|-----------------|----------|

## 1 . Criteria

|                        |                       |
|------------------------|-----------------------|
| Product Name:acitretin |                       |
| Approval Length        | 12 month(s)           |
| Therapy Stage          | Initial Authorization |
| Guideline Type         | Prior Authorization   |

### Approval Criteria

1 - Diagnosis of severe psoriasis

**AND**

2 - Prescribed by or in consultation with a dermatologist

**AND**

3 - ONE of the following:

**3.1** Failure to a 3-month trial of methotrexate at the maximally indicated dose, as confirmed by claims history or submission of medical records

**OR**

**3.2** History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)

**AND**

4 - ONE of the following:

- Greater than or equal to 10% body surface area involvement
- Palmoplantar, facial, or genital involvement
- Severe scalp psoriasis

## 1 . Criteria

|                                                                                                                                           |                           |
|-------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| Product Name: Humira, Abrilada, Amjevita, Cyltezo, Hadlima, Hulio, Hyrimoz, Idacio, Simlandi, Yuflyma, Yusimry, Adalimumab (all products) |                           |
| Diagnosis                                                                                                                                 | Rheumatoid Arthritis (RA) |
| Approval Length                                                                                                                           | 12 month(s)               |
| Therapy Stage                                                                                                                             | Initial Authorization     |
| Guideline Type                                                                                                                            | Prior Authorization       |

## **Approval Criteria**

**1** - Diagnosis of moderately to severely active rheumatoid arthritis

**AND**

**2** - Patient is not receiving adalimumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**3** - Prescribed by or in consultation with a rheumatologist

**AND**

**4** - ONE of the following:

**4.1** Patient is currently on Adalimumab therapy as confirmed by claims history or submission of medical records

**OR**

**4.2** BOTH of the following:

**4.2.1** ONE of the following:

- Failure to a 3 month trial of ONE non-biologic DMARD (e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine) at maximally indicated doses confirmed by claims history or submission of medical records
- History of intolerance or contraindication to one non-biologic DMARD (e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine) (please specify intolerance or contraindication)
- Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of rheumatoid arthritis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), Simponi (golimumab), Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz/Xeljanz XR (tofacitinib)]

**AND**

**4.2.2** If the request is for a non-preferred adalimumab product, ONE of the following:

- Failure of Tyenne (tocilizumab-aazg) confirmed by claims history or submitted medical records
- History of intolerance or contraindication to Tyenne (tocilizumab-aazg) [please specify intolerance or contraindication]

**AND**

**5** - If the request is for a non-preferred adalimumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred adalimumab products (please document reason/special circumstances)\*

**AND**

**6** - If the request is for BRAND Humira, ONE of the following:

**6.1** Submission of medical records confirming patient allergy or intolerance to at least two preferred adalimumab biosimilars' inactive ingredients

**OR**

**6.2** BOTH of the following:

- Submission of medical records confirming patient has previously been successfully treated with brand Humira
- Submission of medical records confirming patient has tried at least two preferred adalimumab biosimilars for 6-8 weeks per product and saw a decrease in effectiveness

Notes

\*If approving a non-preferred adalimumab, please enter  
 1) The group authorization CSPREFADAL (for NY EPP and NY use: CSNYADAL)  
 2) An authorization for the non-preferred adalimumab at GPI-12 level

| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Initial Authorization |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Prior Authorization   |
| <p><b>Approval Criteria</b></p> <p><b>1 - Diagnosis of active psoriatic arthritis</b></p> <p style="text-align: center;"><b>AND</b></p> <p><b>2 - Patient is not receiving adalimumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]</b></p> <p style="text-align: center;"><b>AND</b></p> <p><b>3 - Prescribed by or in consultation with one of the following:</b></p> <ul style="list-style-type: none"> <li>• Rheumatologist</li> <li>• Dermatologist</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>4 - ONE of the following:</b></p> <p><b>4.1 Patient is currently on Adalimumab therapy as confirmed by claims history or submission of medical records</b></p> <p style="text-align: center;"><b>OR</b></p> <p><b>4.2 ONE of the following:</b></p> <ul style="list-style-type: none"> <li>• Failure to a 3 month trial of methotrexate at the maximally indicated dose confirmed by claims history or submission of medical records</li> </ul> |                       |

- History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)
- Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of psoriatic arthritis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), Simponi (golimumab), ustekinumab, Tremfya (guselkumab), Xeljanz/Xeljanz XR (tofacitinib), Otezla (apremilast), Skyrizi (risankizumab-rzaa)]

**AND**

**5** - If the request is for a non-preferred adalimumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred adalimumab products (please document reason/special circumstances)\*

**AND**

**6** - If the request is for BRAND Humira, ONE of the following:

**6.1** Submission of medical records confirming patient allergy or intolerance to at least two preferred adalimumab biosimilars' inactive ingredients

**OR**

**6.2** BOTH of the following:

- Submission of medical records confirming patient has previously been successfully treated with brand Humira
- Submission of medical records confirming patient has tried at least two preferred adalimumab biosimilars for 6-8 weeks per product and saw a decrease in effectiveness

**AND**

**4.2.1.2** ONE of the following:

**4.2.1.2.1** Failure to ONE of the following topical therapy classes confirmed by claims history or submission of medical records:

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Anthralin
- Coal tar

**OR**

**4.2.1.2.2** History of intolerance or contraindication to ALL of the following topical therapy classes (please specify intolerance or contraindication):

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Anthralin
- Coal tar

**AND**

**4.2.1.3** ONE of the following:

**4.2.1.3.1** Failure to a 3 month trial of methotrexate at the maximally indicated dose confirmed by claims history or submission of medical records

**OR**

**4.2.1.3.2** History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)

**OR**

**4.2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of plaque psoriasis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), Otezla (apremilast), Skyrizi (risankizumab-rzaa), ustekinumab, Tremfya (guselkumab)]

**AND**

**5** - If the request is for a non-preferred adalimumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred adalimumab products (please document reason/special circumstances)\*

**AND**

**6** - If the request is for BRAND Humira, ONE of the following:

**6.1** Submission of medical records confirming patient allergy or intolerance to at least two preferred adalimumab biosimilars' inactive ingredients

**OR**

**6.2** BOTH of the following:

- Submission of medical records confirming patient has previously been successfully treated with brand Humira
- Submission of medical records confirming patient has tried at least two preferred adalimumab biosimilars for 6-8 weeks per product and saw a decrease in effectiveness

Notes

\*If approving a non-preferred adalimumab, please enter  
 1) The group authorization CSPREFADAL (for NY EPP and NY use: CSNYADAL)  
 2) An authorization for the non-preferred adalimumab at GPI-12 level

| <p><b>Approval Criteria</b></p> <p><b>1 - Diagnosis of active ankylosing spondylitis</b></p> <p style="text-align: center;"><b>AND</b></p> <p><b>2 - Patient is not receiving adalimumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]</b></p> <p style="text-align: center;"><b>AND</b></p> <p><b>3 - Prescribed by or in consultation with a rheumatologist</b></p> <p style="text-align: center;"><b>AND</b></p> <p><b>4 - ONE of the following:</b></p> <p><b>4.1 Patient is currently on Adalimumab therapy as confirmed by claims history or submission of medical records</b></p> <p style="text-align: center;"><b>OR</b></p> <p><b>4.2 ONE of the following:</b></p> <p><b>4.2.1 Failure to two NSAIDs (e.g., ibuprofen, naproxen) at maximally indicated doses, each used for at least 4 weeks, as confirmed by claims history or submission of medical records</b></p> |                             |

**OR**

**4.2.2** History of intolerance or contraindication to TWO NSAIDs (e.g., ibuprofen, naproxen) (please specify intolerance or contraindication)

**OR**

**4.2.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ankylosing spondylitis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), Simponi (golimumab), Xeljanz/Xeljanz XR (tofacitinib)]

**AND**

**5** - If the request is for a non-preferred adalimumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred adalimumab products (please document reason/special circumstances)\*

**AND**

**6** - If the request is for BRAND Humira, ONE of the following:

**6.1** Submission of medical records confirming patient allergy or intolerance to at least two preferred adalimumab biosimilars' inactive ingredients

**OR**

**6.2** BOTH of the following:

- Submission of medical records confirming patient has previously been successfully treated with brand Humira
- Submission of medical records confirming patient has tried at least two preferred adalimumab biosimilars for 6-8 weeks per product and saw a decrease in effectiveness

Notes

\*If approving a non-preferred adalimumab, please enter  
1) The group authorization CSPREFADAL (for NY EPP and NY use:

**4.2 ONE of the following:**

**4.2.1** Failure to ONE of the following conventional drugs or classes at maximally indicated doses, as confirmed by claims history or submitted medical records:

- Corticosteroids (e.g., prednisone, methylprednisolone, budesonide)
- Azathioprine (generic Imuran)
- 6-mercaptopurine (generic Purinethol)
- Methotrexate

**OR**

**4.2.2** History of intolerance or contraindication to ALL of the following conventional drugs or classes (please specify intolerance or contraindication):

- Corticosteroids (e.g., prednisone, methylprednisolone, budesonide)
- Azathioprine (generic Imuran)
- 6-mercaptopurine (generic Purinethol)
- Methotrexate

**OR**

**4.2.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of Crohn's disease as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), ustekinumab]

**AND**

**5** - If the request is for a non-preferred adalimumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred adalimumab products (please document reason/special circumstances)\*

**AND**

**6** - If the request is for BRAND Humira, ONE of the following:

**6.1** Submission of medical records confirming patient allergy or intolerance to at least two preferred adalimumab biosimilars' inactive ingredients

**OR**

**6.2 BOTH of the following:**

- Submission of medical records confirming patient has previously been successfully treated with brand Humira
- Submission of medical records confirming patient has tried at least two preferred adalimumab biosimilars for 6-8 weeks per product and saw a decrease in effectiveness

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of non-infectious uveitis</p>                                                    |                       |

**AND**

**2** - Uveitis is classified as ONE of the following:

- Intermediate
- Posterior
- Panuveitis

**AND**

**3** - Patient is not receiving adalimumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**4** - Prescribed by or in consultation with ONE of the following:

- Rheumatologist
- Ophthalmologist

**AND**

**5** - ONE of the following:

**5.1** Patient is currently on Adalimumab therapy as confirmed by claims history or submission of medical records

**OR**

**5.2** BOTH of the following:

**5.2.1** ONE of the following:

**5.2.1.1** Failure to at least ONE corticosteroid (e.g., prednisolone, prednisone) at maximally indicated dose, as confirmed by claims history or submission of medical records

**OR**

**5.2.1.2** History of intolerance or contraindication to at least ONE corticosteroid (e.g., prednisolone, prednisone) (please specify intolerance or contraindication)

**AND**

**5.2.2** ONE of the following:

**5.2.2.1** Failure to at least ONE systemic non-biologic immunosuppressant (e.g., methotrexate, cyclosporine, azathioprine, mycophenolate) at maximally indicated dose, as confirmed by claims history or submission of medical records

**OR**

**5.2.2.2** History of intolerance or contraindication to at least ONE systemic non-biologic immunosuppressant (e.g., methotrexate, cyclosporine, azathioprine, mycophenolate) (please specify intolerance or contraindication)

**AND**

**6** - If the request is for a non-preferred adalimumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred adalimumab products (please document reason/special circumstances)\*

**AND**

**7** - If the request is for BRAND Humira, ONE of the following:

**7.1** Submission of medical records confirming patient allergy or intolerance to at least two preferred adalimumab biosimilars' inactive ingredients

**OR**

**7.2** BOTH of the following:

| <p><b>Approval Criteria</b></p> <p>1 - Documentation of positive clinical response to Adalimumab therapy</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - Patient is not receiving adalimumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Siliq (brodalumab), Ilumya (tildrakizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]^</p> <p style="text-align: center;"><b>AND</b></p> <p>3 - If the request is for a non-preferred adalimumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred adalimumab products (please document reason/special circumstances)*</p> |                                                                     |

**AND**

**4** - If the request is for BRAND Humira, ONE of the following:

**4.1** Submission of medical records confirming patient allergy or intolerance to at least two preferred adalimumab biosimilars' inactive ingredients

**OR**

**4.2** BOTH of the following:

- Submission of medical records confirming patient has previously been successfully treated with brand Humira
- Submission of medical records confirming patient has tried at least two preferred adalimumab biosimilars for 6-8 weeks per product and saw a decrease in effectiveness

Notes

\*If approving a non-preferred adalimumab, please enter  
 1) The group authorization CSPREFADAL (for NY EPP and NY use: CSNYADAL)  
 2) An authorization for the non-preferred adalimumab at GPI-12 level

|                 |          |
|-----------------|----------|
| Effective Date: | 6/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                    |                       |
|--------------------|-----------------------|
| Product Name:Adbry |                       |
| Approval Length    | 12 month(s)           |
| Therapy Stage      | Initial Authorization |
| Guideline Type     | Prior Authorization   |

## **Approval Criteria**

**1** - Diagnosis of moderate to severe chronic atopic dermatitis

**AND**

**2** - ONE of the following:

**2.1** Failure to TWO of the following therapeutic classes of topical therapies, confirmed by claims history or submission of medical records:

- One medium, high or very-high potency topical corticosteroid [e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)] (see Table 1 in Background)
- One topical calcineurin inhibitor [e.g., pimecrolimus (generic Elidel), tacrolimus (generic Protopic)]
- Eucrisa (crisaborole)

**OR**

**2.2** History of intolerance or contraindication to ALL of the following therapeutic classes of topical therapies (please specify intolerance or contraindication):

- One medium, high or very-high potency topical corticosteroid [e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)] (see Table 1 in Background)
- One topical calcineurin inhibitor [e.g., pimecrolimus (generic Elidel), tacrolimus (generic Protopic)]
- Eucrisa (crisaborole)

**OR**

**2.3** Patient is currently on Adbry therapy as confirmed by claims history or submission of medical records

**AND**

**3** - Patient is NOT receiving Adbry in combination with EITHER of the following:

- Biologic immunomodulator [e.g., Dupixent (dupilumab), Ebglyss (lebrikizumab-lbkz), Nemluvio (nemolizumab-ilto)]
- Janus kinase inhibitor [e.g., Cibinqo (abrocitinib), Opzelura (topical ruxolitinib), Rinvoq (upadacitinib), Xeljanz/XR (tofacitinib)]

**AND**

**4** - Prescribed by or in consultation with ONE of the following:

- Dermatologist
- Allergist
- Immunologist

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                     |

## 2 . Background

### Benefit/Coverage/Program Information

**Table 1. Relative potencies of topical corticosteroids**

| Class             | Drug                                 | Dosage Form                     | Strength (%) |
|-------------------|--------------------------------------|---------------------------------|--------------|
| Very high potency | Augmented betamethasone dipropionate | Ointment, gel                   | 0.05         |
|                   | Clobetasol propionate                | Cream, foam, ointment           | 0.05         |
|                   | Diflorasone diacetate                | Ointment                        | 0.05         |
|                   | Halobetasol propionate               | Cream, ointment                 | 0.05         |
| High Potency      | Amcinonide                           | Cream, lotion, ointment         | 0.1          |
|                   | Augmented betamethasone dipropionate | Cream, lotion                   | 0.05         |
|                   | Betamethasone dipropionate           | Cream, foam, ointment, solution | 0.05         |
|                   | Desoximetasone                       | Cream, ointment                 | 0.25         |
|                   | Desoximetasone                       | Gel                             | 0.05         |
|                   | Diflorasone diacetate                | Cream                           | 0.05         |
|                   | Fluocinonide                         | Cream, gel, ointment, solution  | 0.05         |
|                   | Halcinonide                          | Cream, ointment                 | 0.1          |
|                   | Mometasone furoate                   | Ointment                        | 0.1          |
|                   | Triamcinolone acetonide              | Cream, ointment                 | 0.5          |

|                      |                            |                                   |              |
|----------------------|----------------------------|-----------------------------------|--------------|
| Medium potency       | Betamethasone valerate     | Cream, foam, lotion, ointment     | 0.1          |
|                      | Clocortolone pivalate      | Cream                             | 0.1          |
|                      | Desoximetasone             | Cream                             | 0.05         |
|                      | Fluocinolone acetonide     | Cream, ointment                   | 0.025        |
|                      | Flurandrenolide            | Cream, ointment, lotion           | 0.05         |
|                      | Fluticasone propionate     | Cream                             | 0.05         |
|                      | Fluticasone propionate     | Ointment                          | 0.005        |
|                      | Mometasone furoate         | Cream, lotion                     | 0.1          |
|                      | Triamcinolone acetonide    | Cream, ointment, lotion           | 0.1          |
| Lower-medium potency | Hydrocortisone butyrate    | Cream, ointment, solution         | 0.1          |
|                      | Hydrocortisone probutate   | Cream                             | 0.1          |
|                      | Hydrocortisone valerate    | Cream, ointment                   | 0.2          |
|                      | Prednicarbate              | Cream                             | 0.1          |
| Low potency          | Alclometasone dipropionate | Cream, ointment                   | 0.05         |
|                      | Desonide                   | Cream, gel, foam, ointment        | 0.05         |
|                      | Fluocinolone acetonide     | Cream, solution                   | 0.01         |
| Lowest potency       | Dexamethasone              | Cream                             | 0.1          |
|                      | Hydrocortisone             | Cream, lotion, ointment, solution | 0.25, 0.5, 1 |
|                      | Hydrocortisone acetate     | Cream, ointment                   | 0.5-1        |

### 3 . Revision History

| Date     | Notes                                                                                                                                                                       |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4/2/2025 | Updated formularies. Removed step through Dupixent, updated prescriber requirement to allow for consultation. Updated examples in safety check to add Ebglyss and Nemludio. |

| Diagnosis       | Members Less than the FDA Approved Minimum Age* |
| Approval Length | 12 month(s)                                     |
| Guideline Type  | Prior Authorization                             |

### Approval Criteria

**1** - ONE of the following:

**1.1** Diagnosis of Attention Deficit Hyperactivity Disorder/Attention Deficit Disorder (ADHD/ADD)

**OR**

**1.2** The use of this drug is supported by information from ONE of the following appropriate compendia of current literature:

- American Hospital Formulary Service Drug Information
- National Comprehensive Cancer Network Drugs and Biologics Compendium
- Thomson Micromedex DrugDex
- Clinical pharmacology
- United States Pharmacopoeia-National Formulary (USP-NF)

**AND**

**2** - The child is unresponsive to, or has had an inadequate response to behavioral therapy

**AND**

**3** - The child is experiencing moderate-severe continuing disturbance in function despite behavioral therapy

**AND**

**4** - ONE of the following<sup>^\*\*</sup>:

**4.1** If the request is for a preferred product, the patient has history of ONE of the following:

**4.1.1** Failure to THREE preferred alternatives approved for use in the patient's age, as confirmed by claims history or submission of medical records (In instances where there are fewer than three preferred alternatives approved for use in the patient's age, the patient must have a history of failure to ALL of the preferred products for the patient's age as confirmed by claims history or submission of medical records)

**OR**

**4.1.2** Contraindication or intolerance to THREE preferred alternatives approved for use in

the patient's age (In instances where there are fewer than three preferred alternatives approved for use in the patient's age, the patient must have a history of contraindication or intolerance to ALL of the preferred products for the patient's age) (please specify contraindication or intolerance)

**OR**

**4.2** If the request is for a non-preferred product, non-preferred criteria must also be met\*\*\*

| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 12 month(s)         |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Prior Authorization |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - The patient has been receiving treatment with the requested non-preferred behavioral health medication and is new to the plan (enrollment effective date within the past 90 days)</p> <p><b>OR</b></p> <p><b>2</b> - The patient is currently receiving treatment with the requested non-preferred behavioral health medication in the hospital and must continue upon discharge</p> <p><b>OR</b></p> <p><b>3</b> - ALL of the following:</p> |                     |

**3.1 Diagnosis of Attention Deficit Hyperactivity Disorder/Attention Deficit Disorders (ADHD/ADD)**

**AND**

**3.2 ONE of the following^:**

**3.2.1** Failure to ALL of the following, as confirmed by claims history or submission of medical records:

- guanfacine ER (generic Intuniv)
- atomoxetine (generic Strattera)
- clonidine ER (generic Kapvay)

**OR**

**3.2.2** History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

- guanfacine ER (generic Intuniv)
- atomoxetine (generic Strattera)
- clonidine ER (generic Kapvay)

**AND**

**3.3 ONE of the following^:**

**3.3.1** Failure to ONE of the following, as confirmed by claims history or submission of medical records:

- Amphetamine/dextroamphetamine extended-release capsule (generic Adderall XR)
- Methylphenidate extended-release tablet (generic Concerta)
- Methylphenidate extended-release capsule (generic Metadate CD)
- Methylphenidate 20 mg (milligrams), 30 mg, 40 mg extended-release capsule (generic Ritalin LA)
- Dexmethylphenidate ER capsule (generic Focalin XR)
- Lisdexamfetamine dimesylate capsule (generic Vyvanse)

**OR**

**3.3.2** History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

- Amphetamine/dextroamphetamine extended-release capsule (generic Adderall XR)
- Methylphenidate extended-release tablet (generic Concerta)
- Methylphenidate extended-release capsule (generic Metadate CD)
- Methylphenidate 20 mg, 30 mg, 40 mg extended-release capsule (generic Ritalin LA)
- Dexmethylphenidate ER capsule (generic Focalin XR)
- Lisdexamfetamine dimesylate capsule (generic Vyvanse)

**OR**

**3.3.3** Physician attestation that use of a stimulant medication is not appropriate for the patient

Product Name: Brand Adderall, Brand Adderall XR, Adzenys XR-ODT, Brand Amphetamine ER ODT, Brand Aptensio XR, generic methylphenidate ER (XR) cap (generic Aptensio XR), Brand Concerta, Cotempla XR-ODT, Brand Daytrana, generic methylphenidate patch, Brand Desoxyn, generic methamphetamine, Brand Dexedrine, Dyanavel XR, Brand Evekeo, generic amphetamine, Brand Focalin, Brand Focalin XR, Brand Intuniv, Jornay PM, Brand Metadate CD, Brand Methylin, generic methylphenidate soln, methylphenidate chew tabs, Brand Mydayis, generic amphetamine/dextroamphetamine ER (generic Mydayis), Brand Procentra, generic dextroamphetamine soln, Quillichew ER, Quillivant XR, Brand Relexxii, Brand Methylphenidate ER OSM, generic methylphenidate ER OSM (generic Relexxii), Brand Ritalin, Brand Ritalin LA, generic methylphenidate ER (LA) 10 mg and 60 mg caps, Brand Strattera, Brand Zenzedi, generic dextroamphetamine 2.5 mg, 7.5 mg, 15 mg, 20 mg and 30 mg, Azstarys, Xelstryl

|                 |                     |
|-----------------|---------------------|
| Diagnosis       | Non-Preferred*      |
| Approval Length | 12 month(s)         |
| Guideline Type  | Prior Authorization |

**Approval Criteria**

**1** - The patient has been receiving treatment with the requested non-preferred behavioral health medication and is new to the plan (enrollment effective date within the past 90 days)

**OR**

**2** - The patient is currently receiving treatment with the requested non-preferred behavioral health medication in the hospital and must continue upon discharge

**OR**

**3** - If the request is non-preferred\*, ALL of the following:

**3.1** The patient has a history of ONE of the following^:

**3.1.1** Failure to a majority (not more than three) of the preferred\* formulary/PDL alternatives for the given diagnosis, as confirmed by claims history or submission of medical records (In instances where there are fewer than three preferred alternatives, the patient must have a history of failure to ALL of the preferred products for the patient's age as confirmed by claims history or submission of medical records)

**OR**

**3.1.2** Contraindication or intolerance to a majority (not more than three) of the preferred\* formulary/PDL alternatives for the given diagnosis (In instances where there are fewer than three preferred alternatives, the patient must have a history of contraindication or intolerance to ALL of the preferred products for the patient's age) (please specify contraindication or intolerance)

**AND**

**3.2** If the request is for a multi-source brand medication, ONE of the following^:

**3.2.1** The multi-source brand is being requested because of an adverse reaction, allergy, or sensitivity to a generic equivalent (specify the adverse reaction, allergy or sensitivity)

**OR**

**3.2.2** The multi-source brand is being requested due to a therapeutic failure with the generic equivalent, as documented by submission of medical records

**OR**

**3.2.3** The multi-source brand is being requested because transition to a generic equivalent could result in destabilization of the patient

**OR**

**3.2.4** Special clinical circumstances exist that preclude the use of a generic version of the multi-source brand medication for the patient (document special clinical circumstances)

**AND**

**3.3** ONE of the following:

**3.3.1** The requested drug must be used for an FDA (Food and Drug Administration)-approved indication

**OR**

**3.3.2** BOTH of the following:

**3.3.2.1** The use of this drug is supported by information from ONE of the following appropriate compendia of current literature:

- American Hospital Formulary Service Drug Information
- National Comprehensive Cancer Network Drugs and Biologics Compendium
- Thomson Micromedex DrugDex
- Clinical pharmacology
- United States Pharmacopoeia-National Formulary (USP-NF)

**AND**

**3.3.2.2** The drug is being prescribed for a medically accepted indication that is recognized as a covered benefit by the applicable health plans' program

### Approval Criteria

**1** - The patient has been receiving treatment with the requested non-preferred behavioral health medication and is new to the plan (enrollment effective date within the past 90 days)

**OR**

**2** - The patient is currently receiving treatment with the requested non-preferred behavioral health medication in the hospital and must continue upon discharge

**OR**

**3 - ONE of the following:**

**3.1 ALL of the following:**

**3.1.1 ONE of the following diagnoses:**

**3.1.1.1 Depression**

**OR**

**3.1.1.2 Narcolepsy**

**OR**

**3.1.1.3 Other hypersomnia of central origin**

**OR**

**3.1.1.4 Autism Spectrum Disorder**

**OR**

**3.1.1.5 Mental fatigue secondary to traumatic brain injury (e.g., post-concussion syndrome)**

**OR**

**3.1.1.6 Fatigue associated with medical illness in patients in palliative or end of life care**

**OR**

**3.1.1.7 Fatigue associated with multiple sclerosis**

**OR**

**3.1.1.8 BOTH of the following:**

**3.1.1.8.1** The use of this drug is supported by information from ONE of the following appropriate compendia:

- American Hospital Formulary Service Drug Information
- National Comprehensive Cancer Network Drugs and Biologics Compendium
- Thomson Micromedex DrugDex
- Clinical pharmacology
- United States Pharmacopoeia-National Formulary (USP-NF)

