocrinologist
- Lipid specialist

AND

2 - Submission of medical records (e.g., chart notes, laboratory values) documenting LDL-C reduction while on Praluent therapy

AND

3 - Not used in combination with another proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Repatha (evolocumab)]

AND

4 - Not used in combination with Leqvio (inclisiran)

	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Praluent [a]	
Diagnosis	Homozygous Familial Hypercholesterolemia
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

Approval Criteria

1 - Diagnosis of homozygous familial hypercholesterolemia (HoFH) as confirmed by submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following:

1.1 Submission of medical records (e.g., chart notes, laboratory values) confirming genetic confirmation of two mutant alleles at the LDLR, APOB, PCSK9, or LDLRAP1 gene locus

OR

1.2 Both of the following:

1.2.1 Pre-Treatment LDL-C greater than 400 mg/dL

AND

1.2.2 ONE of the following:
 Xanthoma before 10 years of age Evidence of heterozygous familial hypercholesterolemia (HeFH) in both parents
AND
2 - Patient has received comprehensive counseling regarding appropriate diet
AND
3 - Patient is receiving other lipid-lowering therapy (e.g., statin, ezetimibe, LDL apheresis)
AND
4 - Prescribed by ONE of the following:
 Cardiologist Endocrinologist Lipid specialist
AND
5 - Not used in combination with another proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Repatha (evolocumab)]
AND
6 - Not used in combination with Juxtapid (lomitapide)
AND
7 - History of failure, contraindication, or intolerance to Repatha (evolocumab) (document date of trial and list reason for therapeutic failure, contraindication, or intolerance)
Notes [a] State mandates may apply. Any federal regulatory requirements an

d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
у.

Product Name: Praluent [a]	
Diagnosis	Homozygous Familial Hypercholesterolemia
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

1 - Submission of medical records (e.g., chart notes, laboratory values) documenting LDL-C reduction while on Praluent therapy

AND

2 - Prescribed by ONE of the following:

- Cardiologist
- Endocrinologist
- Lipid specialist

AND

3 - Not used in combination with another proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Repatha (evolocumab)]

AND

4 - Not used in combination with Juxtapid (lomitapide)

[a] State mandates may apply. Any federal regulatory requirements an

criteria. Other policies and utilization management programs may appl
у.

3. Background

Benefit/Coverage/Program Information

Background:

Praluent (alirocumab) is a PCSK9 (Proprotein Convertase Subtilisin Kexin Type 9) inhibitor indicated:

• To reduce the risk of myocardial infarction, stroke, and unstable angina requiring hospitalization in adults with established cardiovascular disease.

• As adjunct to diet, alone or in combination with other low-density lipoprotein cholesterol (LDL-C) lowering therapies (e.g., statins, ezetimibe, LDL apheresis), for the treatment of adults with primary hyperlipidemia (including heterozygous familial hypercholesterolemia) to reduce LDL-C.

• As an adjunct to other LDL-C lowering therapies in adult patients with homozygous familial hypercholesterolemia (HoFH) to reduce LDL-C. [1]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

2. Background

Benefit/Coverage/Program Information

Background:

This program is to be administered to medications that have a prior authorization requirement but do not have a drug specific guideline. The program is also to be administered when new FDA-approved indications are not addressed in an existing drug-specific prior authorization guideline.

٦

Additional Clinical Rules:

• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

• Supply limits may be in place.

3. Revision History

3. Background

Benefit/Coverage/Program Information

Background:

This program is designed to provide coverage for these medications to be used in conjunction with Assisted Reproductive Technologies (ART, i.e., in vitro fertilization).

Endometrin® (progesterone inserts) is indicated to support embryo implantation and early pregnancy by supplementation of corpus luteal function as part of an ART treatment program for infertile women.

Crinone (progesterone gel) is indicated for progesterone supplementation or replacement as part of an Assisted Reproductive Technology (ART) treatment for infertile women with progesterone deficiency. Crinone is also indicated for the treatment of secondary amenorrhea.

Additional Clinical Rules

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

3. Background

Benefit/Coverage/Program Information

Background:

Promacta (eltrombopag) is a thrombopoietin receptor agonist indicated for the treatment of thrombocytopenia in adult and pediatric patients 1 year and older with persistent or chronic immune thrombocytopenia (ITP) who have experienced an insufficient response to corticosteroids, immunoglobulins, or splenectomy. Promacta is indicated for the treatment of thrombocytopenia in patients with chronic hepatitis C to allow the initiation and maintenance of interferon-based therapy. Promacta is also approved in combination with standard immunosuppressive therapy for the first line treatment of adult and pediatric patients 2 years and older with severe aplastic anemia and for the treatment of patients with severe aplastic anemia who have had an insufficient response to immunosuppressive therapy. [1]

Promacta should be used only in patients with ITP whose degree of thrombocytopenia and clinical condition increase the risk for bleeding. [1]

Promacta should be used only in patients with chronic hepatitis C whose degree of thrombocytopenia prevents the initiation of interferon therapy or limits the ability to maintain interferon-based therapy. Safety and efficacy have not been established in combination with direct-acting antiviral agents used without interferon for treatment of chronic hepatitis C infection.[1]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

3. Background

Benefit/Coverage/Program Information

Background

Pulmozyme (dornase alfa) is a recombinant deoxyribonuclease (DNase) enzyme indicated in conjunction with standard therapies for the management of cystic fibrosis (CF) patients to

improve pulmonary function.

In CF patients with a forced vital capacity (FVC) \ge 40% of predicted, daily administration of Pulmozyme has also been shown to reduce the risk of respiratory tract infections requiring parenteral antibiotics.[1]

Additional Clinical Rules

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

P&T Revision Date:	

1. Indications

Drug Name: Pyrukynd (mitapivat)

Hemolytic anemia Indicated for the treatment of hemolytic anemia in adults with pyruvate kinase (PK) deficiency.

Product Name: Pyrukynd	
Approval Length	6 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

1 - Diagnosis of pyruvate kinase (PK) deficiency based on all of the following:

- Presence of at least 2 variant alleles in the pyruvate kinase liver and red blood cell (PKLR) gene, of which at least 1 is a missense variant
- Patient is not homozygous for the c.1436G>A (p.R479H) variant
- Patient does not have 2 non-missense variants (without the presence of another missense variant) in the PKLR gene

AND

2 - Used for the treatment of hemolytic anemia

AND

- **3** One of the following:
- **3.1** Both of the following:
 - Baseline hemoglobin less than or equal to 10 g/dL
 - Patient has had no more than 4 transfusions in the previous 52 weeks and no transfusions in the preceding 3-month period

OR

3.2 Patient has had a minimum of 6 transfusion episodes in the preceding 52 weeks

AND

4 - Prescribed by a nephrologist or hematologist

Product Name: Pyrukynd	
Diagnosis	With evidence of positive clinical response to Pyrukynd therapy
Approval Length	12 month(s)

Therapy Stage	Reauthorization	
Guideline Type	Non Formulary	
Approval Criteria		
1 - Documentation of po following:	ositive clinical response to Pyrukynd therapy based on one of the	
 A greater than or equal to 1.5 g/dL increase in hemoglobin from baseline sustained at 2 or more scheduled assessments 4 weeks apart during the initial 24 week period without any transfusions Reduction in transfusions of greater than or equal to 33% in the number of red blood cell units transfused during the initial 24 week period compared with the patient's historical transfusion burden Patent has been on Pyrukynd for greater than 52 weeks and has maintained a positive clinical response to therapy 		
AND		
2 - Prescribed by, or in consultation with, a nephrologist or hematologist		
Notes	NOTE: If documentation does not provide evidence of positive clinical r esponse to Pyrukynd therapy, authorization will be issued for 4 weeks t o allow for dose titration with discontinuation of therapy	

DiagnosisWithout evidence of positive clinical resApproval Length4 Week(s)	ponse to Pyrukynd therapy
Therapy Stage Reauthorization	
Guideline Type Non Formulary	

1 - Documentation does not provide evidence of positive clinical response to Pyrukynd therapy, allow for dose titration with discontinuation of therapy

3. Background

Benefit/Coverage/Program Information

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program.
- Supply limitations may be in place

Background

Pyrukynd® (mitapivat) is a pyruvate kinase activator indicated for the treatment of hemolytic anemia in adults with pyruvate kinase (PK) deficiency.

P&T Revision Date:	03/15/2023 ; 1/17/2024

1. Indications

Drug Name: Vuity (pilocarpine), Qlosi (pilocarpine)

Presbyopia FDA approved indication for the treatment of presbyopia in adults.

Product Name: Vuity, Qlosi [a]	
Diagnosis	Treatment of Presbyopia
Guideline Type	Non Formulary
Approval Criteria	

1 - Qlosi or Vuity are not considered medically necessary for the treatment of presbyopia based on the definition of medically necessary health care services in the certificate of coverage. All requests for authorization will be denied.	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y

3. Background

Benefit/Coverage/Program Information

Background:

L

Qlosi (pilocarpine) 0.4% ophthalmic solution and Vuity (pilocarpine) 1.25% ophthalmic solution are indicated for the treatment of presbyopia in adults. The efficacy of Qlosi was established in clinical trials with patients aged 45 to 64 years of age with presbyopia and for Vuity in patients aged 40 to 55 years of age with presbyopia. The standard of therapy for the treatment of presbyopia is use of corrective lenses, such as glasses and contact lenses, or refractive surgery.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

Product Name: Opioid containing medications for malignant pain	
Approval Length	12 month(s)
Guideline Type	Administrative

1 - In the absence of an opioid-specific quantity limit override guideline, the following approval criteria will be used:

1.1 Diagnosis of malignant (cancer) pain

AND

1.2 For opioid containing combination products, the total daily dose of the non-opioid component is supported by one of the following references:

- American Hospital Formulary Service Drug Information
- Micromedex DRUGDEX Information System
- National Comprehensive Cancer Network (NCCN)
- Clinical pharmacology
- Wolters Kluwer Lexi-Drugs
- United States Pharmacopoeia-National Formulary (USP-NF)
- Drug Facts and Comparisons

Product Name: Opioid containing medications for non-malignant pain	
Approval Length	12 month(s)
Guideline Type	Administrative

Approval Criteria

1 - One of the following:

1.1 Quantity limit override requests must involve an FDA-approved indication

OR

1.2 Quantity limit override requests involving off-label indications must meet off-label guideline requirements*

AND

2 - One of the following:

2.1 Higher dose or quantity is supported in the dosage and administration section of the manufacturer's prescribing information

OR

2.2 Higher dose or quantity is supported by one of the following references:

- American Hospital Formulary Service Drug Information
- Micromedex DRUGDEX Information System
- Clinical pharmacology
- Wolters Kluwer Lexi-Drugs
- United States Pharmacopoeia-National Formulary (USP-NF)
- Drug Facts and Comparisons

AND

3 - Quantity requests exceeding the plan's quantity limits will be approved if one of the following criteria are met:

3.1 The prescriber maintains and provides chart documentation of the patient's evaluation, including all of the following:

- An appropriate patient medical history and physical examination
- A description of the nature and intensity of the pain
- Documentation of appropriate dose escalation
- Documentation of ongoing, periodic review of the course of opioid therapy
- An updated, comprehensive treatment plan (the treatment plan should state objectives that will be used to determine treatment success, such as pain relief or improved physical and/or psychosocial function)
- Verification that the risks and benefits of the use of the controlled substance have been discussed with the patient, significant other(s), and/or guardian

OR

3.2 All of the following:

3.2.1 Medication is being used to treat postoperative pain

AND

3.2.2 Medication is not being prescribed for pain related to a dental procedure

AND

3.2.3 The dose being prescribed is the dose that the patient was stable on prior to discharge

AND

4 - For opioid combination products, the total daily dose of the non-opioid component must be supported by one of the following references:

- American Hospital Formulary Service Drug Information
- Micromedex DRUGDEX Information System
- Clinical pharmacology
- Wolters Kluwer Lexi-Drugs
- United States Pharmacopoeia-National Formulary (USP-NF)
- Drug Facts and Comparisons

Notes	*Reference the Off-label Administrative Guideline.

Product Name: Opioid containing medications for non-pain uses	
Approval Length	12 month(s)
Guideline Type	Administrative

Approval Criteria

1 - One of the following:

1.1 Quantity limit override requests must involve an FDA-approved indication

OR

1.2 Quantity limit override requests involving off-label indications must meet off-label guideline requirements*

AND

2 - One of the following:

2.1 Higher dose or quantity is supported in the dosage and administration section of the manufacturer's prescribing information

OR

2.2 Higher dose or quantity is supported by one of the following resources:

- American Hospital Formulary Service Drug Information
- Micromedex DRUGDEX Information System
- Clinical pharmacology
- Wolters Kluwer Lexi-Drugs
- United States Pharmacopoeia-National Formulary (USP-NF)
- Drug Facts and Comparisons

AND

3 - The use is not excluded as documented in the limitations and exclusions section of the certificate of coverage (see technician note for the Exclusions and Limitations Grid URL)

Notes	*Reference the Off-label Administrative Guideline.
-------	--

Product Name: Non-opioid medications (except eye drops, topical applications, condoms, spermicides, emergency contraceptive products, non-hormonal vaginal contraceptives, and contraceptive implants) (in the absence of a drug-specific guideline)*

Approval Length	12 month(s)
Guideline Type	Administrative

Approval Criteria

- **1** One of the following:
- **1.1** Quantity limit override requests must involve an FDA-approved indication

OR

1.2 Quantity limit override requests involving off-label indications must meet off-label guideline approval criteria*

AND

2 - One of the following:

2.1 Higher dose or quantity is supported in the dosage and administration section of the manufacturer's prescribing information

OR

2.2 Higher dose or quantity is supported by one of the following resources:

- American Hospital Formulary Service Drug Information
- Micromedex DRUGDEX Information System
- Clinical pharmacology
- Wolters Kluwer Lexi-Drugs
- United States Pharmacopoeia-National Formulary (USP-NF)
- Drug Facts and Comparisons
- National Comprehensive Cancer Network (NCCN)

AND

3 - One of the following:

3.1 The requested dosage cannot be achieved using the plan accepted quantity limit of a different dose or formulation (for example, for titration or loading-dose purposes, dose-alternating schedule)

OR

3.2 For glycemic agents prescribed for hypoglycemia treatment (e.g., glucagon), the patient is experiencing or is prone to hypoglycemia

3.3 For diabetic testing products (e.g., glucose control solution), the patient is experiencing or is prone to hypoglycemia or hyperglycemia and requires additional testing to achieve glycemic control

OR

3.4 For antiemetics (e.g., ondansetron), the patient requires a larger quantity due to chemotherapy cycle or surgery

OR

3.5 One of the following:

3.5.1 Requested strength/dose is commercially unavailable

OR

3.5.2 There is a medically necessary justification why patient cannot use a higher commercially available strength to achieve the same dosage and remain within the same dosing frequency

AND

4 - The use is not excluded as documented in the limitations and exclusions section of the certificate of coverage (refer to the Exclusions and Limitations Grid found in the link in the Background section)

Notes	*Reference the Off-label Administrative Guideline. For requested drugs containing acetaminophen where the cumulative a cetaminophen dose exceeds 4 grams per day, apply the Therdose guid eline. For albuterol metered dose inhaler (GPI 44201010103410) quantity lim it approvals, effectuate quantity limit approvals as follows to allow an u nlimited quantity: For Georgia and Illinois: Maximum Quantity=999 For all other states: MDD=999

Product Name: Eye Drops	
Approval Length	12 months. Authorization will be for one additional bottle of eye drops

Administrative		
Approval Criteria		
1 - One additional bottle of eye drops may be approved based on BOTH of the following:		
1.1 One of the following:		
 Quantity limit override requests must involve an FDA-approved indication Quantity limit override requests involving off-label indications must meet off-label guideline approval criteria* 		
AND		
es a larger quantity due to a medical condition making it difficult to single drop**		
**Examples of medical conditions making it difficult to accurately admin ister a single drop include: arthritis, tremor, Parkinson disease, neurolo gical condition, musculoskeletal condition, etc. The request may also b e approved if the provider states an additional bottle is needed by the i nsured for use in a day care center, school, or adult day program. *Reference the Off-label Administrative Guideline.		
Product Name: Condoms, Spermicides (e.g., Encare), Emergency Contraceptive Products (e.g., Ella), Non-Hormonal Vaginal Contraceptives (e.g., Phexxi), and Contraceptive Implants (e.g., Nexplanon)		
12 months. Authorization will be for the requested quantity.		

Guideline Type Administrative	Approvar Length
Administrative	Guideline Type

1 - Physician attests that the patient requires a larger quantity

Product Name: Topical Applications	
Approval Length	12 months. Authorization will be for the requested quantity.
Guideline Type	Administrative

Approval Criteria

P&T Revision Date:	02/19/2021 ; 12/15/2021 ; 11/18/2022 ; 8/18/2023

1. Indications

Drug Name: Regranex (becaplermin gel)

Lower extremity diabetic neuropathic ulcers Indicated for the treatment of lower extremity diabetic neuropathic ulcers that extend into the subcutaneous tissue, or beyond, and have an adequate blood supply.

Product Name: Regranex [a]	
Approval Length	6 month(s)
Guideline Type	Prior Authorization
	•

Approval Criteria	
1 - Patient has a lower extremity diabetic neuropathic ulcer	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Regranex is indicated for the treatment of lower extremity diabetic neuropathic ulcers that extend into the subcutaneous tissue, or beyond, and have an adequate blood supply. Regranex should be used as an adjunct to, and not a substitute for, good ulcer care practices including initial sharp debridement, pressure relief and infection control. The efficacy of Regranex gel has not been established for the treatment of pressure ulcers or venous stasis ulcers.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Documentation of positive clinical response to Relistor injection therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	--

3. Background

Benefit/Coverage/Program Information

Background:

Relistor (methylnaltrexone bromide) is an opioid antagonists indicated for the treatment of opioid-induced constipation (OIC) in adult patients with chronic non-cancer pain including patients with chronic pain related to prior cancer or its treatment who do not require frequent (e.g., weekly) opioid dosage escalation. Relistor injection is also indicated for the treatment of opioid-induced constipation in patients with advanced illness or pain caused by active cancer who require opioid dosage escalation for palliative care. Physicians and patients should periodically assess the need for continued treatment with Relistor.

This prior authorization program is intended to encourage the use of lower cost alternatives.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Repatha

Prior Authorization Guideline

Guideline ID	GL-141088
Guideline Name	Repatha
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	4/1/2024
P&T Approval Date:	8/14/2020
	06/16/2021 ; 10/20/2021 ; 06/15/2022 ; 01/18/2023 ; 06/21/2023 ; 10/18/2023 ; 2/16/2024

1. Indications

Drug Name: Repatha (evolocumab)

Primary Hyperlipidemia (including heterozygous familial hypercholesterolemia) and ASCVD Indicated as an adjunct to diet, alone or in combination with other low-density lipoprotein cholesterol (LDL-c) lowering therapies (e.g., statins, ezetimibe), for treatment of adults with primary hyperlipidemia (including heterozygous familial hypercholesterolemia) to reduce (LDL-C).¥

Homozygous familial hypercholesterolemia (HoFH) Indicated as an adjunct to other LDLlowering therapies (e.g., statins, ezetimibe, LDL apheresis) in patients with homozygous familial hypercholesterolemia (HoFH) to reduce LDL-C. [1]

Heterozygous familial hypercholesterolemia (HeFH) Indicated as an adjunct to diet and other LDL-C-lowering therapies in pediatric patients aged 10 years and older with heterozygous familial hypercholesterolemia (HeFH) to reduce LDL-C.

Cardiovascular disease Indicated to reduce the risk of myocardial infarction, stroke, and

coronary revascularization in adults with established cardiovascular disease.

2. Criteria

Product Name: Repatha [a]	
Diagnosis	Primary Hyperlipidemia (including heterozygous familial hypercholesterolemia) and ASCVD
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - ONE of the following diagnoses:

1.1 Heterozygous familial hypercholesterolemia (HeFH) as confirmed by ONE of the following:

1.1.1 BOTH of the following: [14-16]

1.1.1.1 Pre-treatment LDL-C greater than or equal to 190 mg/dL (greater than or equal to 155 mg/dL if less than 16 years of age)

AND

1.1.1.2 ONE of the following:

- Family history of myocardial infarction in first-degree relative less than 60 years of age
- Family history of myocardial infarction in second-degree relative less than 50 years of age
- Family history of LDL-C greater than 190 mg/dL in first- or second-degree relative
- Family history of heterozygous or homozygous familial hypercholesterolemia in first- or second-degree relative
- Family history of tendinous xanthomata and/or arcus cornealis in first- or second-degree relative

1.1.2 BOTH of the following: [14-16] 1.1.2.1 Pre-treatment LDL-C greater than or equal to 190 mg/dL (greater than or equal to 155 mg/dL if less than 16 years of age) AND **1.1.2.2** Submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following: Functional mutation in LDL, apoB, or PCSK9 gene • Tendinous xanthomata Arcus cornealis before age 45 OR **1.2** Atherosclerotic cardiovascular disease (ASCVD) as confirmed by ONE of the following: Acute coronary syndromes • History of myocardial infarction • Stable or unstable angina • Coronary or other arterial revascularization • Stroke • Transient ischemic attack • Peripheral arterial disease presumed to be of atherosclerotic origin OR **1.3** Primary hyperlipidemia with pre-treatment LDL-C greater than or equal to 190 mg/dL AND 2 - Submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following [prescription claims history may be used in conjunction as documentation of medication use, dose, and duration]: 2.1 Patient has been receiving at least 12 consecutive weeks of HIGH-INTENSITY STATIN THERAPY [i.e. atorvastatin 40-80 mg, rosuvastatin 20-40 mg] and will continue to receive a high-intensity statin at maximally tolerated dose

OR

2.2 BOTH of the following:

2.2.1 Patient is unable to tolerate high-intensity statin as evidenced by ONE of the following intolerable and persistent (i.e. more than 2 weeks) symptoms:

- Myalgia [muscle symptoms without creatine kinase (CK) elevations]
- Myositis (muscle symptoms with CK elevations less than 10 times upper limit of normal [ULN])

AND

2.2.2 Patient has been receiving at least 12 consecutive weeks of low-intensity or moderateintensity statin therapy [i.e. atorvastatin 10-20 mg, rosuvastatin 5-10 mg, simvastatin \ge 10 mg, pravastatin \ge 10 mg, lovastatin 20-40 mg, fluvastatin XL 80 mg, fluvastatin 20-40 mg up to 40mg twice daily or Livalo (pitavastatin) \ge 1 mg] and will continue to receive a low-intensity or moderate-intensity statin at maximally tolerated dose

OR

2.3 Patient is unable to tolerate LOW OR MODERATE-, AND HIGH-INTENSITY STATINS as evidenced by ONE of the following:

2.3.1 ONE of the following intolerable and persistent (i.e. more than 2 weeks) symptoms for low or moderate-, and high-intensity statins:

- Myalgia (muscle symptoms without CK elevations)
- Myositis (muscle symptoms with CK elevations less than 10 times upper limit of normal [ULN])

OR

2.3.2 Patient has a labeled contraindication to all statins as documented in medical records

OR

2.3.3 Patient has experienced rhabdomyolysis or muscle symptoms with statin treatment with

CK elevations greater than 10 times ULN

AND

3 - ONE of the following:

3.1 Submission of medical record (e.g., laboratory values) documenting ONE of the following LDL-C values while on maximally tolerated lipid lowering therapy for a minimum of at least 12 weeks within the last 120 days or 120 days prior to starting PCSK9 inhibitor therapy:

- LDL-C greater than or equal to 100 mg/dL with ASCVD
- LDL-C greater than or equal to 130 mg/dL without ASCVD

OR

3.2 BOTH of the following:

3.2.1 Submission of medical record (e.g., laboratory values) documenting ONE of the following LDL-C values while on maximally tolerated lipid lowering therapy for a minimum of at least 12 weeks within the last 120 days or 120 days prior to starting PCSK9 inhibitor therapy:

- LDL-C between 55 mg/dL and 99 mg/dL with ASCVD
- LDL-C between 100 mg/dL and 129 mg/dL without ASCVD

AND

3.2.2 Submission of medical record (e.g., chart notes, laboratory values) documenting ONE of the following [prescription claims history may be used in conjunction as documentation of medication use, dose, and duration]:

- Patient has been receiving at least 12 consecutive weeks of ezetimibe (Zetia) therapy as adjunct to maximally tolerated statin therapy
- Patient has a history of contraindication, or intolerance to ezetimibe

AND

4 - Patient has received comprehensive counseling regarding appropriate diet

AND

5 - Prescribed by ONE of the following:

- Cardiologist
- Endocrinologist
- Lipid specialist

AND

6 - Not used in combination with another proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Praluent (alirocumab)]

AND

7 - Not used in combination with Leqvio (inclisiran)

Notes	[a] State mandates may apply. Any federal regulatory requirements an

3. Background

Benefit/Coverage/Program Information

Background:

Repatha (evolocumab) is a PCSK9 (proprotein convertase subtilisin kexin type 9) inhibitor indicated:

• To reduce the risk of myocardial infarction, stroke, and coronary revascularization in adults with established cardiovascular disease

• As an adjunct to diet, alone or in combination with other low-density lipoprotein cholesterol (LDL-c)lowering therapies (e.g., statins, ezetimibe), for treatment of adults with primary hyperlipidemia (including heterozygous familial hypercholesterolemia) to reduce LDL-C

• As an adjunct to other LDL-C-lowering therapies (e.g., statins, ezetimibe, LDL apheresis) in adults and pediatric patients aged 10 years and older with homozygous familial hypercholesterolemia (HoFH) to reduce LDL-C [1]

• As an adjunct to diet and other LDL-C-lowering therapies in pediatric patients aged 10 years and older with heterozygous familial hypercholesterolemia (HeFH) to reduce LDL-C

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

1. Criteria

Product Name: Acthar Gel, Purified Cortrophin Gel [a]	
Diagnosis	Infantile Spasm
Approval Length	12 month(s)
Guideline Type	Non Formulary

Approval Criteria

1 - Diagnosis of infantile spasms (i.e., West Syndrome)

AND

2 - Patient is less than 2 years old

AND

3 - Dosing for infantile spasm is as follows:

- Initial dose: 75 U/m2 intramuscular (IM) twice daily for 2 weeks
- After 2 weeks, dose should be tapered according to the following schedule: 30 U/m2 IM in the morning for 3 days; 15 U/m2 IM in the morning for 3 days; 10 U/m2 IM in the morning for 3 days; and 10 U/m2 IM every other morning for 6 days (3 doses)

 treatment of the followi Allergic States: Collagen Disea (polymyositis) Dermatologic D severe psoriasi Edematous Sta syndrome without Ophthalmic Dis involving the ey uveitis and chois Multiple scleross Respiratory Dis 	 Acthar Gel and Purified Cortrophin Gel are unproven and/or not medically necessary for treatment of the following disorders and diseases: Allergic States: Serum sickness, atopic dermatitis Collagen Diseases: systemic lupus erythematosus, systemic dermatomyositis (polymyositis) Dermatologic Diseases: Severe erythema multiforme, Stevens-Johnson syndrome, severe psoriasis Edematous State: To induce a diuresis or a remission of proteinuria in the nephrotic syndrome without uremia of the idiopathic type or that due to lupus erythematosus Ophthalmic Diseases: Severe acute and chronic allergic and inflammatory processes involving the eye and its adnexa such as: keratitis, iritis, iridocyclitis, diffuse posterior uveitis and choroiditis, optic neuritis, chorioretinitis, anterior segment inflammation Multiple sclerosis: for treatment of acute exacerbations Respiratory Diseases: Symptomatic sarcoidosis 	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

2. Background

Benefit/Coverage/Program Information

Background:

Acthar Gel (repository corticotropin injection) and Purified Cortrophin Gel (repository corticotropin injection USP) are adrenocorticotropic hormone (ACTH) analogues. Repository corticotropin injection and ACTH stimulate the adrenal cortex to secrete cortisol, corticosterone, aldosterone, and a number of weakly androgenic substances. Prolonged administration of large doses of repository corticotropin injection induces hyperplasia and hypertrophy of the adrenal cortex and continuous high output of cortisol, corticosterone and weak androgens. The release

of endogenous ACTH is influenced by the nervous system via the regulatory hormone released from the hypothalamus and by a negative corticosteroid feedback mechanism. Elevated plasma cortisol suppresses ACTH release. Repository corticotropin injection also binds to melanocortin receptor. Both endogenous ACTH and repository corticotropin injection have a trophic effect on the adrenal cortex which is mediated by cyclic adenosine monophosphate (cyclic AMP).

The Acthar Gel and Purified Cortrophin Gel package inserts have listed other conditions in which it may be used. UHCP has determined that use of Acthar Gel and Purified Cortrophin Gel is not medically necessary for treatment of the following disorders and diseases: multiple sclerosis; rheumatic; collagen; dermatologic; allergic states; ophthalmic; respiratory; and edematous state.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place.

Revlimid

Prior Authorization Guideline

Guideline ID	GL-125487
Guideline Name	Revlimid
Formulary	UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	7/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	05/21/2021 ; 10/20/2021 ; 05/20/2022 ; 5/25/2023

1. Indications

Drug Name: Revlimid (lenalidomide)

Multiple Myeloma (MM) Indicated for the treatment of adult patients with multiple myeloma (MM), in combination with dexamethasone. Revlimid is indicated as maintenance therapy in adult patients with MM following autologous hematopoietic stem cell transplantation (auto-HSCT).

Myelodysplastic syndromes (MDS) Indicated for the treatment of adult patients with transfusion-dependent anemia due to low- or intermediate-1-risk myelodysplastic syndromes (MDS) associated with a deletion 5q abnormality with or without additional cytogenetic abnormalities.

Mantle cell lymphoma (MCL) Indicated for the treatment of adult patients with mantle cell lymphoma (MCL) whose disease has relapsed or progressed after two prior therapies, one of which included bortezomib.

Follicular Lymphoma (FL) Indicated for the treatment of adult patients with previously treated follicular lymphoma (FL), in combination with a rituximab product.

Marginal Zone Lymphoma (MZL) Indicated for the treatment of adult patients with previously treated marginal zone lymphoma (MZL), in combination with a rituximab product.

2. Criteria

Product Name: Brand Revlimid, generic lenalidomide [a]	
Diagnosis	Multiple Myeloma
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
	·

Approval Criteria

1 - Diagnosis of multiple myeloma

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Guideline Type	Prior Authorization

Approval Criteria

1 - Documentation that member has evidence of symptom improvement or reduction in spleen/liver volume while on Revlimid

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl v.
y.

Product Name: Brand Revlimid, generic lenalidomide [a]

Diagnosis	Hodgkin Lymphoma
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
Approval Criteria	
1 - All of the following:	
1.1 Diagnosis of Hodgkin lymphoma	
	AND
1.2 Disease is one of t	the following:
 Relapsed 	
Refractory	
	AND
1.3 Used as third-line or subsequent therapy	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Brand Revlimid, generic lenalidomide [a]	
Diagnosis	Hodgkin Lymphoma
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on Revlimid therapy

[a] State mandates may apply. Any federal regulatory requirements an
d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
y.

Product Name: Brand Revlimid, generic lenalidomide [a]	
Diagnosis	Systemic Light Chain Amyloidosis
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of systemic light chain amyloidosis

AND

2 - One of the following:

- Used in combination with dexamethasone
- Used in combination with dexamethasone and bortezomib
- Used in combination with dexamethasone and cyclophosphamide
- Used in combination with dexamethasone and Ninlaro (ixazomib)

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Diagnosis	Systemic Light Chain Amyloidosis
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria	
1 - Patient does not sho	ow evidence of progressive disease while on Revlimid therapy
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Brand Revlimid, generic lenalidomide [a]	
Diagnosis	Chronic Lymphocytic Leukemia/Small Lymphocytic Lymphoma
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

- **1** Both of the following:
- 1.1 Diagnosis of chronic lymphocytic leukemia (CLL) / small lymphocytic lymphoma (SLL)

AND

1.2 One of the following:

- Used for relapsed or refractory disease after prior therapy with Bruton Tyrosine Kinase (BTK) inhibitor- and venetoclax-based regimens without del(17p)/TP53 mutation
- Used for second-line and subsequent therapy with del(17p)/TP53 mutation

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	---

Product Name: Brand Revlimid, generic lenalidomide [a]	
Diagnosis	Chronic Lymphocytic Leukemia/Small Lymphocytic Lymphoma
Approval Length	12 month(s)
Therapy Stage	Reauthorization

Guideline Type	Prior Authorization
Approval Criteria	
1 - Patient does not sho	ow evidence of progressive disease while on Revlimid therapy
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Brand Revlimid, generic lenalidomide [a]	
Diagnosis	T-Cell Lymphomas
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Both of the following:

1.1 One of the following diagnoses:

- Peripheral T-cell lymphoma T-cell leukemia / lymphoma •
- •
- Hepatosplenic gamma-delta T-cell lymphoma •

AND

1.2 Not used as first line therapy

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
criteria. Other policies and utilization management programs may appl y.