**AND**

**3.1.1.8.2** The drug is being prescribed for a medically accepted indication that is recognized as a covered benefit by the applicable health plans' program

**AND**

**3.1.2 ONE of the following:**

**3.1.2.1** Failure to ALL of the following as confirmed by claims history or submission of medical records^:

- Amphetamine/dextroamphetamine salts extended-release (generic Adderall XR)
- Methylphenidate extended-release tablet or capsule (e.g., generic Concerta or Metadate CD)
- Dexmethylphenidate ER capsule (generic Focalin XR)

**OR**

**3.1.2.2** History of contraindication or intolerance to ALL of the following (please specify contraindication or intolerance)^:

- Amphetamine/dextroamphetamine salts extended-release (generic Adderall XR)
- Methylphenidate extended-release tablet or capsule (e.g., generic Concerta or Metadate CD)
- Dexmethylphenidate ER capsule (generic Focalin XR)

**OR**

**3.1.2.3** History of or potential for a substance abuse disorder

**AND**

**3.1.3** If the request is for BRAND Vyvanse capsules or BRAND Vyvanse chewable tablets, ONE of the following<sup>^\*</sup>:

**3.1.3.1** The multi-source brand is being requested because of an adverse reaction, allergy, or sensitivity to a generic equivalent (specify the adverse reaction, allergy or sensitivity)

**OR**

**3.1.3.2** The multi-source brand is being requested due to a therapeutic failure with the generic equivalent, as documented by submission of medical records

**OR**

**3.1.3.3** The multi-source brand is being requested because transition to a generic equivalent could result in destabilization of the patient

**OR**

**3.1.3.4** Special clinical circumstances exist that preclude the use of a generic version of the multi-source brand medication for the patient (document special clinical circumstances)

**OR**

**3.2** BOTH of the following:

**3.2.1** Diagnosis of Binge Eating Disorder (BED)

**AND**

**3.2.2** If the request is for BRAND Vyvanse capsules or BRAND Vyvanse chewable tablets, ONE of the following<sup>^\*\*</sup>:

**3.2.2.1** The multi-source brand is being requested because of an adverse reaction, allergy, or sensitivity to a generic equivalent (specify the adverse reaction, allergy or sensitivity)

**OR**

**3.2.2.2** The multi-source brand is being requested due to a therapeutic failure with the generic equivalent, as documented by submission of medical records

**OR**

**3.2.2.3** The multi-source brand is being requested because transition to a generic equivalent could result in destabilization of the patient

**OR**

**3.2.2.4** Special clinical circumstances exist that preclude the use of a generic version of the multi-source brand medication for the patient (document special clinical circumstances)

## 2 . Background

| Benefit/Coverage/Program Information           |                          |
|------------------------------------------------|--------------------------|
| Table 1: FDA Approved Minimum Age Table        |                          |
| Product name                                   | FDA Approved Minimum Age |
| All products NOT listed below                  | 6 years of age           |
| Adderall (amphetamine/dextroamphetamine salts) | 3 years of age           |

|                                              |                 |
|----------------------------------------------|-----------------|
| Dexedrine (dextroamphetamine)                | 3 years of age  |
| Evekeo (amphetamine) tablet                  | 3 years of age  |
| Mydayis (mixed amphetamine salts) ER capsule | 13 years of age |
| ProCentra (dextroamphetamine) solution       | 3 years of age  |
| Zenzedi (dextroamphetamine) tablet           | 3 years of age  |

### 3 . Revision History

| Date       | Notes                                                                                                                                                                                                                                                                                                                                                         |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10/22/2025 | Removed obsolete products, Adhansia XR and Evekeo ODT, as targets. Added Amphetamine ER ODT (MSC M) products as targets. Cleaned up GPI tables and updated product name lists, where applicable. Updated step therapy language in less than FDA approved minimum age criteria section. Updated background table. Minor cosmetic updates throughout guideline. |

Aemcolo

## Prior Authorization Guideline

**AND**

**2.2 ONE of the following:**

- Used for the management of recurrent, locoregional advanced and/or metastatic disease
- Used for management to stabilize glucose levels of locoregional insulinoma

**AND**

**2.3 If the request is for Torpenz, ONE of the following:**

- Failure to everolimus (generic Afinitor) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to everolimus (generic Afinitor) (please specify contraindication or intolerance)

**OR**

**3 - ALL of the following:**

**3.1 Diagnosis of well-differentiated, grade 3 neuroendocrine tumor**

**AND**

**3.2 ONE of the following:**

- Disease is unresectable
- Disease is locally advanced
- Disease is metastatic

**AND**

**3.3 Tumor has favorable biology (e.g., relatively low Ki-67 [**

**AND**

**3.4** If the request is for Torpenz, ONE of the following:

- Failure to everolimus (generic Afinitor) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to everolimus (generic Afinitor) (please specify contraindication or intolerance)

### Approval Criteria

1 - ALL of the following:

1.1 Diagnosis of subependymal giant cell astrocytoma (SEGA)

**AND**

1.2 Used as adjuvant treatment

**AND**

1.3 If the request is for Torpenz, ONE of the following:

- Failure to everolimus (generic Afinitor) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to everolimus (generic Afinitor) (please specify contraindication or intolerance)

**OR**

2 - ALL of the following:

**2.1** Diagnosis of meningioma

**AND**

**2.2** Disease is recurrent or progressive

**AND**

**2.3** Surgery and/or radiation is not possible

**AND**

**2.4** ONE of the following:

- Used in combination with bevacizumab (Avastin, Mvasi, etc.)
- Used in combination with octreotide acetate LAR

**AND**

**2.5** If the request is for Torpenz, ONE of the following:

- Failure to everolimus (generic Afinitor) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to everolimus (generic Afinitor) (please specify contraindication or intolerance)

### Approval Criteria

1 - Diagnosis of one of the following:

- Waldenströms macroglobulinemia
- Lymphoplasmacytic lymphoma

**AND**

2 - One of the following:

- Disease is non-responsive to primary treatment
- Disease is progressive
- Disease has relapsed

**AND**

3 - If the request is for Torpenz, ONE of the following:

- Failure to everolimus (generic Afinitor) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to everolimus (generic Afinitor) (please specify contraindication or intolerance)

Product Name: Brand Afinitor, generic everolimus, Torpenz, Brand Afinitor Disperz, generic everolimus TBSO

### Approval Criteria

1 - Diagnosis of breast cancer

**AND**

**2 - ONE of the following:**

- Disease is recurrent
- Disease is metastatic

**AND**

**3 - ONE of the following:**

- Disease is hormone receptor positive (HR+) [i.e., estrogen-receptor-positive (ER+) or progesterone-receptor-positive (PR+)]
- Breast cancer is considered inflammatory

**AND**

**4 - Disease is human epidermal growth factor receptor 2 (HER2)-negative**

**AND**

**5 - One of the following:**

**5.1 Patient is a postmenopausal woman**

**OR**

**5.2 BOTH of the following:**

- Patient is a premenopausal woman
- Patient is being treated with ovarian ablation/suppression

**OR**

**5.3 Patient is male**

**AND**

**6** - Used in combination with ONE of the following:

- Exemestane if progressed within 12 months or on a non-steroidal aromatase inhibitor [e.g., Arimidex (anastrozole), Femara (letrozole)]
- Fulvestrant
- Tamoxifen

**AND**

**7** - If the request is for Torpenz, ONE of the following:

- Failure to everolimus (generic Afinitor) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to everolimus (generic Afinitor) (please specify contraindication or intolerance)

Product Name: Brand Afinitor, generic everolimus, Torpenz, Brand Afinitor Disperz, generic everolimus TBSO

| Diagnosis       | Soft Tissue Sarcoma   |
| Approval Length | 12 month(s)           |
| Therapy Stage   | Initial Authorization |
| Guideline Type  | Prior Authorization   |

### Approval Criteria

**1** - Diagnosis of ONE of the following soft tissue sarcoma subtypes:

- Locally advanced unresectable or metastatic malignant perivascular epithelioid cell tumor (PEComa)
- Recurrent angiomyolipoma
- Lymphangioleiomyomatosis

**AND**

**2** - If the request is for Torpenz, ONE of the following:

- Failure to everolimus (generic Afinitor) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to everolimus (generic Afinitor) (please specify contraindication or intolerance)

Product Name: Brand Afinitor, generic everolimus, Torpenz, Brand Afinitor Disperz, generic everolimus TBSO

| Guideline Type  | Prior Authorization            |

### Approval Criteria

1 - One of the following:

- Diagnosis of thymic carcinoma
- Diagnosis of thymoma

**AND**

2 - ONE of the following:

- First-line therapy as a single agent for those who cannot tolerate first-line combination regimens
- Second-line therapy as a single agent

**AND**

3 - If the request is for Torpenz, ONE of the following:

- Failure to everolimus (generic Afinitor) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to everolimus (generic Afinitor) (please specify contraindication or intolerance)

- History of contraindication or intolerance to everolimus (generic Afinitor) (please specify contraindication or intolerance)

Product Name: Brand Afinitor, generic everolimus, Torpenz, Brand Afinitor Disperz, generic everolimus TBSO

|                 |                       |
|-----------------|-----------------------|
| Diagnosis       | Uterine Neoplasm      |
| Approval Length | 12 month(s)           |
| Therapy Stage   | Initial Authorization |
| Guideline Type  | Prior Authorization   |

### Approval Criteria

1 - ALL of the following:

1.1 Diagnosis of endometrial carcinoma

**AND**

1.2 Used in combination with letrozole

**AND**

1.3 If the request is for Torpenz, ONE of the following:

- Failure to everolimus (generic Afinitor) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to everolimus (generic Afinitor) (please specify contraindication or intolerance)

**OR**

2 - ALL of the following:

2.1 Diagnosis of Uterine Sarcoma

**AND**

**2.2** Disease is perivascular epithelioid cell tumor (PEComa)

**AND**

**2.3** Used as second-line or subsequent therapy

**AND**

**2.4** If the request is for Torpenz, ONE of the following:

- Failure to everolimus (generic Afinitor) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to everolimus (generic Afinitor) (please specify contraindication or intolerance)

Product Name: Brand Afinitor, generic everolimus, Torpenz, Brand Afinitor Disperz, generic everolimus TBSO

|                 |                                                              |
|-----------------|--------------------------------------------------------------|
| Diagnosis       | Tuberous Sclerosis Complex associated Partial-Onset Seizures |
| Approval Length | 12 month(s)                                                  |
| Therapy Stage   | Initial Authorization                                        |
| Guideline Type  | Prior Authorization                                          |

**Approval Criteria**

**1** - Diagnosis of tuberous sclerosis complex associated partial-onset seizures

**AND**

**2** - Used as adjunctive therapy

**AND**

**3** - If the request is for Torpenz, ONE of the following:

- Failure to everolimus (generic Afinitor) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to everolimus (generic Afinitor) (please specify contraindication or intolerance)

Product Name: Brand Afinitor, generic everolimus, Torpenz, Brand Afinitor Disperz, generic everolimus TBSO

### Approval Criteria

**1** - Diagnosis of osteosarcoma

**AND**

**2** - Disease is ONE of the following:

- Relapsed/Refractory
- Metastatic

**AND**

**3** - Used as second-line therapy

**AND**

**4** - Used in combination with Nexavar (sorafenib)

**AND**

**5** - If the request is for Torpenz, ONE of the following:

- Failure to everolimus (generic Afinitor) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to everolimus (generic Afinitor) (please specify contraindication or intolerance)

Product Name: Brand Afinitor, generic everolimus, Torpenz, Brand Afinitor Disperz, generic everolimus TBSO

| Diagnosis       | Histiocytic Neoplasms |
| Approval Length | 12 month(s)           |
| Therapy Stage   | Initial Authorization |
| Guideline Type  | Prior Authorization   |

### Approval Criteria

**1** - Diagnosis of ONE of the following

- Rosai-Dorfman Disease
- Langerhans Cell Histiocytosis
- Erdheim-Chester Disease

**AND**

**2** - Presence of phosphatidylinositol-4,5-bisphosphate 3-kinase catalytic subunit alpha (PIK3CA) mutation

**AND**

**3** - If the request is for Torpenz, ONE of the following:

- Failure to everolimus (generic Afinitor) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to everolimus (generic Afinitor) (please specify contraindication or intolerance)

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 7/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Afrezza |                       |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

### **Approval Criteria**

**1** - One of the following:

**1.1** Diagnosis of type 1 diabetes mellitus and used in combination with a basal insulin or continuous insulin pump

**OR**

**1.2** Diagnosis of type 2 diabetes mellitus

**AND**

**2** - Patient is unable to self-inject medications (e.g. Humalog, Lantus, Levemir) due to ONE of the following:

- Physical impairment
- Visual impairment
- Lipohypertrophy
- Documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-5 for specific phobia diagnostic criteria)

**AND**

**3** - Forced Expiratory Volume (FEV1) within the last 60 days is greater than or equal to 70% of expected normal as determined by the physician

**AND**

**4** - Afrezza will not be approved in patients with ONE of the following:

- Who smoke cigarettes
- Who recently quit smoking (within the past 6 months)
- With chronic lung disease (e.g. asthma, chronic obstructive pulmonary disease)

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                     |

### Guideline Note:

|                 |           |
|-----------------|-----------|
| Effective Date: | 10/1/2024 |
|-----------------|-----------|

## 1 . Criteria

|                      |                             |
|----------------------|-----------------------------|
| Product Name:Agamree |                             |
| Diagnosis            | Duchenne Muscular Dystrophy |
| Guideline Type       | Prior Authorization         |
| Approval Criteria    |                             |

**1** - Published clinical evidence shows Agamree is likely to produce equivalent therapeutic results as other available corticosteroids (e.g., prednisone); therefore, Agamree is not medically necessary for treatment of Duchenne muscular dystrophy

|       |                                                                                                                                                                                            |

| Effective Date: | 11/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                     |                              |
|---------------------|------------------------------|
| Product Name:Alhemo |                              |
| Diagnosis           | Hemophilia A With Inhibitors |
| Approval Length     | 12 month(s)                  |
| Therapy Stage       | Initial Authorization        |
| Guideline Type      | Prior Authorization          |

**Approval Criteria**

1 - BOTH of the following:

1.1 Diagnosis of hemophilia A

**AND**

1.2 Patient has developed high-titer factor VIII inhibitors (i.e., patient has developed factor VIII inhibitors greater than or equal to 5 Bethesda units [BU])

**AND**

2 - Patient is 12 years of age or older

**AND**

3 - Prescribed for the prevention of bleeding episodes (i.e., routine prophylaxis)

### Guideline Note:

|                 |           |
|-----------------|-----------|
| Effective Date: | 12/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                       |                       |
|-----------------------|-----------------------|
| Product Name:Alyftrek |                       |
| Approval Length       | 12 month(s)           |
| Therapy Stage         | Initial Authorization |
| Guideline Type        | Prior Authorization   |

### Approval Criteria

1 - Diagnosis of cystic fibrosis (CF)

**AND**

2 - Submission of laboratory results documenting that the patient has at least one of the following responsive mutations in the CFTR gene\*:

- F508del mutation
- A mutation that is responsive based on clinical data
- A mutation that is responsive based on in vitro data
- A mutation that is responsive based on extrapolated data

**AND**

3 - The patient is at least 6 years of age

**AND**

4 - Prescribed by or in consultation with a provider who specializes in the treatment of CF

|       |                                                                                                                                                                                                  |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Notes | *See Table 1 in Background for list of CFTR gene mutations responsive to Alyftrek. A complete up to date list of responsive mutations can be referenced in the Alyftrek Prescribing Information. |

| ** Clinical data is obtained from Trial 1, NCT05033080 and Trial 2, NCT05076149. |                   |                  |                  |                           |                            |              |

† This mutation is also predicted to be responsive by FRT assay with Alyftrek.

‡ The *N1303K* mutation is predicted to be responsive only by HBE assay. All other mutations predicted to be responsive with in vitro data are supported by FRT assay.

§ Complex/compound mutations where a single allele of the *CFTR* gene has multiple mutations; these exist independent of the presence of mutations on the other allele.

¶ Efficacy is extrapolated to certain non-canonical splice mutations because clinical trials in all mutations in this subgroup are infeasible and these mutations are not amenable to interrogation by FRT system.

| Guideline Type                    | Prior Authorization                                                    |

### Approval Criteria

1 - Diagnosis of ONE of the following\*:

- Enterobius vermicularis (pinworm)
- Ascariasis (roundworm)
- Toxocariasis (roundworm)
- Trichinellosis
- Trichuriasis (whipworm)
- Capillariasis
- Baylisascaris
- Clonorchiasis (liver flukes)
- Gnathostomiasis
- Strongyloidiasis
- Loiasis
- Opisthorchiasis
- Anisakiasis

**OR**

2 - Diagnosis of ONE of the following\*\*:

- Taeniasis or Cysticercosis/Neurocysticercosis
- Hydatid Disease [Echinococcosis (Tapeworm)]
- Ancylostoma/Necatoriasis (Hookworm)

**OR**

3 - Diagnosis of microsporidiosis not caused by Enterocytozoon bienersi or Vittaforma corneae\*\*\*

|                          |                                              |

|--------------------------------------------------------------------------------------|---------------------|
| Product Name: Brand Aptiom, generic eslicarbazepine, Briviact tabs/oral soln, Xcopri |                     |
| Approval Length                                                                      | 12 month(s)         |
| Guideline Type                                                                       | Prior Authorization |
| Approval Criteria                                                                    |                     |

**1** - For continuation of prior therapy for a seizure disorder

**OR**

**2** - ALL of the following:

**2.1** Diagnosis of partial-onset seizures

**AND**

**2.2** History of greater than or equal to 8 week trial of at least TWO of the following (any release formulation qualifies) confirmed by claims history or submitted medical records:

- Carbamazepine (e.g., generic Tegretol)
- Divalproex (e.g., generic Depakote)
- Gabapentin (e.g., generic Neurontin)
- Lacosamide (e.g. generic Vimpat)
- Lamotrigine (e.g., generic Lamictal)
- Levetiracetam (e.g., generic Keppra)
- Oxcarbazepine (e.g., generic Trileptal)
- Phenytoin (e.g., generic Dilantin)
- Pregabalin (e.g., generic Lyrica)
- Topiramate (e.g., generic Topamax)
- Valproic acid (e.g., generic Depakene)
- Zonisamide (generic Zonegran)

**Product Name:**Brand Fycompa, generic perampanel

**Approval Length** 12 month(s)

**Guideline Type** Prior Authorization

**Approval Criteria**

**1** - For continuation of prior therapy for a seizure disorder

**OR**

**2** - ALL of the following:

**2.1** ONE of the following:

**2.1.1** Diagnosis of partial-onset seizures with or without secondarily generalized seizures

**OR**

**2.1.2** ALL of the following:

- Diagnosis of primary generalized tonic-clonic seizures
- Used as adjunctive therapy (defined as accessory treatment used in combination to enhance primary treatment)
- Not used as primary treatment

**AND**

**2.2** History of greater than or equal to 8 week trial of at least TWO of the following (any release formulation qualifies) confirmed by claims history or submitted medical records:

- Carbamazepine (e.g., generic Tegretol)
- Divalproex (e.g., generic Depakote)
- Gabapentin (e.g., generic Neurontin)
- Lacosamide (e.g. generic Vimpat)

- Rufinamide (generic Banzel)

**AND**

**2.4** Prescriber provides a reason or special circumstance the patient cannot use clobazam (generic Onfi) tablets or suspension

**OR**

**3** - ALL of the following:

**3.1** Diagnosis of refractory partial onset seizures (four or more uncontrolled seizures per month after an adequate trial of at least two antiepileptic drugs)

**AND**

**3.2** BOTH of the following:

- Used as adjunctive therapy (defined as accessory treatment used in combination to enhance primary treatment)
- Not used as primary treatment

**AND**

**3.3** History of greater than or equal to 8 week trial of at least TWO of the following (any release formulation qualifies), confirmed by claims history or submitted medical records:

- Carbamazepine (e.g., generic Tegretol)
- Divalproex (e.g., generic Depakote)
- Gabapentin (e.g., generic Neurontin)
- Lacosamide (e.g. generic Vimpat)
- Lamotrigine (e.g., generic Lamictal)
- Levetiracetam (e.g., generic Keppra)
- Oxcarbazepine (e.g., generic Trileptal)
- Phenytoin (e.g., generic Dilantin)
- Pregabalin (e.g., generic Lyrica)
- Topiramate (e.g., generic Topamax)
- Valproic acid (e.g., generic Depakene)
- Zonisamide (generic Zonegran)

**AND**

**3.4** Prescriber provides a reason or special circumstance the patient cannot use generic clobazam tablets or suspension

**OR**

**4** - ALL of the following:

- Diagnosis of Dravet syndrome
- Patient is currently taking Diacomit
- Prescriber provides a reason or special circumstance the patient cannot use generic clobazam tablets or suspension

Product Name: Brand Sabril powd pack, Brand Vigadrone powd pack, generic vigabatrin powd pack, generic Vigpoder powd pack

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Prior Authorization                                                |

## Approval Criteria

1 - ALL of the following:

1.1 The patient is unresponsive to other treatment modalities, unless contraindication (i.e., other medications or behavioral modification attempted)

**AND**

1.2 The patient has tried and failed all available preferred\*\* atypical antipsychotics that are Food and Drug Administration (FDA) approved for the patient's age^

**AND**

1.3 One of the following:

1.3.1 Patient has ONE of the following diagnoses:

- Schizophrenia or schizoaffective disorder
- Autism
- Bipolar disorder

**OR**

1.3.2 Patient displays symptoms of aggression as a symptom of developmental delay, Tourette's syndrome or chronic tics, oppositional defiant disorder, or conduct disorder

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## **Approval Criteria**

**1** - ALL of the following:

**1.1** Patient has ONE of the following diagnoses:

- Schizophrenia or schizoaffective disorder
- Bipolar disorder
- Autism
- Major depressive disorder
- Tourette's

**AND**

**1.2** Submission of medical records documenting the patient is currently prescribed aripiprazole and tolerates the medication<sup>^</sup>

**AND**

**1.3** Submission of medical records documenting the patient's adherence to aripiprazole is less than 80 percent within the past 6 months (medication adherence percentage is defined as the number of pills absent in a given time period divided by the number of pills prescribed during that same time, multiplied by 100)<sup>^</sup>

**AND**

**1.4** ALL of the following strategies (if applicable to the patient) to improve patient adherence have been tried without success<sup>^</sup>:

- Utilization of a pill box
- Utilization of a smart phone reminder (ex. alarm, application, or text reminder)
- Involving family members or friends to assist
- Coordinating timing of dose to coincide with dosing of another daily medication

**AND**

**1.5** Submission of medical records documenting patient has experienced life-threatening or potentially life-threatening symptoms, or has experienced a severe worsening of symptoms leading to a hospitalization which was attributed to the lack of adherence to aripiprazole<sup>^</sup>

**AND**

**1.6** Prescriber acknowledges that Abilify MyCite has not been shown to improve patient adherence and attests that Abilify MyCite is medically necessary for the patient to maintain compliance, avoid life-threatening worsening of symptoms, and reduce healthcare resources utilized due to lack of adherence^

**AND**

**1.7** Prescriber agrees to track and document adherence of Abilify MyCite through software provided by the manufacturer^

**AND**

**1.8** One of the following^:

**1.8.1** History of failure to TWO of the following as confirmed by claims history or submission of medical records:

- Abilify Maintena
- Invega Sustenna
- Risperidone ER injection (generic Risperdal Consta)
- Aristada
- Perseris

**OR**

**1.8.2** History of contraindication, intolerance, reason or special circumstance they cannot use ALL of the following (please specify contraindication, intolerance, reason or special circumstance):

- Abilify Maintena
- Invega Sustenna
- Risperidone ER injection (generic Risperdal Consta)
- Aristada
- Perseris

**OR**

**2** - One of the following

**2.1** The patient has been receiving treatment with the requested non-preferred behavioral health medication and is new to the plan (enrollment effective date within the past 90 days)

**OR**

**2.2** The patient is currently receiving treatment with the requested non-preferred behavioral health medication in the hospital and must continue upon discharge

**Approval Criteria**

**1 - BOTH of the following:**

**1.1** Patient has a diagnosis of ONE of the following:

- Mania or mixed episodes associated with Bipolar Disorder
- Major depressive disorder (MDD)

**AND**

**1.2** ONE of the following^:

- Failure to three preferred\* alternatives, one of which must be aripiprazole, as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to three preferred\* alternatives, one of which must be aripiprazole (please specify contraindication or intolerance)

**OR**

**2 - BOTH of the following:**

**2.1** Patient has a diagnosis of schizophrenia or schizoaffective disorder

**AND**

**2.2** ONE of the following^:

**2.2.1** Failure to THREE preferred atypical antipsychotics\*, which must include both aripiprazole and lurasidone, as confirmed by claims history or submission of medical records

**OR**

**2.2.2** History of contraindication or intolerance to THREE preferred atypical antipsychotics\*, which must include both aripiprazole and lurasidone (please specify contraindication or intolerance)

**OR**

**3** - BOTH of the following:

**3.1** Patient has a diagnosis of depressive episodes associated with Bipolar I Disorder (bipolar depression)

**AND**

**3.2** ONE of the following^:

**3.2.1** Failure to ALL of the following as confirmed by claims history or submission of medical records:

- Fluoxetine used in combination with olanzapine
- Lurasidone
- Quetiapine

**OR**

**3.2.2** History of contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

- Fluoxetine used in combination with olanzapine
- Lurasidone
- Quetiapine

**OR**

**4** - ONE of the following:

- The patient has been receiving treatment with the requested non-preferred behavioral health medication and is new to the plan (enrollment effective date within the past 90 days)

**2.1** The drug is being prescribed within the manufacturer's published dosing guidelines

**OR**

**2.2** The requested dose falls within dosing guidelines found in ONE of the following compendia of current literature:

- American Hospital Formulary Service Drug Information
- National Comprehensive Cancer Network Drugs and Biologics Compendium
- Thomson Micromedex DrugDex
- Clinical pharmacology
- United States Pharmacopoeia-National Formulary (USP-NF)

**AND**

**3** - The requested dosage cannot be achieved using the plan accepted quantity limit of a different dose or formulation

**AND**

**4** - The drug is being prescribed for a medically accepted indication that is recognized as a covered benefit by the applicable health plans' program

**AND**

**5** - Physician has provided rationale for needing to exceed the quantity limit of one capsule per day, at a maximum dose of 42 mg (NOTE: The treatment effect of Caplyta at doses higher than 42 mg daily versus placebo was NOT statistically significant in clinical trials)

| <p><b>Approval Criteria</b></p> <p><b>1 - ALL of the following:</b></p> <p><b>1.1 ONE of the following(*, ^):</b></p> <p><b>1.1.1</b> Patient must demonstrate failure to a majority (not more than three) of the preferred formulary/preferred drug list (PDL) alternatives, one of which must be aripiprazole, for the given diagnosis as confirmed by claims history or submission of medical records - Prior trials of formulary/PDL alternatives must sufficiently demonstrate that the formulary/PDL alternatives are either ineffective or inappropriate at the time of the request</p> <p style="text-align: center;"><b>OR</b></p> <p><b>1.1.2</b> Patient must demonstrate intolerance to a majority (not more than three) of the preferred formulary/PDL alternatives, one of which must be aripiprazole, for the given diagnosis (please specify intolerance) - Prior trials of formulary/PDL alternatives must sufficiently demonstrate that the formulary/PDL alternatives are either ineffective or inappropriate at the time of the request</p> <p style="text-align: center;"><b>OR</b></p> <p><b>1.1.3</b> There are no preferred formulary alternatives for the requested drug</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.2</b> If the request is for a multi-source brand medication, ONE of the following^:</p> <p><b>1.2.1</b> The multi-source brand is being requested because of an adverse reaction, allergy, or sensitivity to a generic equivalent (specify the adverse reaction, allergy, or sensitivity)</p> <p style="text-align: center;"><b>OR</b></p> <p><b>1.2.2</b> The multi-source brand is being requested due to an incomplete response with the generic equivalent as documented by submission of medical records</p> |                     |

**OR**

**1.2.3** The multi-source brand is being requested because transition to a generic equivalent could result in destabilization of the patient

**OR**

**1.2.4** Special clinical circumstances exist that preclude the use of a generic version of the multi-source brand medication for the patient (document special clinical circumstance)

**AND**

**1.3** ONE of the following:

**1.3.1** The requested drug must be used for a Food and Drug Administration (FDA)-approved indication

**OR**

**1.3.2** The use of this drug is supported by information from ONE of the following appropriate compendia of current literature:

- American Hospital Formulary Service Drug Information
- National Comprehensive Cancer Network Drugs and Biologics Compendium
- Thomson Micromedex DrugDex
- Clinical pharmacology
- United States Pharmacopoeia-National Formulary (USP-NF)

**AND**

**1.4** The drug is being prescribed for a medically accepted indication that is recognized as a covered benefit by the applicable health plan's program

**OR**

**2** - The patient has been receiving treatment with the requested non-preferred behavioral health medication and is new to the plan (enrollment effective date within the past 90 days)

**OR**

**3** - The patient is currently receiving treatment with the requested non-preferred behavioral health medication in the hospital and must continue upon discharge

^NJ Psych Panel (any mental health prescriber) is not subject to this criterion.