Product Name: Brand Revlimid, generic lenalidomide [a]	
Diagnosis	T-Cell Lymphomas

Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on Revlimid therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Brand Revlimid, generic lenalidomide [a]	
Diagnosis	Central Nervous System Cancers-Primary CNS Lymphomas
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of primary central nervous system lymphoma

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	у.

Product Name: Brand Revlimid, generic lenalidomide [a]	
Diagnosis	Central Nervous System Cancers-Primary CNS Lymphomas
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Patient does not show evidence of progressive disease while on Revlimid therapy	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Brand Revlimid, generic lenalidomide [a]		
Diagnosis	Kaposi Sarcoma	
Approval Length	12 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	

Г

- **1** One of the following:
- 1.1 Diagnosis of HIV-negative Kaposi Sarcoma

OR

1.2 Both of the following:

1.2.1 Diagnosis of AIDS-related Kaposi Sarcoma

AND

1.2.2 Patient is currently being treated with antiretroviral therapy (ART)

AND

2 - NOT used as first line therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

3. Background

Benefit/Coverage/Program Information

Background:

Revlimid[®] (lenalidomide) is a thalidomide analogue indicated for the treatment of adult patients with multiple myeloma (MM), in combination with dexamethasone; MM, as maintenance following autologous hematopoietic stem cell transplantation (auto-HSCT); transfusion-dependent anemia due to low- or intermediate-1-risk myelodysplastic syndromes (MDS) associated with a deletion 5q abnormality with or without additional cytogenetic abnormalities; mantle cell lymphoma (MCL) whose disease has relapsed or progressed after two prior therapies, one of which included bortezomib; previously treated follicular lymphoma (FL), in combination with a rituximab product; and previously treated marginal zone lymphoma (MZL), in combination with a rituximab product. [1]

The National Cancer Comprehensive Network (NCCN) also recommends use of Revlimid for treatment of the following B-Cell lymphomas: histologic transformation of nodal marginal zone lymphoma to diffuse large B-cell lymphoma, mantle cell lymphoma, nodal marginal zone lymphoma, follicular lymphoma (grade 1-2), extranodal marginal zone lymphoma of nongastric sites (noncutaneous), Castleman's Disease, extranodal marginal zone lymphoma (EMZL) of the stomach, high-grade B-cell lymphoma, splenic marginal zone lymphoma, post-transplant lymphoproliferative disorders, diffuse large B-cell lymphoma, and AIDS-related B-cell lymphomas. NCCN additionally recommends the use of Revlimid in treatment for Kaposi Sarcoma, primary CNS lymphoma, chronic lymphocytic leukemia (CLL)/small lymphocytic lymphoma (SLL), MDS/MPN overlap neoplasms, myelofibrosis, systemic light chain amyloidosis, classic Hodgkin lymphoma, Langerhans cell histiocytosis, and the following T-cell lymphomas: hepatosplenic gamma-delta T-cell lymphoma, peripheral T-cell lymphoma, and Adult T-cell leukemia/lymphoma.

Because of the risk of serious malformations if given during pregnancy, the manufacturer has an extensive risk management program requiring registration by patients, prescribers and dispensing pharmacies. Additional information about the Revlimid Risk Evaluation and Mitigation Strategy (REMS) [Revlimid REMS[®]] program may be found at <u>http://www.revlimidrems.com/</u>. [4]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

5. Revision History

Date	Notes
8/21/2023	Annual review. Removed requirement of persistent facial erythema.
8/21/2023	Removed reauthorization criteria to allow for automation. State mandat e language added.

Rinvoq

Prior Authorization Guideline

Guideline ID	GL-132960
Guideline Name	Rinvoq
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	11/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 05/21/2021 ; 02/18/2022 ; 03/16/2022 ; 05/20/2022 ; 06/15/2022 ; 07/20/2022 ; 09/21/2022 ; 10/19/2022 ; 12/14/2022 ; 07/19/2023 ; 9/20/2023

1. Indications

Drug Name: Rinvoq (upadacitinib)

Rheumatoid Arthritis Indicated for the treatment of adults with moderately to severely active rheumatoid arthritis (RA) who have had an inadequate response or intolerance to one or more tumor necrosis factor (TNF) blockers. The use of Rinvoq in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine is not recommended.

Psoriatic Arthritis Indicated for the treatment of adults with active psoriatic arthritis who have an inadequate response or intolerance to one or more TNF blockers. The use of Rinvoq in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine is not recommended.

Atopic Dermatitis Indicated for the treatment of adults and pediatric patients 12 years of age and older with refractory, moderate to severe atopic dermatitis whose disease is not adequately controlled with other systemic drug products, including biologics, or when use of those therapies are inadvisable. Rinvoq is not recommended in combination with other JAK inhibitors, biologic immunomodulators, or with other immunosuppressants.

Ulcerative Colitis Indicated for the treatment of adults with moderately to severely active ulcerative colitis who have had an inadequate response or intolerance to one or more TNF blockers. Rinvoq is not recommended for use in combination with other JAK inhibitors, biological therapies for ulcerative colitis, or with other potent immunosuppressants such as azathioprine and cyclosporine.

Ankylosing Spondylitis Indicated for the treatment of adults with active ankylosing spondylitis who have had an inadequate response or intolerance to one or more TNF blockers. Use of Rinvoq in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine is not recommended.

Non-radiographic axial spondyloarthritis Indicated for the treatment of adults with active non-radiographic axial spondyloarthritis with objective signs of inflammation who have had an inadequate response or intolerance to TNF blocker therapy.

Crohn's Disease Indicated in adults with moderately to severely active Crohn's disease who have had an inadequate response or intolerance to one or more TNF blockers.

2. Criteria

Product Name: Rinvoq [a]	
Diagnosis	Rheumatoid Arthritis (RA)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of moderately to severely active RA

AND

2 - One of the following:

2.1 Both of the following:

2.1.1 One of the following:

- History of failure to a 3 month trial of one non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)
- Patient has been previously treated with a biologic or targeted synthetic DMARD FDAapproved for the treatment of rheumatoid arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Enbrel (etanercept), Cimzia (certolizumab), adalimumab, Simponi (golimumab), Orencia (abatacept), Olumiant (baricitinib), Xeljanz/Xeljanz XR (tofacitinib)]

AND

2.1.2 One of the following:

- History of failure, contraindication, or intolerance to at least one TNF inhibitor^
- Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria [6])

OR

2.2 Both of the following:

- Patient is currently on Rinvoq therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has not received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Abbvie sponsored Rinvoq Complete program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Rinvoq*

AND

3 - Patient is not receiving Rinvoq in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]
- Potent immunosuppressant (e.g., azathioprine or cyclosporine)

AND

4 - Prescribed by or in consultation with a rheumatologist

· · · · · · · · · · · · · · · · · · ·	
Notes	 [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y. *Patients requesting initial authorization who were established on thera py via the receipt of a manufacturer supplied sample at no cost in the p rescriber's office or any form of assistance from the Abbvie sponsored Rinvoq Complete program shall be required to meet initial authorization
	criteria as if patient were new to therapy. ^Tried/failed alternative(s) ar e supported by FDA labeling.

Product Name: Rinvoq [a]	
Diagnosis	Rheumatoid Arthritis (RA)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Documentation of positive clinical response to Rinvoq therapy

AND

2 - Patient is not receiving Rinvoq in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]
- Potent immunosuppressant (e.g., azathioprine or cyclosporine)

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl y.

Product Name: Rinvoq [a]	
Diagnosis	Psoriatic Arthritis (PsA)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of active psoriatic arthritis

AND

2 - One of the following:

2.1 Both of the following:

2.1.1 One of the following:

- History of failure to a 3 month trial of methotrexate at maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)
- Patient has been previously treated with a biologic or targeted synthetic DMARD FDAapproved for the treatment of psoriatic arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Enbrel (etanercept), Cimzia (certolizumab), adalimumab, Simponi (golimumab), Orencia (abatacept), Stelara (ustekinumab), Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Olumiant (baricitinib), Otezla (apremilast)Cimzia (certolizumab), adalimumab, Simponi (golimumab), Xeljanz/Xeljanz XR (tofacitinib)]

AND

2.1.2 One of the following:

- History of failure, contraindication, or intolerance to at least one TNF inhibitor^
- Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria [6])

Product Name: Rinvoq [a]	
Diagnosis	Ankylosing Spondylitis or non-radiographic Axial Spondyloarthritis (nr-axSpA)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of active ankylosing spondylitis or non-radiographic axial spondyloarthritis

AND

2 - One of the following:

2.1 Both of the following:

2.1.1 One of the following:

2.1.1.1 History of failure to two NSAIDs (e.g., ibuprofen, naproxen) at maximally indicated doses, each used for at least 4 weeks, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial)

OR

2.1.1.2 Patient has been previously treated with a biologic or targeted synthetic DMARD FDA-approved for the treatment of ankylosing spondylitis or non-radiographic axial spondyloarthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Enbrel (etanercept), Cimzia (certolizumab), adalimumab, Simponi (golimumab), Xeljanz/Xeljanz XR (tofacitinib)]

AND

2.1.2 One of the following:

2.1.2.1 History of failure, contraindication, or intolerance to at least one TNF inhibitor ^

OR

2.1.2.2 Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria [5])

OR

2.2 Both of the following:

2.2.1 Patient is currently on Rinvoq therapy as documented by claims history or submission of medical records (Document drug, date, and duration of therapy)

AND

2.2.2 Patient has not received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Abbvie sponsored Rinvoq Complete program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Rinvoq*

AND

3 - Patient is not receiving Rinvoq in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]
- Potent immunosuppressant (e.g., azathioprine or cyclosporine)

3. Background

Benefit/Coverage/Program Information

Background:

Rinvoq is a Janus kinase (JAK) inhibitor indicated for the treatment of adults with moderately to severely active rheumatoid arthritis (RA) who have had an inadequate response or intolerance to one or more tumor necrosis factor (TNF) blockers.

Limitation of Use:

The use of Rinvoq in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine is not recommended.

Rinvoq is also indicated for the treatment of adults with active psoriatic arthritis who have an inadequate response or intolerance to one or more TNF blockers.

Limitation of Use:

The use of Rinvoq in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine is not recommended.

Rinvoq is also indicated for the treatment of adults and pediatric patients 12 years of age and older with refractory, moderate to severe atopic dermatitis whose disease is not adequately controlled with other systemic drug products, including biologics, or when use of those therapies are inadvisable.

Limitation of Use:

Rinvoq is not recommended in combination with other JAK inhibitors, biologic immunomodulators, or with other immunosuppressants.

Rinvoq is also indicated for adults with moderately to severely active ulcerative colitis who have had an inadequate response or intolerance to one or more TNF blockers.

Limitations of Use:

Rinvoq is not recommended for use in combination with other JAK inhibitors, biological therapies for ulcerative colitis, or with other potent immunosuppressants such as azathioprine and cyclosporine.

Rinvoq should be discontinued if adequate therapeutic response is not achieved with the 30 mg dosage. Use the lowest effective dosage needed to maintain response.

Rinvoq is indicated in adults with active ankylosing spondylitis who have had an inadequate response or intolerance to one or more TNF blockers.

Limitations of Use: Use of Rinvog in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine is not recommended. Rinvog is indicated in adults with active non-radiographic axial spondyloarthritis with objective signs of inflammation who have had an inadequate response or intolerance to TNF blocker therapy. Limitations of Use: Rinvog is not recommended for use in combination with other JAK inhibitors, biologic DMARDs, or with potent immunosuppressants such as azathioprine and cyclosporine. Rinvoq is indicated in adults with moderately to severely active Crohn's disease who have had an inadequate response or intolerance to one or more TNF blockers. Limitations of Use: Rinvog is not recommended for use in combination with other JAK inhibitors, biological therapies for Crohn's disease, or with potent immunosuppressants such as azathioprine and cyclosporine Table 1: Relative potencies of topical corticosteroids⁸ Class **Dosage Form** Drug Strength (%) Augmented betamethasone Ointment, gel 0.05 dipropionate Very high Clobetasol propionate Cream, foam, ointment 0.05 potency Diflorasone diacetate Ointment 0.05 Halobetasol propionate Cream, ointment 0.05 Amcinonide Cream, lotion, ointment 0.1 High

3. Background

Benefit/Coverage/Program Information

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Background:

Rozlytrek[™] (entrectinib) is a kinase inhibitor indicated for the treatment of:

- Adult patients with ROS1-positive metastatic non-small cell lung cancer (NSCLC).
 - Adult and pediatric patients 1 month of age and older with solid tumors that:
 - have a neurotrophic tyrosine receptor kinase (NTRK) gene fusion without a known acquired resistance mutation,
 - \circ $% \left({{\rm{are}}} \right)$ are metastatic or where surgical resection is likely to result in severe morbidity, and
 - have progressed following treatment or have no satisfactory alternative therapy

This indication is approved under accelerated approval based on tumor response rate and durability of response. Continued approval for this indication may be contingent upon verification and description of clinical benefit in the confirmatory trials.[1]

Ruconest

Prior Authorization Guideline

Guideline ID	GL-145513
Guideline Name	Ruconest
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	4/9/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	07/21/2021 ; 09/15/2021 ; 04/20/2022 ; 04/19/2023 ; 08/18/2023

1. Indications

Drug Name: Ruconest
Hereditary angioedema (HAE) Indicated for the treatment of acute attacks in adult and adolescent patients with hereditary angioedema (HAE).

2. Criteria

Product Name: Ruconest [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

1 - Diagnosis of hereditary angioedema (HAE) as confirmed by ONE of the following:

1.1 C1 inhibitor (C1-INH) deficiency or dysfunction (Type I or II HAE) as documented by ONE of the following (per laboratory standard):

- C1-INH antigenic level below the lower limit of normal
- C1-INH functional level below the lower limit of normal

OR

1.2 HAE with normal C1 inhibitor levels and ONE of the following:

- Confirmed presence of a FXII, angiopoietin-1, plasminogen gene mutation, or kininogen mutation
- Recurring angioedema attacks that are refractory to high-dose antihistamines with confirmed family history of angioedema

AND

- **2** BOTH of the following:
- 2.1 Prescribed for the acute treatment of HAE attacks

AND

2.2 Not used in combination with other products indicated for the acute treatment of HAE attacks (e.g., Berinert, Firazyr)

AND

3 - Submission of medical records documenting a history of failure, contraindication, or intolerance to one of the following:

- Icatibant (generic Firazyr)
- Sajazir (icatibant)

	AND
 4 - Prescribed by ONE Immunologist Allergist 	of the following:
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Ruconest [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

1 - Documentation of positive clinical response

AND

2 - BOTH of the following:

2.1 Prescribed for the acute treatment of HAE attacks

AND

2.2 Not used in combination with other products indicated for the acute treatment of HAE attacks (e.g., Berinert, Firazyr)

AND

3 - Prescribed by ONE of the following:

- Immunologist
- Allergist

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Ruconest (C1 esterase inhibitor [recombinant]) is indicated for the treatment of acute attacks in adult and adolescent patients with hereditary angioedema (HAE). Effectiveness was not established in HAE patients with laryngeal attacks. [1]

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limitations may be in place.

	у.

Product Name: Brand Sandostatin, octreotide acetate (generic Sandostatin) [a]	
Diagnosis	Meningioma
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on therapy

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
criteria. Other policies and utilization management programs may appl y.

Product Name: Brand Sandostatin, octreotide acetate (generic Sandostatin) [a]	
Diagnosis	Neuroendocrine and Adrenal Tumors [2]
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - One of the following diagnoses:

1.1 Neuroendocrine tumors [e.g., carcinoid tumors, Islet cell tumors, gastrinomas, glucagonomas, insulinomas, lung tumors, somatostatinomas, tumors of the pancreas, GI tract, lung, thymus, adrenal glands, and vasoactive intestinal polypeptidomas (VIPomas)]

1.2 All of the following	:	
1.2.1 Diagnosis of Ph	1.2.1 Diagnosis of Pheochromocytoma or Paraganglioma	
	AND	
1.2.2 Disease is local	ly unresectable or distant metastases	
	AND	
1.2.3 Disease is somatostatin receptor positive		
AND		
1.2.4 Presence of syr	nptomatic disease	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

Product Name: Brand Sandostatin, octreotide acetate (generic Sandostatin) [a]	
Diagnosis	Neuroendocrine and Adrenal Tumors
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on therapy

OR

2 - Documentation of positive clinical response (e.g., suppression of severe diarrhea, flushing, etc.) to therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Brand Sandostatin, octreotide acetate (generic Sandostatin) [a]	
Diagnosis	Thymoma or Thymic Carcinoma
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

- **1** Sandostatin will be approved based on both of the following criteria:
- **1.1** Diagnosis of thymoma or thymic carcinoma

AND

1.2 One of the following:

1.2.1 Used as a second-line therapy for one of the following:

- Unresectable disease following first-line chemotherapy for potentially resectable locally advanced disease, solitary metastasis, or ipsilateral pleural metastasis.
- Extrathoracic metastatic disease.

OR

1.2.2 Both of the following:

1.2.2.1 Used as first line therapy for one of the following:

- Unresectable locally advanced disease in combination with radiation therapy
- Potentially resectable locally advanced disease
- Potentially resectable solitary metastasis or ipsilateral pleural metastasis
- Consideration following surgery for solitary metastasis or ipsilateral pleural metastasis
- Extrathoracic metastatic disease

• Postoperative treatment for thymoma after R2 resection

AND

1.2.2.2 Patient is unable to tolerate first-line combination regimens

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
	y.

3. Background

Benefit/Coverage/Program Information

Background

Sandostatin (octreotide acetate) is indicated to reduce blood levels of growth hormone and IGF-I (somatomedin C) in acromegaly patients who have had inadequate response to or cannot be treated with surgical resection, pituitary irradiation and bromocriptine mesylate at maximally tolerated doses. It is also indicated for the symptomatic treatment of patients with metastatic carcinoid tumors where it suppresses or inhibits the severe diarrhea and flushing episodes associated with the disease and for the treatment of profuse watery diarrhea associated with vasoactive intestinal peptide (VIP)-secreting tumors.[1,2]

The National Comprehensive Cancer Network (NCCN) recommends the use of octreotide acetate for the treatment of thyomas and thymic carcinomas as well as meningiomas. The NCCN also recommends octreotide acetate for the treatment of several types of neuroendocrine and adrenal tumors, including neuroendocrine tumors of the gastrointestinal tract, lung and thymus, neuroendocrine tumors of the pancreas, pheochromocytoma/paraganglioma. The NCCN Palliative Care Guidelines recommend octreotide for the treatment of chemotherapy and/or radiation-induced diarrhea

and malignant bowel obstruction.[3]

Clinical evidence supports the use of octreotide acetate for the treatment of refractory HIV/AIDS-related diarrhea that does not respond to first-line anti-diarrheal therapy,[8-16] and as an adjunct to endoscopic therapy for bleeding gastroesophageal varices associated with liver disease.[17-22]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Sensipar

Prior Authorization Guideline

Guideline ID	GL-111188
Guideline Name	Sensipar
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	10/1/2022
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 08/20/2021 ; 10/20/2021 ; 8/19/2022

1. Indications

Drug Name: Sensipar (cinacalcet)

Secondary hyperparathyroidism Indicated for the treatment of secondary hyperparathyroidism (HPT) in adult patients with chronic kidney disease on dialysis.

Parathyroid carcinoma Indicated for the treatment of hypercalcemia in patients with parathyroid carcinoma.

Primary hyperparathyroidism Indicated for the treatment of hypercalcemia in patients with primary HPT for whom parathyroidectomy would be indicated on the basis of serum calcium levels, but who are unable to undergo parathyroidectomy.

2. Criteria

Product Name: Brand S	Sensipar, cinacalcet (generic Sensipar) [a]
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
Approval Criteria	
1 - Prescribed by or in c	consultation with an oncologist, endocrinologist, or nephrologist
	AND
2 - One of the following	:
2.1 All of the following	:
2.1.1 Diagnosis of sec	condary hyperparathyroidism with chronic kidney disease
	AND
2.1.2 Patient is on dia	Ilysis
	AND
2.1.3 Both of the follo	wing:
 Patient has therapeutic failure, contraindication or intolerance to one phosphate binder (e.g., PhosLo, Fosrenol, sevelamer, Renagel, etc.) Patient has therapeutic failure, contraindication or intolerance to one vitamin D analog (e.g., calcitriol, Hectorol, paricalcitriol, Zemplar, etc.) 	
	OR
2.2 Diagnosis of hypercalcemia with parathyroid carcinoma	
OR	

2.3 All of the following:

- Diagnosis of primary hyperparathyroidism (HPT)
- Severe hypercalcemia (serum calcium level greater than 12.5 mg/dL) due to primary HPT
- Patient is unable to undergo parathyroidectomy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Brand Sensipar, cinacalcet (generic Sensipar) [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Patient has experienced a reduction in serum calcium from baseline

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

3. Background

Benefit/Coverage/Program Information

Background:

Cinacalcet is a calcium-sensing receptor agonist indicated for the treatment of secondary hyperparathyroidism (HPT) in patients with chronic kidney disease (CKD) on dialysis, hypercalcemia in adult patients with parathyroid carcinoma (PC), and for hypercalcemia in adult patients with primary HPT for whom parathyroidectomy would be indicated on the basis of serum calcium levels, but who are unable to undergo parathyroidectomy.

Cinacalcet is not indicated for use in patients with CKD who are not on dialysis.[1]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Simponi

Prior Authorization Guideline

Guideline ID	GL-125872
Guideline Name	Simponi
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	7/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 03/17/2021 ; 05/21/2021 ; 05/20/2022 ; 09/21/2022 ; 5/25/2023

1. Indications

Drug Name: Simponi (golimumab)

Rheumatoid Arthritis Indicated for the treatment of adult patients with moderately to severely active rheumatoid arthritis (RA) in combination with methotrexate (MTX). [1]

Psoriatic Arthritis Indicated alone or in combination with methotrexate for the treatment of adult patients with active psoriatic arthritis (PsA). [1]

Ankylosing Spondylitis Indicated for the treatment of adult patients with active ankylosing spondylitis (AS). [1]

Ulcerative Colitis Indicated in adult patients with moderate to severe ulcerative colitis who require continuous steroid therapy or who have had an inadequate response to or intolerance to prior treatment. It is indicated for inducing and maintaining clinical response, improving endoscopic appearance of the mucosa during induction, inducing clinical remission, and achieving and sustaining clinical remission in induction responders. [1]

2. Criteria

Product Name: Simponi (subcutaneous formulations) [a]	
Diagnosis	Rheumatoid Arthritis (RA)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of moderately to severely active rheumatoid arthritis

AND

2 - One of the following:

2.1 History of failure to a 3 month trial of one non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial)

OR

2.2 Patient has been previously treated with a biologic or targeted synthetic DMARD FDAapproved for the treatment of rheumatoid arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), Humira (adalimumab), Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz/Xeljanz XR (tofacitinib)]

OR

2.3 Both of the following:

• Patient is currently on Simponi therapy as documented by claims history or submission of medical records (Document date, and duration of therapy)

• Patient has not received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Jannsen sponsored CarePath Savings program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Simponi*

AND

3 - Patient is not receiving Simponi in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), adalimumab, Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]

AND

4 - Prescribed by or in consultation with a rheumatologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	 *Patients requesting initial authorization who were established on thera py via the receipt of a manufacturer supplied sample at no cost in the p rescriber's office or any form of assistance from the Jannsen sponsore d CarePath Savings program shall be required to meet initial authorizat ion criteria as if patient were new to therapy.

Product Name: Simponi (subcutaneous formulations) [a]	
Diagnosis	Rheumatoid Arthritis (RA)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Documentation of positive clinical response to Simponi therapy

AND

2 - Patient is not receiving Simponi in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), adalimumab, Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Simponi (subcutaneous formulations) [a]	
Diagnosis	Ankylosing Spondylitis (AS)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of active ankylosing spondylitis

AND

2 - One of the following:

2.1 History of failure to two NSAIDs (e.g., ibuprofen, naproxen) at maximally indicated doses, each used for at least 4 weeks, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trials)

OR

2.2 Patient has been previously treated with a biologic or targeted synthetic DMARD FDAapproved for the treatment of ankylosing spondylitis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), adalimumab, Xeljanz/Xeljanz XR (tofacitinib)]

OR

2.3 Both of the following:

- Patient is currently on Simponi therapy as documented by claims history or submission of medical records (Document date, and duration of therapy)
- Patient has not received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Jannsen sponsored CarePath Savings program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Simponi*

AND

3 - Patient is not receiving Simponi in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), adalimumab, Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]

AND

4 - Prescribed by or in consultation with a rheumatologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
	*Patients requesting initial authorization who were established on thera py via the receipt of a manufacturer supplied sample at no cost in the p rescriber's office or any form of assistance from the Jannsen sponsore d CarePath Savings program shall be required to meet initial authorizat ion criteria as if patient were new to therapy.

3. Background

Benefit/Coverage/Program Information

Background:

Simponi (golimumab) is a tumor necrosis factor (TNF) blocker, indicated for the treatment of adult patients with moderately to severely active rheumatoid arthritis (RA) in combination with methotrexate (MTX). [1] Simponi, alone or in combination with methotrexate, is indicated for the treatment of adult patients with active psoriatic arthritis (PsA). [1] It is also indicated for the treatment of adult patients with active ankylosing spondylitis (AS).[1] Simponi is also indicated in adult patients with moderate to severe ulcerative colitis who require continuous steroid therapy or who have had an inadequate response to or intolerance to prior treatment. For ulcerative colitis, it is indicated for inducing and maintaining clinical response, improving endoscopic appearance of the mucosa during induction, inducing clinical remission, and achieving and sustaining clinical remission in induction responders. [1]

An intravenous formulation of golimumab, Simponi Aria, is also available. Simponi Aria is indicated for adult patients with moderately to severely active rheumatoid arthritis in combination with methotrexate, active psoriatic arthritis in patients 2 years of age and older, adult patients with active ankylosing spondylitis, and active polyarticular Juvenile Idiopathic Arthritis (pJIA) in patients 2 years of age and older.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

1. Indications

Drug Name: Sirturo (bedaquiline fumarate)

Pulmonary multi-drug resistant tuberculosis Indicated as part of combination therapy in adult and pediatric patients (5 years and older and weighing at least 15 kg) with pulmonary multi-drug resistant tuberculosis.

Product Name: Sirturo [a]	
Diagnosis	Pulmonary multi-drug resistant tuberculosis
Approval Length	12 month(s)
Guideline Type	Prior Authorization

Approval Criteria	Approval Criteria	
1 - Sirturo will be appro	ved as continuation of therapy upon hospital discharge	
	OR	
 2 - ALL of the following: Diagnosis of pulmonary multi-drug resistant tuberculosis Prescribed as part of a combination regimen with other anti-tuberculosis agents Prescribed by an infectious disease specialist 		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

3. Background

Benefit/Coverage/Program Information

Background:

Sirturo is a diarylquinoline antimycobacterial drug indicated as part of combination therapy in adult and pediatric patients (5 years and older and weighing at least 15 kg) with pulmonary multi-drug resistant tuberculosis. Sirturo should be reserved for use when an effective treatment regimen cannot otherwise be provided.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

1. Indications

Drug Name: Skyrizi (risankizumab-rzaa)

Plaque Psoriasis Indicated for the treatment of moderate to severe plaque psoriasis in adults who are candidates for systemic therapy or phototherapy.

Psoriatic Arthritis Indicated for the treatment of active psoriatic arthritis in adults.

Crohn's Disease Indicated for the treatment of moderately to severely active Crohn's disease in adults.

Product Name: Skyrizi (subcutaneous formulations) [a]	
Diagnosis	Plaque Psoriasis
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of moderate to severe plaque psoriasis

AND

2 - ONE of the following:

2.1 All of the following:

2.1.1 Greater than or equal to 3% body surface area involvement, palmoplantar, facial, genital involvement, or severe scalp psoriasis

AND

2.1.2 History of failure to ONE of the following topical therapies, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial):

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Coal tar

AND

2.1.3 History of failure to a 3 month trial of methotrexate at maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)

OR

2.2 Patient has been previously treated with a biologic or targeted synthetic DMARD FDAapproved for the treatment of plaque psoriasis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), Humira (adalimumab), Stelara (ustekinumab), Tremfya (guselkumab)]

OR

2.3 BOTH of the following:

- Patient is currently on Skyrizi therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has NOT received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Abbvie sponsored Skyrizi Complete program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Skyrizi*

AND

3 - Patient is not receiving Skyrizi in combination with ANY of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), Humira (adalimumab), Simponi (golimumab), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]

AND

4 - Prescribed by or in consultation with a dermatologist

3. Background

Benefit/Coverage/Program Information

Background:

Skyrizi is an interleukin-23 antagonist indicated for the treatment of moderate to severe plaque psoriasis in adults who are candidates for systemic therapy or phototherapy and active psoriatic arthritis in adults, and moderately to severely active Crohn's disease in adults.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

1. Indications

Drug Name: Sohonos (palovarotene)

Fibrodysplasia ossificans progressiva (FOP) Indicated for reduction in the volume of new heterotopic ossification in adults and children aged 8 years and older for females and 10 years and older for males with fibrodysplasia ossificans progressiva (FOP).

Product Name: Sohonos	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

Approval Criteria
1 - Diagnosis of fibrodysplasia ossificans progressiva (FOP)
AND
2 - Diagnosis has been confirmed by the presence of a mutation in the activin receptor IA (ACVR1) gene
AND
3 - ONE of the following:
3.1 BOTH of the following:
Patient is femalePatient is aged 8 years and older
OR
3.2 BOTH of the following:
Patient is malePatient is aged 10 years and older
AND
4 - Sohonos is being used to reduce the volume of new heterotopic ossification (HO)
AND
5 - Prescribed by or in consultation with an FOP expert (e.g., endocrinologist, geneticist, pediatric orthopedist, pediatric rheumatologist)

Product Name: Sohonos

l

Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

1 - Documentation of positive clinical response (e.g., reduction in new HO volume, improved CAJIS and FOP-PFQ scores, improved quality of life)

AND

2 - Prescribed by or in consultation with an FOP expert (e.g., endocrinologist, geneticist, pediatric orthopedist, pediatric rheumatologist)

3. Background

Benefit/Coverage/Program Information

Background:

Sohonos (palovarotene) is a retinoid indicated for reduction in the volume of new heterotopic ossification in adults and children aged 8 years and older for females and 10 years and older for males with fibrodysplasia ossificans progressiva (FOP).

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Prior Authorization Guideline

Guideline ID	GL-128991
Guideline Name	Somavert
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	9/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 07/21/2021 ; 07/20/2022 ; 7/19/2023

1. Indications

Drug Name: Somavert (pegvisomant)

Acromegaly Indicated for the treatment of acromegaly in patients who have had an inadequate response to surgery or radiation therapy, or for whom these therapies are not appropriate.