## 2 . Background

### Benefit/Coverage/Program Information

**Table 1: Minimum Age Edits**

Based on FDA-approved uses, prior authorization is required for antipsychotic medications for members less than the following ages:

- Abilify Discmelt, Abilify oral solution – 6 years of age
- Abilify Maintena – 18 years of age
- Abilify MyCite – 18 years of age
- Abilify oral tablets – 6 years of age
- Abilify Asimtufii – 18 years of age
- Aristada – 18 years of age
- Caplyta – 18 years of age
- Clozaril – 18 years of age
- Cobenfy – 18 years of age
- Erzofri – 18 years of age
- Fanapt – 18 years of age
- Geodon – 18 years of age
- Invega – 12 years of age
- Invega Sustenna – 18 years of age
- Invega Trinza – 18 years of age
- Invega Hafyera – 18 years of age
- Latuda – 10 years of age
- Lybalvi – 18 years of age
- Molindone – 12 years of age
- Opienza – 6 years of age

- Perseris – 18 years of age
- Rexulti – 18 years of age
- Risperdal – 5 years of age
- Risperdal Consta – 18 years of age
- Rykindo – 18 years of age
- Saphris – 10 years of age
- Secuado – 18 years of age
- Seroquel, Seroquel XR – 10 years of age
- Uzedly – 18 years of age
- Vraylar – 18 years of age
- Zyprexa – 13 years of age
- Zyprexa Zydys – 6 years of age

**Table 2: Maximum Age Edits**

Prior authorization is required for atypical antipsychotic claims for members greater than the following ages:

- Risperidone oral solution: 7 years of age

## **Approval Criteria**

**1** - Diagnosis of Parkinson's disease

**AND**

**2** - Apokyn will be used as intermittent treatment for OFF episodes

**AND**

**3** - Prescribed by or in consultation with a neurologist or specialist in the treatment of Parkinson's disease

**AND**

**4** - Patient is currently on a stable dose of a carbidopa/levodopa-containing medication and will continue receiving treatment with a carbidopa/levodopa-containing medication while on therapy

**AND**

**5** - Patient continues to experience greater than or equal to 2 hours of OFF time per day despite optimal management of carbidopa/levodopa therapy including BOTH of the following:

- Taking carbidopa/levodopa on an empty stomach or at least one half-hour or more before or one hour after a meal or avoidance of high protein diet
- Dose and dosing interval optimization

**AND**

**6** - ONE of the following:

**6.1** Failure to TWO anti-Parkinson's disease therapies from the following adjunctive pharmacotherapy classes (trial must be from two different classes) confirmed by claims history or submitted medical records:

- Dopamine agonists (e.g., pramipexole, ropinirole)
- Catechol-O-methyl transferase (COMT) inhibitors (e.g., entacapone)

- Monoamine oxidase (MAO) B inhibitors (e.g., rasagiline, selegiline)

**OR**

**6.2** History of contraindication or intolerance to TWO anti-Parkinson's disease therapies from the following adjunctive pharmacotherapy classes (contraindication/intolerance must be from two different classes; please specify intolerance or contraindication):

- Dopamine agonists (e.g., pramipexole, ropinirole)
- Catechol-O-methyl transferase (COMT) inhibitors (e.g., entacapone)
- Monoamine oxidase (MAO) B inhibitors (e.g., rasagiline, selegiline)

|                                                                                                                                                                                                                                                                     |                     |

## 1 . Criteria

|                       |                                                |
|-----------------------|------------------------------------------------|
| Product Name:Arcalyst |                                                |
| Diagnosis             | Cryopyrin-Associated Periodic Syndromes (CAPS) |
| Approval Length       | 12 month(s)                                    |
| Therapy Stage         | Initial Authorization                          |
| Guideline Type        | Prior Authorization                            |

**Approval Criteria**

1 - Diagnosis of Cryopyrin-Associated Periodic Syndromes (CAPS), including Familial Cold Auto-inflammatory Syndrome (FCAS) and Muckle-Wells Syndrome (MWS)

Product Name: Arcalyst

|                 |                                                        |
|-----------------|--------------------------------------------------------|
| Diagnosis       | Deficiency of Interleukin-1 Receptor Antagonist (DIRA) |
| Approval Length | 12 month(s)                                            |
| Therapy Stage   | Initial Authorization                                  |
| Guideline Type  | Prior Authorization                                    |

**Approval Criteria**

1 - Diagnosis of Deficiency of Interleukin-1 Receptor Antagonist (DIRA)

**AND**

2 - Disease is in remission (e.g., diary score of less than 0.5 [reflecting no fever, skin rash and bone pain], acute phase reactants [less than 0.5 mg/dL CRP (milligrams per deciliter C-Reactive protein)], absence of objective skin rash, no radiological evidence of active bone lesions)

Product Name: Arcalyst

|                 |                       |
|-----------------|-----------------------|
| Diagnosis       | Pericarditis          |
| Approval Length | 12 month(s)           |

## 1 . Criteria

|                       |                                                           |
|-----------------------|-----------------------------------------------------------|
| Product Name:Arikayce |                                                           |
| Diagnosis             | Refractory Mycobacterium avium complex (MAC) lung disease |
| Approval Length       | 6 month(s)                                                |
| Therapy Stage         | Initial Authorization                                     |
| Guideline Type        | Prior Authorization                                       |

### **Approval Criteria**

**1** - Diagnosis of refractory *Mycobacterium avium* complex (MAC) lung disease

**AND**

**2** - Submission of medical records (e.g., chart notes, laboratory values) documenting respiratory cultures positive for MAC within the previous 6 months

**AND**

**3** - Submission of medical records (e.g., chart notes, laboratory values) or prescription claims history documenting the patient has been receiving a multidrug background regimen containing at least TWO of the following agents for a minimum of 6 consecutive months within the past 12 months:

- Macrolide antibiotic (e.g., azithromycin, clarithromycin)
- Ethambutol
- Rifamycin antibiotic (e.g., rifampin, rifabutin)

**AND**

**4** - Patient will continue to receive a multidrug background regimen

**AND**

**5** - Documentation that the patient has NOT achieved negative sputum cultures after receipt of a multidrug background regimen for a minimum of 6 consecutive months

**AND**

**6** - In vitro susceptibility testing of recent (within 6 months) positive culture documents that the MAC isolate is susceptible to amikacin with a minimum inhibitory concentration (MIC) of less than or equal to 64 micrograms per milliliter (mcg/mL)

**AND**

**7** - Prescribed by or in consultation with **ONE** of the following:

- Infectious disease specialist
- Pulmonologist

**Product Name:**Arikayce

**Approval Criteria**

**1** - **ONE** of the following:

**1.1** Documentation that the patient has achieved negative respiratory cultures

**OR**

**1.2** **ALL** of the following:

**1.2.1** Patient has **NOT** achieved negative respiratory cultures while on Arikayce

**AND**

**1.2.2** Physician attestation that patient has demonstrated clinical benefit while on Arikayce

**AND**

**1.2.3** In vitro susceptibility testing of most recent (within 6 months) positive culture with

available susceptibility testing documents that the Mycobacterium avium complex (MAC) isolate is susceptible to amikacin with a minimum inhibitory concentration (MIC) of less than 64 micrograms per milliliter (mcg/mL)

**AND**

**1.2.4** Patient has NOT received greater than 12 months of Arikayce therapy with continued positive respiratory cultures

**AND**

**2** - Submission of medical records (e.g., chart notes, laboratory values) or prescription claims history documenting that the patient continues to receive a multidrug background regimen containing at least TWO of the following agents:

- Macrolide antibiotic (e.g., azithromycin, clarithromycin)
- Ethambutol
- Rifamycin antibiotic (e.g., rifampin, rifabutin)

**AND**

**3** - Prescribed by or in consultation with ONE of the following:

- Infectious disease specialist
- Pulmonologist

**AND**

**5** - One of the following:

- History of heart failure, with at least one prior hospitalization for heart failure
- Presence of signs and symptoms of heart failure (e.g., dyspnea, edema)

**AND**

**6** - Prescribed by or in consultation with a cardiologist

**AND**

**7** - Patient is not receiving Attruby in combination with an RNA-targeted therapy for ATTR amyloidosis [i.e., Amvuttra (vutrisiran), Onpattro (patisiran), Tegsedi (inotersen), Vyndaqel/Vyndamax (tafamadis), or Wainua (eplontersen)]

Notes

\*May require prior authorization and notification

Product Name:Attruby

Approval Length

12 month(s)

Therapy Stage

Reauthorization

Guideline Type

Prior Authorization

### Approval Criteria

**1** - Documentation that the patient has experienced a positive clinical response to Attruby (e.g., improved symptoms, quality of life, slowing of disease progression, decreased hospitalizations, etc.)

**AND**

**2** - Documentation that patient continues to have New York Heart Association (NYHA) Functional Class I, II, or III heart failure

**AND**

**3** - Prescribed by or in consultation with a cardiologist

**AND**

**4** - Patient is not receiving Attruby in combination with an RNA-targeted therapy for ATTR amyloidosis [i.e., Amvuttra (vutrisiran), Onpattro (patisiran), Tegsedi (inotersen), Vyndaqel/Vyndamax (tafamadis), or Wainua (eplontersen)]

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 7/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                                  |                       |
|----------------------------------|-----------------------|
| Product Name:Austedo, Austedo XR |                       |
| Diagnosis                        | Tardive Dyskinesia    |
| Approval Length                  | 12 month(s)           |
| Therapy Stage                    | Initial Authorization |
| Guideline Type                   | Prior Authorization   |

### Approval Criteria

1 - Diagnosis of moderate to severe tardive dyskinesia

**AND**

2 - ONE of the following:

- Patient has persistent symptoms of tardive dyskinesia despite a trial of dose reduction, tapering, or discontinuation of the offending medication
- Patient is not a candidate for a trial of dose reduction, tapering, or discontinuation of the offending medication

**AND**

3 - Prescribed by or in consultation with ONE of the following:

- Neurologist
- Psychiatrist

**AND**

4 - If the request is for Austedo XR, the prescriber has given a clinical reason or special circumstance why the patient is unable to use Austedo immediate release (please document reason/special circumstance)

## 1 . Criteria

|                                                                      |                            |
|----------------------------------------------------------------------|----------------------------|
| Product Name: Brand Sporanox capsules, generic itraconazole capsules |                            |
| Diagnosis                                                            | Systemic Fungal Infections |
| Approval Length                                                      | 12 month(s)                |
| Guideline Type                                                       | Prior Authorization        |

### Approval Criteria

1 - Diagnosis of ONE of the following:

- Blastomycosis
- Histoplasmosis
- Aspergillosis

**OR**

2 - BOTH of the following:

2.1 Diagnosis of coccidioidomycosis

**AND**

2.2 ONE of the following:

2.2.1 Failure to fluconazole (generic Diflucan) as confirmed by claims history or submission of medical records

**OR**

2.2.2 History of contraindication, intolerance, or resistance to fluconazole (generic Diflucan) (please specify intolerance, contraindication, or resistance)

|                                                                      |                           |

|-----------------|----------|

## 1 . Criteria

|                      |                                        |
|----------------------|----------------------------------------|
| Product Name:Baxdela |                                        |
| Diagnosis            | Community-Acquired Bacterial Pneumonia |
| Approval Length      | 10 Day(s)                              |
| Guideline Type       | Prior Authorization                    |

### **Approval Criteria**

**1** - For continuation of therapy upon hospital discharge

**OR**

**2** - As continuation of therapy when transitioning from intravenous antibiotics that are shown to be sensitive to the cultured organism for the requested indication

**OR**

**3** - All of the following:

**3.1** Diagnosis of community-acquired bacterial pneumonia (CABP)

**AND**

**3.2** Infection caused by an organism that is confirmed to be or likely to be susceptible to treatment with Baxdela

**AND**

**3.3** One of the following:

**3.3.1** Failure to three of the following antibiotics or antibiotic regimens as confirmed by claims history or submission of medical records:

- Amoxicillin
- A macrolide
- Doxycycline
- A fluoroquinolone
- Combination therapy with amoxicillin/clavulanate or cephalosporin AND a macrolide or doxycycline

**OR**

**3.3.2** History of intolerance or contraindication to all of the following antibiotics or antibiotic regimens (please specify intolerance or contraindication)

- Amoxicillin
- A macrolide
- Doxycycline
- A fluoroquinolone
- Combination therapy with amoxicillin/clavulanate or cephalosporin AND a macrolide or doxycycline

**Approval Criteria**

1 - For continuation of therapy upon hospital discharge

**OR**

2 - As continuation of therapy when transitioning from intravenous antibiotics that are shown to be sensitive to the cultured organism for the requested indication

**OR**

3 - All of the following:

3.1 One of the following diagnoses:

3.1.1 Both of the following

3.1.1.1 Acute bacterial skin and skin structure infections

**AND**

**3.1.1.2** Infection caused by methicillin-resistant *Staphylococcus aureus* (MRSA) documented by culture and sensitivity report

**OR**

**3.1.2** Both of the following:

**3.1.2.1** Empirical treatment of patients with acute bacterial skin and skin structure infections

**AND**

**3.1.2.2** Presence of MRSA infection is likely

**AND**

**3.2** ONE of the following:

**3.2.1** Failure of linezolid (generic Zyvox) confirmed by claims history or submitted medical records

**OR**

**3.2.2** History of intolerance or contraindication to linezolid (generic Zyvox) (please specify intolerance or contraindication)

**AND**

**3.3** One of the following:

**3.3.1** Failure to one of the following antibiotics as confirmed by claims history or submitted medical records:

- Sulfamethoxazole-trimethoprim (SMZ-TMP)
- A tetracycline
- Clindamycin

**OR**

**3.3.2** History of intolerance or contraindication to all of the following (please specify intolerance or contraindication):

- Sulfamethoxazole-trimethoprim (SMZ-TMP)
- A tetracycline
- Clindamycin

**OR**

**4** - All of the following:

**4.1** Diagnosis of acute bacterial skin and skin structure infections

**AND**

**4.2** Infection caused by an organism that is confirmed to be or likely to be susceptible to treatment with Baxdela

**AND**

**4.3** One of the following:

**4.3.1** Failure to three of the following antibiotics as confirmed by claims history or submitted medical records:

- A penicillin
- A cephalosporin
- A tetracycline
- Sulfamethoxazole-trimethoprim (SMZ-TMP)
- Clindamycin

**OR**

**4.3.2** History of intolerance or contraindication to all of the following antibiotics (please specify intolerance or contraindication):

- A penicillin

- A cephalosporin
- A tetracycline
- Sulfamethoxazole-trimethoprim (SMZ-TMP)
- Clindamycin

**AND**

**3 - BOTH of the following:**

**3.1** Patient has been screened for underlying depression and/or anxiety

**AND**

**3.2** If applicable, any underlying conditions have been or will be addressed

**AND**

**4 - ONE of the following:**

**4.1** The patient has a history of failure to a trial of tramadol IR (immediate release) as confirmed by claims history or submission of medical records

**OR**

**4.2** The patient has a contraindication or intolerance to tramadol IR (please specify contraindication or intolerance)

**OR**

**4.3** The patient is already receiving chronic opioid therapy prior to surgery for postoperative pain, or if the postoperative pain is expected to be moderate to severe and persist for an extended period of time

**OR**

**4.4** Patient is new to plan and currently established on Belbuca or Butrans for at least the past 30 days

**AND**

**5** - If the request is for neuropathic pain (examples of neuropathic pain include neuralgias and neuropathies), BOTH of the following:

**5.1** Unless it is contraindicated, the patient has not exhibited an adequate response to 8 weeks of treatment with gabapentin titrated to a therapeutic dose (document date of trial) (if contraindicated, document contraindication)

**AND**

**5.2** Unless it is contraindicated, the patient has not exhibited an adequate response to at least 6 weeks of treatment with a tricyclic antidepressant titrated to the maximum tolerated dose (document drug and date of trial) (if contraindicated, document contraindication)

**AND**

**6** - If the request is for Belbuca or Brand Butrans, the prescriber provides a reason or special circumstance the patient cannot use generic buprenorphine patches

### Approval Criteria

**1** - Documented meaningful improvement in pain and function when assessed against treatment goals (document improvement in function or pain score improvement)

**AND**

**2** - Documented rationale for not tapering and discontinuing opioid if treatment goals are not being met

**AND**

**3** - Prescriber attests to BOTH of the following:

**3.1** Patient has been screened for substance abuse/opioid dependence

**AND**

**3.2** Pain is moderate to severe and expected to persist for an extended period of time (chronic)

**AND**

**4** - If the request is for Belbuca or Brand Butrans, the prescriber provides a reason or special circumstance the patient cannot use generic buprenorphine patches

| <p><b>Approval Criteria</b></p> <p>1 - Prescriber attests that the patient has been screened for substance abuse/opioid dependence</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - Treatment goals are defined and include estimated duration of treatment (must document treatment goals)</p> <p style="text-align: center;"><b>AND</b></p> <p>3 - BOTH of the following:</p> <p>3.1 Patient has been screened for underlying depression and/or anxiety</p> <p style="text-align: center;"><b>AND</b></p> <p>3.2 If applicable, any underlying conditions have been or will be addressed</p> <p style="text-align: center;"><b>AND</b></p> |                                                                                                      |

**4 - ONE of the following:**

**4.1** Opioid medication doses of less than 90 MME (Morphine Milligram Equivalents) have been tried and did not adequately control pain (document drug regimen or MME and dates of therapy)

**OR**

**4.2** Patient is new to plan and currently established on the requested MME for at least the past 30 days

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Notes | <p>Authorization will be issued for 6 months for non-cancer related pain/n on-hospice/non-sickle cell anemia related pain/non-end of life related pain up to the current requested MME plus 90 MME.</p> <p>If the patient has been established on the requested MME dose for at least 30 days and does not meet the medical necessity authorization criteria requirements, a denial should be issued and a maximum 60-day authorization may be authorized one time for the requested MME dose.</p> |

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 7/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                        |                       |
|------------------------|-----------------------|
| Product Name: Berinert |                       |
| Approval Length        | 12 month(s)           |
| Therapy Stage          | Initial Authorization |
| Guideline Type         | Prior Authorization   |

### **Approval Criteria**

**1** - Diagnosis of hereditary angioedema (HAE) as confirmed by ONE of the following:

**1.1** C1 inhibitor (C1-INH) deficiency or dysfunction (Type I or II HAE) as documented by ONE of the following (per laboratory standard):

- C1-INH antigenic level below the lower limit of normal
- C1-INH functional level below the lower limit of normal

**OR**

**1.2** HAE with normal C1 inhibitor levels and ONE of the following:

- Confirmed presence of variant(s) in the gene(s) for factor XII, angiotensin-converting enzyme 1, plasminogen-1, kininogen-1, myoferlin, or heparan sulfate-glucosaminase 3-O-sulfotransferase 6
- Recurring angioedema attacks that are refractory to high-dose antihistamines with confirmed family history of angioedema
- Recurring angioedema attacks that are refractory to high-dose antihistamines with unknown background de-novo mutation(s) (i.e., no family history) (HAE-unknown)

**AND**

**2** - Prescribed for the acute treatment of HAE attacks

**AND**

**3** - Not used in combination with other products indicated for the acute treatment of HAE attacks (e.g., Firazyr, Ruconest)

**AND**

**4** - ONE of the following:

**4.1** Failure of Ruconest as confirmed by claims history or submission of medical records

**OR**

**4.2** History of intolerance or contraindication to Ruconest (please specific intolerance or contraindication)

**OR**

**4.3** Patient is currently on Berinert therapy as confirmed by claims history or submission of medical records

**AND**

**5** - Prescribed by ONE of the following:

- Immunologist
- Allergist

|                                                                                                                                                                                                                                                                                                           |                     |

| Effective Date: | 4/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                      |                        |
|----------------------|------------------------|
| Product Name:Bimzelx |                        |
| Diagnosis            | Plaque Psoriasis (PsO) |
| Approval Length      | 12 month(s)            |
| Therapy Stage        | Initial Authorization  |
| Guideline Type       | Prior Authorization    |

## **Approval Criteria**

**1** - ALL of the following:

**1.1** Diagnosis of moderate to severe plaque psoriasis

**AND**

**1.2** ONE of the following:

**1.2.1** ALL of the following:

**1.2.1.1** Greater than or equal to 3% body surface area involvement, palmoplantar, facial, genital involvement, or severe scalp psoriasis

**AND**

**1.2.1.2** ONE of the following:

**1.2.1.2.1** Failure of ONE of the following topical therapy classes confirmed by claims history or submitted medical records:

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Anthralin
- Coal tar

**OR**

**1.2.1.2.2** History of intolerance or contraindication to ALL of the following topical therapy classes (please specify intolerance or contraindication):

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Anthralin

- Coal tar

**AND**

**1.2.1.3** ONE of the following:

- Failure of a 3 month trial of methotrexate, at the maximally indicated doses, confirmed by claims history or submitted medical records
- History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)

**OR**

**1.2.2** Patient has been previously treated with a targeted immunomodulator FDA (Food and Drug Administration)-approved for the treatment of plaque psoriasis as confirmed by claims history or submission of medical records [e.g., Enbrel (etanercept), Cimzia (certolizumab), adalimumab, Orencia (abatacept), Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Siliq (brodalumab), Ilumya (tildrakizumab), Otezla (apremilast), ustekinumab]

**AND**

**1.3** Patient is not receiving Bimzelx in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Siliq (brodalumab), Ilumya (tildrakizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast), ustekinumab]

**AND**

**1.4** ONE of the following:

**1.4.1** Failure to two of the following preferred products confirmed by claims history or submitted medical records:

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

**OR**

**1.4.2** History of intolerance or contraindication to ALL of the following preferred products (please specify intolerance or contraindication):

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

**AND**

**1.5** ONE of the following:

- Failure to Cosentyx (secukinumab) confirmed by claims history or submitted medical records
- History of intolerance or contraindication to Cosentyx (secukinumab) (please specify intolerance or contraindication)

**AND**

**1.6** Prescribed by or in consultation with a dermatologist

**OR**

**2** - ALL of the following:

**2.1** Patient is currently on Bimzelx therapy as confirmed by claims history or submission of medical records

**AND**

**2.2** Diagnosis of moderate to severe plaque psoriasis

**AND**

**2.3** Patient is not receiving Bimzelx in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept),

adalimumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Siliq (brodalumab), Ilumya (tildrakizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast), ustekinumab]

**AND**

**2.4 Prescribed by or in consultation with a dermatologist**

**3** - One of the following:

**3.1** BOTH of the following:

**3.1.1** ONE of the following:

**3.1.1.1** Failure to two of the following as confirmed by claims history or submitted medical records

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

**OR**

**3.1.1.2** History of intolerance or contraindication to all of the following (please specify intolerance or contraindication)