Product Name: Somavert [a]	
Diagnosis	Acromegaly
Approval Length	12 month(s)
Therapy Stage	Initial Authorization

Guideline Type	Prior Authorization	
Approval Criteria		
1 - One of the following	:	
1.1 All of the following	:	
1.1.1 Diagnosis of act	romegaly confirmed by one of the following:	
	greater than 1 ng/mL after a 2-hour oral glucose tolerance test (OGTT)	
	IGF-1 levels (above the age and gender adjusted normal range as physician's lab) at time of diagnosis	
	OR	
1.1.2 One of the follow	wing:	
	esponse to one of the following:	
 Surgery^ Radiation therap 	ργ∧	
 Dopamine agonist (e.g., bromocriptine, cabergoline) therapy 		
	OR	
1.1.2.2 Not a candidate for any of the following:		
 Surgery^ 		
Radiation therapDopamine agon	by^ ist (e.g., bromocriptine, cabergoline) therapy	
AND		
	oonse, intolerance, or contraindication to a long-acting somatostatin in LAR (octreotide), Somatuline Depot (lanreotide)]	

	OR
1.2 Patient is currently on Somavert therapy for acromegaly	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
	^Tried/failed alternative(s) are supported by FDA labeling and/or treatm ent guidelines.

Product Name: Somavert [a]	
Diagnosis	Acromegaly
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Documentation of positive clinical response to Somavert therapy (e.g., age-normalized serum IGF-1 level)

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
	^Tried/failed alternative(s) are supported by FDA labeling and/or treatm ent guidelines.

Benefit/Coverage/Program Information

Additional Clinical Rules:

 Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.Supply limits may be in place.

Background

Somavert (pegvisomant) is a growth hormone receptor antagonist indicated for the treatment of acromegaly in patients who have had an inadequate response to surgery or radiation therapy, or for whom these therapies are not appropriate. The goal of treatment is to normalize serum insulin-like growth factor-I (IGF-I) levels. [1] The American Association of Clinical Endocrinologists (AACE) recommends pegvisomant in patients for whom surgical treatment and somatostatin analogues (SSAs) have proved ineffective or for those who are intolerant of somatostatin analogues. [2,4] The AACE and the Endocrine Society also recommend that dopamine agonists may be considered as first-line medical therapy, particularly in patients with mild biochemical activity, such as in the setting of modestly elevated serum IGF-I levels in the absence or concomitant presence of SSA therapy. [2,4,5]

Spravato

Prior Authorization Guideline

Guideline ID	GL-137161
Guideline Name	Spravato
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	2/1/2024
P&T Approval Date:	9/15/2021
P&T Revision Date:	06/15/2022 ; 12/14/2022 ; 12/13/2023

1. Indications

Drug Name: Spravato

Treatment-resistant depression Indicated, in conjunction with an oral antidepressant, for the treatment of treatment-resistant depression (TRD) in adults.

Major depressive disorder with acute suicidal ideation or behavior Indicated, in conjunction with an oral antidepressant, for the treatment of depressive symptoms in adults with major depressive disorder (MDD) with acute suicidal ideation or behavior.

Product Name: Spravato [a]	
Diagnosis	Major depressive disorder (treatment-resistant)

Approval Length	3 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of major depressive disorder (treatment-resistant), according to the current DSM (i.e., DSM-5-TR) criteria, by a mental health professional

AND

2 - Prescribed by or in consultation with a psychiatrist

AND

3 - Submission of medical records (e.g., chart notes, laboratory values) documenting baseline scoring (prior to starting Spravato) on at least ONE of the following clinical assessments has been completed:

- Baseline score on the 17-item Hamilton Rating Scale for Depression (HAMD17)
- Baseline score on the 16-item Quick Inventory of Depressive Symptomatology (QIDS-C16)
- Baseline score on the 10-item Montgomery-Asberg Depression Rating Scale (MADRS)
- Baseline score on the 9-item Patient Health Questionnaire (PHQ-9)

AND

4 - History of a trial, failure, and/or contraindication of THREE different antidepressant medications or treatment regimens at the maximally tolerated dose(s) for at least 8 weeks in the current depressive episode. An antidepressant or treatment regimen would include any of the following classes or combinations (document medication, dose, and duration):

- Selective serotonin reuptake inhibitors (e.g., citalopram, fluoxetine, paroxetine, sertraline)
- Serotonin norepinephrine reuptake inhibitors (e.g., duloxetine, venlafaxine, etc.)
- Bupropion
- Tricyclic antidepressants (e.g, amitriptyline, clomipramine, nortriptyline, etc.)
- Mirtazapine
- Monoamine oxidase inhibitors (e.g., selegiline, tranylcypromine, etc.)
- Serotonin modulators (e.g., nefazodone, trazodone, etc.)

Augmentation with lithium, Cytomel (liothyronine), antipsychotics, or anticonvulsants

AND

5 - Spravato will be used in combination with an oral antidepressant (one that the patient has not previously failed)

AND

6 - Provider and/or the provider's healthcare setting is certified in the Spravato REMS program

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl y.

Product Name: Spravato [a]	
Diagnosis	Major depressive disorder (treatment-resistant)
Approval Length	6 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Documentation of remission or a positive clinical response to Spravato therapy

AND

2 - Submission of medical records (e.g., chart notes, laboratory values) documenting baseline and recent (within the last month) scoring on at least ONE of the following assessments demonstrating remission or clinical response (e.g., score reduction from baseline) as defined by the:

- Hamilton Rating Scale for Depression (HAMD17; remission defined as a score of ≤7)
- Quick Inventory of Depressive Symptomatology (QIDS-C16; remission defined as a score of ≤ 5)
- Montgomery-Asberg Depression Rating Scale (MADRS; remission defined as a score of ≤ 12)

• Baseline score on the 9-item Patient Health Questionnaire (PHQ-9)

AND

3 - Spravato will be used in combination with an oral antidepressant

AND

4 - Provider and/or the provider's healthcare setting is certified in the Spravato REMS program

AND

5 - Prescribed by or in consultation with a psychiatrist

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Spravato* [a]	
Diagnosis	Depressive symptoms in adults with major depressive disorder (MDD) with acute suicidal ideation or behavior
Approval Length	1 month(s)
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of major depressive disorder according to the current DSM (i.e., DSM-5-TR) criteria, by a mental health professional

AND

2 - Patient is experiencing an acute suicidal ideation or behavior

AND

3 - Patient is receiving newly initiated or optimized oral antidepressant

4 - Provider and/or the provider's healthcare setting is certified in the Spravato REMS program Notes [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply. *Note: Spravato is hard-coded with a quantity of 0.29 per day for the 56 mg strength and 0.43 per day for the 84mg strength. If criteria are met, enter one GPI-12 authorization with an MDD override of 0.86.

Product Name: Spravato* [a]	
Diagnosis	Depressive symptoms in adults with major depressive disorder (MDD) with acute suicidal ideation or behavior
Approval Length	1 month(s)
Guideline Type	Quantity Limit

Approval Criteria

1 - The drug is prescribed within the manufacturer's published dosing guidelines or falls within dosing guidelines found in the compendia of current literature

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
	*Note: Spravato is hard-coded with a quantity of 0.29 per day for the 56 mg strength and 0.43 per day for the 84mg strength. If criteria are met, enter one GPI-12 authorization with an MDD override of 0.86.

3. Background

Benefit/Coverage/Program Information

Background:

Spravato (esketamine) is a non-competitive N-methyl D-aspartate (NMDA) receptor antagonist indicated, in conjunction with an oral antidepressant, for the treatment of treatment-resistant depression (TRD) in adults and depressive symptoms in adults with major depressive disorder (MDD) with acute suicidal ideation or behavior.

Limitations of Use: The effectiveness of Spravato in preventing suicide or in reducing suicidal ideation or behavior has not been demonstrated. Use of Spravato does not preclude the need for hospitalization if clinically warranted, even if patients experience improvement after an initial dose of Spravato. Spravato is not approved as an anesthetic agent. The safety and effectiveness of Spravato as an anesthetic agent have not been established.

Because of the risks of serious adverse outcomes resulting from sedation, dissociation, and abuse and misuse, Spravato is only available through a restricted program under a Risk Evaluation and Mitigation Strategy (REMS) called the Spravato REMS.

For the purposes of this program, a trial and failure of a given antidepressant is defined as the patient unable to achieve a clinical meaningful improvement of the maximally tolerated dose(s) for at least 8 weeks in the current depressive episode. [2,3]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Sprycel

Prior Authorization Guideline

Guideline ID	GL-134173
Guideline Name	Sprycel
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	12/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 10/20/2021 ; 10/19/2022 ; 10/18/2023

1. Indications

Drug Name: Sprycel (dasatinib)

Philadelphia Chromosome-Positive Chronic Myeloid Leukemia (Ph+ CML) Indicated for newly diagnosed adults with Philadelphia chromosome-positive (Ph+) chronic myeloid leukemia (CML) in chronic phase. It is also indicated for the treatment of pediatric patients 1 year of age and older with Ph+ CML in chronic phase.

Philadelphia Chromosome-Positive Acute Lymphoblastic Leukemia (Ph+ALL) FDAlabeled for treatment of adults with Philadelphia chromosome-positive acute lymphoblastic leukemia with resistance or intolerance to prior therapy. It is also indicated for the treatment of pediatric patients 1 year of age and older with newly diagnosed Ph+ ALL in combination with chemotherapy.

Gastrointestinal stromal tumor National Comprehensive Cancer Network (NCCN) also approves of the use of Sprycel in gastrointestinal stromal tumor in patients with a PDGFRA D842V mutation.

Metastatic chondrosarcoma The National Comprehensive Cancer Network (NCCN) also

recommends the use of Sprycel in metastatic chondrosarcoma.

Chordoma The National Comprehensive Cancer Network (NCCN) also recommends the use of Sprycel in recurrent chordoma.

BCR-ABL1-Positive Chronic Myelogenous / Myeloid Leukemia The National Comprehensive Cancer Network (NCCN) also recommends the use of Sprycel in BCR-ABL1 positive CML.

Myeloid/lymphoid neoplasms The National Comprehensive Cancer Network (NCCN) also recommends the use of Sprycel in myeloid/lymphoid neoplasms with eosinophilia and ABL1 rearrangement.

3. Background

Benefit/Coverage/Program Information

Background:

Sprycel (dasatinib) is a tyrosine kinase inhibitor indicated for newly diagnosed adults with Philadelphia chromosome-positive (Ph+) chronic myeloid leukemia (CML) in chronic phase. Sprycel is also indicated for treatment of adults with chronic, accelerated, or myeloid or

lymphoid blast phase Ph+ CML with resistance or intolerance to prior therapy including (imatinib), for the treatment of adults with Ph+ acute lymphoblastic leukemia (ALL) with resistance or intolerance to prior therapy, for the treatment of pediatric patients 1 year of age and older with Ph+ CML in chronic phase, and for the treatment of pediatric patients 1 year of age and older with Ph+ ALL in combination with chemotherapy.[1] The National Comprehensive Cancer Network (NCCN) also recommends the use of Sprycel in BCR-ABL1 positive CML, in gastrointestinal stromal tumor in patients with a PDGFRA D842V mutation, metastatic chondrosarcoma, in recurrent chordoma and in myeloid/lymphoid neoplasms with eosinophilia and ABL1 rearrangement, and in cutaneous melanoma with metastatic or unresectable tumors with activating mutations of KIT as second-line or subsequent therapy for disease progression, intolerance, and/or projected risk of progression with BRAF-targeted therapy

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply Limits may be in place

Benefit/Coverage/Program Information

Background:

This document serves as a resource to highlight individual state mandates that may impact existing utilization management programs. Utilization programs include but are not limited to step therapy, prior authorization, supply limits, first-line trial duration limitations and pain therapy/end of life regulations. Select state mandates may require medical records for documentation. New and revised mandates will be reviewed quarterly with the Utilization Management (UM) committee.

This resource only focuses on sections of state mandates that pertain to utilization management programs. This reference document does not cite full state mandates.

1. Arizona:

a. Step Therapy Exception, AZ21-18132471 CS EI, ARS §20-3604 (effective 1/1/23)

A step therapy exception request shall be granted if sufficient justification to establish that any of the following applies:

• The prescription drug required by the step therapy protocol is contraindicated or will likely cause a serious adverse reaction by or physical or mental harm to the patient.

• The prescription drug required by the step therapy protocol is expected to be ineffective based on the known clinical characteristics of the patient and the known characteristics of the prescription drug regimen.

• The patient has tried the prescription drug required by the step therapy protocol while under the patient's current or previous health care plan, or another prescription drug in the same pharmacological class with a similar efficacy and side effect profile or with the same mechanism of action, the patient's adherence during the trial was for a period of time sufficient to allow for a positive treatment outcome and the prescription drug was discontinued due to lack of efficacy or effectiveness, an adverse event or contraindication.

• The prescription drug required by the step therapy protocol is not in the best interest of the patient based on medical necessity because the patient's use of the prescription drug is expected to cause any of the following:

o A barrier to the patient's adherence to or compliance with the patient's plan of care.

- o A negative impact on the patient's comorbid conditions.
- o A clinically predictable negative drug interaction.

o A decrease in the patient's ability to achieve or maintain a reasonably functional ability in performing daily activities for which the patient has experienced a positive therapeutic outcome.

• The patient has experienced a positive therapeutic outcome on a prescribed drug selected by the patient's health care provider for the medical condition under consideration while on the patient's current or previous health care plan.

A health care provider may not use a pharmaceutical sample for the purpose of qualifying for

an exception to step therapy under this paragraph.

2. Colorado:

a. Step Therapy Exception for Metastatic Cancer, CO22-21309458 C.R.S. §10-16-145.5 (effective 01/01/2023)

A carrier that provides coverage under a health benefit plan for the treatment of stage four advanced metastatic cancer shall not limit or exclude coverage under the health benefit plan for a drug approved by the FDA and that is on the carrier's prescription drug formulary by mandating that a covered person with stage four advanced metastatic cancer undergo STEP THERAPY if the use of the approved drug is consistent with:

• The FDA-approved indication or

• The National Comprehensive Cancer Network Drugs and Biologics Compendium indication for the treatment of stage four advanced metastatic cancer; or

• Peer-reviewed medical literature.

b. Step Therapy Exception, CO22-21309458 CS EI C.R.S. §10-16-145 (effective 1/1/24)

A carrier, a private utilization review organization, or a PBM shall grant an exception to step therapy if the prescribing provider submits justification and supporting clinical documentation, if needed, that states:

• The provider attests that the required prescription drug is contraindicated or will likely cause an adverse reaction or harm to the covered person;

• The required prescription drug is ineffective based on the known clinical characteristics of the covered person and the known characteristics of the prescription drug regimen;

• The covered person has tried, while under the covered person's current or previous health benefit plan, the required prescription drug or another prescription drug in the same pharmacologic class or with the same mechanism of action, and the use of the prescription drug by the covered person was discontinued due to lack of efficacy or effectiveness, diminished effect, or an adverse event;

• The covered person, while on the covered person's current or previous health benefit plan, is stable on a prescription drug selected by the prescribing provider for the medical condition under consideration after undergoing step therapy or after having sought and received a step-therapy exception.

This section does not prohibit a carrier, an organization, or a PBM from requiring a covered person to try a generic equivalent drug, a biosimilar drug, or an interchangeable biological product unless the covered person or covered person's prescribing provider has requested a

step-therapy exception and the prescribed drug meets the criteria for a step-therapy section as specified in this section.

3. Florida:

a. Step Therapy Exception §627.42393 F.S. (effective 1/1/2024)

A health insurer issuing a major medical individual or group policy may not require a steptherapy protocol under the policy for a covered prescription drug requested by an insured if: 1. The insured has previously been approved to receive the prescription drug through the completion of a step-therapy protocol required by a separate health coverage plan.

4. Georgia:

a. Step Therapy Exception GA19-12787856 EI O.C.G.A §33-24-59.25 (effective 1/1/2020)

A step therapy exception shall be granted by a health benefit plan if the prescribing provider's submitted justification and supporting clinical documentation, if needed, is completed and determined to support such provider's statement that:

• The required prescription drug is contraindicated or will cause an adverse reaction or physical or mental harm to the patient;

• The required prescription drug is expected to be ineffective based on the known clinical condition of the patient and the known characteristics of the prescription drug regimen;

• The patient has tried the required prescription drug or another prescription drug in the same pharmacological class or with the same mechanism of action as the required drug while on their current or immediately preceding health plan and such drug was discontinued due to lack of efficacy, diminished effect, or an adverse event; or

• The patient is currently receiving a positive therapeutic outcome on a prescription drug for the medical condition under consideration if, while on their current or immediately preceding health plan, the patient received coverage for the prescription drug and the practitioner gives documentation in accordance with this subsection that the change in prescription drug required by the step therapy protocol is expected to be ineffective or cause harm to the patient based on the known characteristics of the patient and the known characteristics of the required prescription drug.

Drug samples shall not be considered trial and failure of a preferred prescription drug in lieu of trying the step therapy required prescription drug. This Code section shall not be construed to prevent:

• A health benefit plan from requiring a patient to try an AB-rated generic equivalent prior to providing coverage for the equivalent-branded prescription drug

• A health benefit plan from requiring a patient to try an interchangeable biological product prior to providing coverage for the biological products

b. Terminal Condition, GA15-1507096 O.C.G.A §33-24-59.18 (effective 7/1/2015)

No health benefit plan shall restrict coverage for treatment of a terminal condition when such treatment has been prescribed by a physician as medically appropriate and such treatment has been agreed to by an insured patient or by a person to whom the insured patient has legally delegated such authority or to whom otherwise has the legal authority to consent on behalf of the insured patient. The health benefit plan shall not refuse to pay or otherwise reimburse for the treatment diagnosed under this subsection, including any drug or device, so long as such end of life care is consistent with best practices for the treatment of the terminal condition and such treatment is supported by peer reviewed medical literature.

'Terminal condition' means any disease, illness, or health condition that a Physician has diagnosed as expected to result in death in 24 months or less.

c. Step Therapy Exception for Metastatic Cancer, GA Code §33-24-59.20 (effective 1/1/20)

No health benefit plan issued, delivered, or renewed in this state that, as a provision of hospital, medical, or surgical services, directly or indirectly covers the treatment of stage four advanced, metastatic cancer shall limit or exclude coverage for a drug approved by the United States Food and Drug Administration by mandating that the insured shall first be required to fail to successfully respond to a different drug or drugs or prove a history of failure of such drug or drugs; provided, however, that the use of such drug or drugs is consistent with best practices for the treatment of stage four advanced, metastatic cancer and is supported by peer reviewed medical literature. Other mandate provisions define "health benefit plan" and "stage four advanced, metastatic cancer."

5. Illinois:

a. Step Therapy Exception IL16-3027525 215 ILCS 134/45.1 (effective 1/1/2018)

A step therapy requirement exception request shall be approved if:

• the required prescription drug is contraindicated;

• the patient has tried the required prescription drug while under the patient's current or previous health insurance or health benefit plan and the prescribing provider submits evidence of failure or intolerance; or

• the patient is stable on a prescription drug selected by his or her health care provider for the medical condition under consideration while on a current or previous health insurance or health benefit plan.

b. Step Therapy Exception for Stage 4 Advanced, Metastatic Cancer IL18-9299149 215 ILCS 5/356z.29 (effective 1/1/2019)

No individual or group policy of accident and health insurance amended, issued, delivered, or

renewed in this State after the effective date of this amendatory Act of the 100th General Assembly that, as a provision of hospital, medical, or surgical services, directly or indirectly covers the treatment of stage 4 advanced, metastatic cancer shall limit or exclude coverage for a drug approved by the United States Food and Drug Administration by mandating that the insured shall first be required to fail to successfully respond to a different drug or prove history of failure of the drug as long as the use of the drug is consistent with best practices for the treatment of stage 4 advanced, metastatic cancer and is supported by peer-reviewed medical literature

6. Louisiana:

a. Step Therapy Exception for Stage 4 Advanced, Metastatic Cancer LA19-13246769 EI La. R.S. 22:1053 (effective 6/5/2019)

No health coverage plan shall use step therapy or fail first protocols as the basis to restrict any prescription benefit for the treatment of stage-four advanced, metastatic cancer or associated conditions if at least one of the following criteria is met:

• The prescribed drug or drug regimen has the United States Food and Drug Administration approved indication.

• The prescribed drug or drug regimen has the National Comprehensive Cancer Network Drugs and Biologic Compendium indication.

• The prescribed drug or drug regimen is supported by peer-reviewed, evidenced-based medical literature.

The provisions this Section shall not apply if the preferred drug or drug regimen is considered clinically equivalent for therapy, contains the identical active ingredient or ingredients, and is proven to have the same efficacy. For purposes of this Subsection, different salts proven to have the same efficacy shall not be considered as different active ingredients.

b. Exception for Cancer Treatment Targeting A Specific Genetic Mutation, LA 2022000 S 146 EI La. Stat. 22:§1054.1 (A) (effective 8/1/22)

No health coverage plan delivered or issued for delivery in this state shall deny coverage for the treatment of metastatic or unresectable tumors or other advanced cancers with a medically necessary drug prescribed by a physician on the sole basis that the drug is not indicated for the specific tumor type or location in the body of the patient's cancer if the drug is approved by the United States Food and Drug Administration for the treatment of the specific mutation in a different type of cancer. Insurers shall not consider the treatment experimental or outside of their policy scope if the United States Food and Drug Administration has approved the drug for the treatment of cancer with the specific genetic mutation, even if in a different tumor type. This coverage may be denied only if an alternative treatment has proven to be more effective in published randomized clinical trials and is not contraindicated in the patient.

c. Step Therapy Exception, LA20-15951347 CS EI <R.S. 22:1053> (effective 1/1/2021,

amended 8/1/2023)

An override of such the restriction shall be expeditiously granted by the insurer under health coverage plan if the prescribing practitioner, using sound clinical evidence, can demonstrate any of the following circumstances:

• The prescribing physician can demonstrate to the health coverage plan, based on sound clinical evidence, that the preferred treatment required under the step therapy or fail first protocol has been ineffective in the treatment of the insured's patient's disease or medical condition. The prescribing practitioner shall demonstrate to the health coverage plan that the patient has tried the required prescription drug while under his current or a previous health insurance or health coverage plan, or another prescription drug in the same pharmacologic class or with the same mechanism of action, and the prescription drug was discontinued due to lack of efficacy or effectiveness, diminished effect, or an adverse event.

• The prescribing physician can demonstrate to the health coverage plan, based on sound clinical evidence, that the preferred treatment required under the step therapy or fail first protocol is reasonably expected to be ineffective based on the known relevant physical or mental characteristics and medical history of the insured patient and known characteristics of the drug regimen.

• The prescribing physician can demonstrate to the health coverage plan, based on sound clinical evidence, that the preferred treatment required under the step therapy or fail first protocol is contraindicated or will likely cause an adverse reaction or other physical or mental harm to the insured patient.

• The patient is currently receiving a positive therapeutic outcome on a prescription drug for the medical condition under consideration if, while on his current health coverage plan or the immediately preceding health coverage plan, the patient received coverage for the prescription drug.

• The required prescription drug is not in the best interest of the patient based on medical necessity as evidenced by valid documentation submitted by the prescriber.

• The provisions of this Section shall not be construed to prohibit the substitution of an ABrated generic equivalent, biosmimilar, or interchangeable biological product as designated by the federal Food and Drug Administration

d. Off-Label Use Exception, R.S. 22:1060.8 (effective 1/1/23)

No health coverage plan delivered or issued for delivery in this state shall limit or exclude coverage involving a minor for a drug on the basis that the drug is prescribed for a use that is different from the use for which that drug has been approved by the United States Food and Drug Administration and all of the following apply:

• The drug has been approved by the United States Food and Drug Administration.

• The drug is prescribed by a licensed healthcare provider for the treatment of a life threatening, chronic, or seriously debilitating disease or condition in a minor and the drug has been approved by the United States Food and Drug Administration for the same condition or disease in an adult and the drug is medically necessary to treat the disease or condition.

The drug has been recognized for the treatment of the disease or condition in pediatric

application by one of the following:

o The American Hospital Formulary Service Drug Information

o The United States Pharmacopeia Dispensing Information, Volume 1, "Drug Information for the Health Care Professional"

o Recognized in two articles from major peer-reviewed medical journals that present data supporting the proposed off-label use or uses as generally safe and effective unless there is clear and convincing contradictory evidence presented in a major peer-reviewed journal.

e. Cancer Prior Authorization Requirements, LA23-23518873 R.S. 22:1060.14 (effective 1/1/2024)

No health coverage plan that is renewed, delivered, or issued for delivery in this state that provides coverage for cancer in accordance with the Louisiana Insurance Code shall deny a request for prior authorization or the payment of a claim for any procedure, pharmaceutical, or diagnostic test typically covered under the plan to be provided or performed for the diagnosis and treatment of cancer if the procedure, pharmaceutical, or diagnostic test is recommended by nationally recognized clinical practice guidelines for use in the diagnosis or treatment for the insureds particular type of cancer and clinical state.

7. Maryland:

a. Step Therapy Exception MD 23-23313747, MD INS Code Ann. §15-141 (effective 1/1/2024)

An entity subject to this section may not impose a Step Therapy or Fail - First Protocol on an insured or enrollee if:

- The Step Therapy Drug has not been approved by the U.S. Food and Drug Administration for the medical condition being treated; or
- A prescriber provides supporting medical information to the entity that a prescription drug covered by the entity:
- Was ordered by a prescriber for the insured or enrollee within the past 180 days; and
- Based on the professional judgment of the prescriber, was effective in treating the insured's or enrollee's disease or medical condition.

A step therapy exception request shall be granted if, based on the professional judgment of the prescriber and any information and documentation required when:

• The step therapy drug is contraindicated or will likely cause an adverse reaction to the insured or enrollee;

• The step therapy drug is expected to be ineffective based on the known clinical characteristics of the insured or enrollee and the known characteristics of the prescription drug regimen;

• The insured or enrollee is stable on a prescription drug prescribed for the medical condition under consideration while covered under the policy or contract of the entity or under a previous

source of coverage; or

• While covered under the policy or contract of the entity or a previous source of coverage, the insured or enrollee has tried a prescription drug that:

o Is in the same pharmacologic class or has the same mechanism of action as the step therapy drug; and

o Was discontinued by the prescriber due to lack of efficacy or effectiveness, diminished effect, or an adverse event.

This subsection may not be construed to prevent:

• An entity subject to this section from requiring an insured or enrollee to try an AB-rated generic equivalent or interchangeable biologic product before providing coverage for the equivalent branded prescription drug; OR

• A health care provider from prescribing a prescription drug that is determined to be medically inappropriate; or

o Require an entity subject to this section to provide coverage for a prescription drug that is not covered by a policy or contract of the entity

b. Step Therapy Exception for Stage 4 Advanced, Metastatic Cancer, MD17-4512688 MD INS Code §15-142 (effective 10/1/2017)

An entity subject to this section may not impose a step therapy or fail-first protocol on an insured or an enrollee for a prescription drug approved by the U.S. Food and Drug Administration if:

• The prescription drug is used to treat the insured's or enrollee's stage four advanced metastatic cancer; and

• Use of the prescription drug is:

o Consistent with the U.S. Food and Drug Administration-approved indication or

o The National Comprehensive Cancer Network Drugs & Biologics Compendium Indication

for the treatment of stage four advanced metastatic cancer; and

o Supported by peer-reviewed medical literature.

8.Mississippi:

a. Step Therapy Exception, MS 83-9-36 (effective 1/1/2012)

An override of that restriction shall be expeditiously granted by the insurer under the following circumstances:

• The prescribing practitioner can demonstrate, based on sound clinical evidence, that the preferred treatment required under step therapy or fail-first protocol has been ineffective in the

treatment of the insured's disease or medical condition; or

· Based on sound clinical evidence or medical and scientific evidence:

o The prescribing practitioner can demonstrate that the preferred treatment required under the step therapy or fail-first protocol is expected or likely to be ineffective based on the known relevant physical or mental characteristics of the insured and known characteristics of the drug regimen; or

o The prescribing practitioner can demonstrate that the preferred treatment required under the step therapy or fail-first protocol will cause or will likely cause an adverse reaction or other physical harm to the insured.

• The duration of any step therapy or fail-first protocol shall not be longer than a period of thirty (30) days when the treatment is deemed clinically ineffective by the prescribing practitioner. When the prescribing practitioner can demonstrate, through sound clinical evidence, that the originally prescribed medication is likely to require more than thirty (30) days to provide any relief or an amelioration to the insured, the step therapy or fail-first protocol may be extended up to seven (7) additional days.

b. Terminal Condition, § 83-9-22

Health coverage plans prohibited from restricting coverage for medically appropriate treatment prescribed by physician based on insured's diagnosis with terminal condition.;

(1); (a) Notwithstanding any other provision of the law to the contrary, no health coverage plan shall restrict coverage for medically appropriate treatment prescribed by a physician and agreed to by a fully informed insured, or if the insured lacks legal capacity to consent by a person who has legal authority to consent on his or her behalf, based on an insured's diagnosis with a terminal condition. Refusing to pay for treatment rendered to an insured near the end of life that is consistent with best practices for treatment of a disease or condition, approved uses of a drug or device, or uses supported by peer reviewed medical literature, is a per se violation of this section;

(b) Violations of this section shall constitute an unfair trade practice and subject the violator to the penalties provided by law;

(c) As used in this section "terminal condition" means any aggressive malignancy, chronic endstage cardiovascular or cerebral vascular disease, or any other disease, illness or condition which a physician diagnoses as terminal;

(d) As used in this section, a "health coverage plan" shall mean any hospital, health or medical expense insurance policy, hospital or medical service contract, employee welfare benefit plan, contract or agreement with a health maintenance organization or a preferred provider organization, health and accident insurance policy, or any other insurance contract of this type,

including a group insurance plan and the State Health and Life Insurance Plan.; (2); (a) Notwithstanding any other provision of the law to the contrary, no health benefit paid directly or

indirectly with state funds, specifically Medicaid, shall restrict coverage for medically

appropriate treatment prescribed by a physician and agreed to by a fully informed individual, or if the individual lacks legal capacity to consent by a person who has legal authority to consent on his or her behalf, based on an individual's diagnosis with a terminal condition.;

(b) Refusing to pay for treatment rendered to an individual near the end of life that is consistent with best practices for treatment of a disease or condition, approved uses of a drug or device, or uses supported by peer reviewed medical literature, is a per se violation of this section;

(c) As used in this section "terminal condition" means any aggressive malignancy, chronic endstage cardiovascular or cerebral vascular disease, or any other disease, illness or condition which a physician diagnoses as terminal.

9. Missouri:

a. Step Therapy Exception, MO§ 376.2034 (effective 7/1/2012)

A step therapy override exception determination shall be granted if the patient has tried the step therapy required prescription drugs while under his or her current or previous health insurance or health benefit plan, and such prescription drugs were discontinued due to lack of efficacy or effectiveness, diminished effect, or an adverse event, or if the patient's treating health care provider attests that coverage of the prescribed prescription drug is necessary to save the life of the patient. Pharmacy drug samples shall not be considered trial and failure of a preferred prescription drug in lieu of trying the step therapy required prescription drug.

• Upon the granting of a step therapy override exception request, the health carrier, health benefit plan, or utilization review organization shall authorize dispensation of and coverage for the prescription drug prescribed by the patient's treating health care provider, provided such drug is a covered drug under such policy or contract.

• This section shall not be construed to prevent:

o A health carrier, health benefit plan, or utilization review organization from requiring a patient to try a generic equivalent or other brand name drug prior to providing coverage for the requested prescription drug; or

o A health care provider from prescribing a prescription drug he or she determines is medically appropriate.

10. New Mexico

a. Step Therapy Exception, N.M. § 59A-46-52.2 (effective 1/1/24)

A carrier shall expeditiously grant an exception to the health maintenance organization contract's step therapy protocol, based on medical necessity and a clinically valid explanation from the patient's prescribing practitioner as to why a drug on the health maintenance organization contract's formulary that is therapeutically equivalent to the prescribed drug should not be substituted for the prescribed drug, if:

• The prescription drug that is the subject of the exception request is contraindicated or will likely cause an adverse reaction by or physical or mental harm to the patient;

• The prescription drug that is the subject of the exception request is expected to be ineffective based on the known clinical characteristics of the patient and the known characteristics of the prescription drug regimen;

• While under the enrollee's current health maintenance organization contract, or under the enrollee's previous health coverage, the enrollee has tried the prescription drug that is the subject of the exception request or another prescription drug in the same pharmacologic class

or with the same mechanism of action as the prescription drug that is the subject of the exception request and that prescription drug was discontinued due to lack of efficacy or effectiveness, diminished effect or an adverse event; or

• The prescription drug required pursuant to the step therapy protocol is not in the best interest of the patient, based on clinical appropriateness, because the patient's use of the prescription drug is expected to:

• Cause a significant barrier to the patient's adherence to or compliance with the patient's plan of care;

Worsen a comorbid condition of the patient; or

• Decrease the patient's ability to achieve or maintain reasonable functional ability in performing daily activities.