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

**AND**

**3.1.2** ONE of the following:

- Failure to Cosentyx (secukinumab) as confirmed by claims history or submitted medical records
- History of intolerance or contraindication to Cosentyx (secukinumab) (please specify intolerance or contraindication)

**OR**

**3.2** Patient is currently on Bimzelx therapy as confirmed by claims history or submission of medical records

**AND**

**4** - Patient is not receiving Bimzelx in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept),

adalimumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast), ustekinumab]

**AND**

**5** - Prescribed by or in consultation with a rheumatologist or dermatologist

Diagnosis Ankylosing Spondylitis (AS)

Approval Length 12 month(s)

Therapy Stage Initial Authorization

Guideline Type Prior Authorization

### Approval Criteria

**1** - Diagnosis of active ankylosing spondylitis

**AND**

**2** - One of the following:

- Failure to two NSAIDs (e.g., ibuprofen, naproxen) at maximally indicated doses, each used for at least 4 weeks, as confirmed by claims history or submission of medical records
- History of intolerance or contraindication to two NSAIDs (e.g., ibuprofen, naproxen) (please specify intolerance or contraindication)
- Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ankylosing spondylitis as confirmed by claims history or submission of medical records [e.g., adalimumab, Simponi (golimumab), Rinvoq (upadacitinib), Xeljanz/Xeljanz XR (tofacitinib), Enbrel (etanercept)]

**AND**

**3** - One of the following:

**3.1** One of the following:

**3.1.1** Failure of ALL of the following as confirmed by claims history or submitted medical records

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- Cosentyx (secukinumab)

**OR**

**3.1.2** History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- Cosentyx (secukinumab)

**OR**

**3.2** Patient is currently on Bimzelx therapy as confirmed by claims history or submission of medical records

**AND**

**4** - Patient is not receiving Bimzelx in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Cosentyx (secukinumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**5** - Prescribed by or in consultation with a rheumatologist

### Approval Criteria

**1** - Diagnosis of moderate to severe hidradenitis suppurativa (i.e., Hurley Stage II or III)

**AND**

**2** - ONE of the following:

- Failure to at least one oral antibiotic (e.g., doxycycline, clindamycin, rifampin) at maximally indicated doses, as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to at least one oral antibiotic (e.g., doxycycline, clindamycin, rifampin) (please specify contraindication or intolerance)
- Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of hidradenitis suppurativa as confirmed by claims history or submitted medical records [e.g., adalimumab, Cosentyx (secukinumab)]

**AND**

**3** - ONE of the following:

**3.1** ONE of the following:

**3.1.1** Failure to both of the following preferred products confirmed by claims history or submission of medical records

- One of the preferred adalimumab products\*
- Cosentyx (secukinumab)

**OR**

**3.1.2** History of contraindication or intolerance to both of the following preferred products (please specify contraindication or intolerance)

- One of the preferred adalimumab products\*
- Cosentyx (secukinumab)

**OR**

**3.2** Patient is currently on Bimzelx therapy as confirmed by claims history or submission of medical records

**AND**

**4** - Patient is not receiving Bimzelx in combination with another targeted immunomodulator [e.g., adalimumab, Cimzia (certolizumab), Cosentyx (secukinumab), Enbrel (etanercept), Olumiant (baricitinib), Orencia (abatacept), Rinvoq (upadacitinib), Simponi (golimumab), Xeljanz (tofacitinib)]

**AND**

**5** - Prescribed by or in consultation with a dermatologist

|-----------------|-----------|

## 1 . Criteria

|                                                                               |                       |
|-------------------------------------------------------------------------------|-----------------------|
| Product Name: Brand Forteo, generic teriparatide, brand Teriparatide, Bonsity |                       |
| Diagnosis                                                                     | Osteoporosis          |
| Approval Length                                                               | 24 month(s)           |
| Therapy Stage                                                                 | Initial Authorization |
| Guideline Type                                                                | Prior Authorization   |

## **Approval Criteria**

**1 - ONE of the following:**

**1.1 BOTH of the following:**

- Patient is female
- Diagnosis of postmenopausal osteoporosis

**OR**

**1.2 BOTH of the following:**

- Patient is male
- Diagnosis of osteoporosis

**AND**

**2 - ONE of the following:**

**2.1** Patient is at high risk of fracture [e.g., recent fracture (e.g., within the past 12 months), fractures while on approved osteoporosis therapy, multiple fractures, fractures while on drugs causing skeletal harm (e.g., long-term glucocorticoids), very low T-score (e.g., less than -3.0), high risk for falls or history of injurious falls, and very high fracture probability by FRAX (fracture risk assessment tool) (e.g., major osteoporosis fracture greater than 30%, hip fracture greater than 4.5%)]

**OR**

**2.2** Patient has a history of failure to at least one other available osteoporosis therapy (e.g., alendronate, denosumab, risedronate, zoledronate) as confirmed by claims history or submission of medical records

**OR**

**2.3** Patient has contraindication or intolerance to at least one other available osteoporosis therapy (e.g., alendronate, denosumab, risedronate, zoledronate) (please specify contraindication or intolerance)

**AND**

**3 - ONE of the following:**

**3.1** Treatment duration has not exceeded a total of 24 months of cumulative use of parathyroid hormone analogs (e.g., Bonsity, teriparatide injection, Forteo, Tymlos) during the patient's lifetime

**OR**

**3.2 BOTH of the following:**

**3.2.1** Patient is currently or has previously been treated with parathyroid hormone analogs (e.g., Bonsity, teriparatide injection, Forteo, Tymlos)

**AND**

**3.2.2** The prescriber attests that the patient remains at or has returned to having a high risk for fracture

**AND**

**4 - ONE of the following:**

- Failure to Tymlos as confirmed by claims history or submission of medical records
- History of intolerance or contraindication to Tymlos (please specify contraindication or intolerance)

| Guideline Type                                                                | Prior Authorization                                                    |

**Approval Criteria**

**1** - Diagnosis of glucocorticoid-induced osteoporosis

**AND**

**2** - History of prednisone or its equivalent at a dose greater than or equal to 5 mg (milligrams)/day as confirmed by claims history or submission of medical records

**AND**

**3** - ONE of the following:

**3.1** Patient is at high risk of fracture [e.g., recent fracture (e.g., within the past 12 months), fractures while on approved osteoporosis therapy, multiple fractures, fractures while on drugs causing skeletal harm (e.g., long-term glucocorticoids), very low T-score (e.g., less than -3.0), high risk for falls or history of injurious falls, and very high fracture probability by FRAX (fracture risk assessment tool) (e.g., major osteoporosis fracture greater than 30%, hip fracture greater than 4.5%)]

**OR**

**3.2** Patient has a history of failure to at least one other available osteoporosis therapy (e.g., alendronate, denosumab, risedronate, zoledronate) as confirmed by claims history or submission of medical records

**OR**

**3.3** Patient has contraindication or intolerance to at least one other available osteoporosis therapy (e.g., alendronate, denosumab, risedronate, zoledronate) (please specify contraindication or intolerance)

**AND**

**4** - ONE of the following:

**4.1** Treatment duration has not exceeded a total of 24 months of cumulative use of parathyroid hormone analogs (e.g., Bonsity, teriparatide injection, Forteo, Tymlos)

**OR**

**4.2** BOTH of the following:

**4.2.1** Patient is currently or has previously been treated with parathyroid hormone analogs (e.g., Bonsity, teriparatide injection, Forteo, Tymlos)

**AND**

**4.2.2** The prescriber attests that the patient remains at or has returned to having a high risk for fracture

**AND**

**2** - Presence of BRAF V600E mutation

**AND**

**3** - Disease is ONE of the following:

- Advanced
- Metastatic

**AND**

**4** - ONE of the following:

**4.1** BOTH of the following:

- Patient has received prior therapy with an oxaliplatin-based regimen (e.g., FOLFOX, CAPEOX)
- Used in combination with Erbitux (cetuximab) or Vectibix (panitumumab)

**OR**

**4.2** BOTH of the following:

**4.2.1** Patient has NOT received prior therapy with an oxaliplatin-based regimen (e.g., FOLFOX, CAPEOX)

**AND**

**4.2.2** Used in combination with BOTH of the following:

- Erbitux (cetuximab) or Vectibix (panitumumab)
- FOLFOX (fluorouracil, leucovorin, and oxaliplatin)

**AND**

**3** - Disease is one of the following:

- Advanced
- Recurrent
- Metastatic

**AND**

**4** - Used in combination with Mektovi (binimetinib)

**AND**

**5** - ONE of the following:

**5.1** Patient has a contraindication or history of intolerance to the following regimen (please specify contraindication or intolerance):

- Tafinlar (dabrafenib) plus Mekinist (trametinib)

**OR**

**5.2** Provider attests that the patient is not an appropriate candidate for the following regimen:

- Tafinlar (dabrafenib) plus Mekinist (trametinib)

**OR**

**5.3** For continuation of prior Braftovi therapy

|-----------------|----------|
| Effective Date: | 5/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                          |                          |
|--------------------------|--------------------------|
| Product Name: Brexafemme |                          |
| Diagnosis                | Vulvovaginal candidiasis |
| Approval Length          | 3 month(s)               |
| Guideline Type           | Prior Authorization      |

### Approval Criteria

**1** - Diagnosis of vulvovaginal candidiasis (VVC)

**AND**

**2** - ONE of the following:

**2.1** Confirmed azole resistance demonstrated by culture and susceptibility testing

**OR**

**2.2** BOTH of the following:

**2.2.1** Other causes (including but not limited to bacterial vaginosis or trichomoniasis) have been ruled out

**AND**

**2.2.2** Failure of a 7-day course of oral fluconazole therapy defined as 100 mg (milligrams), 150 mg, or 200 mg taken orally every third day for a total of 3 doses (days 1,4, and 7), confirmed by claims history or submission of medical records, for the current episode of VVC

**AND**

**3** - Prescribed by or in consultation with ONE of the following:

- Infectious disease physician
- Obstetrician/Gynecologist

|                          |                                    |

| Diagnosis                | Recurrent vulvovaginal candidiasis |
| Approval Length          | 6 month(s)                         |
| Guideline Type           | Prior Authorization                |

### Approval Criteria

1 - Diagnosis of recurrent vulvovaginal candidiasis (RVVC)

**AND**

2 - ONE of the following:

2.1 Confirmed azole resistance demonstrated by culture and susceptibility testing

**OR**

2.2 BOTH of the following:

2.2.1 Other causes (including but not limited to bacterial vaginosis or trichomoniasis) have been ruled out

**AND**

2.2.2 Failure of a maintenance course of oral fluconazole confirmed by claims history or submission of medical records defined as 100-mg, 150-mg, or 200-mg taken weekly for 6 months

**AND**

3 - Prescribed by or in consultation with ONE of the following:

- Infectious disease physician
- Obstetrician/Gynecologist

| Diagnosis           | Progressive Familial Intrahepatic Cholestasis |
| Approval Length     | 12 month(s)                                   |
| Therapy Stage       | Initial Authorization                         |
| Guideline Type      | Prior Authorization                           |

### Approval Criteria

**1** - Confirmed molecular diagnosis of progressive familial intrahepatic cholestasis (PFIC)

**AND**

**2** - Patient does not have a ABCB11 variant resulting in non-functional or complete absence of bile salt export pump protein (BSEP-3)

**AND**

**3** - Patient is experiencing moderate to severe pruritus associated with PFIC

**AND**

**4** - Patient has a serum bile acid concentration above the upper limit of the normal reference range for the reporting laboratory

**AND**

**5** - Patient has had an inadequate response to at least TWO other conventional treatments for the symptomatic relief of pruritus (e.g., ursodeoxycholic acid, diphenhydramine, cholestyramine, rifampin, naltrexone, sertraline)

**AND**

**6** - Prescribed by a gastroenterologist or hepatologist

**AND**

**5** - Prescriber attests the requested medication is the least costly treatment of equally effective choices

**AND**

**6** - Prescriber attests the requested medication is safe and effective

**AND**

**7** - Submission of previous and current treatments used to treat diagnosis (Must include regimen, duration, treatment goals, and response to treatment)

**AND**

**8** - The requested medication is prescribed within the dosing guidelines from ONE of the following:

**8.1** The manufacturer's published dosing guidelines

**OR**

**8.2** ONE of the following compendia:

- American Hospital Formulary Service Drug Information
- National Comprehensive Cancer Network Drugs and Biologics Compendium
- Thomson Micromedex DrugDex
- Clinical pharmacology
- United States Pharmacopoeia-National Formulary

Notes

^ This criteria does not apply to CSFLD and ACUFLEC. Note: ACUFL EC does not have Rx benefits.  
^ This criteria does NOT apply to ACUNE/ ACUNEEL1

|----------------|---------------------|
| Guideline Type | Prior Authorization |
|----------------|---------------------|

**Approval Criteria**

**1** - Diagnosis of ONE of the following:

- Dedifferentiated chondrosarcoma
- Ewing Sarcoma
- High-grade undifferentiated pleomorphic sarcoma (UPS)

- Mesenchymal chondrosarcoma
- Osteosarcoma
- Primary round cell tumor of the bone (e.g., CIC::DUX4, BCOR::CCNB3)

**AND**

**2** - Disease is ONE of the following:

- Relapsed/refractory
- Metastatic

**AND**

**3** - Used as second line therapy

|                                                                                                                                                                                                                                                                                                                                                                                |                                        |

### **Approval Criteria**

**1** - ALL of the following

**1.1** Diagnosis of ONE of the following soft tissue sarcoma subtypes:

- Extremity/body wall
- Head/neck
- Pleomorphic Rhabdomyosarcoma (RMS)
- Retroperitoneal/intraabdominal

**AND**

**1.2** Disease is advanced/metastatic

**AND**

**1.3** Used as subsequent line of therapy

**OR**

**2** - Diagnosis of ONE of the following soft tissue sarcoma subtypes:

- Alveolar soft part sarcoma (ASPS)
- Epithelioid hemangioendothelioma
- Extraskkeletal myxoid chondrosarcoma

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                   |

| Guideline Type        | Prior Authorization   |

## **Approval Criteria**

**1 - ALL of the following:**

**1.1** Diagnosis of medullary thyroid cancer (MTC)

**AND**

**1.2** ONE of the following:

- Unresectable locoregional disease that is symptomatic or progressing
- Asymptomatic recurrent or persistent distant metastatic disease if unresectable and progressing
- Recurrent or persistent distant metastases if symptomatic disease or progression

**OR**

**2 - ALL of the following:**

**2.1** ONE of the following diagnoses:

- Follicular carcinoma
- Oncocytic carcinoma
- Papillary carcinoma

**AND**

**2.2** ONE of the following:

- Unresectable recurrent disease
- Persistent locoregional disease
- Metastatic disease

**AND**

**2.3** ONE of the following:

- Patient has symptomatic disease

- Patient has progressive disease

**AND**

**2.4** Disease is refractory to radioactive iodine treatment

## 1 . Criteria

|                      |                      |
|----------------------|----------------------|
| Product Name:Cayston |                      |
| Diagnosis            | Cystic Fibrosis (CF) |
| Approval Length      | 12 month(s)          |
| Guideline Type       | Prior Authorization  |

### Approval Criteria

1 - Diagnosis of cystic fibrosis (CF)

**AND**

2 - ONE of the following:

**2.1** Failure to tobramycin solution for inhalation (generic Bethkis) confirmed by claims history or submission of medical records

**OR**

**2.2** History of intolerance or contraindication to tobramycin solution for inhalation (generic Bethkis) (please specify intolerance or contraindication)

## **Approval Criteria**

**1** - Diagnosis of migraine consistent with The International Classification of Headache Disorders, 3rd edition

**AND**

**2** - ONE of the following:

**2.1** 4 to 7 migraine days per month and at least ONE of the following:

- Less than 15 headache days per month
- Provider attests this is the patient's predominant headache diagnosis (i.e., primary driver of headaches is not a different, non-migrainous condition)

**OR**

**2.2** Greater than or equal to 8 migraine days per month

**AND**

**3** - ONE of the following:

**3.1** Failure (after a trial of at least two months), to TWO of the following prophylactic therapies or classes as confirmed by claims history or submission of medical records:

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol)\*
- Candesartan (generic Atacand)\*
- Divalproex sodium [generic Depakote/Depakote ER (extended-release)]
- OnabotulinumtoxinA (generic Botox)\*\*
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- Topiramate (generic Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**OR**

**3.2** History of intolerance or contraindication to TWO of the following prophylactic therapies or classes (please specify intolerance or contraindication):

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol)\*

- Candesartan (generic Atacand)\*
- Divalproex sodium [generic Depakote/Depakote ER (extended-release)]
- OnabotulinumtoxinA (generic Botox)\*\*
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- Topiramate (generic Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**AND**

**4** - Medication will NOT be used in combination with another CGRP (calcitonin gene-related peptide) antagonist or inhibitor used for the preventive treatment of migraines [e.g., Aimovig, Nurtec ODT (orally disintegrating tablet), Qulipta, Vyepti (eptinezumab-jjmr)]

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of migraine consistent with The International Classification of Headache Disorders, 3rd edition</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - ONE of the following:</p> <p><b>2.1</b> 4 to 7 migraine days per month and at least ONE of the following:</p> <ul style="list-style-type: none"> <li>• Less than 15 headache days per month</li> </ul> |                       |

- Provider attests this is the patient's predominant headache diagnosis (i.e., primary driver of headaches is not a different, non-migrainous condition)

**OR**

**2.2** Greater than or equal to 8 migraine days per month

**AND**

**3** - ONE of the following:

**3.1** Failure (after a trial of at least two months), to TWO of the following prophylactic therapies or classes as confirmed by claims history or submission of medical records:

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol)\*
- Candesartan (generic Atacand)\*
- Divalproex sodium [generic Depakote/Depakote ER (extended-release)]
- OnabotulinumtoxinA (generic Botox)\*\*
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- Topiramate (generic Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**OR**

**3.2** History of intolerance or contraindication to TWO of the following prophylactic therapies or classes (please specify intolerance or contraindication):

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol)\*
- Candesartan (generic Atacand)\*
- Divalproex sodium [generic Depakote/Depakote ER (extended-release)]
- OnabotulinumtoxinA (generic Botox)\*\*
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- Topiramate (generic Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**AND**

**4** - ONE of the following:

**4.1** Failure (after a trial of at least three months), to BOTH of the following as documented by claims history or submission of medical records:

- Ajovy
- Emgality [120 mg (milligram) strength]

**OR**

**4.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

- Ajovy
- Emgality (120 mg strength)

**AND**

**5** - Medication will not be used in combination with another CGRP (calcitonin gene-related peptide) antagonist or inhibitor used for the preventive treatment of migraines [e.g., Ajovy, Emgality, Nurtec ODT (orally disintegrating tablet), Qulipta, Vyepti]

Notes

\*Timolol and candesartan are non-preferred and should not be included in denial to provider.  
 \*\*OnabotulinumtoxinA (generic Botox) is a medical benefit and should not be included in denial to provider.

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 9/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Cholbam |                       |
| Approval Length      | 3 month(s)            |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

**Approval Criteria**

1 - BOTH of the following:

1.1 Diagnosis of a bile acid synthesis disorder

**AND**

1.2 Bile acid synthesis disorder is due to single enzyme defects (SEDs)

**OR**

2 - ALL of the following:

2.1 Diagnosis of a peroxisomal disorder including Zellweger spectrum disorders

**AND**

2.2 Patient exhibits manifestations of liver disease, steatorrhea, or complications from decreased fat soluble vitamin absorption

**AND**

2.3 Cholbam is being used as adjunctive treatment

|                          |                     |
|--------------------------|---------------------|
| Product Name:Cholbam     |                     |
| Approval Length          | 12 month(s)         |
| Therapy Stage            | Reauthorization     |
| Guideline Type           | Prior Authorization |
| <b>Approval Criteria</b> |                     |

**1** - Documentation of positive clinical response to Cholbam therapy as evidenced by BOTH of the following:

**1.1** Improvement in liver function (e.g., aspartate aminotransferase [AST], alanine aminotransferase [ALT])

**AND**

**1.2** Absence of complete biliary obstruction

## **2 . Revision History**

| Guideline Type       | Prior Authorization   |

## **Approval Criteria**

**1** - Diagnosis of moderate-to-severe chronic atopic dermatitis

**AND**

**2** - ONE of the following:

**2.1** BOTH of the following:

**2.1.1** ONE of the following:

**2.1.1.1** Failure to TWO of the following therapeutic classes of topical therapies as confirmed by claims history or submission of medical records:

- One medium, high, or very-high potency topical corticosteroid\* [e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)]
- One topical calcineurin inhibitor [e.g., pimecrolimus (generic Elidel), tacrolimus (generic Protopic)]
- Eucrisa (crisaborole)

**OR**

**2.1.1.2** History of intolerance or contraindication to ALL of the following therapeutic classes of topical therapies (please specify intolerance or contraindication):

- One medium, high, or very-high potency topical corticosteroid\* [e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)]
- One topical calcineurin inhibitor [e.g., pimecrolimus (generic Elidel), tacrolimus (generic Protopic)]
- Eucrisa (crisaborole)

**AND**

**2.1.2** ONE of the following:

**2.1.2.1** BOTH of the following:

- Submission of medical records (e.g., chart notes, laboratory values) documenting a 3 month trial of a systemic drug product for the treatment of atopic dermatitis [e.g., Adbry (tralokinumab-ldrm), Dupixent (dupilumab), Ebglyss (lebrikizumab-lbkz), Nemluvio (nemolizumab-ilto), cyclosporine, azathioprine, methotrexate, mycophenolate mofetil, etc.]
- Physician attests that the patient was not adequately controlled with the documented systemic drug product

**OR**

**2.1.2.2** Physician attests that systemic treatment with ALL of the following FDA-approved chronic atopic dermatitis therapies is inadvisable (document drug and contraindication rationale):

- Adbry (tralokinumab-ldrm)
- Dupixent (dupilumab)
- Ebglyss (lebrikizumab-lbkz)
- Nemluvio (nemolizumab-ilto)

**OR**

**2.1.2.3** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure [refer to the Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition Text Revision (DSM-V-TR) 300.29 for specific phobia diagnostic criteria]

**OR**

**2.2** Patient is currently on Cibinqo therapy as confirmed by claims history or submission of medical records

**AND**

**3** - Patient is NOT receiving Cibinqo in combination with any of the following:

- Targeted immunomodulator [e.g., Adbry (tralokinumab-ldrm), Dupixent (dupilumab), Ebglyss (lebrikizumab-lbkz), Nemluvio (nemolizumab-ilto), Olumiant (baricitinib), Opzelura (topical ruxolitinib), Rinvoq (upadacitinib), Xeljanz/XR (tofacitinib)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**4** - Prescribed by or in consultation with ONE of the following:

- Dermatologist
- Allergist
- Immunologist

Notes

\*See list of "Relative Potencies of Topical Corticosteroids" in Table 1 of the Background.

Product Name:Cibinqo

Approval Length 12 month(s)

Therapy Stage Reauthorization

Guideline Type Prior Authorization

### Approval Criteria

**1** - Documentation of positive clinical response to Cibinqo therapy

**AND**

**2** - Patient is NOT receiving Cibinqo in combination with any of the following:

- Targeted immunomodulator [e.g., Adbry (tralokinumab-ldrm), Dupixent (dupilumab), Ebglyss (lebrikizumab-lbkz), Nemluvio (nemolizumab-ilto), Olumiant (baricitinib), Opzelura (topical ruxolitinib), Rinvoq (upadacitinib), Xeljanz/XR (tofacitinib)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**3** - Prescribed by or in consultation with ONE of the following:

- Dermatologist
- Allergist

- Immunologist

| Effective Date: | 4/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                     |                       |
|---------------------|-----------------------|
| Product Name:Cimzia |                       |
| Diagnosis           | Crohn's Disease       |
| Approval Length     | 12 month(s)           |
| Therapy Stage       | Initial Authorization |
| Guideline Type      | Prior Authorization   |

## **Approval Criteria**

**1** - ALL of the following:

**1.1** Diagnosis of moderately to severely active Crohn's disease

**AND**

**1.2** ONE of the following:

**1.2.1** Failure to ONE of the following confirmed by claims history or submitted medical records:

- Corticosteroids (e.g., prednisone, methylprednisolone, budesonide)
- Azathioprine (Imuran)
- 6-mercaptopurine (Purinethol)
- Methotrexate (Rheumatrex, Trexall)

**OR**

**1.2.2** History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

- Corticosteroids (e.g., prednisone, methylprednisolone, budesonide)
- Azathioprine (Imuran)
- 6-mercaptopurine (Purinethol)
- Methotrexate (Rheumatrex, Trexall)

**OR**

**1.2.3** Patient has been previously treated with a targeted immunomodulator FDA (Food and Drug Administration)-approved for the treatment of Crohn's disease as confirmed by claims history or submission of medical records [e.g., adalimumab, ustekinumab, Skyrizi (risankizumab)]

**AND**

**1.3** ONE of the following:

**1.3.1** Failure to ONE of the following as confirmed by claims history or submitted medical records:

- One of the preferred adalimumab products\*
- One of the preferred ustekinumab products\*

**OR**

**1.3.2** History of contraindication or intolerance to BOTH of the following (please specify contraindication or intolerance):

- One of the preferred adalimumab products\*
- One of the preferred ustekinumab products\*

**AND**

**1.4** Patient is NOT receiving Cimzia in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), ustekinumab, Skyrizi (risankizumab)]

**AND**

**1.5** Prescribed by or in consultation with a gastroenterologist

**OR**

**2** - ALL of the following:

**2.1** Patient is currently on Cimzia therapy as confirmed by claims history or submission of medical records

**AND**

**2.2** Diagnosis of moderately to severely active Crohn's disease

**AND**

**2.3** Patient is NOT receiving Cimzia in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), ustekinumab, Skyrizi (risankizumab)]

**AND**

**2.4** Prescribed by or in consultation with a gastroenterologist

Product Name:Cimzia

Diagnosis Rheumatoid Arthritis (RA)

Approval Length 12 month(s)

Therapy Stage Initial Authorization

Guideline Type Prior Authorization

### Approval Criteria

**1** - ALL of the following:

**1.1** Diagnosis of moderately to severely active rheumatoid arthritis (RA)

**AND**

**1.2** ONE of the following:

**1.2.1** Failure to a 3 month trial of ONE non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine], at the maximally indicated doses, confirmed by claims history or submitted medical records

**OR**

**1.2.2** History of intolerance or contraindication to ONE non-biologic DMARD [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] (please specify intolerance or contraindication)

**OR**

**1.2.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of rheumatoid arthritis as confirmed by claims history or submission of medical records [e.g., Enbrel (etanercept), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**1.3** ONE of the following:

**1.3.1** Failure to ALL of the following as confirmed by claims history or submitted medical records:

- Enbrel (etanercept)
- One of the preferred adalimumab products\*
- Tyenne (tocilizumab-aazg)

**OR**

**1.3.2** History of contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

- Enbrel (etanercept)
- One of the preferred adalimumab products\*
- Tyenne (tocilizumab-aazg)

**AND**

**1.4** Patient is NOT receiving Cimzia in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**1.5** Prescribed by or in consultation with a rheumatologist

**OR**

**2 - ALL of the following:**

**2.1** Patient is currently on Cimzia therapy as confirmed by claims history or submission of medical records

**AND**

**2.2** Diagnosis of moderately to severely active rheumatoid arthritis (RA)

**AND**

**2.3** Patient is NOT receiving Cimzia in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**2.4** Prescribed by or in consultation with a rheumatologist

Notes

\*See PDL links in Background

**Product Name:**Cimzia

**Diagnosis** Ankylosing Spondylitis

**Approval Length** 12 month(s)

**Therapy Stage** Initial Authorization

**Guideline Type** Prior Authorization

### Approval Criteria

**1** - ALL of the following:

**1.1** Diagnosis of active ankylosing spondylitis

**AND**

**1.2** ONE of the following:

**1.2.1** Failure of TWO NSAIDs (non-steroidal anti-inflammatory drugs) (e.g., ibuprofen, naproxen) at maximally indicated doses, each used for at least 4 weeks, confirmed by claims history or submitted medical records

**OR**

**1.2.2** History of intolerance or contraindication to TWO NSAIDs (please specify intolerance or contraindication)

**OR**

**1.2.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ankylosing spondylitis as confirmed by claims history or submission of medical records [e.g., adalimumab, Simponi (golimumab), Xeljanz/Xeljanz XR (tofacitinib)]

**AND**

**1.3** ONE of the following:

**1.3.1** Failure to BOTH of the following as confirmed by claims history or submitted medical records:

- Enbrel (etanercept)
- One of the preferred adalimumab products\*

**OR**

**1.3.2** History of contraindication or intolerance to BOTH of the following (please specify contraindication or intolerance):

- Enbrel (etanercept)
- One of the preferred adalimumab products\*

**AND**

**1.4** Patient is NOT receiving Cimzia in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Simponi (golimumab), Oencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**1.5** Prescribed by or in consultation with a rheumatologist

**OR**

**2 - ALL of the following:**

**2.1** Patient is currently on Cimzia therapy as confirmed by claims history or submission of medical records

**AND**

**2.2** Diagnosis of active ankylosing spondylitis

**AND**

**2.3** Patient is NOT receiving Cimzia in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**2.4** Prescribed by or in consultation with a rheumatologist

**1.2** ONE of the following:

**1.2.1** ALL of the following:

**1.2.1.1** Greater than or equal to 3% body surface area involvement, palmoplantar, facial, or genital involvement, or severe scalp psoriasis

**AND**

**1.2.1.2** ONE of the following:

**1.2.1.2.1** Failure to ONE of the following topical therapies, confirmed by claims history or submitted medical records:

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Anthralin
- Coal tar

**OR**

**1.2.1.2.2** History of intolerance or contraindication to ALL of the following topical therapies (please specify intolerance or contraindication):

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Anthralin
- Coal tar

**AND**

**1.2.1.3** ONE of the following:

**1.2.1.3.1** Failure to a 3 month trial of methotrexate at the maximally indicated dose, confirmed by claims history or submitted medical records

**OR**

**1.2.1.3.2** History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)

**OR**

**1.2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of plaque psoriasis as confirmed by claims history or submission of medical records [e.g., adalimumab, Otezla (apremilast), Skyrizi (risankizumab-rzaa), ustekinumab, Tremfya (guselkumab)]

**AND**

**1.3** ONE of the following:

**1.3.1** Failure to TWO of the following preferred products, confirmed by claims history or submitted medical records:

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

|-----------------|----------|

## 1 . Criteria

|                      |                             |
|----------------------|-----------------------------|
| Product Name:Cinryze |                             |
| Diagnosis            | Hereditary angioedema (HAE) |
| Approval Length      | 12 month(s)                 |
| Therapy Stage        | Initial Authorization       |
| Guideline Type       | Prior Authorization         |

### **Approval Criteria**

**1** - Diagnosis of hereditary angioedema (HAE) as confirmed by one of the following:

**1.1** C1 inhibitor (C1-INH) deficiency or dysfunction (Type I or II HAE) as documented by ONE of the following (per laboratory standard):

- C1-INH antigenic level below the lower limit of normal
- C1-INH functional level below the lower limit of normal

**OR**

**1.2** HAE with normal C1 inhibitor levels and ONE of the following:

- Confirmed presence of variant(s) in the gene(s) for factor XII, angiotensin-1, plasminogen-1, kininogen-1, myoferlin, and heparan sulfate-glucosamine 3-O-sulfotransferase 6
- Recurring angioedema attacks that are refractory to high-dose antihistamines with confirmed family history of angioedema
- Recurring angioedema attacks that are refractory to high-dose antihistamines with unknown background de-novo mutation(s) (i.e., no family history) (HAE-unknown)

**AND**

**2** - Prescribed for the prophylaxis of HAE attacks

**AND**

**3** - Not used in combination with other products indicated for prophylaxis against HAE attacks (e.g., Haegarda, Orladeyo, Takhzyro)

**AND**

**4** - Prescriber attests that the patient has experienced attacks of a severity and/or frequency such that they would clinically benefit from prophylactic therapy with Cinryze

**AND**

**5** - One of the following:

**5.1** Failure to Haegarda confirmed by claims history or submitted medical records

**OR**

**5.2** History of intolerance or contraindication to Haegarda (please specify intolerance or contraindication)

**OR**

**5.3** Patient is currently on Cinryze therapy confirmed by claims history or submitted medical records

**AND**

**6** - Prescribed by ONE of the following:

- Immunologist
- Allergist

| Guideline Type                                                                                                                                                                                                                                | Prior Authorization              |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - ONE of the following:</p> <p><b>1.1</b> Patient has non-myeloid malignancies and is undergoing myeloablative chemotherapy followed by autologous or allogeneic bone marrow transplant (BMT)</p> |                                  |

**OR**

**1.2** Used for mobilization of hematopoietic progenitor cells into the peripheral blood for collection by leukapheresis

**OR**

**1.3** Patient has had a peripheral stem cell transplant (PSCT) and has received myeloablative chemotherapy

**AND**

**2** - Prescribed by or in consultation with a hematologist or oncologist

**AND**

**3** - ONE of the following:

**3.1** The request is for Neupogen vial, Nivestym vial, or Releuko vial AND the requested dose is less than 0.3 milliliters

**OR**

**3.2** Both of the following:

**3.2.1** Physician attestation that in their clinical opinion the clinical response would be expected to be superior with Neupogen, Nivestym, Nypozi, or Releuko than experienced with Zarxio

**AND**

**3.2.2** One of the following:

- Failure to Zarxio as confirmed by claims history or submission of medical records

- History of contraindication, intolerance or adverse event to Zarxio (please specify contraindication, intolerance, or adverse event)

|                              |                                        |

## Approval Criteria

**1** - ONE of the following:

**1.1** One of the following:

- Patient is receiving dose dense MVAC (methotrexate, vinblastine, doxorubicin, cisplatin) for bladder cancer
- Patient is receiving dose dense AC (doxorubicin, cyclophosphamide) followed by dose-dense paclitaxel for breast cancer
- Patient is receiving chemotherapy regimen(s) associated with greater than 20% incidence of febrile neutropenia (FN)

**OR**

**1.2** Both of the following:

**1.2.1** Patient is receiving chemotherapy regimen(s) associated with 10-20% incidence of FN

**AND**

**1.2.2** Patient has one or more risk factors for chemotherapy-induced febrile neutropenia such as:

- Persistent neutropenia due to prior chemotherapy, radiation therapy, or bone marrow involvement by tumor (< 500 neutrophils/mcL or < 1,000 neutrophils/mcL and a predicted decline to ≤ 500 neutrophils/mcL over the next 48 hours)
- Liver dysfunction (bilirubin > 2.0)
- Renal dysfunction (creatinine clearance < 50)
- Age greater than 65 years receiving full chemotherapy dose intensity

**AND**

**2** - Prescribed by or in consultation with a hematologist or oncologist

|                                                           |                                                                      |

**Approval Criteria**

1 - ONE of the following:

1.1 BOTH of the following:

1.1.1 ONE of the following:

1.1.1.1 Patient is receiving myelosuppressive anticancer drug(s) given with a curative intent (curative chemotherapy, chemotherapy in curative adjuvant/neoadjuvant setting)

**OR**

1.1.1.2 Patient is receiving myelosuppressive anticancer drug(s) with a non-curative intent and use of secondary prophylaxis is in accordance with the United States Food and Drug Administration approved labeling

**OR**

1.1.1.3 Patient is receiving myelosuppressive anticancer drug(s) for definitive therapy (bridge to stem cell transplant, organ transplant, definitive surgery for oligometastatic disease)

**AND**

1.1.2 ONE of the following:

1.1.2.1 Patient has a documented history of a neutropenic event (febrile neutropenia or low

neutrophil count leading to delay of subsequent cycle) during a previous cycle of the same chemotherapy regimen at full dose for which primary prophylaxis was not received

**OR**

**1.1.2.2** Patient has a documented history of neutropenic event from a previous course of chemotherapy

**OR**

**1.2** ONE of the following:

**1.2.1** BOTH of the following:

**1.2.1.1** Patient is receiving myelosuppressive anticancer drug(s) given with non-curative intent

**AND**

**1.2.1.2** Patient has a documented history of neutropenic event (febrile neutropenia or low neutrophil count leading to delay of subsequent cycle) during a previous cycle of the same chemotherapy regimen after a trial of dose reduction

**OR**

**1.2.2** Patient is receiving myelosuppressive anticancer drug(s) where primary prophylaxis is indicated

**AND**

**2** - Prescribed by or in consultation with a hematologist or oncologist

|                                                           |                                                   |
|-----------------------------------------------------------|---------------------------------------------------|
| Product Name: Granix, Neupogen, Nivestym, Nypozi, Releuko |                                                   |
| Diagnosis                                                 | Secondary Prophylaxis of Febrile Neutropenia (FN) |
| Approval Length                                           | 3 months or duration of therapy                   |
| Guideline Type                                            | Prior Authorization                               |

## **Approval Criteria**

**1 - ONE of the following:**

**1.1 BOTH of the following:**

**1.1.1 ONE of the following:**

**1.1.1.1** Patient is receiving myelosuppressive anticancer drug(s) given with a curative intent (curative chemotherapy, chemotherapy in curative adjuvant/neoadjuvant setting)

**OR**

**1.1.1.2** Patient is receiving myelosuppressive anticancer drug(s) with a non-curative intent and use of secondary prophylaxis is in accordance with the United States Food and Drug Administration approved labeling

**OR**

**1.1.1.3** Patient is receiving myelosuppressive anticancer drug(s) for definitive therapy (bridge to stem cell transplant, organ transplant, definitive surgery for oligometastatic disease)

**AND**

**1.1.2 ONE of the following:**

**1.1.2.1** Patient has a documented history of a neutropenic event (febrile neutropenia or low neutrophil count leading to delay of subsequent cycle) during a previous cycle of the same chemotherapy regimen at full dose for which primary prophylaxis was not received

**OR**

**1.1.2.2** Patient has a documented history of neutropenic event from a previous course of chemotherapy

**OR**

**1.2** ONE of the following:

**1.2.1** BOTH of the following:

**1.2.1.1** Patient is receiving myelosuppressive anticancer drug(s) given with non-curative intent

**AND**

**1.2.1.2** Patient has a documented history of neutropenic event (febrile neutropenia or low neutrophil count leading to delay of subsequent cycle) during a previous cycle of the same chemotherapy regimen after a trial of dose reduction

**OR**

**1.2.2** Patient is receiving myelosuppressive anticancer drug(s) where primary prophylaxis is indicated

**AND**

**2** - Prescribed by or in consultation with a hematologist or oncologist

**AND**

**3** - ONE of the following:

**3.1** The request is for Granix vial, Neupogen vial, Nivestym vial, or Releuko vial AND the requested dose is less than 0.3 milliliters

**OR**

**3.2** Both of the following:

**3.2.1** Physician attestation that in their clinical opinion the clinical response would be expected to be superior with Granix, Neupogen, Nivestym, Nypozi, or Releuko than experienced with Zarxio

**AND**

**3.2.2** One of the following:

- Failure to Zarxio as confirmed by claims history or submission of medical records
- History of intolerance, contraindication or adverse effect to Zarxio (please specify intolerance, contraindication or adverse effect)

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                   |

**3** - Patient has one or more risk factors for an infection-associated complication such as:

- Sepsis syndrome
- Greater than 65 years of age
- Absolute Neutrophil Count (ANC) less than 100/mcL
- Neutropenia expected to be greater than 10 days in duration
- Pneumonia
- Clinically documented infections including invasive fungal infection
- Hospitalization at the time of fever
- Prior episode(s) of FN

**AND**

**4** - Prescribed by or in consultation with a hematologist or oncologist

Product Name: Neupogen, Nivestym, Nypozi, Releuko

|-----------|---------------------------------------|
| Diagnosis | Treatment of Febrile Neutropenia (FN) |
|-----------|---------------------------------------|

|                 |            |
|-----------------|------------|
| Approval Length | 1 month(s) |
|-----------------|------------|

|                |                     |
|----------------|---------------------|
| Guideline Type | Prior Authorization |
|----------------|---------------------|

### Approval Criteria

**1** - Diagnosis of febrile neutropenia (FN)

**AND**

**2** - Patient has not received long-acting prophylactic pegfilgrastim in the last 14 days

**AND**

**3** - Patient has one or more risk factors for an infection-associated complication such as:

- Sepsis syndrome
- Greater than 65 years of age
- Absolute Neutrophil Count (ANC) less than 100/mcL
- Neutropenia expected to be greater than 10 days in duration

- Pneumonia
- Clinically documented infections including invasive fungal infection
- Hospitalization at the time of fever
- Prior episode(s) of FN

**AND**

**4** - Prescribed by or in consultation with a hematologist or oncologist

**AND**

**5** - One of the following:

**5.1** The request is for Neupogen vial, Nivestym vial, or Releuko vial AND the requested dose is less than 0.3 milliliters

**OR**

**5.2** Both of the following:

**5.2.1** Physician attestation that in their clinical opinion the clinical response would be expected to be superior with Neupogen, Nivestym, Nypozi or Releuko than experienced with Zarxio

**AND**

**5.2.2** One of the following:

- Failure to Zarxio as confirmed by claims history or submission of medical records
- History of intolerance, contraindication or adverse effect to Zarxio (please specify intolerance, contraindication or adverse effect)

## 1 . Criteria

|                      |                     |
|----------------------|---------------------|
| Product Name:Soliqua |                     |
| Approval Length      | 12 month(s)         |
| Guideline Type       | Prior Authorization |
| Approval Criteria    |                     |

**1** - Submission of medical records (e.g., chart notes) confirming diagnosis of type 2 diabetes mellitus as evidenced by ONE of the following laboratory values:

- A1C greater than or equal to 6.5%
- Fasting plasma glucose (FPG) greater than or equal to 126 mg/dL
- 2-hour plasma glucose (PG) greater than or equal to 200 mg/dL during oral glucose tolerance test
- Random plasma glucose greater than or equal to 200 mg/dL in patient with classic symptoms of hyperglycemia or hyperglycemic crisis

**OR**

**2** - For patients requiring ongoing treatment for type 2 diabetes mellitus (i.e., diagnosed greater than 2 years ago), submission of medical records (e.g., chart notes) confirming diagnosis of type 2 diabetes mellitus

| Product Name:Compounds or Bulk Powders                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                |
| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 12 month(s)    |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Administrative |
| <p><b>Approval Criteria</b></p> <p>1 - The request is for compounded oral budesonide for the treatment of eosinophilic esophagitis*</p> <p style="text-align: center;"><b>OR</b></p> <p>2 - ALL of the following:</p> <p>2.1 The requested drug component is a covered medication</p> <p style="text-align: center;"><b>AND</b></p> <p>2.2 ONE of the following:</p> <p>2.2.1 The requested drug component is to be administered for an FDA (Food and Drug Administration)-approved indication</p> <p style="text-align: center;"><b>OR</b></p> <p>2.2.2 The use of this drug is supported by information from ONE of the following appropriate compendia of current literature:</p> <ul style="list-style-type: none"> <li>• American Hospital Formulary Service Drug Information</li> <li>• National Comprehensive Cancer Network Drugs and Biologics Compendium</li> <li>• Thomson Micromedex DrugDex</li> <li>• Clinical pharmacology</li> <li>• United States Pharmacopoeia-National Formulary (USP-NF)</li> </ul> <p style="text-align: center;"><b>AND</b></p> |                |

**2.3** If a drug included in the compound requires prior authorization and/or step therapy, all drug specific clinical criteria must also be met

**AND**

**2.4** If the drug component is no longer available commercially, it must not have been withdrawn for safety reasons

**AND**

**2.5** ONE of the following:

- A unique vehicle is required
- A unique dosage form is required for a commercially available product due to patient's age, weight, or inability to take a solid dosage form
- A unique formulation is required for a commercially available product due to an allergy or intolerance to an inactive ingredient in the commercially available product
- There is a shortage of the commercially available product per the FDA Drug Shortage database or the ASHP (American Society of Health-System Pharmacists) Current Drug Shortages tracking log

**AND**

**2.6** Coverage for compounds and bulk powders will NOT be approved for any of the following:

**2.6.1** For topical compound preparations (e.g., creams, ointments, lotions, or gels to be applied to the skin for transdermal, transcutaneous, or any other topical route), if the requested compound contains any FDA approved ingredient that is not FDA approved for TOPICAL use (see Table 1 in Background section)

**OR**

**2.6.2** If the requested compound contains topical fluticasone, topical fluticasone will NOT be approved unless both of the following are met:

**2.6.2.1** Topical fluticasone is intended to treat a dermatologic condition (scar treatments are considered cosmetic and will not be covered)

**AND**

**2.6.2.2** Patient has a contraindication to all commercially available topical fluticasone formulations

**OR**

**2.6.3** Requested compound contains any ingredients when used for cosmetic purposes (see Table 2 in Background section)

**OR**

**2.6.4** Requested compound contains any ingredient(s) which are on the FDA's Do Not Compound List (see Table 3 in Background section)

Notes

\*All other indications for budesonide refer to criteria in step 2

## 2 . Background

### Benefit/Coverage/Program Information

**Table 1: Example topical compound preparations that contain any FDA approved ingredient that are not FDA approved for TOPICAL use, including but NOT LIMITED TO the following:**

- (1) Ketamine
- (2) Gabapentin
- (3) Flurbiprofen (topical ophthalmic use not included)
- (4) Ketoprofen
- (5) Morphine
- (6) Nabumetone

- (7) Oxycodone
- (8) Cyclobenzaprine
- (9) Baclofen
- (10) Tramadol
- (11) Hydrocodone
- (12) Meloxicam
- (13) Amitriptyline
- (14) Pentoxifylline
- (15) Orphenadrine
- (16) Piroxicam
- (17) Levocetirizine
- (18) Amantadine
- (19) Oxytocin
- (20) Sumatriptan
- (21) Chorionic gonadotropin (human)
- (22) Clomipramine
- (23) Dexamethasone
- (24) Hydromorphone
- (25) Methadone
- (26) Papaverine
- (27) Mefenamic acid
- (28) Promethazine

- (29) Succimer DMSA
- (30) Tizanidine
- (31) Apomorphine
- (32) Carbamazepine
- (33) Ketorolac
- (34) Dimercaptopropane-sulfonate
- (35) Dimercaptosuccinic acid
- (36) Duloxetine
- (37) Fluoxetine
- (38) Bromfenac (topical ophthalmic use not included)
- (39) Nepafenac (topical ophthalmic use not included)

**Table 2: Example compounds that contain ingredients for cosmetic purposes:**

- (1) Hydroquinone
- (2) Acetyl hexapeptide-8
- (3) Tocopheryl Acid Succinate
- (4) PracaSil TM-Plus
- (5) Chrysaderm Day Cream
- (6) Chrysaderm Night Cream
- (7) PCCA Spira-Wash
- (8) Lipopen Ultra
- (9) Versapro

- (10) Fluticasone
- (11) Mometasone
- (12) Halobetasol
- (13) Betamethasone
- (14) Clobetasol
- (15) Triamcinolone
- (16) Minoxidil
- (17) Tretinoin
- (18) Dexamethasone
- (19) Spironolactone
- (20) Cycloserine
- (21) Tamoxifen
- (22) Sermorelin
- (23) Mederma Cream
- (24) PCCA Cosmetic HRT Base
- (25) Sanare Scar Therapy Cream
- (26) Scarcin Cream
- (27) Apothederm
- (28) Stera Cream
- (29) Copasil
- (30) Collagenase
- (31) Arbutin Alpha

- (32) Nourisil
- (33) Freedom Cepapro
- (34) Freedom Silomac Andydrous
- (35) Retinaldehyde
- (36) Apothederm

**Table 3: Example ingredients on the FDA's Do Not Compound List:**

- (1) 3,3',4',5-tetrachlorosalicylanilide
- (2) Adenosine phosphate
- (3) Adrenal cortex
- (4) Alatrofloxacin mesylate
- (5) Aminopyrine
- (6) Astemizole
- (7) Azaribine
- (8) Benoxaprofen
- (9) Bithionol
- (10) Camphorated oil
- (11) Carbetapentane citrate
- (12) Casein, iodinated
- (13) Cerivastatin sodium
- (14) Chlormadinone acetate
- (15) Chloroform

- (16) Cisapride
- (17) Defenfluramine hydrochloride
- (18) Diamthazole dihydrochloride
- (19) Dibromsalan
- (20) Dihydrostreptomycin sulfate
- (21) Dipyrone
- (22) Encainide hydrochloride
- (23) Etretinate
- (24) Fenfluramine hydrochloride
- (25) Flosequinan
- (26) Glycerol, iodinated
- (27) Grepafloxacin
- (28) Mepazine
- (29) Metabromsalan
- (30) Methapyrilene
- (31) Methopholine
- (32) Methoxyflurane
- (33) Mibefradil dihydrochloride
- (34) Nomifensine maleate
- (35) Novobiocin sodium
- (36) Oxyphenisatin acetate
- (37) Oxyphenisatin

- (38) Pemoline
- (39) Pergolide mesylate
- (40) Phenacetin
- (41) Phenformin hydrochloride
- (42) Phenylpropanolamine
- (43) Pipamazine
- (44) Potassium arsenite
- (45) Propoxyphene
- (46) Rapacuronium bromide
- (47) Rofecoxib
- (48) Sibutramine hydrochloride
- (49) Sparteine sulfate
- (50) Sulfadimethoxine
- (51) Sweet spirits of nitre
- (52) Tegaserod maleate
- (53) Temafloxacin hydrochloride
- (54) Terfenadine
- (55) Ticrynafen
- (56) Tribromsalan
- (57) Trichloroethane
- (58) Troglitazone
- (59) Trovafloxacin mesylate:

(60) Urethane

(61) Valdecoxib

(62) Zomepirac sodium

### 3 . Revision History

| Date      | Notes                                                                 |
|-----------|-----------------------------------------------------------------------|
| 8/14/2025 | Added LA to formularies, no clinical changes to criteria for 10/1/25. |

Constipation Agents

## Prior Authorization Guideline

|                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Effective Date: | 10/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                                   |                       |
|-----------------------------------|-----------------------|
| Product Name:generic lubiprostone |                       |
| Approval Length                   | 12 month(s)           |
| Therapy Stage                     | Initial Authorization |
| Guideline Type                    | Prior Authorization   |
| Approval Criteria                 |                       |

**1 - ONE of the following:**

**1.1** Diagnosis of opioid-induced constipation in an adult with chronic, non-cancer pain

**OR**

**1.2** Diagnosis of opioid-induced constipation in a patient with chronic pain related to prior cancer diagnosis or its treatment who does not require frequent (e.g., weekly) opioid dosage escalation

**OR**

**1.3** Diagnosis of chronic idiopathic constipation

**OR**

**1.4 BOTH of the following:**

- Diagnosis of irritable bowel syndrome with constipation
- Patient was female at birth

**AND**

**2 - ONE of the following:**

**2.1** Failure to ONE of the following as confirmed by claims history or submission of medical records:

- Lactulose
- Polyethylene glycol (Miralax)

**OR**

**2.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

- Lactulose

- Polyethylene glycol (Miralax)

|                             |                       |
|-----------------------------|-----------------------|
| Product Name: Brand Amitiza |                       |
| Approval Length             | 12 month(s)           |
| Therapy Stage               | Initial Authorization |
| Guideline Type              | Prior Authorization   |

**Approval Criteria**

1 - For diagnosis of opioid-induced constipation (OIC), BOTH of the following:

1.1 ONE of the following:

- Diagnosis of OIC in an adult with chronic, non-cancer pain
- Diagnosis of OIC in a patient with chronic pain related to prior cancer diagnosis or its treatment who does not require frequent (e.g., weekly) opioid dosage escalation

**AND**

1.2 ONE of the following:

1.2.1 Failure to ALL of the following as confirmed by claims history or submission of medical records:

- Lactulose or polyethylene glycol (Miralax)
- Movantik
- Lubiprostone (generic of Amitiza)