The provisions of this section shall not be construed to prevent a health maintenance organization contract from requiring a patient to try a generic equivalent of a prescription drug before providing coverage for the equivalent brand-name prescription drug. The provisions of this section shall not be construed to prevent a health maintenance organization contract from requiring a patient to try a generic equivalent of a prescription drug before providing coverage for the equivalent of a prescription drug before providing coverage for the equivalent of a prescription drug before providing coverage for the equivalent of a prescription drug before providing coverage for the equivalent brand-name prescription drug.

11. North Carolina

a. Step Therapy Exception NC20- 16056997 CS EI, Statute § 58-3-221 (effective 1/1/2024)

An insurer shall grant an exception request if the prescribing provider's submitted justification and supporting clinical documentation are sufficient to demonstrate any of the following:

• The enrollee has tried the alternate drug or drugs while covered by the current or the previous health benefit plan.

• The formulary or alternate drug or drugs has been ineffective in the treatment of the enrollee's disease or condition.

• The formulary or alternate drug or drugs causes or is reasonably expected by the prescribing provider to cause a harmful or adverse clinical reaction in the enrollee.

• Either (i) the drug is prescribed in accordance with any applicable clinical protocol of the insurer for the prescribing of the drug or (ii) the drug has been approved as an exception to the clinical protocol pursuant to the insurer's exception procedure.

• The enrollee's prescribing provider certifies in writing that the enrollee has previously used an alternative nonrestricted access drug or device and the alternative drug or device has been detrimental to the enrollee's health or has been ineffective in treating the same condition and, in the opinion of the prescribing health care provider, is likely to be detrimental to the enrollee's health or ineffective in treating the condition again.

Pharmaceutical drug samples or patient incentive programs, including coupons or debit cards, shall not be considered trial and failure of a preferred prescription drug in lieu of trying the formulary preferred prescription drug.

Nothing in this section requires an insurer to pay for drugs or devices or classes of drugs or

devices related to a benefit that is specifically excluded from coverage by the insurer.

This section shall not be construed to prevent the health benefit plan from requiring an enrollee to try an A-rated generic equivalent drug, or a biosimilar, as defined under 42 U.S.C. § 262(i)(2), prior to providing coverage for the equivalent branded prescription drug.

12. Ohio:

a. Step Therapy Exception, OH 3901.832 (effective 1/1/20)

Pursuant to a step therapy exemption request or an appeal, a health plan issuer or utilization review organization shall grant a step therapy exemption if any of the following are met:

• The required prescription drug is contraindicated for that specific patient, pursuant to the drug's United States food and drug administration prescribing information.

• The patient has tried the required prescription drug while under their current, or a previous, health benefit plan, or another United States food and drug administration approved AB-rated prescription drug, and such prescription drug was discontinued due to lack of efficacy or effectiveness, diminished effect, or an adverse event.

• The patient is stable on a prescription drug selected by the patient's health care provider for the medical condition under consideration, regardless of whether or not the drug was prescribed when the patient was covered under the current or a previous health benefit plan, or has already gone through a step therapy protocol. However, a health benefit plan may require a stable patient to try a pharmaceutical alternative, per the federal food and drug administration's orange book, purple book, or their successors, prior to providing coverage for the prescribed drug.

b. Step Therapy Exception for Stage 4 Advanced, Metastatic Cancer, OH21-16933950, ORC § 3902.51 (effective 3/24/2021)

A health benefit plan issued, delivered, or renewed in Ohio on or after 3/24/2021 that directly or indirectly covers the treatment of stage four advanced metastatic cancer is prohibited from making coverage of a drug that is prescribed to treat such cancer or associated conditions dependent upon a covered person demonstrating either of the following:

- · Failure to successfully respond to a different drug;
- A history of failing to respond to a different drug or drugs.

This prohibition applies only to uses of such drug or drugs that are consistent with either of the following:

• An indication approved by, or described in, as applicable, either of the following for the treatment of stage four advanced metastatic cancer:

- o The United States Food and Drug Administration;
- o The National Comprehensive Cancer Network drugs and biologics compendium.
- The best practices for the treatment of stage four advanced metastatic cancer, as supported

by peer-reviewed medical literature.

A violation of this prohibition is an unfair and deceptive practice in the business of insurance.

13. Oklahoma:

a. Step Therapy Exception, OK19-12431543 OK Stat. §63-7310 (effective 1/1/2020)

A health insurance plan shall grant a requested step therapy exception if the submitted justification of the prescribing provider and supporting clinical documentation, if needed, is completed and supports the statement of the provider that:

• The required prescription drug is contraindicated or will likely cause an adverse reaction or physical or mental harm to the patient,

• The required prescription drug is expected to be ineffective based on the known clinical characteristics of the patient and the known characteristics of the prescription drug,

• The patient has tried the required prescription drug while under the patient's current or a previous health insurance plan and such prescription drug was discontinued due to lack of efficacy or effectiveness, diminished effect or an adverse event,

• The required prescription drug is not in the best interest of the patient, based on medical necessity, or

• The patient is stable on a prescription drug selected by the patient's healthcare provider for the medical condition under consideration while on the patient's current or a previous health insurance plan

Nothing in this section shall be construed to authorize the use of a pharmaceutical sample for the sole purpose of meeting the requirements for a step therapy exception

b. Step Therapy Exception for Stage 4 Advanced, Metastatic Cancer, H-2748, OK23-2329415 (effective 11/1/23)

A health benefit plan that provides coverage for advanced metastatic cancer and associated conditions may not require, before providing coverage of an FDA-approved prescription drug, that the enrollee: (1) fails to successfully respond to a different drug; or (2) proves a history of failure of a different drug. This prohibition applies only to a drug, the use of which is: (1) consistent with best practices for the treatment of advanced metastatic cancer or an associated condition; (2) supported by peer-reviewed, evidence-based literature; and (3) approved by the FDA.

14. Tennessee:

a. Step Therapy Exception, Tenn. Code § 56-7-3502 (effective 1/1/23)

A health carrier, health benefit plan, or utilization review organization shall grant a step therapy exception if one (1) of the following applies:

• The required prescription drug is contraindicated or will likely cause an adverse reaction to, or physical or mental harm to, the patient due to a documented adverse event with a previous use of the required prescription drug or a documented medical condition, including a comorbid condition;

• The required prescription drug is expected to be ineffective based on the known clinical characteristics of the patient and the known characteristics of the prescription drug regimen;

o The required prescription drug is not in the best interest of the patient, based on clinical appropriateness, because the patient's use of the drug is expected to:

o Cause a significant barrier to the patient's adherence to or compliance with the patient's plan of care;

o Worsen a comorbid condition of the patient; or

o Decrease the patient's ability to achieve or maintain reasonable functional ability in performing daily activities; or

• The patient is currently receiving a positive therapeutic outcome on a prescription drug selected by the patient's healthcare provider for the medical condition under consideration while on a current or previous health insurance or health benefit plan, and the patient's healthcare provider gives documentation to the health insurance, health benefit plan, or utilization review organization that the change in prescription drug required by the step therapy protocol is expected to be ineffective or cause harm to the patient based on the known characteristics of the specific enrollee and the known characteristics of the required prescription drug.

The use of pharmaceutical samples of a required prescription drug is not considered a trial of the required prescription drug as part of a step therapy protocol.

15. Texas:

a. Step Therapy Exception, TX17-4501604 Tex. Ins. Code §1369.0546 (effective 1/1/2018) A health benefit plan issuer shall grant a written request if the request includes the prescribing provider's written statement, with supporting documentation, stating that:

• The drug required under the step therapy protocol:

- o Is contraindicated;
- o Will likely cause an adverse reaction in or physical or mental harm to the patient; or

o Is expected to be ineffective based on the known clinical characteristics of the patient and the known characteristics of the prescription drug regimen;

• The patient previously discontinued taking the drug required under the step therapy protocol, or another prescription drug in the same pharmacologic class or with the same mechanism of action as the required drug, while under the health benefit plan currently in force or while covered under another health benefit plan because the drug was not effective or had a diminished effect or because of an adverse event;

• The drug required under the step therapy protocol is not in the best interest of the patient,

based on clinical appropriateness, because the patient's use of the drug is expected to: o Cause a significant barrier to the patient's adherence to or compliance with the patient's plan of care;

o Worsen a comorbid condition of the patient; or

o Decrease the patient's ability to achieve or maintain reasonable functional ability in performing daily activities; or

• The drug that is subject to the step therapy protocol was prescribed for the patient's condition;

• The patient:

o Received benefits for the drug under the health benefit plan currently in force or a previous health benefit plan; and

o Is stable on the drug; and

o The change in the patient's prescription drug regimen required by the step therapy protocol is expected to be ineffective or cause harm to the patient based on the known clinical characteristics of the patient and the known characteristics of the required prescription drug regimen

b. Step Therapy Exception for Stage 4 Advanced, Metastatic Cancer, TX19-13305672 Tex. Ins. Code §1369.213 (effective 1/1/2020)

A health benefit plan that provides coverage for stage-four advanced, metastatic cancer and associated conditions may not require, before the health benefit plan provides coverage of a prescription drug approved by the United States Food and Drug Administration (FDA), that the enrollee:

• Fail to successfully respond to a different drug; or

• Prove a history of failure of a different drug.

This section applies only to a drug the use of which is:

- Consistent with best practices for the treatment of stage-four advanced, metastatic cancer or an associated condition;
- Supported by peer-reviewed, evidence-based literature; and
- Approved by the United States Food and Drug Administration.

c. **Step Therapy Exception for Serious Mental Illness** TX23-23491650 §1369.0547 (effective 1/1/2024)

This section applies only to a drug prescribed to an enrollee who is 18 years of age or older to treat a diagnosis of a serious mental illness. A health benefit plan that provides coverage for prescription drugs to treat a serious mental illness may not require, before the health benefit plan provides coverage of a prescription drug approved by the United States Food and Drug Administration, that the enrollee:

- fail to successfully respond to more than one different drug for each drug prescribed, excluding the generic or pharmaceutical equivalent of the prescribed drug; or
- prove a history of failure of more than one different drug for each drug prescribed, excluding the generic or pharmaceutical equivalent of the prescribed drug.

Subject to Section 1369.0546, a health benefit plan issuer may implement a step therapy protocol to require a trial of a generic or pharmaceutical equivalent of a prescribed prescription drug as a condition of continued coverage of the prescribed drug only:

- once in a plan year; and
- if the generic or pharmaceutical equivalent drug is added to the plan's drug formulary.

16. Virginia:

a. Continuity of Care for Treatment of a Mental Disorder, VA21-17387330 VA code §38.2-3407.15:2 (effective 7/1/2021)

Any provider contract between a carrier and a participating health care provider with prescriptive authority, or its contracting agent, shall contain specific provisions that:

• Require that when any carrier has previously approved prior authorization for any drug prescribed for the treatment of a mental disorder listed in the most recent edition of the Diagnostic and Statistical Manual of Mental Disorders published by the American Psychiatric Association, no additional prior authorization shall be required by the carrier, provided that (i) the drug is a covered benefit; (ii) the prescription does not exceed the FDA-labeled dosages; (iii) the prescription has been continuously issued for no fewer than three months; and (iv) the prescriber performs an annual review of the patient to evaluate the drug's continued efficacy, changes in the patient's health status, and potential contraindications. Nothing in this subdivision shall prohibit a carrier from requiring prior authorization for any drug that is not listed on its prescription drug formulary at the time the initial prescription for the drug is issued.

b. Step Therapy Exception, VA19-11741564 VA code §38.2-3407.9:05 (effective 1/1/2020)

A step therapy exception request shall be granted if the prescribing provider's submitted justification and supporting clinical documentation, if needed, are determined to support the prescribing provider's statement that:

• The required prescription drug is contraindicated;

• The required drug would be ineffective based on the known clinical characteristics of the patient and the known characteristics of the prescription drug regimen;

• The patient has tried the step therapy-required prescription drug while under their current or a previous health benefit plan, and such prescription drug was discontinued due to lack of efficacy or effectiveness, diminished effect, or an adverse event; or

• The patient is currently receiving a positive therapeutic outcome on a prescription drug recommended by his provider for the medical condition under consideration while on a current or the immediately preceding health benefit plan.

Drug samples shall not be considered trial and failure of a preferred drug.

This section shall not be construed to prevent a carrier or utilization review organization from requiring an enrollee to try an AB-rate generic equivalent or interchangeable biological product prior to providing coverage or substitute a generic for a branded drug.

17. Washington

a. Non-Formulary and Step Therapy Exception, WA19-12810894 48.43 RCW (effective 1/1/2021)

An exception request must be granted if the health carrier or prescription drug utilization management entity determines that the evidence submitted by the provider or patient is sufficient to establish that:

• The required prescription drug is contraindicated or will likely cause a clinically predictable adverse reaction by the patient;

• The required prescription drug is expected to be ineffective based on the known clinical characteristics of the patient and the known characteristics of the prescription drug regimen;

• The patient has tried the required prescription drug or another prescription drug in the same pharmacologic class or a drug with the same mechanism of action while under his or her current or a previous health plan, and such prescription drug was discontinued due to lack of efficacy or effectiveness, diminished effect, or an adverse event;

• The patient is currently experiencing a positive therapeutic outcome on a prescription drug recommended by the patient's provider for the medical condition under consideration while on his or her current or immediately preceding health plan, and changing to the required prescription drug may cause clinically predictable adverse reactions, or physical or mental harm to, the patient; or

• The required prescription drug is not in the best interest of the patient, based on documentation of medical appropriateness, because the patient's use of the prescription drug is expected to:

- a. Create a barrier to the patient's adherence to or compliance with the patient's plan of care;
- b. Negatively impact a comorbid condition of the patient;
- c. Cause a clinically predictable negative drug interaction; or
- d. Decrease the patient's ability to achieve or maintain reasonable functional ability in

performing daily activities

• This section does not prevent:

a. A health carrier or prescription drug utilization management entity from requiring a patient to try an AB-rated generic equivalent or a biological product that is an interchangeable biological product prior to providing coverage for the equivalent branded prescription drug;
b. A health carrier or prescription drug utilization management entity from denying an

exception for a drug that has been removed from the market due to safety concerns from the federal food and drug administration; or

c. A health care provider from prescribing a prescription drug that is determined to be medically appropriate

b. Continuity of Care, WA21-16859749 WAC 284-43-2021 (effective 1/1/2021)

A carrier must not require the enrollee to submit a new exception request for a refill if the enrollee's prescribing physician or other prescriber continues to prescribe the drug and the drug continues to be approved by the U.S. Food and Drug Administration for treating the enrollee's disease or medical condition, or if the drug was prescribed as part of the enrollee's participation in a clinical trial.

• If the substituted drug is for an off-label drug use, a carrier may require the enrollee to submit a new exception request when a prescription fill and renewal cycle ends.

• A carrier may require an enrollee to try and AB-rated generic equivalent or a biological product that is an interchangeable biological product prior to providing coverage for the equivalent branded prescription drug.

• A carrier must consider exception requests for a U.S. Food and Drug Administration approved drug used for purposes other than what is indicated on the official label if the use is medically acceptable. A carrier must take into consideration major drug compendia, authoritative medical literature, and accepted standards of practice when making its decision.

18. Wisconsin

a. Step Therapy Exception, WI19-13419928 EI Wis. Stat. § 632.866 (effective 1/1/2020)

An insurer, pharmacy benefit manager, or utilization review organization shall grant an exception to the step therapy protocol if the prescribing provider submits complete, clinically relevant written documentation supporting a step therapy exception request and any of the following are satisfied:

• The prescription drug required under the step therapy protocol is contraindicated or, due to a documented adverse event with a previous use or a documented medical condition, including a comorbid condition, is likely to do any of the following:

- o Cause a serious adverse reaction in the patient.
- o Decrease the ability to achieve or maintain reasonable functional ability in performing daily

activities.

o Cause physical or psychiatric harm to the patient.

• The prescription drug required under the step therapy protocol is expected to be ineffective based on all of the following:

o Sound clinical evidence or medical and scientific evidence.

o The known clinical characteristics of the patient.

o The known characteristics of the prescription drug regimen as described in peer-reviewed literature or the manufacturer's prescribing information for the prescription drug.

• The patient has tried the prescription drug required under the step therapy protocol, or another prescription drug in the same pharmacologic class or with the same mechanism of action, under the policy or plan or a previous policy or plan, the patient was adherent to the prescription drug regimen for a time that allows for a positive treatment outcome, and the patient's use of the prescription drug was discontinued by the patient's provider due to lack of efficacy or effectiveness, diminished effect, or adverse event. This subdivision does not prohibit an insurer, pharmacy benefit manager, or utilization review organization from requiring a patient to try another drug in the same pharmacologic class or with the same mechanism of action if that therapy sequence is supported by clinical review criteria

• The patient is stable on a prescription drug selected by his or her health care provider for the medical condition under consideration while covered under the policy or plan or a previous policy or plan.

• Nothing in this subsection shall be construed to allow the use of a pharmaceutical sample to satisfy a criterion for an exception to a step therapy protocol.

Nothing in this subsection shall be construed to prevent any of the following: 1. An insurer, pharmacy benefit manager, or utilization review organization from requiring a patient to try an A-rated generic equivalent prescription drug, as designated by the federal Food and Drug administration, or a biosimilar, as defined under 42 USC 262 (i) (2), before providing coverage for the equivalent brand name prescription drug

Additional Clinical Rules That Apply to All State Mandates:

- Applicable clinical programs will apply
- Step therapy bypass does NOT apply to FDA approved labeling requirements
- Verbal attestation may be accepted; submission of evidence not required

Stelara

Prior Authorization Guideline

Guideline ID	GL-122938
Guideline Name	Stelara
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	5/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 05/21/2021 ; 12/15/2021 ; 08/19/2022 ; 09/21/2022 ; 3/15/2023

1. Indications

Drug Name: Stelara (ustekinumab)

Plaque Psoriasis Indicated for the treatment of adult and pediatric patients 6 years of age or older with moderate to severe plaque psoriasis who are candidates for phototherapy or systemic therapy.

Psoriatic Arthritis Indicated for the treatment of adult and pediatric patients 6 years of age or older with active psoriatic arthritis.

Crohn's Disease Indicated in adult patients with moderately to severely active Crohn's disease.

Ulcerative Colitis Indicated in adults for moderately to severely active ulcerative colitis.

2. Criteria

Product Name: Stelara 45mg/0.5mL (subcutaneous formulations) [a]	
Diagnosis	Plaque Psoriasis
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of moderate to severe plaque psoriasis

AND

2 - One of the following:

2.1 All of the following:

2.1.1 Greater than or equal to 3% body surface area involvement, palmoplantar, facial, genital involvement, or severe scalp psoriasis

AND

2.1.2 History of failure to one of the following topical therapies, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial):

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Coal tar

AND

2.1.3 History of failure to a 3 month trial of methotrexate at maximally indicated dose, unless contraindicated or clinically significant adverse effects are experienced (document date and duration of trial)

OR

2.2 Patient has been previously treated with a biologic or targeted synthetic DMARD FDAapproved for the treatment of plaque psoriasis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Cimzia (certolizumab), adalimumab, Otezla (apremilast), Skyrizi (risankizumab-rzaa), Tremfya (guselkumab)]

OR

2.3 Both of the following:

- Patient is currently on Stelara therapy as documented by claims history or submission of medical records (Document date and duration of therapy)
- Patient has not received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Janssen sponsored CarePath Savings program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Stelara*

AND

3 - Patient is not receiving Stelara in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Skyrizi (risankizumab-rzaa)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]

AND

4 - Prescribed by or in consultation with a dermatologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl v.
	*Patients requesting initial authorization who were established on thera py via the receipt of a manufacturer supplied sample at no cost in the p rescriber's office or any form of assistance from the Janssen sponsore d CarePath Savings program shall be required to meet initial authorizat

ion criteria as if patient were new to therapy.

2 - Patient is not receiving Stelara in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Skyrizi (risankizumab-rzaa)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	--

3. Background

Benefit/Coverage/Program Information

Background:

Stelara (ustekinumab) is a human interleukin-12 and -23 antagonist indicated for the treatment of adult and pediatric patients 6 years of age or older with active psoriatic arthritis and for

moderate to severe plaque psoriasis who are candidates for phototherapy or systemic therapy. It is also indicated in adult patients with moderately to severely active Crohn's disease and for moderately to severely active ulcerative colitis.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.
- The intravenous infusion is typically covered under the medical benefit. Please refer to the UnitedHealthcare Drug Policy for Stelara.

Step Therapy Antigout Agents

Prior Authorization Guideline

Guideline ID	GL-132954
Guideline Name	Step Therapy Antigout Agents
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	11/1/2023
P&T Approval Date:	10/18/2020
P&T Revision Date:	07/21/2021 ; 09/15/2021 ; 07/20/2022 ; 9/20/2023

Product Name: Febuxostat (generic Uloric) [a]		
Approval Length	12 month(s)	
Guideline Type	Step Therapy	
Approval Criteria		
1 - History of failure, contraindication or intolerance to the following:		
allopurinol (generic Zyloprim)		
Notes	[a] State mandates may apply. Any federal regulatory requirements an	

d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
у.

2. Background

Benefit/Coverage/Program Information

Background:

Febuxostat (generic Uloric) is an antigout agent indicated for the chronic management of hyperuricemia in patients with gout who have an inadequate response to a maximally titrated dose of allopurinol, who are intolerant to allopurinol, or for whom treatment with allopurinol is not advisable.

Step Therapy programs are utilized to encourage the use of lower cost alternatives for certain therapeutic classes. This program requires a member to try allopurinol before providing coverage for febuxostat (generic Uloric).

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may apply

P&T Revision Date:	02/19/2021 ; 09/15/2021 ; 05/20/2022 ; 05/20/2022 ; 06/21/2023 ; 8/18/2023

1. Criteria

Product Name: generic asenapine [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Step Therapy

Approval Criteria

1 - History of failure, contraindication, or intolerance to TWO of the following (list reason for therapeutic failure, contraindication, or intolerance):

- olanzapine oral or orally disintegrating tablets
- quetiapine oral immediate release or extended-release tablets
- risperidone oral solution, oral disintegrating, or tablets
- ziprasidone oral capsules
- aripiprazole immediate release tablets

OR

2 - Treatment was initiated at a recent behavioral inpatient admission and the member is currently stable on therapy

OR

3 - The member is new to the plan (as evidenced by coverage effective date of less than or equal to 120 days) and currently stabilized on therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may apply.

Product Name: generic asenapine [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Step Therapy

Approval Criteria

1 - Documentation of positive clinical response

y.		[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
----	--	--

2. Background

Benefit/Coverage/Program Information

Background:

Asenapine (generic Saphris) is an atypical antipsychotic indicated for the treatment of Schizophrenia in adults; and Bipolar I disorder as acute monotherapy treatment of manic or mixed episodes in adults and pediatric patients 10 to 17 years of age, adjunctive treatment to lithium or valproate in adults, and maintenance monotherapy treatment in adults. [1,2]

Step Therapy programs are utilized to encourage the use of lower cost alternatives for certain therapeutic classes. This program requires a member to try generic atypical antipsychotic alternative(s) prior to receiving coverage for asenapine (generic Saphris).

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place

Product Name: Vemlidy [a]		
Diagnosis	Treatment-Naive Chronic Hepatitis B Infection	
Approval Length	12 month(s)	
Guideline Type	Step Therapy	
Approval Criteria		
1 - Patient has a contraindication to entecavir therapy		
Notes	[a] State mandates may apply. Any federal regulatory requirements an	

d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
у.

Product Name: Vemlidy [a]		
Diagnosis	Treatment-Experienced Chronic Hepatitis B Infection	
Approval Length	12 month(s)	
Guideline Type	Step Therapy	

Approval Criteria

1 - Patient has a history of failure, intolerance or contraindication to entecavir therapy

OR

2 - Both of the following:

2.1 Patient is currently on tenofovir disoproxil fumarate 300mg therapy

AND

2.2 One of the following:

- Patient has an estimated glomerular filtration rate below 90 mL/minute
- Patient has a diagnosis of osteoporosis

OR

3 - Patient is currently on Vemlidy therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl y.

2. Background

Benefit/Coverage/Program Information

Background

Entecavir is a hepatitis B virus (HBV) nucleoside analogue reverse transcriptase inhibitor indicated for the treatment of chronic hepatitis B virus infection in adults and children at least 2 years of age with evidence of active viral replication and either evidence of persistent elevations in serum aminotransferases (ALT or AST) or histologically active disease. [1]

Vemlidy (tenofovir alafenamide) is an HBV nucleoside analogue reverse transcriptase inhibitor and is indicated for the treatment of chronic hepatitis B virus infection in adults and pediatric patients 12 years of age and older with compensated liver disease. [2]

Viread (tenofovir disoproxil fumarate) is an HBV nucleoside analogue reverse transcriptase inhibitor and is indicated for the treatment of chronic hepatitis B in adults and pediatric patients 2 years of age and older weighing at least 10 kg. [3]

Step Therapy programs are utilized to encourage the use of lower cost alternatives for certain therapeutic classes. This program requires a member to try entecavir oral tablets or tenofovir disoproxil fumarate 300mg before providing coverage for Vemlidy (tenofovir alafenamide).

Additional Clinical Rules:

- Supply limits may be in place
- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

1. Indications

Drug Name: Ketoprofen

Rheumatoid Arthritis and Osteoarthritis: Indicated for the management of the signs and symptoms of rheumatoid arthritis and osteoarthritis

Pain: Indicated for the management of pain

Primary Dysmenorrhea: Indicated for the treatment of primary dysmenorrhea

Drug Name: Ketoprofen Extended-Release (ER)

Rheumatoid Arthritis and Osteoarthritis: Indicated for the management of the signs and symptoms of rheumatoid arthritis and osteoarthritis

Product Name: Generic ketoprofen, generic ketoprofen extended-release [a]	
Approval Length	12 month(s)
Guideline Type	Step Therapy
products: diclofenac IR or flurbiprofen ibuprofen (preso naproxen (preso	ription strength)
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Ketoprofen is a non-steroidal anti-inflammatory (NSAID) for the management of the signs and symptoms of rheumatoid arthritis and osteoarthritis, for the management of pain, and for treatment of primary dysmenorrhea. Ketoprofen extended-release is indicated for the management of the signs and symptoms of rheumatoid arthritis and osteoarthritis. Extended-release ketoprofen is not indicated for acute pain.

Step Therapy programs are utilized to encourage the use of lower cost alternatives for certain therapeutic classes. This program requires a member to try three alternative solid oral NSAIDs – diclofenac, flurbiprofen, prescription strength ibuprofen, or prescription strength naproxen – prior to receiving coverage for ketoprofen or ketoprofen extended-release.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may also be in place.

Benefit/Coverage/Program Information

Background:

Darifenacin is indicated for the treatment of an overactive bladder (OAB) with symptoms of urinary frequency, urinary urgency, or urge-related urinary incontinence.

Oxybutynin is indicated for the treatment of OAB with symptoms of urinary frequency, urinary urgency, or urinary incontinence due to involuntary detrusor muscle contractions (includes neurogenic bladder), and for the relief of symptoms of bladder instability associated with voiding in patients with uninhibited neurogenic or reflex neurogenic bladder (i.e., urgency, frequency, urinary leakage, urge incontinence, dysuria).

Step Therapy programs are utilized to encourage the use of lower cost alternatives for certain therapeutic classes. This program requires a member to try oxybutynin (generic Ditropan) prior to receiving coverage for darifenacin.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Step Therapy Sedative Hypnotic Agents

Prior Authorization Guideline

Guideline ID	GL-139061
Guideline Name	Step Therapy Sedative Hypnotic Agents
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	3/1/2024
P&T Approval Date:	11/13/2020
P&T Revision Date:	09/15/2021 ; 05/20/2022 ; 07/19/2023 ; 1/17/2024

1. Criteria

Product Name: Belsomra [a]	
Approval Length	12 month(s)
Guideline Type	Step Therapy

Approval Criteria

1 - History of trial and failure, contraindication, or intolerance to TWO of the following sedativehypnotic alternatives:

- Zolpidem immediate release tablets (generic Ambien)
- Zaleplon (generic Sonata)

Eszopiclone (generic Lunesta)	
Notes	[a]State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply

Product Name: Ramelteon (generic Rozerem) [a]	
Approval Length	12 month(s)
Guideline Type	Step Therapy

1 - ONE of the following criteria:

1.1 History of trial and failure, contraindication, or intolerance to TWO of the following sedative-hypnotic alternatives:

- Zolpidem immediate release oral tablets (generic Ambien)
- Zaleplon (generic Sonata)
- Eszopiclone (generic Lunesta)

OR

1.2 History of or potential for a substance abuse disorder

Notes	[a]State mandates may apply. Any federal regulatory requirements and
	the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply

2. Background

Benefit/Coverage/Program Information

Background:

Ramelteon (generic Rozerem) is a sedative hypnotic agent indicated for the treatment of sleep-onset insomnia. Belsomra (suvorexant) is a sedative hypnotic agent indicated for

treatment of both sleep-onset and sleep-maintenance insomnia.

Step Therapy programs are utilized to encourage the use of lower cost alternatives for certain therapeutic classes. This program requires a member to try alternative sedative hypnotic agents prior to receiving coverage for Ramelteon (generic Rozerem) or Belsomra (suvorexant).

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

P&T Approval Date:	11/13/2020
P&T Revision Date:	03/17/2021 ; 09/15/2021 ; 11/18/2022

1. Criteria

Product Name: Zolmitriptan nasal spray (generic Zomig nasal spray) [a]	
Approval Length	12 month(s)
Guideline Type	Step Therapy

Approval Criteria

- **1** Both of the following criteria:
- **1.1** History of failure, contraindication, or intolerance to two of the following oral triptans:
 - almotriptan (generic Axert)

- eletriptan (generic Relpax)
- naratriptan (generic Amerge)
- rizatriptan (generic Maxalt/Maxalt MLT)
- sumatriptan (generic Imitrex)
- zolmitriptan (generic Zomig) tablets or ODT

AND

1.2 History of failure, contraindication, or intolerance to sumatriptan nasal spray (generic Imitrex nasal spray)

	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
--	---

2. Background

Benefit/Coverage/Program Information

Background:

Zolmitriptan nasal spray (generic Zomig nasal spray) is indicated for the acute treatment of migraine with or without aura in adults and pediatric patients 12 years of age and older. Zolmitriptan nasal spray (generic Zomig nasal spray) is not intended for the prophylactic therapy of migraine attacks or for the treatment of cluster headache.

Step Therapy programs are utilized to encourage the use of lower cost alternatives for certain therapeutic classes. This program requires a member to try two oral generic triptans and sumatriptan nasal spray before providing coverage for Zolmitriptan nasal spray (generic Zomig nasal spray).

Additional Clinical Programs:

Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

1. Criteria

Product Name: Fetzima [a]	
Approval Length	12 month(s)
Guideline Type	Step Therapy

Approval Criteria

1 - ONE of the following:

1.1 History of failure, contraindication, or intolerance to at least THREE of the following generic formulations (document drug and date of trials):

 citalopram duloxetine escitalopram fluoxetine fluvoxamine imn paroxetine sertraline tablets venlafaxine IR ta venlafaxine ER (s ablets
	OR
	dication was initiated during a recent inpatient mental health member is stabilized on the requested medication
	OR
	the plan and currently stabilized on the requested medication (as effective date of less than or equal to 120 days)
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

2. Background

Benefit/Coverage/Program Information

Background:

Fetzima (levomilnacipran) is a serotonin norepinephrine reuptake inhibitor [SNRI] indicated for major depressive disorder [MDD].