**OR**

1.2.2 History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

- Lactulose
- Polyethylene glycol (Miralax)
- Movantik
- Lubiprostone (generic of Amitiza)

**OR**

**2** - For diagnosis of chronic idiopathic constipation, **ONE** of the following:

**2.1** Failure to **ALL** of the following as confirmed by claims history or submission of medical records:

- Lactulose or polyethylene glycol (Miralax)
- Prucalopride (generic of Motegrity)
- Lubiprostone (generic of Amitiza)

**OR**

**2.2** History of intolerance or contraindication to **ALL** of the following (please specify intolerance or contraindication):

- Lactulose
- Polyethylene glycol (Miralax)
- Prucalopride (generic of Motegrity)
- Lubiprostone (generic of Amitiza)

**OR**

**3** - For diagnosis of irritable bowel syndrome with constipation (IBS-C), **BOTH** of the following:

**3.1** Patient was female at birth

**AND**

**3.2** **ONE** of the following:

**3.2.1** Failure to **BOTH** of the following as confirmed by claims history or submission of medical records:

- Lactulose or polyethylene glycol (Miralax)
- Lubiprostone (generic of Amitiza)

**OR**

**3.2.2** History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

- Lactulose
- Polyethylene glycol (Miralax)
- Lubiprostone (generic of Amitiza)

## 1 . Criteria

|                                                                                  |                       |
|----------------------------------------------------------------------------------|-----------------------|
| Product Name:Continuous Glucose Monitors, sensors, and transmitters (all brands) |                       |
| Approval Length                                                                  | 12 month(s)           |
| Therapy Stage                                                                    | Initial Authorization |
| Guideline Type                                                                   | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of diabetes

**AND**

**2** - One of the following:

**2.1** Patient is on an intensive insulin regimen (3 or more insulin injections per day or uses continuous subcutaneous insulin infusion pump)

**OR**

**2.2** One of the following:

**2.2.1** Patient has a history of a level 3 hypoglycemic event [glucose less than 54mg/dL (3.0mmol/L)] characterized by altered mental and/or physical state requiring third-party assistance for treatment of hypoglycemia

**OR**

**2.2.2** Patient has a history of more than one level 2 hypoglycemia event [glucose less than 54mg/dL (3.0mmol/L)] that persist despite multiple attempts to adjust medication(s) or modify diabetes treatment plan

**AND**

**3** - Patient regularly monitors blood glucose 4 or more times per day

**AND**

**4** - If the request is for a non-preferred continuous glucose monitor (all components), ONE of the following:

**4.1** BOTH of the following:

- Patient has a physical or mental limitation that makes utilization of Dexcom G6 and Dexcom G7 unsafe, inaccurate, or otherwise not feasible (e.g., manual dexterity) (document limitation)
- Patient has a physical or mental limitation that makes utilization of the preferred Freestyle Libre product unsafe, inaccurate, or otherwise not feasible (e.g., manual dexterity) (document limitation)

**OR**

**4.2** Provider submits documentation why the patient requires use of a non-preferred continuous glucose monitor system for treatment of diabetes, rather than one of the preferred products

### Approval Criteria

**1** - For diagnosis of Hepatosplenic T-cell lymphoma, ALL of the following:

**1.1** Disease is relapsed or refractory

**AND**

**1.2** ONE of the following:

- Failure to at least two prior systemic therapies confirmed by claims history or submitted medical records
- History of intolerance or contraindication to at least two prior systemic therapies (please specify intolerance or contraindication)

**OR**

**2** - For diagnosis of Breast implant-associated anaplastic large cell lymphoma, ALL of the following:

- Disease is relapsed or refractory
- Used as second-line and subsequent therapy

**OR**

**3** - For diagnosis of Peripheral T-cell lymphoma, ONE of the following:

- Used as initial palliative intent therapy
- Used as second-line and subsequent therapy

## 1 . Criteria

|                                                  |                                   |
|--------------------------------------------------|-----------------------------------|
| Product Name: Brand Corlanor, generic ivabradine |                                   |
| Diagnosis                                        | Symptomatic Chronic Heart Failure |
| Approval Length                                  | 12 month(s)                       |
| Therapy Stage                                    | Initial Authorization             |
| Guideline Type                                   | Prior Authorization               |

**Approval Criteria**

**1** - ALL of the following:

**1.1** Worsening heart failure in a diagnosis of stable, symptomatic, chronic [e.g., New York Heart Association (NYHA) class II, III, or IV] heart failure

**AND**

**1.2** Patient has a left ventricular ejection fraction (EF) less than or equal to 35%

**AND**

**1.3** The patient is in sinus rhythm

**AND**

**1.4** Patient has a resting heart rate greater than or equal to 70 beats per minute

**AND**

**1.5** ONE of the following:

**1.5.1** Patient is on a stabilized dose and receiving concomitant therapy with maximum tolerated beta blocker (e.g., carvedilol, metoprolol succinate, bisoprolol) as confirmed by claims history or submission of medical records

**OR**

**1.5.2** Patient has a contraindication or intolerance to beta-blocker therapy (please specify contraindication or intolerance)

**AND**

**1.6 ONE of the following:**

**1.6.1** Patient is on a stabilized dose and receiving concomitant therapy with dapagliflozin (Farxiga authorized generic) (includes combination products containing dapagliflozin) as confirmed by claims history or submission of medical records

**OR**

**1.6.2** Patient has a contraindication or intolerance to SGLT2 (sodium-glucose co-transporter 2) inhibitor therapy (please specify contraindication or intolerance)

**AND**

**1.7 ONE of the following:**

**1.7.1** Patient is on a stabilized dose and receiving concomitant therapy with ONE of the following, as confirmed by claims history or submission of medical records:

**1.7.1.1** Angiotensin-converting enzyme (ACE) inhibitor (e.g., captopril, enalapril)

**OR**

**1.7.1.2** Angiotensin II receptor blocker (ARB) (e.g., candesartan, valsartan)

**OR**

**1.7.1.3** Angiotensin receptor-neprilysin inhibitor (ARNI) (e.g., Entresto)

**OR**

**1.7.2** Patient has a contraindication or intolerance to ACE inhibitors, ARBs, and ARNIs (please specify contraindication or intolerance)

**AND**

**1.8 ONE of the following:**

**1.8.1** Patient is on a stabilized dose and receiving concomitant therapy with a maximally tolerated aldosterone antagonist (e.g., eplerenone, spironolactone) as confirmed by claims history or submission of medical records

**OR**

**1.8.2** Patient has a contraindication or intolerance to aldosterone antagonist therapy (please specify contraindication or intolerance)

**AND**

**1.9** Prescribed by or in consultation with a cardiologist

**OR**

**2** - ALL of the following:

**2.1** Diagnosis of stable symptomatic heart failure due to dilated cardiomyopathy (DCM)

**AND**

**2.2** Patient is in sinus rhythm

**AND**

**2.3** Patient has an elevated heart rate

**AND**

**2.4** Prescribed by or in consultation with a cardiologist

**OR**

**3** - Patient is currently established on Corlanor therapy

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                       |

|-----------------|----------|

## 1 . Criteria

|                       |                       |
|-----------------------|-----------------------|
| Product Name:Cosentyx |                       |
| Diagnosis             | Plaque Psoriasis      |
| Approval Length       | 12 month(s)           |
| Therapy Stage         | Initial Authorization |
| Guideline Type        | Prior Authorization   |

## **Approval Criteria**

**1** - Diagnosis of moderate to severe plaque psoriasis

**AND**

**2** - Patient is NOT receiving Cosentyx in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Taltz (ixekizumab), Siliq (brodalumab), Ilumya (tildrakizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**3** - Prescribed by or in consultation with a dermatologist

**AND**

**4** - ONE of the following:

**4.1** Patient is currently on Cosentyx therapy as confirmed by claims history or submission of medical records

**OR**

**4.2** BOTH of the following:

**4.2.1** ONE of the following:

**4.2.1.1** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of plaque psoriasis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), adalimumab, Otezla (apremilast), Skyrizi (risankizumab-rzaa), ustekinumab, Tremfya (guselkumab), Enbrel (etanercept)]

**OR**

**4.2.1.2 ALL of the following:**

**4.2.1.2.1** Greater than or equal to 3% body surface area involvement, palmoplantar, facial, or genital involvement, or severe scalp psoriasis

**AND**

**4.2.1.2.2 ONE of the following:**

- Failure of ONE of the following confirmed by claims history or submitted medical records: Corticosteroids (e.g., betamethasone, clobetasol, desonide), Vitamin D analogs (e.g., calcitriol, calcipotriene), Tazarotene, Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus), Anthralin, Coal tar
- History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication): Corticosteroids (e.g., betamethasone, clobetasol, desonide), Vitamin D analogs (e.g., calcitriol, calcipotriene), Tazarotene, Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus), Anthralin, Coal tar

**AND**

**4.2.1.2.3 ONE of the following:**

- Failure of a 3 month trial of methotrexate, at the maximally indicated doses, confirmed by claims history or submitted medical records
- History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)

**AND**

**4.2.2 ONE of the following:**

**4.2.2.1** Failure to TWO of the following preferred products as confirmed by claims history or submitted medical records:

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

**OR**

**4.2.2.2** History of intolerance or contraindication to ALL of the following preferred products (please specify intolerance or contraindication):

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

### Approval Criteria

**1** - Diagnosis of active ankylosing spondylitis

**AND**

**2** - Patient is NOT receiving Cosentyx in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**3** - Prescribed by or in consultation with a rheumatologist

**AND**

**4** - ONE of the following:

**4.1** Patient is currently on Cosentyx therapy as confirmed by claims history or submission of medical records

**OR**

**4.2** BOTH of the following:

**4.2.1** ONE of the following:

**4.2.1.1** Failure to TWO NSAIDs (e.g., ibuprofen, naproxen) at maximally indicated doses, each used for at least 4 weeks confirmed by claims history or submitted medical records

**OR**

**4.2.1.2** History of intolerance or contraindication to TWO NSAIDs (please specify intolerance or contraindication)

**OR**

**4.2.1.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ankylosing spondylitis as confirmed by claims history or submission of medical records [e.g., adalimumab, Simponi (golimumab), Xeljanz/Xeljanz XR (tofacitinib), Rinvoq (upadacitinib), Enbrel (etanercept)]

**AND**

**4.2.2** ONE of the following:

- Failure of BOTH of the following confirmed by claims history or submitted medical records: One of the preferred adalimumab products\*, Enbrel (etanercept)
- History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication): One of the preferred adalimumab products\*, Enbrel (etanercept)

**Approval Criteria**

1 - Diagnosis of active non-radiographic axial spondyloarthritis

**AND**

**2** - Patient is NOT receiving Cosentyx in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**3** - Prescribed by or in consultation with a rheumatologist

**AND**

**4** - ONE of the following:

**4.1** Patient is currently on Cosentyx therapy as confirmed by claims history or submission of medical records

**OR**

**4.2** ONE of the following:

**4.2.1** Failure to TWO NSAIDs (e.g., ibuprofen, naproxen) at maximally indicated doses, each used for at least 4 weeks confirmed by claims history or submitted medical records

**OR**

**4.2.2** History of intolerance or contraindication to TWO NSAIDs (e.g., ibuprofen, naproxen) (please specify intolerance or contraindication)

**OR**

**4.2.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of non-radiographic axial spondyloarthritis as confirmed by claims history or submission of medical records [e.g., adalimumab, Cimzia (certolizumab), Simponi (golimumab)]

| Date      | Notes                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2/20/2025 | Updated formularies. Removed reference to brand Stelara. Removed Ilumya step in PsO section – and added preferred ustekinumab as step therapy option in PsO and PsA. Removed requirement that one of the steps in PsO must be adalimumab. Updated step therapy bypass in HS section to bypass oral antibiotic therapy for patients with a history of targeted immunomodulator therapy and bypass for adalimumab section for current utilizers. |

Cotellic

## Prior Authorization Guideline

## 1 . Criteria

|                       |                       |
|-----------------------|-----------------------|
| Product Name:Cotellic |                       |
| Diagnosis             | Melanoma              |
| Approval Length       | 12 month(s)           |
| Therapy Stage         | Initial Authorization |
| Guideline Type        | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of melanoma

**AND**

**2** - ONE of the following:

**2.1** Patient has unacceptable toxicities to Tafinlar (dabrafenib)/Mekinist (trametinib) on the basis of agent side-effect profile

**OR**

**2.2** Disease is one of the following:

- Relapsed greater than 3 months after treatment discontinuation
- Unresectable
- Metastatic

**AND**

**3** - Disease is positive for ONE of the following mutations:

- BRAF V600E
- BRAF V600K

**AND**

**4** - Used in combination with Zelboraf (vemurafenib)

## 1 . Criteria

|                                                                                                                         |                     |
|-------------------------------------------------------------------------------------------------------------------------|---------------------|
| Product Name: Brand Daraprim, generic pyrimethamine                                                                     |                     |
| Approval Length                                                                                                         | 12 month(s)         |
| Guideline Type                                                                                                          | Prior Authorization |
| <b>Approval Criteria</b><br><br>1 - Submission of medical records (e.g., chart notes) documenting ONE of the following: |                     |

**1.1 Treatment of severe acquired toxoplasmosis, including toxoplasmic encephalitis**

**OR**

**1.2 Treatment of congenital toxoplasmosis**

**OR**

**1.3 Secondary prophylaxis of toxoplasmic encephalitis**

**OR**

**1.4 ALL of the following:**

**1.4.1** Primary pneumocystis pneumonia (PCP) prophylaxis in human immunodeficiency virus (HIV)-infected patients or as secondary prophylaxis in HIV-infected patients who have been treated for an acute episode of pneumocystis pneumonia

**AND**

**1.4.2** Patient has experienced intolerance to prior prophylaxis with trimethoprim-sulfamethoxazole (TMP-SMX)

**AND**

**1.4.3 One of the following:**

- Patient has been re-challenged with trimethoprim-sulfamethoxazole (TMP-SMX) using a desensitization protocol and is still unable to tolerate
- Evidence of moderately severe or life threatening-reaction to trimethoprim-sulfamethoxazole (TMP-SMX) in the past [e.g., toxic epidermal necrolysis (TEN), Stevens-Johnson syndrome]

**OR**

**1.5 ALL of the following:**

**1.5.1** Primary prophylaxis of toxoplasmic encephalitis

**AND**

**1.5.2** Toxoplasma immunoglobulin G (IgG) positive

**AND**

**1.5.3** CD4 count less than or equal to 100 cells per mm<sup>3</sup> if initiating prophylaxis or CD4 count 100-200 cells per mm<sup>3</sup> if reinstituting prophylaxis\*

**AND**

**1.5.4** Will be used in combination with dapsone or atovaquone

**AND**

**1.5.5** Patient has experienced intolerance to prior prophylaxis with trimethoprim-sulfamethoxazole (TMP-SMX)

**AND**

**1.5.6** ONE of the following:

- Patient has been re-challenged with trimethoprim-sulfamethoxazole (TMP-SMX) using a desensitization protocol and is still unable to tolerate
- Evidence of moderately severe or life threatening-reaction to trimethoprim-sulfamethoxazole (TMP-SMX) in the past [e.g., toxic epidermal necrolysis (TEN), Stevens-Johnson syndrome]

Notes

\*Consider discontinuation of primary prophylaxis if CD4 count > 200 cells/mm<sup>3</sup> for > 3 months after institution of combination antiretroviral therapy.

|-----------------|----------|
| Effective Date: | 8/3/2024 |
|-----------------|----------|

## 1 . Criteria

|                     |                       |
|---------------------|-----------------------|
| Product Name:Daybue |                       |
| Approval Length     | 12 month(s)           |
| Therapy Stage       | Initial Authorization |
| Guideline Type      | Prior Authorization   |
|                     |                       |

### Approval Criteria

**1** - Diagnosis of Rett Syndrome (RTT) confirmed by ONE of the following:

**1.1** ALL of the following clinical signs and symptoms:

- A pattern of development, regression, then recovery or stabilization
- Partial or complete loss of purposeful hand skills such as grasping with fingers, reaching for things, or touching things on purpose
- Partial or complete loss of spoken language
- Repetitive hand movements, such as wringing the hands, washing, squeezing, clapping, or rubbing
- Gait abnormalities, including walking on toes or with an unsteady, wide-based, stiff-legged gait

**OR**

**1.2** Confirmed genetic mutation in the MECP2 gene

**AND**

**2** - Prescribed by, or in consultation with, ONE of the following:

- Geneticist
- Pediatrician who specializes in childhood neurological or developmental disorders
- Neurologist

## 1 . Criteria

|                                                                                                 |                       |
|-------------------------------------------------------------------------------------------------|-----------------------|
| Product Name: Cequa, Miebo, Brand Restasis, Restasis Multidose, Tryptyr, Tyrvaya, Vevye, Xiidra |                       |
| Approval Length                                                                                 | 12 month(s)           |
| Therapy Stage                                                                                   | Initial Authorization |
| Guideline Type                                                                                  | Prior Authorization   |

### **Approval Criteria**

**1** - Diagnosis of ONE of the following:

- Moderate to severe keratoconjunctivitis sicca
- Moderate to severe dry eye disease

**AND**

**2** - NOT prescribed to manage dry eyes peri-operative elective eye surgery [e.g., LASIK (laser-assisted in situ keratomileusis)]

**AND**

**3** - Failure to at least one OTC (over-the-counter) artificial tear product (e.g., Systane Ultra, Akwa Tears, Refresh Optive, Soothe XP) as confirmed by claims history or submission of medical records

**AND**

**4** - ONE of the following:

**4.1** Failure to cyclosporine emulsion 0.05% (generic Restasis) as confirmed by claims history or submission of medical records

**OR**

**4.2** History of contraindication or intolerance to cyclosporine emulsion 0.05% (generic Restasis) (please specify contraindication or intolerance)

**AND**

**5** - Medication will NOT be used in combination with another prescription product for dry eye disease or keratoconjunctivitis sicca (e.g., Miebo, Restasis single dose-vials, Tyrvaya, Xiidra)

**AND**

**6** - Prescribed by or in consultation with ONE of the following:

- Ophthalmologist
- Optometrist
- Rheumatologist

Product Name:generic cyclosporine 0.05% emulsion

|                 |             |
|-----------------|-------------|
| Approval Length | 12 month(s) |

|---------------------------------------------------------|---------------------|
| Product Name:Brand Duexis, generic ibuprofen/famotidine |                     |
| Approval Length                                         | 12 month(s)         |
| Guideline Type                                          | Prior Authorization |
| Approval Criteria                                       |                     |

**1 - ONE** of the following risk factors for NSAID (non-steroidal anti-inflammatory drug)-induced adverse GI (gastrointestinal) events:

- Patient is greater than or equal to 65 years of age
- Prior history of peptic, gastric, or duodenal ulcer
- History of NSAID-related ulcer
- History of clinically significant GI bleeding
- Untreated or active H. Pylori (Helicobacter pylori) gastritis
- Concurrent use of oral corticosteroids (e.g., prednisone, prednisolone, dexamethasone)
- Concurrent use of anticoagulants (e.g., warfarin, heparin)
- Concurrent use of antiplatelets (e.g., aspirin including low-dose, clopidogrel)

**AND**

**2 - ONE** of the following:

**2.1** Failure to THREE combinations of preferred\* NSAIDs, one of which must be celecoxib (generic Celebrex), taken concomitantly with preferred\* H2-receptor antagonists, as confirmed by claims history or submitted medical records

**OR**

**2.2** History of contraindication or intolerance to ALL preferred\* NSAIDs and ALL preferred\* H2-receptor antagonists (please specify contraindication or intolerance)

**AND**

**3 - Physician** has provided rationale for needing to use fixed-dose combination therapy with Duexis instead of taking individual products in combination

## 1 . Criteria

|                    |                       |
|--------------------|-----------------------|
| Product Name:Duopa |                       |
| Approval Length    | 12 month(s)           |
| Therapy Stage      | Initial Authorization |
| Guideline Type     | Prior Authorization   |

**Approval Criteria**

1 - Diagnosis of advanced Parkinson's disease

**AND**

2 - Patient experiences a wearing “off” phenomenon that cannot be managed by increasing the dose of oral levodopa

**AND**

3 - Has undergone or has planned placement of a procedurally-placed tube

**AND**

4 - Prescribed by or in consultation with a neurologist

|                                                                                                         |                     |
|---------------------------------------------------------------------------------------------------------|---------------------|
| Product Name:Duopa                                                                                      |                     |
| Approval Length                                                                                         | 12 month(s)         |
| Therapy Stage                                                                                           | Reauthorization     |
| Guideline Type                                                                                          | Prior Authorization |

### Guideline Note:

|                 |           |
|-----------------|-----------|
| Effective Date: | 11/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                        |                       |
|------------------------|-----------------------|
| Product Name: Dupixent |                       |
| Diagnosis              | Atopic Dermatitis     |
| Approval Length        | 12 month(s)           |
| Therapy Stage          | Initial Authorization |
| Guideline Type         | Prior Authorization   |

## **Approval Criteria**

**1** - Diagnosis of moderate-to-severe chronic atopic dermatitis

**AND**

**2** - ONE of the following:

**2.1** Failure to TWO of the following therapeutic classes of topical therapies as confirmed by claims history or submission of medical records:

- One medium, high, or very-high potency topical corticosteroid [e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)] (see Table 1 in Background)
- One topical calcineurin inhibitor [e.g., pimecrolimus (generic Elidel), tacrolimus (generic Protopic)]
- Eucrisa (crisaborole)

**OR**

**2.2** History of contraindication or intolerance to ALL of the following therapeutic classes of topical therapies (please specify contraindication or intolerance):

- One medium, high, or very-high potency topical corticosteroid [e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)] (see Table 1 in Background)
- One topical calcineurin inhibitor [e.g., pimecrolimus (generic Elidel), tacrolimus (generic Protopic)]
- Eucrisa (crisaborole)

**OR**

**2.3** Patient is currently on Dupixent therapy as confirmed by claims history or submission of medical records

**AND**

**3** - Patient is NOT receiving Dupixent in combination with either of the following for treatment of the same indication:

- Biologic immunomodulator [e.g., Adbry (tralokinumab-ldrm), Nemluvio (nemolizumab-ilto)]
- Janus kinase inhibitor [e.g., Rinvoq (upadacitinib), Xeljanz/XR (tofacitinib), Opzelura (topical ruxolitinib), Cibinqo (abrocitinib)]

**AND**

**4** - Prescribed by or in consultation with ONE of the following:

- Dermatologist
- Allergist
- Immunologist

| Diagnosis       | Asthma                |
| Approval Length | 12 month(s)           |
| Therapy Stage   | Initial Authorization |
| Guideline Type  | Prior Authorization   |

### **Approval Criteria**

**1** - Diagnosis of moderate-to-severe asthma

**AND**

**2** - ONE of the following:

**2.1** ALL of the following:

**2.1.1** Classification of asthma as uncontrolled or inadequately controlled as defined by at least ONE of the following:

- Poor symptom control [e.g., Asthma Control Questionnaire (ACQ) score consistently greater than 1.5 or Asthma Control Test (ACT) score consistently less than 20]
- Two or more bursts of systemic corticosteroids for at least 3 days each in the previous 12 months
- Asthma-related emergency treatment (e.g., emergency room visit, hospital admission, or unscheduled physician's office visit for nebulizer or other urgent treatment)
- Airflow limitation [e.g., after appropriate bronchodilator withhold forced expiratory volume in 1 second (FEV1) less than 80% predicted (in the face of reduced FEV1/forced vital capacity [FVC] defined as less than the lower limit of normal)]
- Patient is currently dependent on oral corticosteroids for the treatment of asthma

**AND**

**2.1.2** Dupixent will be used in combination with ONE of the following:

**2.1.2.1** ONE maximally-dosed (appropriately adjusted for age) combination inhaled corticosteroid (ICS)/long-acting beta2 agonist (LABA) [e.g., Advair/AirDuo Respiclick (fluticasone propionate/salmeterol), Symbicort (budesonide/formoterol), Breo Ellipta (fluticasone furoate/vilanterol)] (see Table 2 in Background)

**OR**

**2.1.2.2** Combination therapy including BOTH of the following:

- ONE maximally-dosed (appropriately adjusted for age) ICS product [e.g., ciclesonide (Alvesco), mometasone furoate (Asmanex), beclomethasone dipropionate (QVAR)] (see Table 2 in Background)
- ONE additional asthma controller medication [e.g., LABA - olodaterol (Striverdi) or indacaterol (Arcapta); leukotriene receptor antagonist - montelukast (Singulair); theophylline]

**AND**

**2.1.3** ONE of the following:

- Submission of medical records (e.g., chart notes, laboratory values, etc.) documenting that asthma is an eosinophilic phenotype as defined by a baseline (pre-dupilumab treatment) peripheral blood eosinophil level greater than or equal to 150 cells/microliter
- Patient is currently dependent on oral corticosteroids for the treatment of asthma

**OR**

**2.2** BOTH of the following:

**2.2.1** Patient is currently on Dupixent therapy as confirmed by claims history or submission of medical records

**AND**

**2.2.2** Dupixent will be used in combination with ONE of the following:

**2.2.2.1** ONE maximally-dosed (appropriately adjusted for age) combination inhaled corticosteroid (ICS)/long-acting beta2 agonist (LABA) [e.g., Advair/AirDuo Respiclick (fluticasone propionate/salmeterol), Symbicort (budesonide/formoterol), Breo Ellipta (fluticasone furoate/vilanterol)]

**OR**

**2.2.2.2** Combination therapy including BOTH of the following:

- ONE maximally-dosed (appropriately adjusted for age) ICS product [e.g., ciclesonide (Alvesco), mometasone furoate (Asmanex), beclomethasone dipropionate (QVAR)]
- ONE additional asthma controller medication [e.g., LABA - olodaterol (Striverdi) or indacaterol (Arcapta); leukotriene receptor antagonist – montelukast (Singulair); theophylline]

**AND**

**3** - Patient is NOT receiving Dupixent in combination with any of the following for treatment of the same indication:

- Anti-interleukin-5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE (immunoglobulin E) therapy [e.g., Xolair (omalizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**4** - Prescribed by or in consultation with ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Prior Authorization                         |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - ONE of the following:</p> <p><b>1.1</b> Diagnosis of chronic rhinosinusitis with nasal polyposis (CRSwNP) defined by ALL of the following:</p> <p><b>1.1.1</b> TWO or more of the following symptoms for longer than 12 weeks duration:</p> <ul style="list-style-type: none"> <li>• Nasal mucopurulent discharge</li> <li>• Nasal obstruction, blockage, or congestion</li> <li>• Facial pain, pressure, and/or fullness</li> <li>• Reduction or loss of sense of smell</li> </ul> <p><b>AND</b></p> <p><b>1.1.2</b> ONE of the following findings using nasal endoscopy and/or sinus computed tomography (CT):</p> |                                             |

- Purulent mucus or edema in the middle meatus or ethmoid regions
- Polyps in the nasal cavity or the middle meatus
- Radiographic imaging demonstrating mucosal thickening or partial or complete opacification of paranasal sinuses

**AND**

**1.1.3 ONE of the following:**

- Presence of bilateral nasal polyposis
- Patient has previously required surgical removal of bilateral nasal polyps

**AND**

**1.1.4 ONE of the following:**

**1.1.4.1 Patient has required prior sinus surgery**

**OR**

**1.1.4.2 Patient has required systemic corticosteroids (e.g., prednisone, methylprednisolone) for CRSwNP in the previous 2 years**

**OR**

**1.1.4.3 Patient has been unable to obtain symptom relief after trial of TWO of the following classes of agents:**

- Nasal saline irrigations
- Intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)
- Antileukotriene agents (e.g., montelukast, zafirlukast, zileuton)

**OR**

**1.2 BOTH of the following:**

- Diagnosis of chronic rhinosinusitis with nasal polyposis (CRSwNP)

- Patient is currently on Dupixent therapy as confirmed by claims history or submission of medical records

**AND**

**2** - Patient will receive Dupixent as add-on maintenance therapy in combination with intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)

**AND**

**3** - Patient is NOT receiving Dupixent in combination with any of the following for treatment of the same indication:

- Anti-interleukin-5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab), Nucala (mepolizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**4** - Prescribed by or in consultation with ONE of the following:

- Allergist
- Immunologist
- Otolaryngologist
- Pulmonologist

| Diagnosis                                                                               | Eosinophilic Esophagitis |
| Approval Length                                                                         | 12 month(s)*             |
| Therapy Stage                                                                           | Initial Authorization    |
| Guideline Type                                                                          | Prior Authorization      |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of eosinophilic esophagitis</p> |                          |

**AND**

**2** - Patient is experiencing symptoms related to esophageal dysfunction (e.g., dysphagia, food impaction, chest pain that is often centrally located and may not respond to antacids, gastroesophageal reflux disease-like symptoms/refractory heartburn, upper abdominal pain)

**AND**

**3** - Submission of medical records (e.g., chart notes, laboratory values, etc.) documenting eosinophil-predominant inflammation on esophageal biopsy, consisting of a peak value of 15 or more intraepithelial eosinophils per high power field (HPF) [or 60 eosinophils per mm<sup>2</sup> (square millimeters)]

**AND**

**4** - Secondary causes of esophageal eosinophilia have been ruled out

**AND**

**5** - Mucosal eosinophilia is isolated to the esophagus and symptoms have persisted after an 8-week trial of at least ONE of the following, as confirmed by claims history or submission of medical records:

- Proton pump inhibitors (e.g., pantoprazole, omeprazole)
- Topical (esophageal) corticosteroids (e.g., budesonide, fluticasone)

**AND**

**6** - Patient is NOT receiving Dupixent in combination with any of the following for treatment of the same indication:

- Anti-interleukin-5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab), Nucala (mepolizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**7** - Prescribed by or in consultation with ONE of the following:

- Allergist
- Gastroenterologist

Notes

\*If clinical criteria is met, enter a GPI-10 authorization with a MDD of 0 .3 mL.

Product Name: Dupixent

Diagnosis Eosinophilic Esophagitis

Approval Length 12 month(s)\*

Therapy Stage Reauthorization

Guideline Type Prior Authorization

### Approval Criteria

**1** - Documentation of positive clinical response to Dupixent therapy as evidenced by improvement of at least ONE of the following from baseline:

- Symptoms (e.g., dysphagia, chest pain, heartburn)
- Histologic measures (e.g., esophageal intraepithelial eosinophil count)
- Endoscopic measures (e.g., edema, furrows, exudates, rings, strictures)

**AND**

**2** - Patient is NOT receiving Dupixent in combination with any of the following for treatment of the same indication:

- Anti-interleukin-5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab), Nucala (mepolizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

|                                                                                    |                                                                                   |

|                        |                       |
|------------------------|-----------------------|
| Product Name: Dupixent |                       |
| Diagnosis              | Prurigo Nodularis     |
| Approval Length        | 12 month(s)           |
| Therapy Stage          | Initial Authorization |
| Guideline Type         | Prior Authorization   |

  

**Approval Criteria**

1 - Diagnosis of prurigo nodularis

**AND**

2 - Patient has greater than or equal to 20 nodular lesions

**AND**

3 - ONE of the following:

**3.1** Failure to at least one previous prurigo nodularis treatment(s) (e.g., topical corticosteroids, topical calcineurin inhibitors, topical capsaicin) as confirmed by claims history or submission of medical records

**OR**

**3.2** History of contraindication or intolerance to all other prurigo nodularis treatment(s) (e.g., topical corticosteroids, topical calcineurin inhibitors, topical capsaicin) (please specify contraindication or intolerance)

**AND**

**4** - Patient is NOT receiving Dupixent in combination with either of the following for treatment of the same indication:

- Biologic immunomodulator [e.g., Adbry (tralokinumab-ldrm), Nemluvio (nemolizumab-ilto)]
- Janus kinase inhibitor [e.g., Rinvoq (upadacitinib), Xeljanz/XR (tofacitinib), Opzelura (topical ruxolitinib), Cibinqo (abrocitinib)]

**AND**

**5** - Prescribed by or in consultation with ONE of the following:

- Dermatologist
- Allergist
- Immunologist

**AND**

**3** - Prescribed by or in consultation with ONE of the following:

- Dermatologist
- Allergist
- Immunologist

**Product Name:**Dupixent

|                 |                                               |
|-----------------|-----------------------------------------------|
| Diagnosis       | Chronic Obstructive Pulmonary Disorder (COPD) |
| Approval Length | 12 month(s)                                   |
| Therapy Stage   | Initial Authorization                         |
| Guideline Type  | Prior Authorization                           |

**Approval Criteria**

**1** - Diagnosis of chronic obstructive pulmonary disorder (COPD)

**AND**

**2** - Submission of documentation (e.g., medical records, chart notes) of ALL of the following:

- Post-bronchodilator forced expiratory volume (FEV1) / forced vital capacity (FVC) ratio less than 0.7
- Post-bronchodilator FEV1 % predicted greater than or equal to 30% and less than or equal to 70%
- Patient has an eosinophilic phenotype defined by a baseline (pre-dupilumab treatment) peripheral blood eosinophil level greater than or equal to 300 cells/ $\mu$ L

**AND**

**3** - Uncontrolled or inadequately controlled COPD demonstrated by BOTH of the following:

**3.1** ONE of the following:

- Two or more COPD exacerbations in the previous year requiring treatment with systemic corticosteroids and/or antibiotics
- One or more COPD exacerbation(s) that resulted in hospitalization or observation for over 24 hours in an emergency department or urgent care facility in the past year

**AND**

**3.2** COPD exacerbation(s) occurred while receiving maintenance therapy with ONE of the following:

- Triple therapy with a long-acting muscarinic antagonist (LAMA), long-acting beta agonist (LABA), and inhaled corticosteroid (ICS) (e.g., Breztri Aerosphere, Trelegy Ellipta)
- Dual therapy with a LAMA and LABA (e.g., Anoro Ellipta, Bevespi Aerosphere, Stiolto Respimat) and a failure, contraindication, or intolerance to an inhaled corticosteroid (ICS)

**AND**

**4** - Symptoms of chronic productive cough for at least 3 months in the past year

**AND**

**5** - Dupixent will be used as add-on maintenance therapy with ONE of the following:

- Triple therapy with a long-acting muscarinic antagonist (LAMA), long-acting beta agonist (LABA), and inhaled corticosteroid (ICS) (e.g., Breztri Aerosphere, Trelegy Ellipta)
- Dual therapy with a LAMA and LABA (e.g., Anoro Ellipta, Bevespi Aerosphere, Stiolto Respimat) and a failure, contraindication, or intolerance to an inhaled corticosteroid (ICS)

**AND**

**6** - Patient is NOT receiving Dupixent in combination with any of the following for treatment of the same indication:

- Anti-interleukin-5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]

- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**7** - Prescribed by or in consultation with ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                               |

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Documentation of a positive clinical response to Dupixent therapy as demonstrated by at least ONE of the following:</p> <ul style="list-style-type: none"> <li>• Reduction in the frequency of COPD exacerbations</li> <li>• Increase in percent predicted FEV1 from pretreatment baseline</li> <li>• Reduction in severity or frequency of COPD-related symptoms (e.g., dyspnea, wheezing, cough, sputum volume, decrease in sputum purulence)</li> <li>• Reduction in oral corticosteroid requirements</li> </ul> <p><b>AND</b></p> <p><b>2</b> - Dupixent will be used as add-on maintenance therapy with ONE of the following:</p> <ul style="list-style-type: none"> <li>• Triple therapy with a long-acting muscarinic antagonist (LAMA), long-acting beta agonist (LABA), and inhaled corticosteroid (ICS) (e.g., Breztri Aerosphere, Trelegy Ellipta)</li> <li>• Dual therapy with a LAMA and LABA (e.g., Anoro Ellipta, Bevespi Aerosphere, Stiolto Respimat) and a failure, contraindication, or intolerance to an inhaled corticosteroid (ICS)</li> </ul> |                                               |

**AND**

**3** - Patient is NOT receiving Dupixent in combination with any of the following for treatment of the same indication:

- Anti-interleukin-5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**4** - Prescribed by or in consultation with ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

**OR**

**2.2** Patient remains symptomatic despite at least a 2-week trial and failure of BOTH of the following taken in combination (confirmed by claims history or submitted medical records):

**2.2.1** Second generation H1-antihistamine [e.g., Allegra (fexofenadine), Claritin (loratadine), Zyrtec (cetirizine)]

**AND**

**2.2.2** ONE of the following:

- Different second generation H1-antihistamine [e.g., Allegra (fexofenadine), Claritin (loratadine), Zyrtec (cetirizine)]
- First generation H1-antihistamine [e.g., Benadryl (diphenhydramine), Chlor-Trimeton (chlorpheniramine), Vistaril (hydroxyzine)]\*
- H2-antihistamine [e.g., Pepcid (famotidine), Tagamet HB (cimetidine), Zantac (ranitidine)]
- Leukotriene modifier [e.g., Singulair (montelukast)]

**OR**

**2.3** History of contraindication or intolerance to ONE of the following (please specify contraindication or intolerance)

**2.3.1** Two H1-antihistamines [e.g., Allegra (fexofenadine), Benadryl (diphenhydramine), Claritin (loratadine)]\*

**OR**

**2.3.2** BOTH of the following taken in combination:

**2.3.2.1** Second generation H1-antihistamine [e.g., Allegra (fexofenadine), Claritin (loratadine), Zyrtec (cetirizine)]

**AND**

**2.3.2.2** ONE of the following:

- Different second generation H1-antihistamine [e.g., Allegra (fexofenadine), Claritin (loratadine), Zyrtec (cetirizine)]
- First generation H1-antihistamine [e.g., Benadryl (diphenhydramine), Chlor-Trimeton (chlorpheniramine), Vistaril (hydroxyzine)]\*
- H2-antihistamine [e.g., Pepcid (famotidine), Tagamet HB (cimetidine), Zantac (ranitidine)]
- Leukotriene modifier [e.g., Singulair (montelukast)]

**AND**

**3** - Patient is NOT receiving Dupixent in combination with Xolair (omalizumab) for treatment of the same indication

**AND**

**4** - Prescribed by or in consultation with ONE of the following:

- Allergist
- Dermatologist
- Immunologist

### Guideline Note:

|                 |           |
|-----------------|-----------|
| Effective Date: | 10/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Duvyzat |                       |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of Duchenne muscular dystrophy (DMD)

**AND**

**2** - Diagnosis confirmed by the presence of a mutation in the DMD gene

**AND**

**3** - Patient is 6 years of age or older

**AND**

**4** - Submission of medical records (e.g., chart notes) confirming that the patient is ambulatory without needing an assistive device (e.g., without side-by-side assist, cane, walker, wheelchair, etc.)

**AND**

**5** - Patient has been or will be established on a stable corticosteroid regimen

**AND**

**6** - Prescribed by, or in consultation with, a pediatric neuromuscular specialist with expertise in the treatment of DMD

**AND**

**7** - Patient has not received gene therapy for DMD [e.g., Elevidys (delandistrogene moxparvovec-rokl)]

**AND**

**8** - Patient will not receive Duvyzat in combination with exon-skipping therapies for DMD [e.g., Amondys (casimersen), Exondys 51 (eteplisen), Viltepso (viltolarsen), Vyondys 53 (golodirsen)]

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                     |

| Effective Date: | 6/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Ebglyss |                       |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

## **Approval Criteria**

**1** - Diagnosis of moderate-to-severe chronic atopic dermatitis

**AND**

**2** - One of the following:

**2.1** Inadequate response to TWO of the following therapeutic classes of topical therapies as confirmed by claims history or submission of medical records:

- One medium, high or very-high potency topical corticosteroid [e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)]\*
- One topical calcineurin inhibitor [e.g., pimecrolimus (generic Elidel), tacrolimus (generic Protopic)]
- Eucrisa (crisaborole)

**OR**

**2.2** History of contraindication or intolerance to ALL of the following therapeutic classes of topical therapies (please specify contraindication or intolerance):

- One medium, high or very-high potency topical corticosteroid [e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)]\*
- One topical calcineurin inhibitor [e.g., pimecrolimus (generic Elidel), tacrolimus (generic Protopic)]
- Eucrisa (crisaborole)

**OR**

**2.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of atopic dermatitis as documented by claims history or submission of medical records [e.g., Adbry (tralokinumab-ldrm), Cibinqo (abrocitinib), Dupixent (dupilumab), Ebglyss (lebrikizumab-lbkz), Opzelura (ruxolitinib), Rinvoq (upadacitinib)]

**AND**

**3 - One of the following:**

**3.1** Failure to BOTH of the following as confirmed by claims history or submission of medical records:

- Adbry (tralokinumab-ldrm)
- Dupixent (dupilumab)

**OR**

**3.2** History of contraindication or intolerance to BOTH of the following (please specify contraindication or intolerance):

- Adbry (tralokinumab-ldrm)
- Dupixent (dupilumab)

**OR**

**3.3** Patient is currently on Ebglyss therapy as confirmed by claims history or submission of medical records

**AND**

**4 - Patient is NOT receiving Ebglyss in combination with either of the following:**

- Biologic immunomodulator [e.g., Adbry (tralokinumab-ldrm), Dupixent (dupilumab), Nemluvio (nemolizumab-ilto)]
- Janus kinase inhibitor [e.g., Cibinqo (abrocitinib), Opzelura (topical ruxolitinib), Rinvoq (upadacitinib), Xeljanz/XR (tofacitinib)]

**AND**

**5 - Prescribed by or in consultation with one of the following:**

- Dermatologist
- Allergist
- Immunologist

Notes

\*See Table 1 for relative potencies of topical corticosteroids.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                     |

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 4/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                     |                           |
|---------------------|---------------------------|
| Product Name:Enbrel |                           |
| Diagnosis           | Rheumatoid Arthritis (RA) |
| Approval Length     | 12 month(s)               |
| Therapy Stage       | Initial Authorization     |
| Guideline Type      | Prior Authorization       |

## **Approval Criteria**

**1** - All of the following:

**1.1** Diagnosis of moderately to severely active rheumatoid arthritis (RA)

**AND**

**1.2** ONE of the following:

**1.2.1** Failure to a 3 month trial of ONE non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at maximally indicated doses, confirmed by claims history or submission of medical records

**OR**

**1.2.2** History of intolerance or contraindication to one non-biologic DMARD [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] (please specify intolerance or contraindication)

**OR**

**1.2.3** Patient has been previously treated with a targeted immunomodulator FDA (Food and Drug Administration)-approved for the treatment of rheumatoid arthritis confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz/Xeljanz XR (tofacitinib)]

**AND**

**1.3** Patient is NOT receiving Enbrel in combination with another targeted immunomodulator [e.g., Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**1.4** Prescribed by or in consultation with a rheumatologist

**OR**

**2** - All of the following:

**2.1** Patient is currently on Enbrel therapy as confirmed by claims history or submission of medical records

**AND**

**2.2** Diagnosis of moderately to severely active rheumatoid arthritis

**AND**

**2.3** Patient is NOT receiving Enbrel in combination with another targeted immunomodulator [e.g., Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**2.4** Prescribed by or in consultation with a rheumatologist

## 1 . Criteria

|                                                           |                       |
|-----------------------------------------------------------|-----------------------|
| Product Name: Brand Endari, generic l-glutamine powd pack |                       |
| Diagnosis                                                 | Sickle cell disease   |
| Approval Length                                           | 12 month(s)           |
| Therapy Stage                                             | Initial Authorization |
| Guideline Type                                            | Prior Authorization   |

### Approval Criteria

1 - BOTH of the following:

- Diagnosis of sickle cell disease
- Used to reduce acute complications of sickle cell disease

**AND**

2 - ONE of the following:

- Patient is using Endari with concurrent hydroxyurea therapy
- Patient is unable to take hydroxyurea due to a contraindication or intolerance (please specify contraindication or intolerance)

**AND**

3 - Patient has had 2 or more painful sickle cell crises within the past 12 months

|-----------------|----------|

## 1 . Criteria

|                       |                       |
|-----------------------|-----------------------|
| Product Name:Enspryng |                       |
| Approval Length       | 12 month(s)           |
| Therapy Stage         | Initial Authorization |
| Guideline Type        | Prior Authorization   |
|                       |                       |

### **Approval Criteria**

**1** - Diagnosis of neuromyelitis optica spectrum disorder (NMOSD)

**AND**

**2** - Patient has a positive serologic test for anti-aquaporin-4 (AQP4) antibodies

**AND**

**3** - History of failure, contraindication, or intolerance to rituximab therapy

**AND**

**4** - One of the following:

- History of one or more relapses that required rescue therapy during the previous 12 months
- History of two or more relapses that required rescue therapy during the previous 24 months

**AND**

**5** - Prescribed by, or in consultation with, a neurologist

**AND**

**6** - Patient is NOT receiving Enspr yng in combination with any of the following:

- Disease modifying therapies for the treatment of multiple sclerosis [e.g., Gilenya (fingolimod), Tecfidera (dimethyl fumarate), Ocrevus (ocrelizumab), etc.]
- Complement inhibitors [e.g., Soliris (eculizumab), Ultomiris (ravulizumab), etc]
- Anti-IL6 (anti-interleukin-6) therapy [e.g., Actemra (tocilizumab)]
- B-cell depletion therapy [e.g., rituximab, Uplizna (inebilizumab)]

## 1 . Criteria

|                                           |                       |
|-------------------------------------------|-----------------------|
| Product Name:Entresto, Entresto Sprinkles |                       |
| Approval Length                           | 12 month(s)           |
| Therapy Stage                             | Initial Authorization |
| Guideline Type                            | Prior Authorization   |
| Approval Criteria                         |                       |

**1** - Request is for continuation of therapy initiated during an inpatient stay

**OR**

**2** - ALL of the following:

**2.1** Diagnosis of pediatric heart failure with systemic left ventricular systolic dysfunction which is symptomatic

**AND**

**2.2** Prescribed by or in consultation with a cardiologist

**AND**

**2.3** If the request is for Entresto Sprinkles, the prescriber has given a clinical reason or special circumstance why the patient is unable to use regular Entresto tablets

**OR**

**3** - ALL of the following:

**3.1** Diagnosis of heart failure (with or without hypertension)

**AND**

**3.2** ONE of the following:

**3.2.1** Ejection fraction is less than or equal to 40 percent

**OR**

**3.2.2** BOTH of the following:

**3.2.2.1** Ejection fraction is greater than 40 percent

**AND**

**3.2.2.2** Patient has structural heart disease [i.e., left atrial enlargement (LAE) or left ventricular hypertrophy (LVH)]

**AND**

**3.3** Heart failure is classified as ONE of the following:

- New York Heart Association Class II
- New York Heart Association Class III
- New York Heart Association Class IV

**AND**

**3.4** Patient does not have a history of angioedema

**AND**

**3.5** Patient will discontinue any use of concomitant ACE (angiotensin converting enzyme) Inhibitor or ARB (angiotensin II receptor blocker) before initiating treatment with Entresto\*

**AND**

**3.6** Patient is not concomitantly on aliskiren therapy

**AND**

**3.7** Entresto is prescribed by, or in consultation with, a cardiologist

|       |                                                                                         |
|-------|-----------------------------------------------------------------------------------------|
| Notes | *ACE inhibitors must be discontinued at least 36 hours prior to initiation of Entresto. |

## 1 . Criteria

|                         |                         |
|-------------------------|-------------------------|
| Product Name:Entyvio SC |                         |
| Diagnosis               | Ulcerative Colitis (UC) |
| Approval Length         | 12 month(s)             |
| Therapy Stage           | Initial Authorization   |
| Guideline Type          | Prior Authorization     |

**Approval Criteria**

**1** - Submission of medical records documenting clinical rationale for need of subcutaneous Entyvio in place of Entyvio administered intravenously (covered under the medical benefit)

**AND**

**2** - Diagnosis of moderately to severely active ulcerative colitis (UC)

**AND**

**3** - ONE of the following:

**3.1** Patient has been established on therapy with Entyvio under an active UnitedHealthcare medical benefit prior authorization for the treatment of moderately to severely active ulcerative colitis

**OR**

**3.2** Patient is currently on Entyvio for subcutaneous use therapy as confirmed by claims history or submission of medical records

**AND**

**4** - Patient is NOT receiving Entyvio for subcutaneous use in combination with another targeted immunomodulator [e.g., adalimumab, Cimzia (certolizumab), Enbrel (etanercept), Omvoh (mirikizumab-mrkz), Rinvoq (upadacitinib), Simponi (golimumab), Skyrizi (risankizumab), ustekinumab, Xeljanz (tofacitinib)]

**AND**

**5** - Prescribed by or in consultation with a gastroenterologist

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 1/1/2023 |
|-----------------|----------|

## 1 . Criteria

|                       |                       |
|-----------------------|-----------------------|
| Product Name:Erivedge |                       |
| Diagnosis             | Basal Cell Carcinoma  |
| Approval Length       | 12 month(s)           |
| Therapy Stage         | Initial Authorization |
| Guideline Type        | Prior Authorization   |

**Approval Criteria**

1 - Diagnosis of metastatic basal cell carcinoma

**OR**

2 - BOTH of the following:

2.1 Diagnosis of locally advanced basal cell carcinoma

**AND**

2.2 ONE of the following:

- Cancer has recurred following surgery
- Patient is not a candidate for surgery
- Patient is not a candidate for radiation

|                                                                                                                                                                                      |                       |

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 2/1/2024 |
|-----------------|----------|

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Erleada |                       |
| Diagnosis            | Prostate Cancer       |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

## Approval Criteria

**1** - Diagnosis of prostate cancer

**AND**

**2** - ONE of the following:

**2.1** BOTH of the following:

- Disease is castration-resistant or recurrent
- Disease is non-metastatic

**OR**

**2.2** BOTH of the following:

- Disease is castration-sensitive or naïve
- Disease is metastatic

**AND**

**3** - ONE of the following:

**3.1** Used in combination with a gonadotropin-releasing hormone (GnRH) analog [e.g., Lupron (leuprolide), Zoladex (goserelin), Trelstar (triptorelin), Vantas (histrelin), Firmagon (degarelix)]

**OR**

**3.2** Patient has had bilateral orchiectomy

|-----------------|----------|
| Effective Date: | 6/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                                                  |                                            |
|--------------------------------------------------|--------------------------------------------|
| Product Name: Aranesp, Epogen, Procrit, Retacrit |                                            |
| Diagnosis                                        | Anemia Due to Chronic Kidney Disease (CKD) |
| Approval Length                                  | 12 month(s)                                |
| Therapy Stage                                    | Initial Authorization                      |
| Guideline Type                                   | Prior Authorization                        |

**Approval Criteria**

**1** - Diagnosis of chronic kidney disease (CKD)

**AND**

**2** - Hematocrit is less than 30 percent at initiation of therapy

**AND**

**3** - Patient does not have evidence of other causes of anemia (e.g., iron deficiency, hemolysis, vitamin B12 deficiency)

**AND**

**4** - ONE of the following:

**4.1** Patient is on dialysis

**OR**

**4.2** ALL of the following:

**4.2.1** Patient is NOT on dialysis

**AND**

**4.2.2** The rate of hematocrit decline indicates the likelihood of requiring a red blood cell (RBC) transfusion

**AND**

**4.2.3** Therapeutic goal is reducing the risk of alloimmunization and/or other RBC transfusion-related risks

**AND**

**2** - Patient does not have evidence of other causes of anemia (e.g., iron deficiency, hemolysis, vitamin B12 deficiency) and there is documentation of normal iron stores

**AND**

**3** - One of the following:

**3.1** Patient has moderate to severe chronic kidney disease (CKD)

**OR**

**3.2** Undergoing palliative treatment

**OR**

**3.3** Receiving myelosuppressive chemotherapy not given with curative intent

**OR**

**3.4** Both of the following:

- Receiving myelosuppressive chemotherapy with curative intent
- Patient is refusing blood transfusion(s)