Step Therapy programs are utilized to encourage the use of lower cost alternatives for certain therapeutic classes. This program requires a trial of at least three step one medications before providing coverage for Fetzima.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may also be in place.

potency class (Class 2) Apexicon E create betamethasone betamethasone desoximetasone desoximetasone diflorasone diace 	am 0.05% dipropionate ointment 0.05% dipropionate augmented cream 0.05%
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

2. Background

Benefit/Coverage/Program Information

Background:

Topical steroids are commonly prescribed for the treatment of rash, eczema, and dermatitis. Topical steroids have anti-inflammatory properties, and are classified into different potency classes based on their vasoconstriction abilities. A vasoconstriction bioassay provides potency measurements that correlate with clinical potency. There are numerous topical steroid products.

Class 1: Super Potent	Class 5: Lower Mid-Strength
Class 2: Potent	Class 6: Mild
Class 3: Upper Mid-Strength	Class 7: Least Potent
Class 4: Mid-Strength	

Step Therapy programs are utilized to encourage the use of lower cost alternatives for certain

therapeutic classes. This program requires a member to try one or two lower cost alternative topical steroids before providing coverage for higher cost topical steroids.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Stivarga

Prior Authorization Guideline

Guideline ID	GL-133069
Guideline Name	Stivarga
Formulary	UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	06/16/2021 ; 09/15/2021 ; 06/15/2022 ; 10/19/2022 ; 06/21/2023 ; 8/18/2023

1. Indications

Drug Name: Stivarga (regorafenib)

Colorectal cancer (CRC) Indicated for the treatment of patients with metastatic colorectal cancer (CRC) who have been previously treated with fluoropyrimidine-, oxaliplatin- and irinotecan-based chemotherapy, an anti-VEGF therapy, and, if RAS wild type, an anti-EGFR therapy.

Gastrointestinal stromal tumor (GIST) Indicated for the treatment of locally advanced, unresectable or metastatic gastrointestinal stromal tumor (GIST) who have been previously treated with imatinib mesylate (Gleevec) and sunitinib malate (generic Sutent).

Hepatocellular carcinoma (HCC) Indicated for the treatment of patients with hepatocellular carcinoma (HCC) who have been previously treated with sorafenib tosylate (generic Nexavar). [1]

Other Uses: The National Comprehensive Cancer Network (NCCN) also recommends use of Stivarga in colon cancer, rectal cancer, soft tissue sarcomas, hepatobiliary cancers,

osteosarcoma, SDH-deficient GIST with gross residual disease (R2 resection), and glioblastoma. [2]

2. Criteria

Product Name: Stivarga	a [a]
Diagnosis	Colorectal Cancer (CRC)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
Approval Criteria 1 - Diagnosis of advanc	ed or metastatic colorectal cancer
	AND
 2 - History of failure, contraindication, or intolerance to treatment with all of the following:^ Oxaliplatin-based chemotherapy Irinotecan-based chemotherapy Fluoropyrimidine-based chemotherapy Anti-VEGF therapy-based chemotherapy 	
	AND
3 - One of the following	:
3.1 Tumor is RAS mutant-type	
	OR
3.2 Both of the following	ng:

- Tumor is RAS wild-type
- History of failure, contraindication, or intolerance to anti-EGFR therapy

Notes	 [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. 1. Indications

Drug Name: Strensiq (asfotase alfa)

Perinatal/infantile and juvenile-onset hypophosphatasia (HPP) Indicated for the treatment of patients with perinatal/infantile and juvenile-onset hypophosphatasia (HPP).

2. Criteria

Product Name: Strensic	me: Strensiq [a]	
Approval Length	6 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	

1 - Diagnosis of perinatal/infantile or juvenile-onset hypophosphatasia based on ALL of the following:

1.1 ONE of the following:

- Onset of clinical signs and symptoms of hypophosphatasia prior to age 18 years (e.g., respiratory insufficiency, vitamin B6 responsive seizures, hypotonia, failure to thrive, delayed walking, waddling gait, dental abnormalities, low trauma fractures)
- Radiographic evidence supporting the diagnosis of hypophosphatasia at the age of onset prior to age 18 years (e.g., craniosynostosis, infantile rickets, non-traumatic fractures)

AND

1.2 ONE of the following:

1.2.1 BOTH of the following:

- Patient has low level activity of serum alkaline phosphatase (ALP) evidenced by an ALP level below the age and gender-adjusted normal range
- Patient has an elevated level of tissue non-specific alkaline phosphatase (TNSALP) substrate (e.g., serum pyridoxal 5'-phosphate [PLP] level, serum or urine phosphoethanolamine [PEA] level, urinary inorganic pyrophosphate [PPi level])

OR

1.2.2 Confirmation of tissue-nonspecific alkaline phosphatase (TNSALP) gene mutation by ALPL genomic DNA testing*

AND

2 - Prescribed by ONE of the following:

- Endocrinologist
- A specialist experienced in the treatment of metabolic bone disorders

AND

3 - ONE of the following:

3.1 BOTH of the following:

- Diagnosis of perinatal/infantile-onset hypophosphatasia
- Request does not exceed a maximum supply limit of 9 mg/kg/week

OR

3.2 BOTH of the following:

- Diagnosis of juvenile-onset hypophosphatasia
- Request does not exceed a maximum supply limit of 6 mg/kg/week

AND

4 - ONE of the following:

4.1 Patient is prescribed Strensiq 18 mg/0.45 mL, Strensiq 28 mg/0.7 mL, or Strensiq 40 mg/mL vials

OR

4.2 Both of the following:

- Patient is prescribed Strensiq 80 mg/0.8 mL vial
- Patient's weight is greater than or equal to 40 kg

N	otes	 *Results of prior genetic testing can be submitted as confirmation of dia gnosis of HPP, however please note that the provider should confirm c overage status of any new genetic testing under the patient's UnitedHe althcare plan prior to ordering. [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

	ibed Strensiq 80 mg/0.8 mL vials is greater than or equal to 40 kg
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Strensiq is a tissue nonspecific alkaline phosphatase indicated for the treatment of patients with perinatal/infantile and juvenile-onset hypophosphatasia (HPP). [1]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Stromectol

Prior Authorization Guideline

Guideline ID	GL-139070
Guideline Name	Stromectol
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	3/1/2024
P&T Approval Date:	9/22/2021
P&T Revision Date:	08/19/2022 ; 12/14/2022 ; 1/17/2024

1. Indications

Drug Name: Stromectol (ivermectin) tablets

Parasitic Infections Indicated for the treatment of parasitic infections including strongyloidiasis and onchocerciasis. Ivermectin may also be used for other compendia supported parasitic infections including but not limited to scabies, hookworm disease, and ascariasis.

2. Criteria

Product Name: Brand Stromectol, generic ivermectin tablets [a]	
Approval Length	1 Month
Guideline Type	Prior Authorization

 Pediculosis Strongyloidia Ascariasis Scabies (incl 	sis due to nematode parasite Isis uding crusted scabies) arva migrans (hook worm disease)
Notes	*Requests for COVID treatment and/or prophylaxis are to be denied. [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Stromectol (ivermectin) is indicated for the treatment of parasitic infections including strongyloidiasis and onchocerciasis. It may also be used for other compendia supported parasitic infections including but not limited to scabies, hookworm disease, and ascariasis. Most infections are treated with a single weight-based dose. The National Institutes of Health's (NIH) COVID-19 Treatment Guidelines recommends against the use of Stromectol (ivermectin) for treatment of COVID-19[1].

Additional Clinical Rules

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class
- Supply limits may be in place

Sucraid

Prior Authorization Guideline

Guideline ID	GL-138554
Guideline Name	Sucraid
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	3/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 01/19/2022 ; 01/18/2023 ; 1/17/2024

1. Indications

Drug Name: Sucraid (sacrosidase)
Sucrase deficiency Indicated for the treatment of genetically determined sucrase deficiency, which is part of congenital sucrase-isomaltase deficiency (CSID). [1]

2. Criteria

Product Name: Sucraid	
Approval Length	3 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria
1 - Diagnosis of congenital sucrase-isomaltase deficiency (CSID)
AND
2 - Diagnosis has been confirmed by ONE of the following:
2.1 Endoscopic biopsy of the small bowel indicating ALL of the following:
2.1.1 Normal small bowel morphology
AND
2.1.2 Absent or markedly reduced sucrase activity
AND
2.1.3 Isomaltase activity varying from 0 to full activity
AND
2.1.4 Reduced maltase activity
AND
2.1.5 ONE of the following:
2.1.5.1 Normal lactase activity
OR
2.1.5.2 BOTH of the following:

- Reduced lactase
- Sucrase:lactase ratio of less than 1.0

OR

2.2 Molecular genetic testing of the sucrase-isomaltase (SI) gene indicating a pathogenic isomaltase gene variant

AND

3 - Prescribed by or in consultation with a gastroenterologist or rare disease specialist

AND

4 - Will be used with a sucrose-free, low starch diet

Product Name: Sucraid	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Documentation of positive clinical response Sucraid therapy [e.g., reduced symptoms (e.g., abdominal pain, bloating, gas, vomiting), reduced number of stools per day, reduced number of symptomatic days]

AND

2 - Prescribed by or in consultation with a gastroenterologist or rare disease specialist

3 - Will be used with a sucrose-free, low starch diet

3. Background

Benefit/Coverage/Program Information

Background:

Sucraid (sacrosidase) is an oral enzyme replacement therapy indicated for the treatment of genetically determined sucrase deficiency, which is part of congenital sucrase-isomaltase deficiency (CSID).[1]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Sunosi

Prior Authorization Guideline

Guideline ID	GL-136224
Guideline Name	Sunosi
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	2/1/2024
P&T Approval Date:	2/17/2023
P&T Revision Date:	08/18/2023 ; 11/17/2023

1. Indications

Drug Name: Sunosi (solriamfetol)

Narcolepsy or Obstructive Sleep Apnea Indicated to improve wakefulness in adult patients with excessive daytime sleepiness associated with narcolepsy or obstructive sleep apnea (OSA).

2. Criteria

Product Name: Sunosi [a]	
Diagnosis	Narcolepsy
Approval Length	6 month(s)
Therapy Stage	Initial Authorization

Guideline Type	Prior Authorization
Approval Critoria	
Approval Criteria	
	olepsy as confirmed by sleep study (unless the prescriber provides g that a sleep study would not be feasible)
	AND
	essive daytime sleepiness (including but not limited to daily periods of sleep or daytime lapses into sleep) are present
	AND
3 - History of failure,	contraindication, or intolerance of BOTH the following:
3.1 One of the follow	ving:
	e based stimulant (e.g., amphetamine, dextroamphetamine) ate based stimulant
	AND
3.2 One of the follow	ving:
	neric Provigil) generic Nuvigil)
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

Product Name: Sunosi [a]	
Diagnosis	Narcolepsy
Approval Length	12 month(s)
Therapy Stage	Reauthorization

Guideline Type	Prior Authorization

1 - Documentation demonstrating reduction in symptoms of excessive daytime sleepiness associated with therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Sunosi [a]	
Diagnosis	Obstructive Sleep Apnea
Approval Length	6 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of obstructive sleep apnea defined by one of the following:

1.1 Fifteen or more obstructive respiratory events per hour of sleep confirmed by a sleep study (unless the prescriber provides justification confirming that a sleep study would not be feasible)

OR

1.2 Both of the following:

1.2.1 Five or more obstructive respiratory events per hour of sleep confirmed by a sleep study (unless the prescriber provides justification confirming that a sleep study would not be feasible)

AND

1.2.2 One or more of the following sign/symptoms are present:

Daytime sleepiness • • Nonrestorative sleep Fatique • Insomnia • Waking up with breath holding, gasping, or choking • Habitual snoring noted by bed partner or other observer • • Observed apnea AND 2 - Both of the following: **2.1** Standard treatments for the underlying airway obstruction (e.g., continuous positive airway pressure [CPAP], bi-level positive airway pressure [BiPAP]) have been used for one month or longer AND **2.2** Patient is fully compliant with ongoing treatment(s) for the underlying airway obstruction AND **3** - History of failure, contraindication, or intolerance to one of the following: armodafinil (generic Nuvigil) • modafinil (generic Provigil) • Notes [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl

Product Name: Sunosi [a]	
Diagnosis	Obstructive Sleep Apnea
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

у.

1 - Documentation demonstrating reduction in symptoms of excessive daytime sleepiness associated with therapy

AND

2 - Patient continues to be fully compliant with ongoing treatment(s) for the underlying airway obstruction (e.g., CPAP, BiPAP)

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
criteria. Other policies and utilization management programs may appl

3. Background

Benefit/Coverage/Program Information

Background:

Sunosi is a dopamine and norepinephrine reuptake inhibitor (DNRI) indicated to improve wakefulness in adult patients with excessive daytime sleepiness associated with narcolepsy or obstructive sleep apnea (OSA).

Limitations of Use: Sunosi is not indicated to treat the underlying airway obstruction in OSA. Ensure that the underlying airway obstruction is treated (e.g., with continuous positive airway pressure (CPAP)) for at least one month prior to initiating Sunosi for excessive daytime sleepiness. Modalities to treat the underlying airway obstruction should be continued during treatment with Sunosi. Sunosi is not a substitute for these modalities.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Sutent

Prior Authorization Guideline

Guideline ID	GL-143847
Guideline Name	Sutent
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	03/17/2021 ; 09/15/2021 ; 03/16/2022 ; 08/19/2022 ; 03/15/2023 ; 3/20/2024

1. Indications

Drug Name: Sutent (sunitinib malate)

Gastrointestinal stromal tumor (GIST) Indicated for the treatment of gastrointestinal stromal tumor (GIST) after disease progression on or intolerance to Gleevec (imatinib mesylate).

Renal cell carcinoma (RCC) Indicated for the treatment of advanced renal cell carcinoma (RCC).

Recurrent RCC Indicated for the treatment of adjuvant treatment of adult patients at high risk of recurrent RCC following nephrectomy.

Pancreatic neuroendocrine tumors (pNET) Indicated for the treatment of progressive, welldifferentiated pancreatic neuroendocrine tumors (pNET) in patients with unresectable locally advanced or metastatic disease.

<u>Off Label Uses:</u> Other Uses: The National Cancer Comprehensive Network (NCCN) recommends use of Sutent for medullary, follicular, oncocytic, or papillary thyroid carcinoma;

chordoma; meningiomas; thymic carcinoma; and treatment of myeloid/lymphoid neoplasms with eosinophilia and FMS-like tyrosine kinase 3 (FLT3) rearrangement. NCCN also approves the use of Sutent for other soft tissue sarcomas: alveolar soft part sarcoma (ASPS), angiosarcoma, and solitary fibrous tumor/ hemangiopericytoma.

2. Criteria

Product Name: Brand S	Sutent, generic sunitinib [a]	
Diagnosis	Gastrointestinal Stromal Tumor (GIST)	
Approval Length	12 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	
Approval Criteria		
1 - Diagnosis of gastroi	ntestinal stromal tumor (GIST)	
	AND	
 2 - ONE of the following: 2.1 History of disease progression on, contraindication, or intolerance to one of the following^: 		
 imatinib (generic Gleevec) Stivarga (regorafenib) Standard dose Qinlock (ripretinib) 		
OR		
2.2 SDH-deficient GIST		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	
	^ Tried/failed alternative(s) are supported by FDA labeling and/or NCC N guidelines	

Product Name: Brand Sutent, generic sunitinib [a]	
Diagnosis	Gastrointestinal Stromal Tumor (GIST)
Approval Length	12 month(s)

Benefit/Coverage/Program Information

Background:

Sutent (sunitinib malate) is a tyrosine kinase inhibitor indicated for the treatment of gastrointestinal stromal tumor (GIST) after disease progression on or intolerance to Gleevec (imatinib mesylate); treatment of advanced renal cell carcinoma (RCC); adjuvant treatment of adult patients at high risk of recurrent RCC following nephrectomy; and treatment of progressive, well-differentiated pancreatic neuroendocrine tumors (pNET) in patients with unresectable locally advanced or metastatic disease.

The National Cancer Comprehensive Network (NCCN) recommends use of Sutent for medullary, follicular, oncocytic, or papillary thyroid carcinoma; chordoma; meningiomas; thymic carcinoma; and treatment of myeloid/lymphoid neoplasms with eosinophilia and FMS-like tyrosine kinase 3 (FLT3) rearrangement. [2] NCCN also approves the use of Sutent for other soft tissue sarcomas: alveolar soft part sarcoma (ASPS), angiosarcoma, and solitary fibrous tumor/hemangiopericytoma.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Synribo

Prior Authorization Guideline

Guideline ID	GL-136225
Guideline Name	Synribo
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 10/20/2021 ; 08/19/2022 ; 11/18/2022 ; 11/17/2023

1. Indications

Drug Name: Synribo

Chronic myeloid leukemia Indicated for the treatment of adult patients with chronic or accelerated phase chronic myeloid leukemia (CML) with resistance and/or intolerance to two or more tyrosine kinase inhibitors (TKI). [1]

Other Uses The National Cancer Comprehensive Network (NCCN) also recommends the use of Synribo for patients with advanced phase CML with progression to accelerated phase and for patients with relapsed or refractory disease after hematopoietic stem cell transplantation. [2]

2. Criteria

Product Name: Synribo [a]

Diagnosis	Chronic myeloid leukemia		
Approval Length	12 month(s)		
Therapy Stage	Initial Authorization		
Guideline Type	Prior Authorization		
Approval Criteria			
	1 - Patient has a history of resistance and/or intolerance to two or more tyrosine kinase inhibitors [e.g., Gleevec (imatinib), Sprycel (dasatinib), Tasigna (nilotinib), Bosulif (bosutinib), Iclusig (ponatinib)] [^]		
	AND		
2 - One of the following:			
2.1 Diagnosis of chronic or accelerated phase chronic myelogenous leukemia			
	OR		
2.2 Diagnosis of advanced phase chronic myelogenous leukemia with progression to accelerated phase			
OR			
2.3 Patient has relapsed disease after hematopoietic stem cell transplant for chronic myeloid leukemia			
Notes	 [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y. ^ Tried/failed alternative(s) are supported by FDA labeling and/or NCC N guidelines 		

Product Name: Synribo [a]	
Diagnosis	Chronic myeloid leukemia
Approval Length	12 month(s)

Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on Synribo therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an

3. Background

Benefit/Coverage/Program Information

Background:

Syprine and Clovique (trientine hydrochloride) are indicated for the treatment of patients with

Wilson's disease who are intolerant of penicillamine. Trientine hydrochloride and penicillamine cannot be considered interchangeable. Trientine hydrochloride should be used when continued treatment with penicillamine is no longer possible because of intolerable or life endangering side effects. [1-4]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Tafinlar

Prior Authorization Guideline

Guideline ID	GL-126681
Guideline Name	Tafinlar
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	8/1/2023
P&T Approval Date:	9/15/2021
P&T Revision Date:	03/16/2022 ; 08/19/2022 ; 05/25/2023 ; 6/21/2023

1. Indications

Drug Name: Tafinlar

Melanoma Indicated as a single agent for the treatment of patients with unresectable or metastatic melanoma with BRAF V600E mutation. Tafinlar is also indicated, in combination with trametinib, for the treatment of patients with unresectable or metastatic melanoma with BRAF V600E or V600K mutations, and the adjuvant treatment of patients with melanoma with BRAF V600E or V600K mutations and involvement of lymph node(s), following complete resection.

Non-small cell lung cancer Indicated, in combination with trametinib, for the treatment of patients with metastatic non-small cell lung cancer (NSCLC) with BRAF V600E mutation.

Anaplastic thyroid cancer Indicated, in combination with trametinib, for the treatment of patients with locally advanced or metastatic anaplastic thyroid cancer (ATC) with BRAF V600E mutation and with no satisfactory locoregional treatment options.

Solid Tumors Indicated for the treatment of adult and pediatric patients 6 years of age and older with unresectable or metastatic solid tumors with BRAF V600E mutation who have progressed following prior treatment and have no satisfactory alternative treatment options.

Low-Grade Glioma Indicated, in combination with Mekinist, for the treatment of pediatric patients 1 year of age and older with low-grade glioma (LGG) with a BRAF V600E mutation who require systemic therapy.

Other Uses: The National Cancer Comprehensive Network (NCCN) also approves the use of Tafinlar in combination with Mekinist for the adjuvant treatment of ATC with BRAF V600E mutations following resection; and as monotherapy for the treatment of follicular, oncocytic, and papillary thyroid carcinomas with a BRAF mutation; in combination with Mekinist for the treatment for recurrent, advanced, or metastatic NSCLC in patients with BRAF V600E mutation, or as single agent if the combination of Tafinlar and Mekinist is not tolerated; in the treatment of glioblastomas and other high-grade gliomas; in the treatment of central nervous system (CNS) cancer in patients with melanoma; ovarian cancer/fallopian tube cancer/primary peritoneal cancer with persistent disease or recurrence in BRAF V600E positive tumors; pancreatic and ampullary adenocarcinomas if BRAF V600E mutation positive; and certain BRAF V600E mutation positive histiocytic neoplasms and hepatobiliary cancers.

3. Background

Benefit/Coverage/Program Information

Background:

Tafinlar (dabrafenib) is a kinase inhibitor indicated as a single agent for the treatment of patients with unresectable or metastatic melanoma with BRAF V600E mutation as detected by an FDA-approved test. Tafinlar is not indicated for treatment of patients with wild-type BRAF solid tumors [1]

Tafinlar, in combination with Mekinist (trametinib), is indicated for the treatment of patients with unresectable or metastatic melanoma with BRAF V600E or BRAF V600K mutations as detected by an FDA-approved test and for the adjuvant treatment of melanoma with BRAF V600E or BRAF V600K mutations, as detected by an FDA approved test, involving the lymph node(s), following complete resection. Tafinlar, in combination with Mekinist, is indicated for the treatment of patients with metastatic NSCLC with BRAF V600E mutation as detected by an FDA-approved test, for the treatment of locally advanced or metastatic anaplastic thyroid cancer (ATC) with BRAF V600E mutation and with no satisfactory locoregional treatment options, and for the treatment of adult and pediatric patients 6 years of age and older with unresectable or metastatic solid tumors with BRAF V600E mutation who have progressed following prior treatment and have no satisfactory alternative treatment options. [1] The latter indication is approved under accelerated approval based on overall response rate and duration of response. Continued approval for this indication may be contingent upon verification and description of clinical benefit in a confirmatory trial(s). Tafinlar, in combination with Mekinist, is also indicated for the treatment of pediatric patients 1 year of age and older with low-grade glioma (LGG) with a BRAF V600E mutation who require systemic therapy.

The National Comprehensive Cancer Network (NCCN) also recommends use of Tafinlar in combination with Mekinist for the adjuvant treatment of ATC with BRAF V600E mutations following resection; and as monotherapy for the treatment of follicular oncocytic, and papillary thyroid carcinomas with a BRAF mutation; in combination with Mekinist for the treatment for recurrent, advanced, or metastatic NSCLC in patients with BRAF V600E mutation, or as single agent if the combination of Tafinlar and Mekinist is not tolerated; in the treatment of glioblastomas and other high-grade gliomas; in the treatment of central nervous system (CNS)

cancer in patients with melanoma; ovarian cancer/fallopian tube cancer/primary peritoneal cancer with persistent disease or recurrence in BRAF V600E positive tumors; pancreatic and ampullary adenocarcinomas if BRAF V600E mutation positive; and certain BRAF V600E mutation positive histiocytic neoplasms and hepatobiliary cancers. [2]

Information on FDA-approved tests for the detection of BRAF V600 mutations in melanoma may be found at: <u>http://www.fda.gov/CompanionDiagnostics</u>

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

4. References

- 1. Tafinlar [package insert]. Research Triangle Park, NC: GlaxoSmithKline; March 2023.
- 2. The NCCN Drugs and Biologics Compendium (NCCN Compendium[™]). Available at www.nccn.org. Accessed April 10, 2023.

5. Revision History

Date	Notes
6/20/2023	Updated background and coverage criteria to include new indication fo r solid tumors with BRAF V600E mutation per package insert.
6/20/2023	Updated background and coverage criteria with indication for pediatric patients with low-grade glioma per prescribing information. Per NCCN recommendations: updated coverage criteria for CNS cancers, thyroid cancer; added coverage criteria for ovarian cancer/fallopian tube canc er/primary peritoneal cancer, pancreatic cancer, and ampullary cancer. Updated references.
6/20/2023	Added additional Tafinlar GPIs, no updates to criteria

Takhzyro

Prior Authorization Guideline

Guideline ID	GL-143850
Guideline Name	Takhzyro
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	8/18/2023
P&T Revision Date:	3/20/2024

1. Indications

Drug Name: Takhzyro

Hereditary angioedema (HAE) Takhzyro is a plasma kallikrein inhibitor (monoclonal antibody) indicated for prophylaxis to prevent attacks of hereditary angioedema (HAE) in patients 2 years and older.

2. Criteria

Product Name: Takhzyro [a]	
Approval Length	^See Notes
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

1 - Diagnosis of hereditary angioedema (HAE) as confirmed by ONE of the following:

1.1 C1 inhibitor (C1-INH) deficiency or dysfunction (Type I or II HAE) as documented by ONE of the following (per laboratory standard):

- C1-INH antigenic level below the lower limit of normal
- C1-INH functional level below the lower limit of normal

OR

1.2 HAE with normal C1 inhibitor levels and ONE of the following:

- Confirmed presence of variant(s) in the gene(s) for factor XII, angiopoietin-1, plasminogen-1, kininogen-1, myoferlin, and heparan sulfate-glucosamine 3-O-sulfotransferase 6
- Recurring angioedema attacks that are refractory to high-dose antihistamines with confirmed family history of angioedema
- Recurring angioedema attacks that are refractory to high-dose antihistamines with unknown background de-novo mutation(s) (i.e., no family history) (HAE-unknown)

AND

2 - BOTH of the following:

- For prophylaxis against HAE attacks
- Not used in combination with other products indicated for prophylaxis against HAE attacks (e.g., Cinryze, Haegarda, Orladeyo)

AND

3 - BOTH of the following:

- Prescriber attests that patient has experienced attacks of a severity and/or frequency such that they would clinically benefit from prophylactic therapy with Takhzyro
- Documentation of baseline HAE attack rate is greater than or equal to one attack per 4 weeks

AND

4 - Submission of medical records documenting a history of failure, contraindication, or intolerance to Haegarda (C1 esterase inhibitor, human)

AND

5 - Prescribed by ONE of the following:

- Immunologist
- Allergist

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
	 ^Approval durations: 1) Adult and pediatric patients 12 years of age and older: Authorization of Takhzyro 300mg given every 2 weeks will be issued for 8 months. 2) Pediatric patients 6 to less than 12 years of age: Authorization of Ta khzyro 150 mg given every 2 weeks will be issued for 8 months. 3) Pediatric patients less than 6 years of age: Authorization of Takhzyr o 150 mg given every 4 weeks will be issued for 12 months.

Product Name: Takhzyro [a]	
Approval Length	^See Notes
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

Approval Criteria

1 - Documentation of positive clinical response while on Takhzyro therapy

AND

2 - Reduction in the utilization of on-demand therapies used for acute attacks (e.g., Berinert, Ruconest, Firazyr, Kalbitor) as determined by claims information, while on Takhzyro therapy

AND	
3 - Prescribed by ONE of the following:	
ImmunologistAllergist	
AND	
4 - ALL of the following:	
 For prophylaxis against HAE attacks Not used in combination with other products indicated for prophylaxis against HAE attacks (e.g., Cinryze, Haegarda, Orladeyo) 	
AND	
5 - ONE of the following:	
5.1 Patient is less than 6 years of age, and the request is no more than Takhzyro 150 mg given every 4 weeks (authorization for 12 months)	
OR	
5.2 Documentation of the number of acute HAE attacks in the previous 6 months, while on Takhzyro therapy, shows one of the following:	
5.2.1 Patient experienced no (zero) acute HAE attacks in the previous 6 months, and one of the following:	
5.2.1.1 Patient is 12 years of age or older, and the request is no more than Takhzyro 300 mg given every 4 weeks** (authorization for 12 months)	
OR	
5.2.1.2 Patient is 6 years to less than 12 years of age, and the request is no more than	

OR

5.2.2 Patient experienced one or more acute HAE attacks in the previous 6 months, and one of the following:

5.2.2.1 Patient is 12 years of age or older, and the request is no more than Takhzyro 300 mg given every 2 weeks (authorization for 6 months)

OR

5.2.2.2 Patient is 6 years to less than 12 years of age, and the request is no more than Takhzyro 150 mg given every 2 weeks (authorization for 6 months)

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
	 ^Approval durations: 1) Pediatric patients less than 6 years of age: Authorization of Takhzyr o 150 mg given every 4 weeks for 12 months. 2) No (zero) acute HAE attacks in the previous 6 months while on Takh zyro therapy: Adult and pediatric patients 12 years of age and older: Au thorization of Takhzyro 300mg given every 4 weeks for 12 months* 3) No (zero) acute HAE attacks in the previous 6 months while on Takh zyro therapy: Pediatric patients 6 to less than 12 years of age: Authoriz ation of Takhzyro 150 mg given every 4 weeks for 12 months* 4) One or more acute HAE attacks in the previous 6 months while on T akhzyro therapy: Adult and pediatric patients 12 years of age and older : Authorization of Takhzyro 300 mg given every 2 weeks for 6 months 5) One or more acute HAE attacks in the previous 6 months while on T akhzyro therapy: Pediatric patients 6 to less than 12 years of age and older : Authorization of Takhzyro 300 mg given every 2 weeks for 6 months 5) One or more acute HAE attacks in the previous 6 months while on T akhzyro therapy: Pediatric patients 6 to less than 12 years of age: Authoriz ation of Takhzyro 150 mg given every 2 weeks for 6 months **Patients experiencing unexpected breakthrough HAE attacks once s
	witched to every 4 week dosing will require additional review to allow fo r 2 weeks dosing.

3. Background

Benefit/Coverage/Program Information

Background:

Takhzyro is a plasma kallikrein inhibitor (monoclonal antibody) indicated for prophylaxis to prevent attacks of hereditary angioedema (HAE) in patients 2 years and older.¹

Additional Clinical Programs:

• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

• Supply limits may be in place.

Date	Notes
3/7/2024	Annual review. Update to diagnostic criteria for HAE with normal C1 in hibitor levels. Updated and simplified reauthorization criteria.

Talzenna

Prior Authorization Guideline

Guideline ID	GL-130273
Guideline Name	Talzenna
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	10/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 09/15/2021 ; 12/15/2021 ; 12/14/2022 ; 8/18/2023

1. Indications

Drug Name: Talzenna (talazoparib)

BRCA-mutated (gBRCAm) HER2-negative Locally Advanced or Metastatic Breast Cancer Indicated for the treatment of adult patients with deleterious or suspected deleterious germline BRCA mutated (gBRCAm), human epidermal growth factor receptor 2 (HER2)-negative locally advanced or metastatic breast cancer. Appropriate patients for therapy are selected based on an FDA-approved companion diagnostic for Talzenna. [1]

HRR Gene-mutated mCRPC Indicated in combination with Xtandi (enzalutamide) for the treatment of adult patients with homologous recombination repair (HRR) gene-mutated metastatic castration-resistant prostate cancer (mCRPC).

Other Uses: The National Comprehensive Cancer Network (NCCN) also supports use of Talzenna in any localized or metastatic breast cancer subtype associated with a germline BRCA1 or BRCA2 mutation.

2. Criteria

Tarceva

Prior Authorization Guideline

Guideline ID	GL-136226
Guideline Name	Tarceva
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 09/15/2021 ; 11/18/2022 ; 11/17/2023

1. Indications

Drug Name: Tarceva (erlotinib)

Locally advanced or metastatic non-small cell lung cancer (NSCLC) Indicated for the treatment of patients with metastatic non-small cell lung cancer (NSCLC) whose tumors have epidermal growth factor receptor (EGFR) exon 19 deletions or exon 21 (L858R) substitution mutations receiving first-line, maintenance, or second or greater line treatment after progression following at least one prior chemotherapy regimen. [1]

Locally advanced, unresectable, or metastatic pancreatic cancer indicated as first-line treatment for locally advanced, unresectable, or metastatic pancreatic cancer in combination with gemcitabine. [1]

Other Indications In addition, the National Cancer Comprehensive Network (NCCN) also recommends Tarceva for the treatments of chordoma, brain, leptomeningeal, and spine metastases originating from NSCLC, relapsed or stage IV kidney cancer with non-clear cell histology, NSCLC with known sensitizing EGFR mutations, and vulvar cancer. [2]

2. Criteria

3. Background

Benefit/Coverage/Program Information

Background:

Tarceva (erlotinib) is a kinase inhibitor indicated for the treatment of patients with metastatic non-small cell lung cancer (NSCLC) whose tumors have epidermal growth factor receptor (EGFR) exon 19 deletions or exon 21 (L858R) substitution mutations receiving first-line, maintenance, or second or greater line treatment after progression following at least one prior chemotherapy regimen. [1] Tarceva is also indicated as first-line treatment for locally advanced, unresectable, or metastatic pancreatic cancer in combination with gemcitabine. [1] In addition, the National Cancer Comprehensive Network (NCCN) also recommends Tarceva for the treatments of chordoma, brain, leptomeningeal, and spine metastases originating from NSCLC, relapsed or stage IV kidney cancer with non-clear cell histology, NSCLC with known sensitizing EGFR mutations, and vulvar cancer. [2]

The safety and efficacy of Tarceva has not been established in patients with NSCLC whose tumors have other EGFR mutations. Tarceva is not recommended for use in combination with platinum-based chemotherapy. [1]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

P&T Revision Date:	04/20/2022 ; 07/20/2022 ; 07/19/2023 ; 2/16/2024

1. Indications

Drug Name: Tarpeyo (budesonide delayed-release capsules)

Primary immunoglobulin A nephropathy (IgAN) Indicated to reduce the loss of kidney function in adults with primary immunoglobulin A nephropathy (IgAN) who are at risk for disease

2. Criteria

Product Name: Tarpeyo [a]	
Approval Length	9 month(s)
Guideline Type	Non Formulary

Approval Criteria
1 - Diagnosis of primary immunoglobulin A nephropathy (IgAN) confirmed by renal biopsy
AND
2 - Patient is at risk for disease progression
AND
3 - Used to reduce the loss of kidney function
AND
4 - Estimated glomerular filtration rate (eGFR) greater than or equal to 35 mL/min/1.73 m2
AND
5 - ONE of the following:
5.1 Patient is on a stabilized dose and receiving concomitant therapy with ONE of the following:
• maximally tolerated angiotensin converting enzyme (ACE) inhibitor (e.g., captopril,
 enalapril) maximally tolerated angiotensin II receptor blocker (ARB) (e.g., candesartan, valsartan)
OR
5.2 Patient has an allergy, contraindication, or intolerance to ACE inhibitors and ARBs
AND
6 - History of failure, contraindication or intolerance to a 30-day trial of a glucocorticoid (e.g., methylprednisolone, prednisone)

7 - Prescribed by or in a	AND
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Date	Notes

2/5/2024	Policy reviewed and approved for application to UnitedHealthcare Valu e & Balance Exchange for 4/2024 implementation.

Temodar

Prior Authorization Guideline

Guideline ID	GL-134178
Guideline Name	Temodar
Formulary	UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	12/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 10/20/2021 ; 10/19/2022 ; 10/18/2023

1. Indications

Drug Name: Temodar (temozolomide)

Glioblastoma multiforme Indicated for treatment in patients with newly diagnosed glioblastoma multiforme concomitantly with radiotherapy and then as maintenance treatment.

Refractory anaplastic astrocytoma Indicated for treatment of adult patients with refractory anaplastic astrocytoma who have experienced disease progression on a drug regimen containing nitrosourea and procarbazine.

2. Criteria

Product Name: Brand Temodar, generic temozolomide [a]	
Diagnosis	Central Nervous Systems (CNS) Tumor

Approval Length	12 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	
 Intracranial and World Health Or mutant Astrocyto WHO Grade 2 o Medulloblastoma Glioblastoma Limited or exten 	 Diagnosis of ONE of the following types of central nervous systems tumor: Intracranial and Spinal Ependymoma (Excluding Subependymoma) World Health Organization (WHO) Grade 2, 3, or 4 isocitrate dehydrogenase (IDH)-mutant Astrocytoma WHO Grade 2 or 3 IDH-mutant, 1p19q Codeleted Oligodendroglioma Medulloblastoma Circumscribed Glioma 	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

Product Name: Brand Temodar, generic temozolomide [a]	
Diagnosis	Central Nervous Systems (CNS) Tumor
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on therapy

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
y.

Product Name: Brand Temodar, generic temozolomide [a]

Diagnosis	Melanoma
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

- **1** Diagnosis of ONE of the following types of melanoma:
 - Metastatic or unresectable cutaneous melanoma
 - Metastatic or unresectable uveal melanoma
 - Mucosal melanoma

Product Name: Brand Temodar, generic temozolomide [a]	
Diagnosis	Melanoma
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Patient does not show evidence of progressive disease while on therapy

		[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

	y.

Product Name: Brand Temodar, generic temozolomide [a]	
Diagnosis	Bone Cancer
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

- **1** Diagnosis of ONE of the following:
 - Ewing's sarcoma family of tumors
 - Mesenchymal Chondrosarcoma

AND

2 - ONE of the following:

- Disease has relapsed
- Disease is progressive following primary treatment
- Used as second-line therapy for metastatic disease

AND

3 - Used in combination with Campostar (irinotecan)	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Brand Temodar, generic temozolomide [a]	
Diagnosis	Bone Cancer
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	у.

Product Name: Brand Temodar, generic temozolomide [a]	
Diagnosis	Uterine Sarcoma
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of recurrent or metastatic uterine sarcoma

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl y.

Product Name: Brand Temodar, generic temozolomide [a]

Diagnosis	Uterine Sarcoma
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an

	y.

Product Name: Brand Temodar, generic temozolomide [a]	
Diagnosis	Small Cell Lung Cancer (SCLC)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of small cell lung cancer (SCLC)

AND

2 - ONE of the following:

- Relapse following complete or partial response or stable disease with primary treatment
- Primary progressive disease

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
y.

Product Name: Brand Temodar, generic temozolomide [a]	
Diagnosis	Small Cell Lung Cancer (SCLC)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apple
	y.

Product Name: Brand Temodar, generic temozolomide [a]	
Diagnosis	NCCN Recommended Regimens
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Temodar will be approved for uses not outlined above if supported by The National Comprehensive Cancer Network (NCCN) Drugs and Biologics Compendium

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	у.

Product Name: Brand Temodar, generic temozolomide [a]	
Diagnosis	NCCN Recommended Regimens
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Documentation of positive clinical response to therapy

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
у.

3. Background

Benefit/Coverage/Program Information

Background:

Temozolomide (generic Temodar) is an alkylating drug indicated for treatment of adult patients with newly diagnosed glioblastoma concomitantly with radiotherapy and then as maintenance treatment.[1] It is also indicated for treatment of adult patients with refractory anaplastic astrocytoma who have experienced disease progression on a drug regimen containing nitrosourea and procarbazine. The National Comprehensive Cancer Network (NCCN) also recommends temozolomide (generic Temodar)for the treatment of CNS cancers - infiltrative supratentorial astrocytoma/oligodendroglioma or anaplastic glioma, intracranial and spinal ependymoma, limited and extensive brain metastases, glioblastoma, primary central nervous system lymphoma, medulloblastoma; cutaneous melanoma, uveal melanoma, and mucosal melanoma; pancreatic neuroendocrine disorders; primary cutaneous lymphomas – mycosis fungoides (MF) and Sézary syndrome (SS); soft tissue sarcoma (STS), Ewing's sarcoma; mesenchymal chondrosarcoma; lung neuroendocrine tumors;

pheochromocytoma/paraganglioma, carcinoid syndrome, neuroendocrine and adrenal tumors; uterine sarcoma; or small cell lung cancer (SCLC).[2]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Date	Notes
10/3/2023	Annual review. Updated coverage criteria and classifications for CNS T umor, Melanoma, and Neuroendocrine and Adrenal Tumors per NCCN guidelines. Updated references.

Testosterone

Prior Authorization Guideline

Guideline ID	GL-143212
Guideline Name	Testosterone
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	4/1/2024
P&T Approval Date:	1/20/2021
P&T Revision Date:	08/20/2021 ; 09/15/2021 ; 05/20/2022 ; 11/18/2022 ; 01/18/2023 ; 2/16/2024

1. Indications

Drug Name: Androgel and Pump 1%,1.62% (testosterone gel), Testim, Vogelxo and Pump, Androderm (testosterone patch), Natesto (testosterone nasal gel), Fortesta, Jatenzo (testosterone undecanoate capsule), Kyzatrex, Tlando, testosterone 30 mg/act soln, Xyosted

Hypogonadism (congenital or acquired) or hypogonadrotropic hypogonadism Testosterone products are approved by the Food and Drug Administration (FDA) for testosterone replacement therapy in males with primary hypogonadism (congenital or acquired) or hypogonadotropic hypogonadism (congenital or acquired). Primary hypogonadism originates from a deficiency or disorder in the testicles. Secondary hypogonadism indicates a problem in the hypothalamus or the pituitary gland. Testosterone use has been strongly linked to improvements in muscle mass, bone density, and libido.

2. Criteria

Product Name: generic testosterone 1.62%, generic testosterone pump 1.62%, Brand Androgel Pump, Brand Testim, generic testosterone 1%, Brand Vogelxo, generic testosterone pump 1%, Brand Vogelxo Pump, Androderm, Natesto, Brand Fortesta, generic testosterone 2%, Jatenzo, Kyzatrex, Tlando, Xyosted, testosterone 30 mg/act, Brand Androgel [a]

Diagnosis	Hypogonadism
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

- **1** ONE of the following:
- **1.1** Patient has a history of ONE of the following:
 - Bilateral orchiectomy
 - Panhypopituitarism
 - A genetic disorder known to cause hypogonadism (e.g., congenital anorchia, Klinefelter's syndrome)

OR

1.2 ALL of the following:

1.2.1 ONE of the following:

1.2.1.1 Two pre-treatment serum total testosterone levels less than 300 ng/dL (less than 10.4 nmol/L) or less than the reference range for the lab, taken at separate times (This may require treatment to be temporarily held. Document lab value and date for both levels)

OR

1.2.1.2 BOTH of the following:

- Patient has a condition that may cause altered sex-hormone binding globulin (SHBG) (e.g., thyroid disorder, HIV disease, liver disorder, diabetes, obesity)
- One pre-treatment calculated free or bioavailable testosterone level less than 50 pg/mL (<5 ng/dL or < 0.17 nmol/L) or less than the reference range for the lab (This may require treatment to be temporarily held. Document lab value and date)

	AND
Genotropin, Huma	ing any of the following: g growth hormones, unless diagnosed with panhypopituitarism: trope, Norditropin FlexPro, Nutropin AQ, Omnitrope, Saizen r (e.g., Arimidex [anastrozole], Femara [letrozole], Aromasin
	AND
1.2.3 Patient was male a	at birth
	AND
1.2.4 Diagnosis of hypog	gonadism
	AND
1.2.5 ONE of the following	ng:
syndrome) Osteopenia Osteoporosis Decreased bone d Decreased libido 	on in weight (less than 90% ideal body weight) (e.g., AIDS wasting ensity estosterone deficiency (e.g., injury, tumor, infection, or genetic
d] State mandates may apply. Any federal regulatory requirements an the member specific benefit plan coverage may also impact coverage riteria. Other policies and utilization management programs may appl

Diagnosis	Gender Dysphoria

Approval Length	12 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	
Approval Criteria		
1 - Using hormones to a	change physical characteristics	
	AND	
2 - The covered person must be diagnosed with gender dysphoria, as defined by the current version of the Diagnostic and Statistical Manual of Mental Disorders (DSM)		
	AND	
3 - Patient is NOT taking any of the following:		
 One of the following growth hormones, unless diagnosed with panhypopituitarism: Genotropin, Humatrope, Norditropin FlexPro, Nutropin AQ, Omnitrope, Saizen Aromatase inhibitor (e.g., Arimidex [anastrozole], Femara [letrozole], Aromasin [exemestane]) 		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.	

Product Name: generic testosterone 1.62%, generic testosterone pump 1.62%, Brand Androgel Pump, Brand Testim, generic testosterone 1%, Brand Vogelxo, generic testosterone pump 1%, Brand Vogelxo Pump, Androderm, Natesto, Brand Fortesta, generic testosterone 2%, Jatenzo, Kyzatrex, Tlando, Xyosted, testosterone 30 mg/act, Brand Androgel [a]	
Diagnosis	Non-Gender Dysphoria (includes hypogonadism) and Gender Dysphoria
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - ONE of the following:

1.1 Patient has a history of ONE of the following:

- Bilateral orchiectomy
- Panhypopituitarism
- A genetic disorder known to cause hypogonadism (e.g., congenital anorchia, Klinefelter's syndrome)

OR

1.2 BOTH of the following:

1.2.1 ONE of the following:

1.2.1.1 Follow-up total serum testosterone level drawn within the past 6 months for patients new to testosterone therapy (i.e. on therapy for less than one year), or 12 months for patients continuing testosterone therapy (i.e. on therapy for one year or longer), is within or below the normal male limits of the reporting lab (document value and date)

OR

1.2.1.2 Follow-up total serum testosterone level drawn within the past 6 months for patients new to testosterone therapy (i.e. on therapy for less than one year), or 12 months for patients continuing testosterone therapy (i.e. on therapy for one year or longer), is outside of upper male limits of normal for the reporting lab and the dose is adjusted (document value and date)

OR

1.2.1.3 BOTH of the following:

1.2.1.3.1 Patient has a condition that may cause altered sex-hormone binding globulin (SHBG) (e.g., thyroid disorder, HIV disease, liver disorder, diabetes, obesity)

AND

1.2.1.3.2 ONE of the following:

•	Follow-up calculated free or bioavailable testosterone level drawn within the past 6
	months for patients new to testosterone therapy (i.e. on therapy for less than one year),
	or 12 months for patients continuing testosterone therapy (i.e. on therapy for one year
	or longer), is within or below the normal male limits of the reporting lab (document lab
	value and date)

 Follow-up calculated free or bioavailable testosterone level drawn within the past 6 months for patients new to testosterone therapy (i.e. on therapy for less than one year), or 12 months for patients continuing testosterone therapy (i.e. on therapy for one year or longer), is outside of upper male limits of normal for the reporting lab and the dose is adjusted (document value and date)

AND

1.2.2 Patient is not taking ANY of the following:

- One of the following growth hormones, unless diagnosed with panhypopituitarism: Genotropin, Humatrope, Norditropin FlexPro, Nutropin AQ, Omnitrope, Saizen
- Aromatase inhibitor (e.g., Arimidex [anastrozole], Femara [letrozole], Aromasin [exemestane])

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	у.

3. Background

Benefit/Coverage/Program Information

Background:

Testosterone products are approved by the Food and Drug Administration (FDA) for testosterone replacement therapy in males with primary hypogonadism (congenital or acquired) or hypogonadotropic hypogonadism (congenital or acquired). Primary hypogonadism originates from a deficiency or disorder in the testicles. Secondary hypogonadism indicates a problem in the hypothalamus or the pituitary gland. Testosterone use has been strongly linked to improvements in muscle mass, bone density, and libido.

The purpose of this program is to provide coverage for androgens and anabolic steroid therapy

for the treatment of conditions for which they have shown to be effective and are within the scope of the plan's pharmacy benefit. Coverage for the enhancement of athletic performance or body building will not be provided.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

5. Revision History

Date	Notes
2/15/2024	Annual review. Updated references.

Tezspire

Prior Authorization Guideline

Guideline ID	GL-133345	
Guideline Name	Tezspire	
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP 	

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	7/19/2023
P&T Revision Date:	8/18/2023

1. Indications

Drug Name: Tezspire (tezepelumab) prefilled pen

Severe Asthma Indicated for the add-on maintenance treatment of adult and pediatric patients aged 12 years and older with severe asthma.

2. Criteria

Product Name: Tezspire auto-inj prefilled pen [a]	
Diagnosis	Severe Asthma
Approval Length	6 month(s)
Therapy Stage	Initial Authorization

Guideline Type	Non Formulary
Approval Criteria	
1 - All of the following:	
1.1 Patient has been established on therapy with Tezspire for severe asthma under an active UnitedHealthcare prior authorization	
	AND
1.2 Documentation of positive clinical response to Tezspire therapy as demonstrated by at least one of the following:	
 Reduction in the frequency of exacerbations Decreased utilization of rescue medications Increase in percent predicted FEV1 from pretreatment baseline Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing, etc.) 	
AND	
1.3 Tezspire is being used in combination with an inhaled corticosteroid (ICS)-containing controller medication [e.g., Advair/AirDuo Respiclick (fluticasone propionate/salmeterol), Symbicort (budesonide/formoterol), Breo Ellipta (fluticasone furoate/vilanterol)]	
AND	
1.4 Patient is not receiving Tezspire in combination with any of the following:	
(mepolizumab)] • Anti-IgE-therapy	5 therapy [e.g., Cinqair (resilizumab), Fasenra (benralizumab), Nucala / [e.g., Xolair (omalizumab)] 4 therapy [e.g., Dupixent (dupilumab)]
AND	
1.5 Prescribed by one of the following:	

- Allergist
- Immunologist
- Pulmonologist

OR

2 - All of the following:

2.1 Diagnosis of severe asthma

AND

2.2 Classification of asthma as uncontrolled or inadequately controlled as defined by at least one of the following:

- Poor symptom control (e.g., Asthma Control Questionnaire [ACQ] score consistently greater than 1.5 or Asthma Control Test [ACT] score consistently less than 20)
- Two or more bursts of systemic corticosteroids for at least 3 days each in the previous 12 months
- Asthma-related emergency treatment (e.g., emergency room visit, hospital admission, or unscheduled physician's office visit for nebulizer or other urgent treatment)
- Airflow limitation (e.g., after appropriate bronchodilator withhold forced expiratory volume in 1 second [FEV1] less than 80% predicted [in the face of reduced FEV1/forced vital capacity [FVC] defined as less than the lower limit of normal])
- Patient is currently dependent on oral corticosteroids for the treatment of asthma

AND

2.3 Tezspire will be used in combination with one of the following:

2.3.1 One maximally-dosed (appropriately adjusted for age) combination inhaled corticosteroid (ICS)/long-acting beta2 agonist (LABA) product [e.g., Advair/AirDuo Respiclick (fluticasone propionate/salmeterol), Symbicort (budesonide/formoterol), Breo Ellipta (fluticasone furoate/vilanterol)]

OR

2.3.2 Combination therapy including both of the following:

2.3.2.1 One high-dose (appropriately adjusted for age) ICS product [e.g., ciclesonide

(Alvesco), mometasone furoate (Asmanex), beclomethasone dipropionate (QVAR)]

AND

2.3.2.2 One additional asthma controller medication [e.g., LABA - olodaterol (Striverdi) or indacaterol (Arcapta); leukotriene receptor antagonist - montelukast (Singulair); theophylline]

AND

2.4 One of the following:

2.4.1 Both of the following:

2.4.1.1 Tezspire will be used to treat eosinophilic asthma

AND

2.4.1.2 History of failure, contraindication, or intolerance to a 4-month trial of Dupixent (dupilumab)

OR

2.4.2 Both of the following:

2.4.2.1 Tezspire will be used to treat persistent allergic asthma

AND

2.4.2.2 History of failure, contraindication, or intolerance to a 4-month trial of Xolair (omalizumab)

OR

2.4.3 Both of the following:

2.4.3.1 Tezspire will be used to treat oral corticosteroid dependent asthma

AND

2.4.3.2 History of failure, contraindication, or intolerance to a 4-month trial of Dupixent (dupilumab)

OR

2.4.4 Patient's asthma is not of the eosinophilic, allergic, or oral corticosteroid dependent phenotype

AND

2.5 Patient is not receiving Tezspire in combination with any of the following:

- Anti-interleukin 5 therapy [e.g., Cinqair (resilizumab), Fasenra (benralizumab), Nucala (mepolizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]

3. Background

Benefit/Coverage	/Program	Information
------------------	----------	-------------

Background

Tezspire (tezepelumab) is indicated for the add-on maintenance treatment of adult and pediatric patients aged 12 years and older with severe asthma.

Limitations of use:

Tezspire is not indicated for relief of acute bronchospasm of status asthmaticus.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Thalomid

Prior Authorization Guideline

Guideline ID	GL-125874	
Guideline Name	Thalomid	
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP 	

Guideline Note:

Effective Date:	7/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	05/21/2021 ; 09/15/2021 ; 05/20/2022 ; 5/25/2023

1. Indications

Drug Name: Thalomid

Erythema nodosum leprosum (ENL) Indicated for the acute treatment of cutaneous manifestations of moderate to severe erythema nodosum leprosum (ENL). It is also indicated as maintenance therapy for prevention and suppression of the cutaneous manifestations of ENL recurrence. It is not indicated as monotherapy for such ENL treatment in the presence of moderate to severe neuritis.

Multiple myeloma Indicated for treatment of newly diagnosed multiple myeloma in combination with dexamethasone.

Off Label Uses: The National Cancer Comprehensive Network (NCCN) also recommends the use of Thalomid for treatment of histiocytic neoplasms – Langerhans cell histiocytosis and Rosai-Dorman disease, myelofibrosis-associated anemia, B-Cell Lymphomas – Castleman's disease, and Kaposi Sarcoma.

2. Criteria

Product Name: Thalomid [a]	
Diagnosis	Multiple Myeloma
Approval Length	12 month(s)

3. Background

Benefit/Coverage/Program Information

Background:

Thalomid (thalidomide) is a synthetic glutamic acid derivative indicated for the treatment of patients with newly diagnosed multiple myeloma (MM) in combination with dexamethasone. It is also indicated for the acute treatment of cutaneous manifestations of moderate to severe erythema nodosum leprosum (ENL) and as maintenance therapy for prevention and suppression of the cutaneous manifestations of ENL recurrence. It is not indicated as monotherapy for such ENL treatment in the presence of moderate to severe neuritis.

The National Cancer Comprehensive Network (NCCN) also recommends the use of Thalomid for treatment of histiocytic neoplasms – Langerhans cell histiocytosis and Rosai-Dorman disease, myelofibrosis-associated anemia, B-Cell Lymphomas – Castleman's disease, and Kaposi Sarcoma.

Because of the risk of serious malformations if given during pregnancy, the manufacturer has an extensive risk management program requiring registration by patients, prescribers and dispensing pharmacies. Additional information about the Thalomid Risk Evaluation and Mitigation Strategy (REMS) [Thalomid REMS®] program may be found at http://www.thalidomiderems.com/.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Therdose Administrative

Prior Authorization Guideline

Guideline ID	GL-133947
Guideline Name	Therdose Administrative
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	1/20/2021
P&T Revision Date:	10/20/2021

1. Criteria

Product Name: Cumulative doses of acetaminophen exceeding 4 grams per day	
Approval Length	12 month(s)
Guideline Type	Administrative

Approval Criteria

1 - The cumulative* total daily dose of acetaminophen is supported by one of the following references:

- American Hospital Formulary Service Drug Information
- Micromedex DRUGDEX Information System

- National Comprehensive Cancer Network (NCCN)
- Clinical pharmacology
- Wolters Kluwer Lexi-Drugs
- United States Pharmacopoeia-National Formulary (USP-NF)
- Drug Facts and Comparisons

Notes	*For any given member, all medications containing acetaminophen will accumulate to the total daily dose. For members who need one time ov errides for acetaminophen exceeding 4 grams per day due to administr ative reasons such as vacation supplies, drug changes, dosage chang es, etc., please refer the prescriber/member to the Help Desk by includi ng the following verbiage in closure letters: If you exceed the maximum FDA approved dosing of 4 grams of acetaminophen per day because you need extra medication due to reasons such as going on a vacation , replacement for a stolen medication, your doctor changed to another medication that has acetaminophen, or your doctor changed the dosing on your medication that resulted in acetaminophen exceeding 4 grams per day, please have your pharmacy contact the OptumRx Pharmacy Helpdesk at the time they are filling your prescription for a one-time ov erride.

2. Background

Benefit/Coverage/Program Information

Background:

A hard safety edit assesses the total cumulative daily dose of acetaminophen based on FDA approved maximum dosing of 4 grams. The edit is triggered if total daily dose exceeds the FDA-defined maximum daily dose. This program is administered who have triggered the hard safety edit.

Date	Notes
9/28/2023	Added background.

Tobacco Cessation Health Care Reform Zero Dollar Cost Share Review

Prior Authorization Guideline

Guideline ID	GL-143258
Guideline Name	Tobacco Cessation Health Care Reform Zero Dollar Cost Share Review
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	2/17/2024
P&T Approval Date:	2/19/2021
P&T Revision Date:	09/15/2021 ; 08/19/2022

1. Criteria

Product Name: Apo-varenicline, Brand Chantix, generic varenicline, Nicotrol inhaler, or Nicotrol NS [a]	
Approval Length	Authorization will be issued for zero copay with deductible bypass for 12-month period
Guideline Type	Prior Authorization
	-

Approval Criteria

1 - Patient is 18 years of age or older

AND

2 - Treatment is being requested for tobacco cessation

AND

3 - History of failure, contraindication, or intolerance to one of the following:

- Nicotine replacement patches OTC (e.g. Nicoderm CQ-OTC)
- Nicotine gum OTC (e.g. Nicorette gum- OTC)
- Nicotine lozenge or mini-lozenge OTC (e.g. Nicorette lozenge-OTC)

AND

4 - History of failure, contraindication, or intolerance to bupropion (generic Zyban)

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

2. Background

Benefit/Coverage/Program Information

Background:

Tobacco cessation therapies are more likely to succeed for patients who are motivated to stop tobacco use and who are given additional advice and support. Patients should be provided with appropriate educational materials and counseling to support the quit attempt. The patient should set a quit date.

This program is designed to meet Health Care Reform requirements for tobacco cessation coverage at zero dollar cost share.

Additional Clinical Rules:

• Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and re-

authorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

• Supply limits may be in place.

Background:

Topical retinoid products are indicated for cosmetic and medical conditions (e.g. acne vulgaris, psoriasis, precancerous skin lesions). Prior Authorization is in place to verify the use is for the diagnosis of a medical condition.

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Tukysa

Prior Authorization Guideline

Guideline ID	GL-144151
Guideline Name	Tukysa
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	5/1/2024
P&T Approval Date:	9/15/2021
P&T Revision Date:	08/19/2022 ; 11/18/2022 ; 03/15/2023 ; 3/20/2024

1. Indications

Drug Name: Tukysa

HER2-positive breast cancer Indicated in combination with trastuzumab and capecitabine for treatment of adult patients with advanced unresectable or metastatic HER2-positive breast cancer, including patients with brain metastases, who have received one or more prior anti-HER2-based regimens in the metastatic setting.

Colorectal Cancer Indicated in combination with trastuzumab for the treatment of adult patients with RAS wild-type HER2-positive unresectable or metastatic colorectal cancer that has progressed following treatment with fluoropyrimidine-, oxaliplatin-, and irinotecan-based chemotherapy.

Other Uses: The National Cancer Comprehensive Network (NCCN) recommends the use of Tukysa for the treatment of central nervous system cancers (limited and extensive brain metastases) when used in combination with capecitabine and trastuzumab in patients with HER2 positive breast cancer if previously treated with one or more anti-HER2-based regimens. The NCCN also recommends the use of Tukysa in combination with trastuzumab for the treatment of advanced or metastatic colorectal cancer (HER2-amplified and RAS and BRAF

wild-type) if intensive therapy not recommended.

2. Criteria

Product Name: Tukysa	[a]	
Diagnosis	Breast Cancer	
Approval Length	12 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	
Approval Criteria		
1 - Diagnosis of breast	cancer	
	AND	
2 - Disease is one of the	e following:	
Advanced unresectableMetastatic		
	AND	
3 - Disease is human epidermal growth factor receptor 2 (HER2)-positive		
AND		
4 - Patient has been previously treated with an anti-HER2-based regimen in the metastatic setting (e.g., trastuzumab (Herceptin, Kanjinti), pertuzumab (Perjeta), ado-trastuzumab emtansine (T-DM1)		
	AND	

5 - Used in combination with trastuzumab (e.g., Herceptin, Kanjinti, Ontruzant) and capecitabine (Xeloda)	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Tukysa [a]	
Diagnosis	Breast Cancer
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Patient does not show evidence of progressive disease while on Tukysa therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	--

Product Name: Tukysa [a]	
Diagnosis	CNS Cancers
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of brain metastases with HER2 positive breast cancer

AND

2 - Patient has been previously treated with an anti-HER2-based regimen (e.g., trastuzumab

[Herceptin, Kanjinti], pertuzumab [Perjeta], ado-trastuzumab emtansine [T-DM1])

AND

3 - Used in combination with trastuzumab (e.g., Herceptin, Kanjinti, Ontruzant) and capecitabine (Xeloda)

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Tukysa [a]	
Diagnosis	CNS Cancers
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Patient does not show evidence of progressive disease while on Tukysa therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	у.

Product Name: Tukysa [a]	
Diagnosis	Colorectal Cancer
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of unresectable, advanced, or metastatic colorectal cancer (HER2-amplified and RAS and BRAF wild-type)

AND

2 - Disease is human epidermal growth factor receptor 2 (HER2)-positive

AND

- **3** One of the following:
- **3.1** Patient has previously been treated with one of the following regimens:
 - Fluoropyrimidine-based chemotherapy
 - Oxaliplatin-based chemotherapy
 - Irinotecan-based chemotherapy

OR

3.2 Patient is not appropriate for intensive therapy

AND

4 - Used in combination with trastuzumab (e.g., Herceptin, Kanjinti)

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Tukysa [a]	
Diagnosis	Colorectal Cancer
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Patient does not show evidence of progressive disease while on Tukysa therapy	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Tukysa [a]	
Diagnosis	NCCN Recommended Regimens
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Tukysa will be approved for uses not outlined above if supported by The National Comprehensive Cancer Network (NCCN) Drugs and Biologics Compendium

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Tukysa [a]	
Diagnosis	NCCN Recommended Regimens
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Documentation of positive clinical response to Tukysa therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
	y.

3. Background

Benefit/Coverage/Program Information

Background:

Tukysa (tucatinib) is a kinase inhibitor indicated in combination with trastuzumab and capecitabine for treatment of adult patients with advanced unresectable or metastatic human epidermal growth factor receptor 2 (HER2)-positive breast cancer, including patients with brain metastases, who have received one or more prior anti-HER2-based regimens in the metastatic setting. [1] Tukysa is also indicated in combination with trastuzumab for the treatment of adult patients with RAS wild-type HER2-positive unresectable or metastatic colorectal cancer that has progressed following treatment with fluoropyrimidine-, oxaliplatin-, and irinotecan-based chemotherapy.

The National Cancer Comprehensive Network (NCCN) recommends the use of Tukysa for the treatment of central nervous system cancers (limited and extensive brain metastases) when used in combination with capecitabine and trastuzumab in patients with HER2 positive breast cancer if previously treated with one or more anti-HER2-based regimens. The NCCN also recommends the use of Tukysa in combination with trastuzumab for the treatment of advanced or metastatic colorectal cancer (HER2-amplified and RAS and BRAF wild-type) if intensive therapy not recommended.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

3. Background

Benefit/Coverage/Program Information

Background:

Turalio (pexidartinib) is a kinase inhibitor indicated for the treatment of adult patients with symptomatic tenosynovial giant cell tumor (TGCT) associated with severe morbidity or functional limitations and not amenable to improvement with surgery.

The National Cancer Comprehensive Network (NCCN) also recommends Turalio as singleagent therapy for the treatment of TGCT/ pigmented villonodular synovitis (PVNS) in patients without respect to morbidity and surgery eligibility. NCCN also recommends Turalio for colony stimulating factor 1 receptor (CSF1R) mutation positive histiocytic neoplasms.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Tykerb

Prior Authorization Guideline

Guideline ID	GL-134190
Guideline Name	Tykerb
Formulary	UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	12/1/2023
P&T Approval Date:	10/20/2021
P&T Revision Date:	10/19/2022 ; 10/18/2023

1. Indications

Drug Name: Tykerb

Metastatic breast cancer Indicated for use in combination with Femara (letrozole) for the treatment of postmenopausal women with hormone receptor positive metastatic breast cancer that overexpresses the human epidermal growth factor receptor 2 (HER2) receptor for whom hormonal therapy is indicated

Advanced or metastatic breast cancer Indicated in combination with Xeloda (capecitabine) for treatment of patients with advanced or metastatic breast cancer whose tumors overexpress HER2 and who have received prior therapy, including an anthracycline, a taxane, and the HER2 receptor antagonist Herceptin (trastuzumab). Patients should have disease progression on Herceptin prior to initiation of treatment with Tykerb in combination with Xeloda.

2. Criteria

Product Name: Brand T	ykerb, generic lapatinib [a]	
Diagnosis	Breast Cancer	
Approval Length	12 month(s)	
Therapy Stage	Initial Authorization	
Guideline Type	Prior Authorization	
Approval Criteria		
1 - BOTH of the following	ng:	
 Diagnosis of recurrent or stage IV hormone receptor positive, human epidermal growth factor receptor 2-positive (HER2+) breast cancer Used in combination with an aromatase inhibitor [e.g., Aromasin (exemestane), Femara (letrozole), Arimidex (anastrozole)] 		
	OR	
2 - ALL of the following	:	
2.1 Diagnosis of recurrent or stage IV HER2+ breast cancer		
AND

3. Background

Benefit/Coverage/Program Information

Background:

Tykerb (lapatinib) is a kinase inhibitor indicated for use in combination with Femara (letrozole) for the treatment of postmenopausal women with hormone receptor positive metastatic breast cancer that overexpresses the human epidermal growth factor receptor 2 (HER2) receptor for whom hormonal therapy is indicated. Tykerb is also indicated in combination with Xeloda (capecitabine) for treatment of patients with advanced or metastatic breast cancer whose tumors overexpress HER2 and who have received prior therapy, including an anthracycline, a taxane, and trastuzumab. Patients should have disease progression on trastuzumab prior to initiation of treatment with Tykerb in combination with Xeloda. The National Cancer Comprehensive Network (NCCN) also recommends the use of Tykerb in metastatic central nervous system (CNS) lesions with primary tumor of the breast, intracranial and spinal ependymomas, EGFR-positive chordoma and colon and rectal cancers not previously treated

with HER2 inhibitors.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

	AND	
	has not exceeded a total of 24 months of cumulative use of parathyroid Teriparatide Injection, Forteo, Tymlos) during the patient's lifetime	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage	

criteria. Other policies and utilization management programs may appl
у.

3. Background

Benefit/Coverage/Program Information

Background:

Tymlos is a human parathyroid hormone analog indicated for the treatment of postmenopausal women with osteoporosis at high risk for fracture or patients who have failed or are intolerant to other available osteoporosis therapy. Tymlos is also indicated to increase bone density in men with osteoporosis at high risk for fracture or patients who have failed or are intolerant to other available osteoporosis therapy. [1]

The American Association of Clinical Endocrinologists/American College of Endocrinology recommend the use of Tymlos in patients unable to sue oral therapy and as initial therapy for patients at very high fracture risk defined as the following: patients with a recent fracture (e.g., within the past 12 months), fractures while on approved osteoporosis therapy, multiple fractures, fractures while on drugs causing skeletal harm (e.g., long-term glucocorticoids), very low T-score (e.g., less than -3.0), high risk for falls or history of injurious falls, and very high fracture probability by FRAX® (fracture risk assessment tool) (e.g., major osteoporosis fracture >30%, hip fracture >4.5%) or other validated fracture risk algorithm to be at very high fracture risk.[2]

The safety and efficacy of Tymlos have not been evaluated beyond 2 years of treatment. Cumulative use of Tymlos and other parathyroid hormone analogs (e.g., Forteo, teriparatide injection) for more than 2 years during a patient's lifetime is not recommended. [1]

Additional Clinical Rules:

 Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Valchlor

Prior Authorization Guideline

Guideline ID	GL-134484
Guideline Name	Valchlor
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	12/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 10/20/2021 ; 09/21/2022 ; 10/18/2023

1. Indications

Drug Name: Valchlor (mechlorethamine) gel for topical use

Stage IA and IB mycosis fungoides-type cutaneous T-cell lymphoma Indicated for the topical treatment of Stage IA and IB mycosis fungoides-type cutaneous T-cell lymphoma in patients who have received prior skin-directed therapy.

Langerhans Cell Histiocytosis (LCH) The National Cancer Comprehensive Network (NCCN) recommends use of topical mechlorethamine in Langerhans Cell Histiocytosis (LCH).

<u>Off Label Uses:</u> T-cell leukemia/lymphoma The National Cancer Comprehensive Network (NCCN) recommends use of topical mechlorethamine in T-cell leukemia/lymphoma.

Primary cutaneous B-cell lymphoma The National Cancer Comprehensive Network (NCCN) recommends use of topical mechlorethamine in primary cutaneous B-cell lymphoma.

Primary cutaneous CD30+ T-cell lymphoproliferative disorders The National Cancer Comprehensive Network (NCCN) recommends use of topical mechlorethamine in primary cutaneous CD30+ T-cell lymphoproliferative disorders.

2. Criteria

Product Name: Valchlor [a]	
Diagnosis	Primary Cutaneous Lymphomas
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of ONE of the following:

- Chronic or smoldering T-cell leukemia/lymphoma
- Primary cutaneous marginal zone or follicle center B-cell lymphoma
- Lymphomatoid papulosis (LyP) with extensive lesions
- Mycosis fungoides (MF)/Sezary syndrome (SS)

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	--

Product Name: Valchlor [a]	
Diagnosis	Primary Cutaneous Lymphomas
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Patient does not show evidence of progressive disease while on Valchlor

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Valchlor [a]	
Diagnosis	Histiocytic Neoplasms
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of Langerhans Cell Histiocytosis (LCH)

AND

2 - Skin disease is unifocal and isolated

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

criteria. Other policies and utilization management programs may appl y.

Product Name: Valchlor [a]	
Diagnosis	NCCN Recommended Regimens
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Documentation of positive clinical response to Valchlor therapy

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage
criteria. Other policies and utilization management programs may apply.

3. Background

Benefit/Coverage/Program Information

Background:

Valchlor gel for topical use (mechlorethamine) is an alkylating drug indicated for the topical treatment of Stage IA and IB mycosis fungoides-type cutaneous T-cell lymphoma in patients who have received prior skin-directed therapy. [1]. The National Cancer Comprehensive Network (NCCN) recommends use of topical mechlorethamine in T-cell leukemia/lymphoma, primary cutaneous B-cell lymphoma, primary cutaneous CD30+ T-cell lymphoproliferative disorders, and Langerhans Cell Histiocytosis (LCH).[2]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program.
- Supply limits may be in place.

Vecamyl

Prior Authorization Guideline

Guideline ID	GL-134492
Guideline Name	Vecamyl
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	12/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	07/21/2021 ; 10/18/2023

1. Indications

Drug Name: Vecamyl (mecamylamine)

Moderately Severe to Severe Essential Hypertension Indicated for the management of moderately severe to severe essential hypertension and uncomplicated cases of malignant hypertension.

2. Criteria

Product Name: Vecamyl	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of moderately severe to severe essential hypertension

OR

2 - Diagnosis of uncomplicated malignant hypertension

Product Name: Vecamyl	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization
Approval Criteria	

1 - Documentation of a positive clinical response to Vecamyl therapy

3. Background

Benefit/Coverage/Program Information

Background:

Vecamyl (mecamylamine) is indicated for the management of moderately severe to severe essential hypertension and uncomplicated cases of malignant hypertension.[1] Vecamyl was originally approved under the brand name Inversine, which was launched in the 1950s. The product was withdrawn in September 2009; withdrawal was not due to safety concerns. As of March 2013, the FDA issued an approval for mecamylamine to be re-marketed in the United States.[2]

Additional Clinical Rules:

 Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD- 10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

• Supply limits may be in place.

3. Background

Benefit/Coverage/Program Information

Background:

Venclexta (venetoclax) is a BCL-2 inhibitor indicated for the treatment of adult patients with chronic lymphocytic leukemia (CLL) or small lymphocytic lymphoma (SLL). Venclexta is also indicated in combination with azacitidine, or decitabine, or low-dose cytarabine for the treatment of newly diagnosed acute myeloid leukemia (AML) in adults who are age 75 years or older, or who have comorbidities that preclude use of intensive induction chemotherapy.

In addition, the National Cancer Comprehensive Network (NCCN) recommends the use of Venclexta in relapsed/refractory Philadelphia-chromosome negative acute lymphoblastic leukemia (ALL) in combination with decitabine, hyperCVAD (hyper-fractionated cyclophosphamide, vincristine, doxorubicin, and dexamethasone, alternating with high-dose methotrexate and cytarabine), nelarabine, or mini-hyperCVD (mini-hyper-fractionated cyclophosphamide, vincristine, and dexamethasone, alternating with high-dose methotrexate and cytarabine); in AML for patients less than 60 years old as alternative induction treatment with unfavorable risk genetics and TP53-mutation in combination with azacitidine, or at least 60 years of age with newly diagnosed or relapsed/refractory disease; in CLL/SLL with or without

del(17p)/TP53 mutation; in multiple myeloma for relapse or progressive disease with t(11;14) translocation in combination with dexamethasone; in relapsed/refractory systemic light chain amyloidosis with t(11;14) translocation; and in previously treated Waldenstrom macroglobulinemia/lymphoplasmacytic lymphoma.

Additional Clinical Rules:

 Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class

Supply limits may be in place.

Verzenio

Prior Authorization Guideline

Guideline ID	GL-132784
Guideline Name	Verzenio
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	8/18/2023
P&T Revision Date:	

1. Indications

Drug Name: Verzenio

Breast cancer Verzenio (abemaciclib) is a kinase inhibitor is indicted in combination with endocrine therapy (tamoxifen or an aromatase inhibitor) for the adjuvant treatment of adult patients with hormone receptor (HR)-positive, human epidermal growth factor 2 (HER2)negative, node-positive, early breast cancer at high risk of recurrence; in combination with an aromatase inhibitor as initial endocrine-based therapy for the treatment of adult patients with HR-positive, HER2-negative advanced or metastatic breast cancer; in combination with Faslodex (fulvestrant) for the treatment of adult patients with HR-positive, HER2-negative advanced or metastatic breast cancer with disease progression following endocrine therapy; and as monotherapy for the treatment of adult patients with HR-positive, HER2-negative advanced or metastatic breast cancer with disease progression following endocrine therapy and prior chemotherapy in the metastatic setting. The National Comprehensive Cancer Network (NCCN) recommends the use of Verzenio similarly for men and premenopausal women treated with ovarian ablation/suppression with recurrent or metastatic HR-positive. HER2-negative breast cancer disease, in combination with an aromatase inhibitor or Faslodex (fulvestrant). The use of an aromatase inhibitor in men with breast cancer is ineffective without concomitant suppression of testicular steroidogenesis. The NCCN also recommends the use of Verzenio for 2 years as adjuvant therapy in combination with endocrine therapy in patients with HR-positive, HER2-negative, high risk (i.e., \geq 4 positive lymph nodes, or 1-3 positive lymph nodes with one or more of the following: Grade 3 disease, tumor size \geq 5 cm) disease.

1 - Documentation of positive clinical response to Viberzi therapy

	 [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y
--	---

3. Background

Benefit/Coverage/Program Information

Background

Viberzi (eluxadoline) is a mu-opioid receptor agonist, indicated for the treatment of irritable bowel syndrome with diarrhea (IBS-D) in adults.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may apply

Vijoice

Prior Authorization Guideline

Guideline ID	GL-126680
Guideline Name	Vijoice
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	8/1/2023
P&T Approval Date:	6/15/2022
P&T Revision Date:	6/21/2023

1. Indications

Drug Name: Vijoice

PIK3CA-Related Overgrowth Spectrum (PROS) Indicated for the treatment of adult and pediatric patients 2 years of age and older with severe manifestations of PIK3CA-Related Overgrowth Spectrum (PROS) who require systemic therapy.

2. Criteria

Product Name: Vijoice [a]	
Diagnosis	PIK3CA-Related Overgrowth Spectrum (PROS)
Approval Length	6 month(s)
Therapy Stage	Initial Authorization

Guideline Type	Non Formulary	
Approval Criteria		
1 - Diagnosis of PIK3CA-Related Overgrowth Spectrum (PROS) based on all of the following criteria:		
1.1 Confirmed presen	ce of a mutation in the PIK3CA gene	
	AND	
1.2 Patient is 2 years	of age or older	
	AND	
1.3 One of the followir	na:	
1.3.1 Two or more of	the following spectrum features:	
 Overgrowth: adipose, muscle, nerve, skeletal Vascular malformations: capillary, venous, arteriovenous, lymphatic Epidermal nevus 		
	OR	
1.3.2 One or more of	the following isolated features:	
 Large isolated lymphatic malformation Isolated macrodactyly or overgrown splayed feet/hands with overgrown limbs Truncal adipose overgrowth Hemimegalencephaly (bilateral) / dysplastic megalencephaly / focal cortical dysplasia Epidermal nevus Seborrheic keratoses Benign lichenoid keratoses 		
AND		
2 - Patient has severe manifestations of PROS [3] (e.g., severe vascular malformations, chronic gastrointestinal bleeding, severe dyspnea, disabling chronic pain, severe epilepsy, severe		

manifestations despite previous debulking surgery)

AND

3 - Prescribed by, or in consultation with, a clinical geneticist or a practitioner who has specialized expertise in the management of PROS manifestations

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Vijoice	[a]
Diagnosis	PIK3CA-Related Overgrowth Spectrum (PROS)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

Approval Criteria

1 - Documentation of positive clinical response to Vijoice therapy

AND

2 - Prescribed by, or in consultation with, a clinical geneticist or a practitioner who has specialized expertise in the management of PROS manifestations

	d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apple	
	y.	

3. Background

Benefit/Coverage/Program Information

Background:

Vijoice (alpelisib) is a kinase inhibitor indicated for the treatment of adult and pediatric patients 2 years of age and older with severe manifestations of PIK3CA-Related Overgrowth Spectrum (PROS) who require systemic therapy. This indication is approved under accelerated approval based on response rate and duration of response. Continued approval for this indication may be contingent upon verification and description of clinical benefit in a confirmatory trial(s). [1]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Updated background to align with NCCN recommendations. Updated reference.

Vowst

Prior Authorization Guideline

Guideline ID	GL-137166
Guideline Name	Vowst
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	2/1/2024
P&T Approval Date:	7/19/2023
P&T Revision Date:	12/13/2023

1. Indications

Drug Name: Vowst (fecal microbiota spores, live-brpk)

Clostridioides difficile infection (CDI) Indicated indicated to prevent the recurrence of Clostridioides difficile infection (CDI) in individuals 18 years of age and older following antibacterial treatment for recurrent CDI (rCDI).

Product Name: Vowst (fecal microbiota spores, live-brpk) [a]	
Approval Length	1 month(s)
Guideline Type	Non Formulary

1 - Diagnosis of recurrent Clostridioides difficile infection (rCDI) as defined by BOTH of the following:

- Presence of diarrhea defined as a passage of 3 or more loose bowel movements within a 24-hour period for 2 consecutive days
- A positive stool test for Clostridioides difficile toxin
 - AND

2 - Patient is 18 years of age or older

AND

3 - Patient has had one or more recurrences of CDI following an initial episode of CDI

AND

4 - Patient has completed at least 10 days of one of the following antibiotic therapies for rCDI 2 to 4 days prior to initiating Vowst[^]:

- Oral vancomycin
- Dificid (fidaxomicin)

AND

5 - Previous episode of CDI is under control [e.g., less than 3 unformed/loose (i.e., Bristol Stool Scale type 6-7) stools/day for 2 consecutive days]

AND

6 - Patient will drink magnesium citrate on the day before and at least 8 hours prior to taking the first dose of Vowst

AND

7 - Prescribed by or in consultation with ONE of the following:

- Gastroenterologist
- Infectious disease specialist

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.
	y. ^Tried/failed alternative(s) are supported by FDA labeling and/or trea tment guidelines.

Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

Approval Criteria
1 - Patient is less than 18 years of age
AND
2 - Diagnosis of achondroplasia as confirmed by ONE of the following:
2.1 Submission of medical records documenting BOTH of the following:
 Patient has clinical manifestations characteristic of achondroplasia (e.g., macrocephaly, frontal bossing, midface retrusion, disproportionate short stature with rhizomelic shortening of the arms and the legs, brachydactyly, trident configuration of the hands, thoracolumbar kyphosis, and accentuated lumbar lordosis) Patient has radiographic findings characteristic of achondroplasia (e.g., large calvaria and narrowing of the foramen magnum region, undertubulated, shortened long bones with metaphyseal abnormalities, narrowing of the interpedicular distance of the caudal spine, square ilia and horizontal acetabula, small sacrosciatic notches, proximal scooping of the femoral metaphyses, and short and narrow chest)
OR
2.2 Submission of medical records documenting molecular genetic testing confirmed c.1138G>A or c.1138G>C variant (i.e., p.Gly380Arg mutation) in the fibroblast growth factor receptor-3 (FGFR3) gene
AND
3 - Patient has open epiphyses
AND
4 - BOTH of the following:
 Patient has not had limb-lengthening surgery in the previous 18 months Patient does not plan to have limb-lengthening surgery while on Voxzogo

AND

5 - Prescribed by ONE of the following:

- Clinical geneticist
- Endocrinologist
- A practitioner who has specialized expertise in the management of achondroplasia

Product Name: Voxzogo	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

Approval Criteria

1 - Documentation of positive clinical response to Voxzogo therapy (e.g., improvement in annualized growth velocity (AGV) compared to baseline)

AND

2 - Patient continues to have open epiphyses

AND

3 - Patient does not plan to have limb-lengthening surgery while on Voxzogo

AND

4 - Prescribed by or in consultation with ONE of the following:

- Clinical geneticist
- Endocrinologist
- A practitioner who has specialized expertise in the management of achondroplasia

3. Background

Benefit/Coverage/Program Information

Background:

Voxzogo (vosoritide) is a C type natriuretic peptide (CNP) analog indicated to increase linear growth in pediatric patients with achondroplasia with open epiphyses. This indication is approved under accelerated approval based on an improvement in annualized growth velocity. Continued approval for this indication may be contingent upon verification and description of clinical benefit in confirmatory trial(s).

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply Limits may also be in place

4. References

Date	Notes
11/3/2023	Annual review. Updated not to be used in combination to Targeted Imm unomodulators. Simplified reauthorization criteria to only require positiv e clinical response and not used in combination with other treatment m edications.

Vyndaqel, Vyndamax

Prior Authorization Guideline

Guideline ID	GL-133072
Guideline Name	Vyndaqel, Vyndamax
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 02/18/2022 ; 06/21/2023 ; 8/18/2023

1. Indications

Drug Name: Vyndaqel (tafamidis meglumine), Vyndamax (tafamidis)

Transthyretin-mediated amyloidosis with cardiomyopathy (ATTR-CM) Indicated for the treatment of the cardiomyopathy of wild type or hereditary transthyretin-mediated amyloidosis in adults to reduce cardiovascular mortality and cardiovascular-related hospitalization. [1]

Product Name: Vyndaqel, Vyndamax [a]	
Diagnosis	Transthyretin (ATTR)-mediated amyloidosis with cardiomyopathy (ATTR-CM)
Approval Length	12 month(s)

Therapy Stage	Initial Authorization
Guideline Type	Non Formulary
Approval Criteria	
1 - Diagnosis of tran	sthyretin (ATTR)-mediated amyloidosis with cardiomyopathy (ATTR-CM)
	AND
2 - One of the follow	ring:
2.1 Documentation	that the patient has a pathogenic TTR mutation (e.g., V30M)
	OR
2.2 Cardiac or non- amyloid deposits	cardiac tissue biopsy demonstrating histologic confirmation of ATTR
	OR
2.3 All of the follow	ving:
2.3.1 Echocardiag	ram or cardiac magnetic resonance imaging suggestive of amyloidosis
	AND
2.3.2 Radionuclide or 3 cardiac uptake*	e imaging (99mTc-DPD, 99mTc-PYP, or 99m Tc-HMDP) showing grade 2
	AND
2.3.3 Absence of r free light chain (sFL	monoclonal protein identified in serum, urine immunofixation (IFE), serum

AND

3 - Prescribed by or in consultation with a cardiologist

AND

4 - Presence of clinical signs and symptoms of cardiomyopathy (e.g., heart failure, dyspnea, edema, hepatomegaly, ascites, angina, etc.)

AND

5 - Documentation of both of the following:

5.1 One of the following:

5.1.1 Patient has New York Heart Association (NYHA) Functional Class I or II heart failure

OR

5.1.2 Both of the following:

5.1.2.1 Patient has New York Heart Association (NYHA) Functional Class III heart failure

AND

5.1.2.2 Patient's cardiopulmonary functional status allows patient to ambulate 100 meters or greater in six minutes or less

AND

5.2 Patient has an N-terminal pro-B-type naturetic peptide (NT-proBNP) level greater than or equal to 600 pg/mL (picograms/milliliter)

AND

6 - One of the following:

6.1 Patient is not receiving Vyndaqel/Vyndamax in combination with either of the following:

- Onpattro (patisiran)
- Tegsedi (inotersen)

OR

6.2 Physician attests that he/she will coordinate care with other specialist(s) involved in the patient's amyloidosis treatment plan to determine optimal long term monotherapy¥ treatment regimen (Subsequent requests for combination therapy will result in an adverse coverage determination)

Notes	 *May require prior authorization and notification. ¥ Referring to monotherapy with Vyndaqel/Vyndamax, Onpattro, or Te gsedi. [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	---

Product Name: Vyndaqel, Vyndamax [a]	
Diagnosis	Transthyretin (ATTR)-mediated amyloidosis with cardiomyopathy (ATTR-CM)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

Approval Criteria

1 - Documentation that the patient has experienced a positive clinical response to Vyndaqel/Vyndamax (e.g., improved symptoms, quality of life, slowing of disease progression, decreased hospitalizations, etc.)

AND

2 - Prescribed by or in consultation with a cardiologist

AND

3 - Documentation that patient continues to have New York Heart Association (NYHA) Functional Class I, II, or III heart failure

AND

4 - Patient is not receiving Vyndaqel/Vyndamax in combination with either of the following:

- Onpattro (patisiran)
- Tegsedi (inotersen)

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply
criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background:

Vyndaqel[®] (tafamidis meglumine) and Vyndamax[™] (tafamidis) are transthyretin stabilizers indicated for the treatment of the cardiomyopathy of wild type or hereditary transthyretin-mediated amyloidosis in adults to reduce cardiovascular mortality and cardiovascular-related hospitalization.¹

Additional Clinical Programs:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

1. Indications

Drug Name: Wainua (eplontersen)

Polyneuropathy of hereditary transthyretin-mediated (hATTR) amyloidosis Indicated for the treatment of the polyneuropathy of hereditary transthyretin-mediated (hATTR) amyloidosis in adults.

Product Name: Wainua [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

1 - BOTH of the following:

- Diagnosis of hATTR amyloidosis with polyneuropathy
- Documentation that the patient has a pathogenic TTR mutation (e.g., V30M)

AND

2 - Prescribed by or in consultation with a neurologist

AND

- **3** Documentation of ONE of the following:
 - Patient has a baseline polyneuropathy disability (PND) score ≤ IIIb
 - Patient has a baseline FAP Stage 1 or 2
 - Patient has a baseline neuropathy impairment (NIS) score \geq 10 and \leq 130

AND

4 - Patient has not had a liver transplant

AND

5 - Presence of clinical signs and symptoms of the disease (e.g., peripheral sensorimotor polyneuropathy, autonomic neuropathy, motor disability, etc.)

AND

6 - Patient is not receiving Wainua in combination with EITHER of the following:

- Oligonucleotide agents [e.g., Onpattro (patisiran), Amvuttra (vutrisiran), Tegsedi (inotersen)]
- Tafamidis (e.g., Vyndaqel, Vyndamax)

[a] State mandates may apply. Any federal regulatory requirements an
d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Wainua [a]	
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

1 - Documentation that the patient has experienced a positive clinical response to Wainua therapy (e.g., improved neurologic impairment, motor function, quality of life, slowing of disease progression, etc.)

AND

2 - Patient is not receiving Wainua in combination with EITHER of the following:

- Oligonucleotide agents [e.g., Onpattro (patisiran), Amvuttra (vutrisiran), Tegsedi (inotersen)]

Xeljanz, Xeljanz XR

Prior Authorization Guideline

Guideline ID	GL-132958
Guideline Name	Xeljanz, Xeljanz XR
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	11/1/2023
P&T Approval Date:	8/14/2020
P&T Revision Date:	01/21/2021 ; 05/21/2021 ; 06/16/2021 ; 09/15/2021 ; 02/18/2022 ; 05/20/2022 ; 06/15/2022 ; 09/21/2022 ; 02/17/2023 ; 05/25/2023 ; 9/20/2023

1. Indications

Drug Name: Xeljanz /Xeljanz XR

Rheumatoid Arthritis Indicated for the treatment of adult patients with moderately to severely active rheumatoid arthritis who have had an inadequate response or intolerance to one or more TNF blockers. It may be used as monotherapy or in combination with methotrexate or other non-biologic disease-modifying antirheumatic drugs (DMARDs).

Psoriatic Arthritis Indicated for the treatment of adult patients with active psoriatic arthritis who have an inadequate response or intolerance to one or more TNF blockers.

Ulcerative Colitis Indicated for the treatment of adult patients with moderately to severely active ulcerative colitis, who have an inadequate response or intolerance to one or more TNF blockers.

Ankylosing Spondylitis Indicated for the treatment of active ankylosing spondylitis in patients

who have an inadequate response or intolerance to one or more TNF blockers.

Drug Name: Xeljanz / Xeljanz Solution

Polyarticular Course Juvenile Idiopathic Arthritis Indicated for the treatment of active polyarticular course juvenile idiopathic arthritis in patients 2 years of age and older who have had an inadequate response or intolerance to one or more TNF blockers.

2. Criteria

Product Name: Xeljanz or Xeljanz XR [a]	
Diagnosis	Rheumatoid Arthritis (RA)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Diagnosis of moderately to severely active RA

AND

2 - One of the following:

2.1 Both of the following:

2.1.1 One of the following:

2.1.1.1 History of failure to a 3 month trial of one non-biologic disease modifying antirheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at maximally indicated doses, unless contraindicated or clinically significant adverse effects are experienced (document drug, date, and duration of trial)

OR

2.1.1.2 Patient has been previously treated with a biologic or targeted synthetic DMARD

FDA-approved for the treatment of rheumatoid arthritis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., Enbrel (etanercept), Cimzia (certolizumab), adalimumab, Simponi (golimumab), Orencia (abatacept), Olumiant (baricitinib), Rinvoq (upadacitinib)]

AND

2.1.2 One of the following:

- History of failure, contraindication, or intolerance to at least one TNF inhibitor^
- Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria [5])

OR

2.2 Both of the following:

2.2.1 Patient is currently on Xeljanz or Xeljanz XR therapy as documented by claims history or submission of medical records (Document drug, date, and duration of therapy)

AND

2.2.2 Patient has not received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Pfizer sponsored XELSOURCE program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Xeljanz or Xeljanz XR*

AND

3 - Patient is not receiving Xeljanz or Xeljanz XR in combination with any of the following:

- Biologic DMARD [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Skyrizi (risankizumab-rzaa), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]
- Potent immunosuppressant (e.g., azathioprine or cyclosporine)

AND

4 - Prescribed by or in consultation with a rheumatologist	
Notes	 *Patients requesting initial authorization who were established on thera py via the receipt of a manufacturer supplied sample at no cost in the p rescriber's office or any form of assistance from the Pfizer sponsored X ELSOURCE program shall be required to meet initial authorization crite ria as if patient were new to therapy. 3. Background

Benefit/Coverage/Program Information

Background:

Xeljanz/Xeljanz XR (tofacitinib) is an inhibitor of Janus Kinases (JAKs) indicated for the treatment of adult patients with moderately to severely active rheumatoid arthritis who have had an inadequate response or intolerance to one or more tumor necrosis factor (TNF) blockers. It may be used as monotherapy or in combination with methotrexate or other non-biologic disease-modifying antirheumatic drugs (DMARDs). [1] Examples of non-biologic DMARDs commonly used in the treatment of rheumatoid arthritis include methotrexate, leflunomide, and sulfasalazine. [2,3] Xeljanz/Xeljanz XR is also indicated for the treatment of adult patients with active psoriatic arthritis, active ankylosing spondylitis, and moderately to severely active ulcerative colitis, who have an inadequate response or intolerance to one or more TNF blockers. Xeljanz/Xeljanz Solution is indicated for the treatment of active polyarticular juvenile idiopathic arthritis in patients 2 years of age and older who have had an inadequate response or intolerance to one or more TNF blockers.

Limitations of Use:

The use of Xeljanz/Xeljanz XR/Xeljanz Solution in combination with biologic DMARDs or with potent immunosuppressants such as azathioprine and cyclosporine is not recommended.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Xifaxan

Prior Authorization Guideline

Guideline ID	GL-129021
Guideline Name	Xifaxan
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	9/1/2023
P&T Approval Date:	9/15/2021
P&T Revision Date:	7/19/2023

1. Indications

Drug Name: Xifaxan

Travelers' diarrhea Indicated for the treatment of travelers' diarrhea (TD) caused by noninvasive strains of Escherichia coli in adult and pediatric patients 12 years of age and older.

Hepatic Encephalopathy Indicated for the reduction in risk of overt hepatic encephalopathy (HE) recurrence in adults.

Irritable bowel syndrome with diarrhea Indicated for the treatment of irritable bowel syndrome with diarrhea (IBS-D) in adults.

2. Criteria

Product Name: Xifaxan [a]

Diagnosis	Travelers' Diarrhea		
Approval Length	1 month(s)		
Guideline Type	Prior Authorization		
Approval Criteria	Approval Criteria		
1 - Diagnosis of travelers' diarrhea			
AND			
2 - History of failure, contraindication, or intolerance to one of the following:			
 Azithromycin (generic Zithromax) Ciprofloxacin (generic Cipro) Levofloxacin (generic Levaquin) Ofloxacin (generic Floxin) 			
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.		

Product Name: Xifaxan [a]	
Diagnosis	Hepatic Encephalopathy
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Diagnosis of Hepatic Encephalopathy

AND

2 - One of the following:

2.1 Both of the following:

- Used as add-on therapy to lactulose
- Patient is unable to achieve an optimal clinical response with lactulose monotherapy

	OR
2.2 History of contraine	dication or intolerance to lactulose
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Xifaxan [a]	
Diagnosis	Hepatic Encephalopathy
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Documentation of positive clinical response to Xifaxan therapy

criteria. Other policies and utilization management programs may appl y.		[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
---	--	--

Product Name: Xifaxan [a]	
Diagnosis	Irritable Bowel Syndrome with Diarrhea (IBS-D)
Approval Length	14 Day(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
Approval Criteria	

1 - Diagnosis of IBS-D

AND

2 - History of failure, contraindication, or intolerance to a tricyclic antidepressant (e.g. amitriptyline)

[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
у.

Product Name: Xifaxan [a]	
Diagnosis	Irritable Bowel Syndrome with Diarrhea (IBS-D)
Approval Length	14 Day(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

Approval Criteria

- **1** Xifaxan will be approved based on all of the following criteria:
 - Patient has experienced a recurrence of IBS-D after a prior 14 day course of therapy with Xifaxan
 - Patient has had a treatment-free period between courses of therapy
 - Patient has not already received 3 treatment courses of Xifaxan for IBS-D in the previous 6 months

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	---

Product Name: Xifaxan [a]	
Diagnosis	Inflammatory Bowel Disease (e.g. Crohn's Disease, Ulcerative Colitis, Diverticulitis) (Off Label)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization

Guideline Type	Prior Authorization	
Approval Criteria		
1 - Diagnosis of Inflam	1 - Diagnosis of Inflammatory Bowel Disease	
AND		
2 - History of failure, contraindication, or intolerance to both of the following:		
 Ciprofloxacin (generic Cipro) Metronidazole (generic Flagyl) 		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl	

Product Name: Xifaxan [a]	
Diagnosis	Inflammatory Bowel Disease (e.g. Crohn's Disease, Ulcerative Colitis, Diverticulitis) (Off Label)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Documentation of positive clinical response to Xifaxan therapy

у.

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply

3. Background

Benefit/Coverage/Program Information

Background:

Xifaxan is an antibacterial agent indicated for the treatment of travelers' diarrhea caused by noninvasive strains of Escherichia coli in patients 12 years of age and older, for the risk reduction of overt hepatic encephalopathy recurrence in adults and for the treatment of irritable bowel syndrome with diarrhea (IBS-D). There is limited data to support the off-label use of Xifaxan for the treatment of inflammatory bowel diseases.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

5. Revision History

Date	Notes
7/31/2023	Policy reviewed and approved for application to UnitedHealthcare Valu e & Balance Exchange for 1/2022 implementation.
7/31/2023	Annual review. Updated criteria to add "diagnosis of" to Traveler's Diarr hea and Hepatic Encephalopathy sections. Updated references.

Xolair

Prior Authorization Guideline

Guideline ID	GL-134270
Guideline Name	Xolair
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	2/1/2024
P&T Approval Date:	7/21/2021
	11/19/2021 ; 12/15/2021 ; 02/18/2022 ; 09/21/2022 ; 07/19/2023 ; 08/18/2023 ; 10/18/2023

1. Indications

Drug Name: Xolair (omalizumab) prefilled syringe

Asthma Indicated for adults and pediatric patients 6 years of age and older with moderate to severe persistent asthma who have a positive skin test or in vitro reactivity to a perennial aeroallergen and whose symptoms are inadequately controlled with inhaled corticosteroids.

Nasal Polyps Indicated for add-on maintenance treatment of nasal polyps in adult patients 18 years of age and older with inadequate response to nasal corticosteroids.

Chronic Idiopathic Urticaria (CIU) Indicated for the treatment of adults and adolescents 12 years of age and older with chronic idiopathic urticaria who remain symptomatic despite H1 antihistamine treatment.

2. Criteria

Product Name: Xolair prefilled syringe [a]	
Diagnosis	Asthma
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Xolair for self-administration will be approved based on ONE of the following:

1.1 ALL of the following:

1.1.1 Patient has been established on therapy with Xolair for moderate to severe persistent asthma under an active UnitedHealthcare prior authorization

AND

1.1.2 Documentation of positive clinical response to Xolair therapy as demonstrated by at least ONE of the following:

- Reduction in the frequency of exacerbations
- Decreased utilization of rescue medications
- Increase in percent predicted FEV1 from pretreatment baseline
- Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing, etc.)

AND

1.1.3 Xolair is being used in combination with an inhaled corticosteroid (ICS)-containing maintenance medication [e.g., Advair/AirDuo (fluticasone/salmeterol), Breo Ellipta (fluticasone furoate/vilanterol), Symbicort (budesonide/ formoterol), Trelegy Ellipta (fluticasone furoate/umeclidinium/vilanterol)]

AND

1.1.4 Patient is not receiving Xolair in combination with ANY of the following:

- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Anti-interleukin 5 therapy [e.g., Nucala (mepolizumab), Cinqair (resilizumab), Fasenra (benralizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

OR

1.2 ALL of the following:

1.2.1 Diagnosis of moderate or severe asthma

AND

1.2.2 Classification of asthma as uncontrolled or inadequately controlled as defined by at least ONE of the following:

- Poor symptom control (e.g., Asthma Control Questionnaire [ACQ] score consistently greater than 1.5 or Asthma Control Test [ACT] score consistently less than 20)
- Two or more bursts of systemic corticosteroids for at least 3 days each in the previous 12 months
- Asthma-related emergency treatment (e.g., emergency room visit, hospital admission, or unscheduled physician's office visit for nebulizer or other urgent treatment)
- Airflow limitation (e.g., after appropriate bronchodilator withhold forced expiratory volume in 1 second [FEV1] less than 80% predicted [in the face of reduced FEV1/forced vital capacity [FVC] defined as less than the lower limit of normal])
- Patient is currently dependent on oral corticosteroids for the treatment of asthma

AND

1.2.3 Submission of medical records (e.g., chart notes, laboratory values, etc.) documenting a baseline (pre-omalizumab treatment) serum total IgE (immunoglobulin E) level greater than or equal to 30 IU/mL (international units/milliliter) and less than or equal to 1300 IU/mL

AND

1.2.4 Positive skin test or in vitro reactivity to a perennial aeroallergen

AND

1.2.5 Used in combination	ation with ONE of the following:
corticosteroid (ICS)/long	ly-dosed (appropriately adjusted for age) combination inhaled g-acting beta2-agonist (LABA) product [e.g., fluticasone AirDuo/Advair), budesonide/formoterol (Symbicort)]
	OR
1.2.5.2 Combination	therapy including BOTH of the following:
(Alvesco), momOne additional a	dosed (appropriately adjusted for age) ICS product [e.g., ciclesonide etasone furoate (Asmanex), beclomethasone dipropionate (QVAR)] asthma controller medication [e.g., LABA - olodaterol (Striverdi) or apta); leukotriene receptor antagonist - montelukast (Singulair);
	AND
1.2.6 Patient is not re	ceiving Xolair in combination with ANY of the following:
 Anti-interleukin (benralizumab)] 	4 therapy [e.g., Dupixent (dupilumab)] 5 therapy [e.g., Nucala (mepolizumab), Cinqair (resilizumab), Fasenra lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]
	AND
1.2.7 Prescribed by C	NE of the following:
AllergistImmunologistPulmonologist	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl

Product Name: Xolair prefilled syringe [a]	
Diagnosis	Chronic Urticaria
Approval Length	12 month(s)

Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization
Approval Criteria	
1 - Xolair for self-ad	ministration will be approved based on ONE of the following:
1.1 ALL of the follo	owing:
1.1.1 Patient has UnitedHealthcare p	been established on therapy with Xolair for chronic urticaria under an active rior authorization
	AND
1.1.2 Documentat exacerbations, itch	ion of positive clinical response to Xolair therapy (e.g., reduction in severity, hives)
	AND
1.1.3 Patient is no	t receiving Xolair in combination with ANY of the following:
	kin 4 therapy [e.g., Dupixent (dupilumab)] kin 5 therapy [e.g., Nucala (mepolizumab), Cinqair (resilizumab), Fasenra
(benralizuma	ab)]
I hymic stror	nal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]
	OR
1.2 ALL of the follo	owing:
1.2.1 Diagnosis of chronic urticaria	
	AND
1.2.2 ONE of the f	following:

1.2.2.1 Patient remains symptomatic despite at least a 2-week trial of, or history of contraindication or intolerance to, TWO H1-antihistamines [e.g., Allegra (fexofenadine),

Benadryl (diphenhydramine), Claritin (loratadine)]*^

OR

1.2.2.2 Patient remains symptomatic despite at least a 2-week trial of, or history of contraindication or intolerance to BOTH of the following taken in combination:[^]

1.2.2.2.1 Second generation H1-antihistamine [e.g., Allegra (fexofenadine), Claritin (loratadine), Zyrtec (cetirizine)]

AND

1.2.2.2.2 ONE of the following:

- Different second generation H1-antihistamine [e.g., Allegra (fexofenadine), Claritin (loratadine), Zyrtec (cetirizine)]
- First generation H1-antihistamine [e.g., Benadryl (diphenhydramine), Chlor-Trimeton (chlorpheniramine), Vistaril (hydroxyzine)]*
- H2-antihistamine [e.g., Pepcid (famotidine), Tagamet HB (cimetidine), Zantac (ranitidine)]
- Leukotriene modifier [e.g., Singulair (montelukast)]

AND

1.2.3 Patient is not receiving Xolair in combination with ANY of the following:

- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Anti-interleukin 5 therapy [e.g., Nucala (mepolizumab), Cinqair (resilizumab), Fasenra (benralizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

AND

1.2.4 Prescribed by ONE of the following:

- Allergist
- Dermatologist
- Immunologist

Notes

[a] State mandates may apply. Any federal regulatory requirements an

d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl
y. *Patients 65 years of age and older in whom first generation H1-antihis tamines are considered high risk medications to be avoided (e.g., Beer s criteria, HEDIS) should be directed to try alternatives that are not con sidered high risk. ^Tried/failed alternative(s) are supported by FDA labeling.

Product Name: Xolair prefilled syringe [a]	
Diagnosis	Chronic Urticaria
Approval Length	12 month(s)
Therapy Stage	Reauthorization

Product Name: Xolair prefilled syringe [a]

Diagnosis	Nasal Polyps
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Xolair for self-administration will be approved based on ONE of the following:

1.1 ALL of the following:

1.1.1 Patient has been established on therapy with Xolair for nasal polyps under an active UnitedHealthcare prior authorization

AND

1.1.2 Documentation of positive clinical response to Xolair therapy

AND

1.1.3 Patient will continue to receive Xolair as add-on maintenance therapy in combination with intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)

AND

1.1.4 Patient is not receiving Xolair in combination with ANY of the following:

- Anti-interleukin-5 therapy [e.g., Cinqair (resilizumab), Fasenra (benralizumab), Nucala (mepolizumab)
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

OR

1.2 ALL of the following:

1.2.1 Diagnosis of nasal polyps

AND

1.2.2 TWO OR MORE of the following symptoms for longer than 12 weeks duration:

- Nasal mucopurulent discharge
- Nasal obstruction, blockage, or congestion
- Facial pain, pressure, and/or fullness
- Reduction or loss of sense of smell

AND

1.2.3 ONE of the following findings using nasal endoscopy and/or sinus computed tomography (CT):

- Purulent mucus or edema in the middle meatus or ethmoid regions
- Polyps in the nasal cavity or the middle meatus
- Radiographic imaging demonstrating mucosal thickening or partial or complete opacification of paranasal sinuses

AND

- **1.2.4** ONE of the following:
- **1.2.4.1** Patient has required prior sinus surgery

OR

1.2.4.2 Patient has required systemic corticosteroids (e.g., prednisone, methylprednisolone) for nasal polyps in the previous 2 years

OR

1.2.4.3 Patient has been unable to obtain symptom relief after trial of both of the following:

- Intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)[^]
- One other therapy used in the management of nasal polyps [i.e., nasal saline irrigations. antileukotriene agents (e.g., montelukast, zafirlukast, zileuton)]

AND

1.2.5 Patient will receive Xolair as add-on maintenance therapy in combination with intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)

AND

1.2.6 Patient is not receiving Xolair in combination with any of the following:

- Anti-intrleukin-5 therapy [e.g., Cinqair (resilizumab), Fasenra (benralizumab), Nucala (mepolizumab)]
- Anti-interleukin-4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

AND

- **1.2.7** Prescribed by ONE of the following:
 - Allergist
 - Immunologist
 - Otolaryngologist
 - Pulmonologist

3. Background

Benefit/Coverage/Program Information

Background

Xolair (omalizumab) is an anti-IgE antibody indicated for the treatment of moderate to severe asthma in adults and pediatric patients 6 years of age and older with a positive skin test or in vitro reactivity to a perennial aeroallergen and symptoms that are inadequately controlled with inhaled corticosteroids. Xolair is also indicated for add-on maintenance treatment of nasal polyps in adult patients 18 years of age and older with inadequate response to nasal corticosteroids. Xolair is also indicated for the treatment of chronic idiopathic urticaria in adults and adolescents 12 years of age and older who remain symptomatic despite H1 antihistamine treatment.

This policy refers to Xolair (omalizumab) subcutaneous injection for self-administered subcutaneous injection. Xolair (omalizumab) for administration by a healthcare professional is obtained under the medical benefit.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

5. Revision History

Date	Notes
10/4/2023	Annual review. Removed prescriber requirement for initial authorization s for patients established on therapy under UHC medical prior authoriz ation. Added requirement patient is not receiving Xolair with other simil ar treatments for chronic urticaria reauthorization.

Xospata

Prior Authorization Guideline

Guideline ID	GL-141092
Guideline Name	Xospata
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	4/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 09/15/2021 ; 02/18/2022 ; 02/17/2023 ; 2/16/2024

1. Indications

Drug Name: Xospata (gilteritinib)

Acute myeloid leukemia Indicated for the treatment of adult patients who have relapsed or refractory acute myeloid leukemia (AML) with an FMS-like tyrosine kinase 3 (FLT3) mutation as detected by an FDA-approved test.

Other Uses The National Cancer Comprehensive Network (NCCN) recommends the use of Xospata for the treatment of myeloid/lymphoid neoplasms with eosinophilia and FMS-like tyrosine kinase 3 (FLT3) rearrangement. NCCN also recommends Xospata for treatment of AML in combination with azacitidine in patients with FLT3 mutation for low-intensity treatment induction when not a candidate for intensive induction therapy, follow-up treatment after induction therapy following response to previous lower intensity therapy with the same regimen, or for maintenance therapy as a single agent in patients who are post-allogeneic hematopoietic cell transplantation, in remission, and have a history of FLT3 mutation.

2. Criteria

Product Name: Xospata	ı [a]		
Diagnosis	Acute Myeloid Leukemia (AML)		
Approval Length	12 month(s)		
Therapy Stage	Initial Authorization		
Guideline Type	Prior Authorization		
Approval Criteria 1 - Diagnosis of acute myeloid leukemia (AML)			
	AND		
2 - AML is FMS-like tyrosine kinase 3 (FLT3) mutation-positive			
	AND		
3 - ONE of the following:			
 Used in combination with azacitidine as low-intensity treatment induction when not a candidate for intensive induction therapy Follow-up after induction therapy with response to previous lower intensity therapy with the same regimen Post-allogeneic hematopoietic cell transplantation and in remission Disease is relapsed or refractory 			
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.		

Product Name: Xospata [a]	
Diagnosis	Acute Myeloid Leukemia (AML)
Approval Length	12 month(s)
Therapy Stage	Reauthorization

Guideline Type	Prior Authorization	
Approval Criteria		
1 - Patient does not show evidence of progressive disease while on Xospata therapy		
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Background

Xospata (gilteritinib) is a kinase inhibitor indicated for the treatment of adult patients who have relapsed or refractory acute myeloid leukemia (AML) with an FMS-like tyrosine kinase 3 (FLT3) mutation as detected by an FDA-approved test.[1]

The National Cancer Comprehensive Network (NCCN) recommends the use of Xospata for the treatment of myeloid/lymphoid neoplasms with eosinophilia and FMS-like tyrosine kinase 3 (FLT3) rearrangement. [2] NCCN also recommends Xospata for treatment of AML in combination with azacitidine in patients with FLT3 mutation for low-intensity treatment induction when not a candidate for intensive induction therapy, follow-up treatment after induction therapy following response to previous lower intensity therapy with the same regimen, or for maintenance therapy as a single agent in patients who are post-allogeneic hematopoietic cell transplantation, in remission, and have a history of FLT3 mutation.

Additional Clinical Rules

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Xyrem, Xywav, Lumryz

Prior Authorization Guideline

Guideline ID	GL-137252
Guideline Name	Xyrem, Xywav, Lumryz
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP

Guideline Note:

Effective Date:	2/1/2024
P&T Approval Date:	8/14/2020
P&T Revision Date:	02/19/2021 ; 05/20/2022 ; 11/18/2022 ; 02/17/2023 ; 12/13/2023

1. Indications

Drug Name: Xyrem, Lumryz (sodium oxybate)

Narcolepsy Indicated for the treatment of excessive daytime sleepiness (EDS) or cataplexy in patients with narcolepsy.

Drug Name: Xywav (calcium, magnesium, potassium, and sodium oxybates)

Narcolepsy Indicated for the treatment of excessive daytime sleepiness (EDS) or cataplexy in patients with narcolepsy.

Idiopathic hypersomnia (IH) Indicated for idiopathic hypersomnia (IH) in adults.

2. Criteria

Product Name: Lumryz, Xyrem or Xywav [a]	
Diagnosis	Narcolepsy with Cataplexy (i.e., Narcolepsy Type 1)
Approval Length	3 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

1 - Submission of medical records (e.g., chart notes, laboratory values) documenting a diagnosis of narcolepsy with cataplexy (i.e., Narcolepsy Type 1) with BOTH of the following:

- The patient has daily periods of irrepressible need to sleep or daytime lapses into sleep occurring for at least three months
- A mean sleep latency of less than or equal to 8 minutes and two or more sleep onset REM periods (SOREMPs) on an MSLT performed according to standard techniques following a normal overnight polysomnogram. A SOREMP (within 15 minutes of sleep onset) on the preceding nocturnal polysomnogram may replace one of the SOREMPs on the MSLT

AND

2 - Physician attestation to BOTH of the following:

- Patient has experienced cataplexy defined as more than one episode of sudden loss of muscle tone with retained consciousness
- Other causes of sleepiness have been ruled out or treated (including but not limited to obstructive sleep apnea, insufficient sleep syndrome, shift work, the effects of substances or medications, or other sleep disorders)

AND

- **3** Prescribed by ONE of the following:
 - Neurologist
 - Psychiatrist
 - Pulmonologist
 - Sleep Medicine Specialist

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage

	criteria. Other policies and utilization management programs may appl y.
--	--

Product Name: Lumryz, Xyrem or Xywav [a]	
Diagnosis	Narcolepsy with Cataplexy (i.e., Narcolepsy Type 1)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization

1 - Documentation demonstrating a reduction in frequency of cataplexy attacks associated with therapy

OR

2 - Documentation demonstrating reduction in symptoms of excessive daytime sleepiness associated with therapy

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.
-------	--

Product Name: Lumryz, Xyrem or Xywav [a]	
Diagnosis	Narcolepsy without Cataplexy (i.e., Narcolepsy Type 2)
Approval Length	3 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Prior Authorization

Approval Criteria

1 - Submission of medical records (e.g., chart notes, lab values) documenting a diagnosis of narcolepsy without cataplexy (i.e., Narcolepsy Type 2) with BOTH of the following:

• The patient has daily periods of irrepressible need to sleep or daytime lapses into sleep

occurring for at least three months

• A mean sleep latency of less than or equal to 8 minutes and two or more sleep onset REM periods (SOREMPs) are found on a MSLT performed according to standard techniques following a normal overnight polysomnogram. A SOREMP (within 15 minutes of sleep onset) on the preceding nocturnal polysomnogram may replace one of the SOREMPs on the MSLT

AND

- 2 Physician attestation to the following:
 - Other causes of sleepiness have been ruled out or treated (including but not limited to obstructive sleep apnea, insufficient sleep syndrome, shift work, the effects of substances or medications or their withdrawal, sleep phase disorder, or other sleep disorders)

AND

3 - History of failure, contraindication, or intolerance of BOTH of the following:

3.1 ONE of the following:

- Amphetamine based stimulant (e.g., amphetamine, dextroamphetamine)
- Methylphenidate based stimulant

AND

3.2 ONE of the following:

- modafanil (generic Provigil)
- armodafanil (generic Nuvigil)

AND

4 - Prescribed by ONE of the following:

- Neurologist
- Psychiatrist
- Pulmonologist
- Sleep Medicine Specialist

Product Name: Xywav [a]	
Diagnosis	Idiopathic Hypersomnia
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Prior Authorization
Approval Criteria 1 - Documentation demonstrating reduction in symptoms of excessive daytime sleepiness associated with therapy	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

3. Background

Benefit/Coverage/Program Information

Additional Clinical Rules

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Background

Lumryz, Xyrem (sodium oxybate) and Xyvaw are central nervous system depressants indicated for the treatment of excessive daytime sleepiness (EDS) or cataplexy in patients with narcolepsy. Xyway is also indicated for idiopathic hypersomnia (IH) in adults.

Lumryz, Xyrem and Xywav are classified as a Schedule III controlled substance by Federal law. The active ingredient, sodium oxybate or gamma-hydroxybutyrate (GHB), is listed in the most restrictive schedule of the Controlled Substances Act (Schedule I). Thus, non-medical

uses are classified under Schedule I.

Lumryz, Xyrem and Xywav are available only through a REMS program with restricted distribution. The REMS Program provides educational materials to the prescriber and the patient explaining the risks and proper use of Lumryz, Xyrem and Xywav, and the required prescription form. Once it is documented that the patient has read and/or understood the materials, the drug will be shipped to the patient. The REMS Program also recommends patient follow-up every 3 months. Physicians are expected to report all serious adverse events to the manufacturer.

3. Background

Clinical Practice Guidelines

The National Cancer Comprehensive Network (NCCN):

Zelboraf[™] (vemurafenib) is a kinase inhibitor indicated for the treatment of patients with unresectable or metastatic melanoma with BRAF V600E mutation as detected by an FDA-approved test. It is also indicated for the treatment of patients with Erdheim-Chester Disease with BRAF V600 mutation. Zelboraf is not recommended for use in patients with wild-type BRAF melanoma.[1]

The National Cancer Comprehensive Network (NCCN) guideline recommends use of Zelboraf in combination with Cotellic (cobimetinib) for treatment of central nervous system (CNS) cancer and metastatic or unresectable melanoma with a BRAF V600 mutation (or as a single agent if BRAF/MEK inhibitor combination therapy is contraindicated). Zelboraf is also recommended for the treatment of hairy cell leukemia, non-small cell lung cancer (NSCLC), Langerhans cell histiocytosis (LCH), and follicular, oncocytic, and papillary thyroid carcinomas with a BRAF mutation. [2]

Benefit/Coverage/Program Information

Background:

Information on FDA-approved tests for the detection of BRAF V600 mutations in melanoma may be found at: <u>http://www.fda.gov/CompanionDiagnostics</u>. [1]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

Zeposia

Prior Authorization Guideline

Guideline ID	GL-133363	
Guideline Name	Zeposia	
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP 	

Guideline Note:

Effective Date:	1/1/2024
P&T Approval Date:	5/20/2022
P&T Revision Date:	08/19/2022 ; 09/21/2022 ; 01/18/2023 ; 05/25/2023 ; 8/18/2023

1. Indications

Drug Name: Zeposia Multiple Sclerosis (MS) Indicated for the treatment of relapsing forms of multiple sclerosis (MS), to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in adults.

Ulcerative Colitis (UC) Indicated for the treatment of moderately to severely active ulcerative colitis (UC) in adults.

2. Criteria

Product Name: Zeposia [a]	
Diagnosis	Multiple Sclerosis

Approval Length	12 month(s)		
Guideline Type	Non Formulary		
Approval Criteria	Approval Criteria		
1 - Diagnosis of multiple	1 - Diagnosis of multiple sclerosis (MS)		
AND			
2 - History of failure, contraindication, or intolerance to two of the following preferred products or classes (document drug, date, and duration of trial):			
 dimethyl fumarate (generic Tecfidera) fingolimod (generic Gilenya) glatiramer acetate interferon beta-1a or beta-1b (e.g., Betaseron, Avonex) 			
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.		

Product Name: Zeposia [a]	
Diagnosis	Ulcerative Colitis (UC)
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

1 - Diagnosis of moderately to severely active UC

AND

2 - One of the following:

2.1 Patient has had prior or concurrent inadequate response to a therapeutic course of oral corticosteroids and/or immunosuppressants (e.g., azathioprine, 6-mercaptopurine) OR 2.2 Patient has been previously treated with a biologic or targeted synthetic DMARD FDAapproved for the treatment of ulcerative colitis as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) [e.g., adalimumab, Simponi (golimumab), Stelara (ustekinumab), Xeljanz (tofacitinib), Rinvog (upadacitinib)] AND **3** - One of the following: **3.1** History of failure, contraindication, or intolerance to two of the following preferred products (document drug, date, and duration of trial): One of the formulary adalimumab products [b] • Rinvoq (upadacitinib) • • Simponi (golimumab) • Stelara (ustekinumab) Xeljanz/Xeljanz XR (tofacitinib) OR **3.2** Both of the following: **3.2.1** Patient is currently on Zeposia therapy as documented by claims history or submission of medical records (Document drug, date, and duration of therapy) AND **3.2.2** Patient has not received a manufacturer supplied sample at no cost in the prescriber's office, or any form of assistance from the Bristol Myers Squibb sponsored Zeposia 360 Support Program (e.g., sample card which can be redeemed at a pharmacy for a free supply of medication) as a means to establish as a current user of Zeposia*

AND

4 - Patient is not receiving Zeposia in combination with any of the following:

- Biologic DMARD [e.g., adalimumab, Simponi (golimumab), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Xeljanz (tofacitinib), Rinvoq (upadacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]

5 - Prescribed by or in consultation with a gastroenterologist Notes [a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y. *Patients requesting initial authorization who were established on thera py via the receipt of a manufacturer supplied sample at no cost in the p rescriber's office or any form of assistance from the Bristol Myers Squi bb sponsored Zeposia 360 Support Program shall be required to meet i nitial authorization criteria as if patient were new to therapy. [b] For a list of formulary adalimumab products please reference drug c overage tools.

Product Name: Zeposia [a]	
Diagnosis	Ulcerative Colitis (UC)
Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

Approval Criteria

1 - Documentation of positive clinical response to Zeposia therapy

AND

2 - Patient is not receiving Zeposia in combination with any of the following:

- Biologic DMARD [e.g., adalimumab, Simponi (golimumab), Stelara (ustekinumab)]
- Janus kinase inhibitor [e.g., Xeljanz (tofacitinib), Rinvoq (upadacitinib)]
- Phosphodiesterase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]

Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Zilbrysq

Prior Authorization Guideline

Guideline ID	GL-138569	
Guideline Name	Zilbrysq	
Formulary	 UnitedHealthcare Government Programs Exchange Formulary SP 	

Guideline Note:

Effective Date:	3/1/2024
P&T Approval Date:	1/17/2024
P&T Revision Date:	

1. Indications

Drug Name: Zilbrysq	
Generalized myasthenia gravis (gMG) Indicated for the treatment of generalized	myasthenia
gravis (gMG) in adult patients who are antiacetylcholine receptor (AChR) antibody p	oositive.

2. Criteria

Product Name: Zilbrysq [a]	
Approval Length	12 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary

1 - Submission of medical records (e.g., chart notes, laboratory values, etc.) confirming ALL of the following:

- Diagnosis of generalized myasthenia gravis (gMG)
- Positive serologic test for anti-AChR antibodies
- Patient has a Myasthenia Gravis Foundation of America (MGFA) Clinical Classification of class II, III, or IV at initiation of therapy
- Patient has a Myasthenia Gravis Activities of Daily Living scale (MG-ADL) total score ≥ 6 at initiation of therapy

AND

2 - ONE of the following:

- History of failure of at least two immunosuppressive agents over the course of at least 12 months (e.g., azathioprine, corticosteroids, cyclosporine, methotrexate, mycophenolate, etc.)
- Patient has a history of failure of at least one immunosuppressive therapy and has required four or more courses of plasmapheresis/ plasma exchanges and/or intravenous immune globulin over the course of at least 12 months without symptom control

AND

3 - Patient is not receiving Zilbrysq in combination with another complement inhibitor (e.g., Soliris, Ultomiris) or a neonatal Fc receptor blocker (e.g., Rystiggo, Vyvgart,Vyvgart Hytrulo)

AND

4 - Prescribed by, or in consultation with, a neurologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

Product Name: Zilbrysq [a]

Approval Length	12 month(s)
Therapy Stage	Reauthorization
Guideline Type	Non Formulary

1 - Submission of medical records (e.g., chart notes, laboratory tests) demonstrating ALL of the following:

- Improvement and/or maintenance of at least a 2-point improvement (reduction in score) in the MG-ADL score from pre-treatment baseline [4]
- Reduction in signs and symptoms of myasthenia gravis
- Maintenance, reduction, or discontinuation of dose(s) of baseline immunosuppressive therapy (IST) prior to starting Zilbrysq Note: Add on, dose escalation of IST, or additional rescue therapy from baseline to treat myasthenia gravis or exacerbation of symptoms while on Zilbrysq therapy will be considered as treatment failure

AND

2 - Patient is not receiving Zilbrysq in combination with another complement inhibitor (e.g., Soliris, Ultomiris) or a neonatal Fc receptor blocker (e.g., Rystiggo, Vyvgart,Vyvgart Hytrulo)

AND

3 - Prescribed by, or in consultation with, a neurologist

Notes	[a] State mandates may apply. Any federal regulatory requirements an
	d the member specific benefit plan coverage may also impact coverage
	criteria. Other policies and utilization management programs may appl
	у.

3. Background

Benefit/Coverage/Program Information

Background:

Zilbrysq (zilucoplan) is a complement inhibitor indicated for the treatment of generalized myasthenia gravis (gMG) in adult patients who are antiacetylcholine receptor (AChR) antibody

positive. [1]

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.

Zoryve

Prior Authorization Guideline

Guideline ID	GL-141093
Guideline Name	Zoryve
Formulary	UnitedHealthcare Government Programs Exchange Formulary

Guideline Note:

Effective Date:	4/1/2024
P&T Approval Date:	9/21/2022
P&T Revision Date:	02/17/2023 ; 11/17/2023 ; 2/16/2024

1. Indications

Drug Name: Zoryve cream (roflumilast)

Plaque Psoriasis Indicated for topical treatment of plaque psoriasis, including intertriginous areas, in patients 6 years of age and older.

Drug Name: Zoryve foam (roflumilast)

Seborrheic Dermatitis Indicated for the treatment of seborrheic dermatitis in adult and pediatric patients 9 years of age and older.

2. Criteria

Product Name: Zoryve cream [a]	
Diagnosis	Plaque Psoriasis

Approval Length	6 month(s)
Therapy Stage	Initial Authorization
Guideline Type	Non Formulary
Approval Criteria 1 - Diagnosis of plaque psoriasis	
	AND
 2 - Minimum duration of a 4-week trial and failure, contraindication, or intolerance to ONE of the following topical therapies [2]: Corticosteroids (e.g., betamethasone, clobetasol, desonide) Vitamin D analogs (e.g., calcitriol, calcipotriene) Tazarotene Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus) Coal tar 	
	AND
3 - Patient is not receivi	ing Zoryve cream in combination with any of the following:
(golimumab), Sł • Janus kinase ini (tofacitinib)]	D [e.g., Cimzia (certolizumab), Humira (adalimumab), Simponi kyrizi (risankizumab-rzaa), Stelara (ustekinumab)] hibitor [e.g., Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz ase 4 (PDE4) inhibitor [e.g., Otezla (apremilast)]
AND	
4 - Prescribed by, or in consultation with, a dermatologist	
Notes	[a] State mandates may apply. Any federal regulatory requirements an d the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may appl y.

Product Name: Zoryve cream [a]

Diagnosis	Plaque Psoriasis

3. Background

Benefit/Coverage/Program Information

Background

Zykadia[®] (ceritinib) is a kinase inhibitor indicated for the treatment of patients with anaplastic lymphoma kinase (ALK)-positive metastatic non-small cell lung cancer (NSCLC) as detected by an FDA-approved test. The National Cancer Comprehensive Network (NCCN) also recommends Zykadia as first-line therapy for ALK-positive or ROS proto-oncogene 1 (ROS1)-positive recurrent, advanced or metastatic NSCLC, for the treatment of inflammatory myofibroblastic tumor (IMT) with ALK translocation, in treatment of ALK-positive brain metastases from NSCLC, in the treatment of ALK-positive Erdheim-Chester Disease, advanced, recurrent, metastatic, or inoperable inflammatory myofibroblastic tumor (IMT) with positive relapsed or refractory anaplastic large cell lymphoma as palliative intent therapy or second-line and subsequent therapy.

Additional Clinical Rules:

- Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class.
- Supply limits may be in place.

3. Background

Benefit/Coverage/Program Information

Background

Zytiga is a CPY17 inhibitor indicated for use in combination with prednisone for the treatment of patients with metastatic castration-resistant prostate cancer and for high-risk metastatic castration-sensitive prostate cancer. Patients should also receive a gonadotropin-releasing hormone (GnRH) analog concurrently while taking Zytiga or should have had bilateral orchiectomy. [1] The National Comprehensive Cancer Network (NCCN) also recommends the use of Zytiga in combination with prednisone and androgen deprivation therapy as initial therapy for patients without metastases yet with regional node positive disease in combination with androgen deprivation therapy (ADT) and external bean radiation therapy (EBRT) as initial therapy in patients with very-high-risk, node negative prostate cancer, and in combination with prednisone and ADT in patients with positive pelvic persistence/recurrence after prostatectomy. [2]

Additional Clinical Rules

 Notwithstanding Coverage Criteria, UnitedHealthcare may approve initial and reauthorization based solely on previous claim/medication history, diagnosis codes (ICD-10) and/or claim logic. Use of automated approval and re-approval processes varies by program and/or therapeutic class. Supply limits may be in place.