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Prior Authorization                             |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of myelodysplastic syndrome (MDS)</p> <p><b>AND</b></p> <p><b>2</b> - Serum erythropoietin level less than or equal to 500 milliunits per milliliter</p> <p><b>AND</b></p> <p><b>3</b> - Hematocrit is less than or equal to 30 percent at the initiation of therapy</p> <p><b>AND</b></p> <p><b>4</b> - Patient does not have evidence of other causes of anemia (e.g., iron deficiency, hemolysis, vitamin B12 deficiency)</p> |                                                 |

**AND**

**5** - Treatment of lower risk [defined as IPSS-R (Very Low, Low, Intermediate)] disease with symptomatic anemia

**AND**

**6** - One of the following:

**6.1** Patient is with del(5q) chromosomal abnormality

**OR**

**6.2** Both of the following:

- Patient is without del(5q) chromosomal abnormality
- Ring sideroblasts less than 15% (or ring sideroblasts less than 5% with an SF3B1 mutation)

**OR**

**6.3** All of the following:

- Patient is without del(5q) chromosomal abnormality
- Ring sideroblasts greater than or equal to 15% (or ring sideroblasts greater than or equal to 5% with an SF3B1 mutation)
- Following no response to Reblozyl (luspatercept-aamt)

| Diagnosis                                           | Anemia Associated with Myelodysplastic syndrome |
| Approval Length                                     | 12 month(s)                                     |
| Therapy Stage                                       | Reauthorization                                 |
| Guideline Type                                      | Prior Authorization                             |

**Approval Criteria**

**1** - Hematocrit remains less than or equal to 36 percent for continuation of therapy

**AND**

**2** - Documentation of positive clinical response to erythropoietin stimulating agent (ESA) therapy

**AND**

**3** - Serum erythropoietin level less than or equal to 500 milliunits per milliliter

|                                                                                                                                                                                                                                                                                                                                                                                          |                                                                     |

**1.1.1** Skin thickening of the fingers of both hands extending proximal to the metacarpophalangeal joints

**OR**

**1.1.2** At least TWO of the following:

- Skin thickening of the fingers (e.g., puffy fingers, sclerodactyly of the fingers)
- Fingertip lesions (e.g., digital tip ulcers, fingertip pitting scars)
- Telangiectasia
- Abnormal nailfold capillaries
- Pulmonary arterial hypertension
- Raynaud's phenomenon
- SSc-related autoantibodies [e.g., anticentromere, anti-topoisomerase I, anti-RNA (ribonucleic acid) polymerase III]

**AND**

**1.2** Presence of interstitial lung disease as determined by finding evidence of pulmonary fibrosis on high-resolution computed tomography (HRCT), involving at least 10% of the lungs

**AND**

**2** - Ofev is not being used in combination with Esbriet (pirfenidone)

**AND**

**3** - The prescriber is a pulmonologist

### Approval Criteria

**1** - Diagnosis of chronic fibrosing interstitial lung disease (ILD) with a progressive phenotype as documented by BOTH of the following:

**1.1** Presence of fibrotic ILD as determined by finding evidence of pulmonary fibrosis on HRCT (high-resolution computed tomography), involving at least 10% of the lungs

**AND**

**1.2** Patient is presenting with clinical signs of progression as defined by ONE of the following in the previous 24 months:

**1.2.1** Forced vital capacity (FVC) decline of greater than 10%

**OR**

**1.2.2** TWO of the following:

- FVC decline of greater than or equal to 5%, but less than 10%
- Patient is experiencing worsening respiratory symptoms
- Patient is exhibiting increasing extent of fibrotic changes on chest imaging

**AND**

**2** - Ofev is not being used in combination with Esbriet (pirfenidone)

**AND**

**3** - The prescriber is a pulmonologist

## 1 . Criteria

|                      |              |
|----------------------|--------------|
| Product Name:Eucrisa |              |
| Approval Length      | 12 month(s)  |
| Guideline Type       | Step Therapy |
| Approval Criteria    |              |

**1 - BOTH of the following:**

**1.1 ONE of the following:**

**1.1.1** Failure to ONE topical corticosteroid [e.g., mometasone furoate, fluocinolone acetonide (generic Synalar), fluocinonide] as confirmed by claims history or submission of medical records

**OR**

**1.1.2** History of contraindication or intolerance ONE topical corticosteroid [e.g., mometasone furoate, fluocinolone acetonide (generic Synalar), fluocinonide] (please specify contraindication or intolerance)

**AND**

**1.2 ONE of the following:**

**1.2.1** Patient is less than 2 years of age

**OR**

**1.2.2** Patient is greater than or equal to 2 years of age and ONE of the following:

- Failure to ONE topical calcineurin inhibitor [e.g., pimecrolimus (generic Elidel), tacrolimus (generic Protopic)] as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to ONE topical calcineurin inhibitor [e.g., pimecrolimus (generic Elidel), tacrolimus (generic Protopic)] (Please specify contraindication or intolerance)

**OR**

**2 - Patient is currently on Eucrisa therapy as confirmed by claims history or submission of medical records**

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 7/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Evrysdi |                       |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

### **Approval Criteria**

**1** - Diagnosis of spinal muscular atrophy (SMA)

**AND**

**2** - Submission of medical records (e.g., chart notes, laboratory values) confirming the mutation or deletion of genes in chromosome 5q resulting in ONE of the following:

- Homozygous gene deletion or mutation of SMN1 gene (e.g., homozygous deletion of exon 7 at locus 5q13)
- Compound heterozygous mutation of SMN1 gene [e.g., deletion of SMN1 exon 7 (allele 1) and mutation of SMN1 (allele 2)]

**AND**

**3** - Patient is not dependent on invasive ventilation

**AND**

**4** - Patient is not dependent on the use of non-invasive ventilation beyond use for naps and nighttime sleep

**AND**

**5** - Patient is not receiving concomitant chronic survival motor neuron (SMN)-modifying therapy [e.g., Spinraza (nusinersen)]

**AND**

**6** - One of the following:

**6.1** Patient has not previously received gene replacement therapy for the treatment of SMA [e.g., Zolgensma (onasemnogene abeparvovec-xioi)]

**OR**

**6.2 Both of the following:**

- Patient has previously received gene replacement therapy [e.g., Zolgensma (onasemnogene abeparvovec-xioi)] for the treatment of SMA
- Submission of medical records (e.g., chart notes, laboratory values) documenting a clinically meaningful functional decline (e.g., loss of motor milestone) since receiving gene replacement therapy [e.g., Zolgensma (onasemnogene abeparvovec-xioi)]

**AND**

**7 -** Submission of medical records (e.g., chart notes, laboratory values) documenting the baseline assessment of at least ONE of the following exams (based on patient age and motor ability) to establish baseline motor ability (baseline motor function analysis could include assessments evaluated prior to receipt of previous chronic SMN-modifying therapy if transitioning therapy)\*:

- Children's Hospital of Philadelphia Infant Test of Neuromuscular Disorders (CHOP INTEND)
- Hammersmith Infant Neurological Exam Part 2 (HINE-2)
- Hammersmith Functional Motor Scale Expanded (HFMSE)
- Revised Upper Limb Module (RULM) Test
- Motor Function Measure 32 (MFM-32) Scale

**AND**

**8 -** Prescribed by or in consultation with a neurologist with expertise in the treatment of SMA

|       |                                                                                                                                                                                                                                                                                                      |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Notes | *Baseline assessments for patients less than 2 months of age requesting Evrysdi are not necessary in order not to delay access to initial therapy in recently diagnosed infants. Initial assessments shortly post-therapy can serve as baseline with respect to efficacy reauthorization assessment. |

| Product Name:Evrysdi |                     |
| Approval Length      | 12 month(s)         |
| Therapy Stage        | Reauthorization     |
| Guideline Type       | Prior Authorization |

## **Approval Criteria**

**1** - Submission of medical records (e.g., chart notes, laboratory values) with the most recent results documenting a positive clinical response to Evrysdi compared to pretreatment baseline status [inclusive of baseline assessments prior to receipt of previous chronic survival motor neuron (SMN)-modifying therapy] as demonstrated by at least ONE of the following exams:

**1.1** Children's Hospital of Philadelphia Infant Test of Neuromuscular Disorders (CHOP INTEND) with ONE of the following:

- Improvement or maintenance of previous improvement of at least a 4-point increase in score from pretreatment baseline
- Patient has achieved and maintained any new motor milestone from pretreatment baseline when they would otherwise be unexpected to do so

**OR**

**1.2** Hammersmith Infant Neurological Exam Part 2 (HINE-2) with ONE of the following:

- Improvement or maintenance of previous improvement of at least a 2-point (or maximal score) increase in ability to kick
- Improvement or maintenance of previous improvement of at least a 1-point increase in any other HINE-2 milestone (e.g., head control, rolling, sitting, crawling, etc.), excluding voluntary grasp
- The patient exhibited improvement, or maintenance of previous improvement, in more HINE motor milestones than worsening, from pretreatment baseline (net positive improvement)
- Patient has achieved and maintained any new motor milestones when they would otherwise be unexpected to do so

**OR**

**1.3** Hammersmith Functional Motor Scale Expanded (HFMSE) with ONE of the following:

- Improvement or maintenance of previous improvement of at least a 3-point increase in score from pretreatment baseline
- Patient has achieved and maintained any new motor milestone from pretreatment baseline when they would otherwise be unexpected to do so

**OR**

**1.4 Revised Upper Limb Module (RULM) with ONE of the following:**

- Improvement or maintenance of previous improvement of at least a 2-point increase in score from pretreatment baseline
- Patient has achieved and maintained any new motor milestone from pretreatment baseline when they would otherwise be unexpected to do so

**OR**

**1.5 Motor Function Measure 32 (MFM-32) with ONE of the following:**

- Improvement or maintenance of previous improvement of at least a 3-point increase in score from pretreatment baseline
- Patient has achieved and maintained any new motor milestone from pretreatment baseline when they would otherwise be unexpected to do so

**AND**

**2 - Patient is not dependent on invasive ventilation**

**AND**

**3 - Patient is not dependent on the use of non-invasive ventilation beyond use for naps and nighttime sleep**

**AND**

**4 - Patient is not receiving concomitant chronic SMN-modifying therapy [e.g., Spinraza (nusinersen)]**

**AND**

**5 - Prescribed by or in consultation with a neurologist with expertise in the treatment of spinal muscular atrophy (SMA)**

## 1 . Criteria

|                       |                                    |
|-----------------------|------------------------------------|
| Product Name:Exkivity |                                    |
| Diagnosis             | Non-Small Cell Lung Cancer (NSCLC) |
| Approval Length       | 12 month(s)                        |
| Therapy Stage         | Initial Authorization              |
| Guideline Type        | Prior Authorization                |

**Approval Criteria**

**1** - Diagnosis of non-small cell lung cancer (NSCLC)

**AND**

**2** - Disease is locally advanced or metastatic

**AND**

**3** - Disease is epidermal growth factor receptor (EGFR) exon 20 insertion mutation positive

**AND**

**4** - Subsequent therapy for disease that has progressed on or after platinum-based chemotherapy

| Guideline Type                                                                                                                       | Prior Authorization                         |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of primary immunoglobulin A nephropathy (IgAN) confirmed by renal biopsy</p> |                                             |

**AND**

**2** - Patient is at risk of rapid disease progression [e.g., generally a urine protein-to-creatinine ratio (UPCR) greater than or equal to 1.5 g/g, or by other criteria such as clinical risk scoring using the International IgAN Prediction Tool]

**AND**

**3** - Used to reduce proteinuria

**AND**

**4** - Estimated glomerular filtration rate (eGFR) greater than or equal to 30 mL/min/1.73 m<sup>2</sup>

**AND**

**5** - ONE of the following:

**5.1** Patient is on a stabilized dose and receiving concomitant therapy with ONE of the following as confirmed by claims history or submission of medical records:

- Maximally tolerated angiotensin converting enzyme (ACE) inhibitor (e.g., captopril, enalapril)
- Maximally tolerated angiotensin II receptor blocker (ARB) (e.g., candesartan, valsartan)

**OR**

**5.2** Patient has an allergy, contraindication, or intolerance to ACE inhibitors and ARBs (please specify allergy, contraindication, or intolerance)

**AND**

**6** - ONE of the following:

**6.1** Patient is on a stabilized dose and receiving concomitant therapy with a maximally

tolerated sodium-glucose cotransporter-2 (SGLT2) inhibitor [e.g., Jardiance (empagliflozin)] as confirmed by claims history or submission of medical records

**OR**

**6.2** Patient has an allergy, contraindication, or intolerance to SGLT2 inhibitors (please specify allergy, contraindication, or intolerance)

**AND**

**7** - ONE of the following:

**7.1** Failure to a 30-day trial of a glucocorticoid (e.g., methylprednisolone, prednisone) as confirmed by claims history or submission of medical records

**OR**

**7.2** History of intolerance or contraindication to a glucocorticoid (please specify intolerance or contraindication)

**AND**

**8** - Prescribed by or in consultation with a nephrologist

|                                                                                                                                                                                                                                     |                                   |

| Guideline Type                                                                                                                                                                                                                      | Prior Authorization               |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of complement 3 glomerulopathy (C3G) confirmed by all of the following:</p> <p><b>1.1</b> Documentation of a kidney biopsy demonstrating characteristic findings of C3G</p> |                                   |

**AND**

**1.2** Glomerulonephritis has persisted at least 3 months in duration

**AND**

**1.3** ONE of the following:

- Serum complement 3 (C3) protein less than 77 mg/dL (alternatively, less than 0.85 x lower limit of the central laboratory normal range)
- Other complement abnormalities are present [e.g., soluble membrane attack complex (sC5b-9), serum factor H, serum factor B, factor I, membrane cofactor protein (MCP, CD46), C3/C4/C5 nephritic factor (NeF)] which are suggestive of a C3 glomerulopathy

**AND**

**1.4** Presence of monoclonal gammopathy of undetermined significance (MGUS) has been excluded by measurement of serum free light chains or other investigative means based on standards of care

**AND**

**2** - Disease is considered to be moderate to severe based on proteinuria greater than or equal to 1.5 g/day and/or abnormal kidney function

**AND**

**3** - Used to reduce proteinuria

**AND**

**4** - ONE of the following:

- Failure to a glucocorticoid (e.g., methylprednisolone, prednisone) as confirmed by claims history or submission of medical records

- History of intolerance or contraindication to a glucocorticoid (please specify intolerance or contraindication)

**AND**

**5 - ONE of the following:**

**5.1** Patient is on a stabilized dose and receiving concomitant therapy with ONE of the following as confirmed by claims history or submission of medical records:

- Maximally tolerated angiotensin converting enzyme (ACE) inhibitor (e.g., captopril, enalapril)
- Maximally tolerated angiotensin II receptor blocker (ARB) (e.g., candesartan, valsartan)

**OR**

**5.2** Patient has an allergy, contraindication, or intolerance to ACE inhibitors and ARBs (please specify allergy, contraindication, or intolerance)

**AND**

**6 - Patient has NOT undergone a solid-organ or cell transplant, including kidney transplant**

**AND**

**7 - Prescribed by or in consultation with a nephrologist**

| Product Name: Fabhalta |                                                                                |
|------------------------|--------------------------------------------------------------------------------|
| Diagnosis              | Primary immunoglobulin A nephropathy (IgAN), Complement 3 glomerulopathy (C3G) |
| Approval Length        | 12 month(s)                                                                    |
| Therapy Stage          | Reauthorization                                                                |
| Guideline Type         | Prior Authorization                                                            |
|                        |                                                                                |

### Approval Criteria

1 - Documentation of positive clinical response to Fabhalta therapy demonstrated by a reduction in proteinuria

## 2 . Revision History

| Date     | Notes                                                                                                                                          |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------|
| 7/7/2025 | Updated formularies. Added criteria for C3 glomerulopathy (C3G). Replaced Soliris with eculizumab in list of examples of complement inhibitors |

Fasenra

## Prior Authorization Guideline

|                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## 1 . Criteria

|                          |                                                                 |
|--------------------------|-----------------------------------------------------------------|
| Product Name:Fasenra Pen |                                                                 |
| Diagnosis                | Severe Asthma                                                   |
| Approval Length          | 12 month(s)                                                     |
| Therapy Stage            | Initial Authorization - Transitioning from UHC medical benefits |
| Guideline Type           | Prior Authorization                                             |

### **Approval Criteria**

**1** - Patient has been established on therapy with Fasenra under an active UnitedHealthcare medical benefit prior authorization for the treatment of severe asthma

**AND**

**2** - Documentation of positive clinical response to Fasenra therapy as demonstrated by ONE of the following:

- Reduction in the frequency of exacerbations
- Decreased utilization of rescue medications
- Increase in percent predicted forced expiratory volume in 1 second (FEV1) from pretreatment baseline
- Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing, etc.)
- Reduction in oral corticosteroid requirements

**AND**

**3** - Fasenra is being used in combination with an inhaled corticosteroid (ICS)-containing maintenance medication [e.g., Advair/AirDuo (fluticasone/salmeterol), Breo Ellipta (fluticasone furoate/vilanterol), Symbicort (budesonide/ formoterol), Trelegy Ellipta (fluticasone furoate/umeclidinium/vilanterol)]

**AND**

**4** - Patient is NOT receiving Fasenra in combination with any of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Nucala (mepolizumab)]
- Anti-IgE (immunoglobulin E) therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**5** - Prescribed by ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                     |

| <p><b>Approval Criteria</b></p> <p><b>1 - Diagnosis of severe asthma</b></p> <p style="text-align: center;"><b>AND</b></p> <p><b>2 - Classification of asthma as uncontrolled or inadequately controlled as defined by ONE of the following:</b></p> <ul style="list-style-type: none"> <li>• Poor symptom control [e.g., Asthma Control Questionnaire (ACQ) score consistently greater than 1.5 or Asthma Control Test (ACT) score consistently less than 20]</li> <li>• Two or more bursts of systemic corticosteroids for at least 3 days each in the previous 12 months</li> <li>• Asthma-related emergency treatment (e.g., emergency room visit, hospital admission, or unscheduled physician's office visit for nebulizer or other urgent treatment)</li> <li>• Airflow limitation [e.g., after appropriate bronchodilator withhold forced expiratory volume in 1 second (FEV1) less than 80% predicted (in the face of reduced FEV1/forced vital capacity [FVC] defined as less than the lower limit of normal)]</li> <li>• Patient is currently dependent on oral corticosteroids for the treatment of asthma</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>3 - Submission of medical records (e.g., chart notes, laboratory values, etc.) confirming asthma is an eosinophilic phenotype as defined by a baseline (pre-treatment) peripheral blood eosinophil level greater than or equal to 150 cells per microliter</b></p> |                                                                     |

**AND**

**4** - Fasenra will be used in combination with ONE of the following:

**4.1** ONE maximally-dosed (appropriately adjusted for age) combination inhaled corticosteroid (ICS)/long-acting beta2 agonist (LABA) [e.g., fluticasone/salmeterol (authorized generic of AirDuo), fluticasone propionate/salmeterol diskus (generic for Advair Diskus), Wixela Inhub (generic for Advair Diskus), Advair/AirDuo Respiclick (fluticasone propionate/salmeterol), Symbicort (budesonide/formoterol), Breo Ellipta (fluticasone furoate/vilanterol), Dulera (mometasone/formoterol)]

**OR**

**4.2** Combination therapy including BOTH of the following:

- ONE maximally-dosed (appropriately adjusted for age) ICS product [e.g., ciclesonide (Alvesco), mometasone furoate (Asmanex), beclomethasone dipropionate (QVAR), Arnuity Ellipta (fluticasone furoate)]
- ONE additional asthma controller medication [e.g., LABA - Striverdi (olodaterol) or Arcapta (indacaterol); leukotriene receptor antagonist - montelukast (Singulair); theophylline]

**AND**

**5** - Patient is NOT receiving Fasenra in combination with any of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Nucala (mepolizumab)]
- Anti-IgE (immunoglobulin E) therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**6** - Prescribed by ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

- Relapsing disease as defined as a past history (within the past 2 years) of at least one EGPA relapse (requiring additional or dose escalation of corticosteroids or immunosuppressant, or hospitalization)
- Refractory disease as defined as failure to attain remission within the prior 6 months following induction treatment with standard therapy regimens

**AND**

**5** - Patient is currently taking standard therapy [i.e., systemic glucocorticoids (e.g., prednisone, methylprednisolone) with or without immunosuppressive therapy (e.g., cyclophosphamide, rituximab)]

**AND**

**6** - Patient is NOT receiving Fasenra in combination with any of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Nucala (mepolizumab)]
- Anti-IgE (immunoglobulin E) therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**7** - Prescribed by ONE of the following:

- Pulmonologist
- Rheumatologist
- Allergist
- Immunologist

| Guideline Type           | Prior Authorization                                  |

### Approval Criteria

**1** - Documentation of positive clinical response as demonstrated by at least ONE of the following:

- Reduction in the frequency and/or severity of relapses
- Reduction or discontinuation of doses of corticosteroids and/or immunosuppressant
- Disease remission
- Reduction in severity or frequency of EGPA-related symptoms

**AND**

**2** - Patient is NOT receiving Fasenra in combination with any of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Nucala (mepolizumab)]
- Anti-IgE (immunoglobulin E) therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

| Effective Date: | 12/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                                        |                     |
|----------------------------------------|---------------------|
| Product Name:Fentanyl citrate lozenges |                     |
| Approval Length                        | 12 month(s)         |
| Guideline Type                         | Prior Authorization |
| Approval Criteria                      |                     |

**1** - Submission of medical records demonstrating use is for the management of breakthrough pain associated with a cancer diagnosis (cancer diagnosis must be documented)

**AND**

**2** - Patient must have at least a one week history of ONE of the following medications to demonstrate tolerance to opioids (Document drug and date of trial):

- Oral morphine sulfate at a dose of greater than or equal to 60 mg/day
- Fentanyl transdermal patch at a dose of greater than or equal to 25 mcg/hr
- Oral oxycodone at a dose of greater than or equal to 30 mg/day
- Oral hydromorphone at a dose of greater than or equal to 8 mg/day
- Oral oxymorphone at a dose of greater than or equal to 25 mg/day
- Oral hydrocodone at a dose of greater than or equal to 60 mg/day
- An alternative opioid at an equianalgesic dose (e.g., oral methadone greater than or equal to 20 mg/day)

**AND**

**3** - The patient is currently taking a long-acting opioid around the clock for cancer pain (Document drug)

**AND**

**4** - ONE of the following:

**4.1** The patient is not concurrently receiving an alternative fentanyl transmucosal product

**OR**

**4.2** BOTH of the following:

**4.2.1** The patient is currently receiving an alternative transmucosal fentanyl product

**AND**

**4.2.2** The prescriber is requesting the termination of all current authorizations for alternative transmucosal fentanyl products in order to begin treatment with the requested medication

(Only one transmucosal fentanyl product will be approved at a time. If previous authorizations cannot be terminated, the PA request will be denied)

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                     |

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Submission of medical records demonstrating use is for the management of breakthrough pain associated with a cancer diagnosis (cancer diagnosis must be documented)</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - Patient must have at least a one week history of ONE of the following medications to demonstrate tolerance to opioids (Document drug and date of trial):</p> <ul style="list-style-type: none"> <li>• Oral morphine sulfate at a dose of greater than or equal to 60 mg/day</li> <li>• Fentanyl transdermal patch at a dose of greater than or equal to 25 mcg/hr</li> <li>• Oral oxycodone at a dose of greater than or equal to 30 mg/day</li> <li>• Oral hydromorphone at a dose of greater than or equal to 8 mg/day</li> <li>• Oral oxymorphone at a dose of greater than or equal to 25 mg/day</li> <li>• Oral hydrocodone at a dose of greater than or equal to 60 mg/day</li> <li>• An alternative opioid at an equianalgesic dose (e.g., oral methadone greater than or equal to 20 mg/day)</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>3</b> - The patient is currently taking a long-acting opioid around the clock for cancer pain (Document drug)</p> <p style="text-align: center;"><b>AND</b></p> <p><b>4</b> - ONE of the following:</p> <p><b>4.1</b> The patient is not concurrently receiving an alternative fentanyl transmucosal product</p> |                     |

**OR**

**4.2** BOTH of the following:

**4.2.1** The patient is currently receiving an alternative fentanyl transmucosal product

**AND**

**4.2.2** The prescriber is requesting the termination of all current authorizations for alternative transmucosal fentanyl products in order to begin treatment with the requested medication (Only one transmucosal fentanyl product will be approved at a time. If previous authorizations cannot be terminated, the PA request will be denied)

**AND**

**5** - One of the following:

- Failure to fentanyl citrate lozenges confirmed by claims history or submission of medical records
- History of intolerance or contraindication to fentanyl citrate lozenges (document intolerance or contraindication)

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Patient is at least 6 months of age or older</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - One of the following diagnoses:</p> <ul style="list-style-type: none"> <li>• Dystrophic epidermolysis bullosa (DEB)</li> <li>• Junctional epidermolysis bullosa (JEB)</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>3</b> - Submission of medical records (e.g., chart notes, laboratory values) confirming a genetic mutation associated with DEB or JEB (i.e., COL7A1, LAMA3, LAMB3, LAMC2, COL17A1, ITGA6, ITGB4, ITGA3)</p> <p style="text-align: center;"><b>AND</b></p> <p><b>4</b> - Patient has at least one partial thickness wound that meets ALL of the following criteria:</p> <ul style="list-style-type: none"> <li>• 10-50 cm<sup>2</sup> in size</li> <li>• Present for at least 3 weeks</li> <li>• Adequate granulation tissue</li> <li>• Excellent vascularization</li> <li>• No evidence of active wound infection</li> <li>• No evidence or history of basal or squamous cell carcinomas (SCC)</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>5</b> - Prescribed by, or in consultation with, a dermatologist with expertise in the treatment of epidermolysis bullosa (EB)</p> <p style="text-align: center;"><b>AND</b></p> |                     |

**6** - Patient is NOT receiving Filsuvez in combination with Vyjuvek on the same wound(s)

**Product Name:**Filsuvez

**Approval Length** 12 month(s)

**Therapy Stage** Reauthorization

**Guideline Type** Prior Authorization

### Approval Criteria

**1** - Documentation of positive clinical response to Filsuvez therapy (e.g., complete wound closure, reduction in wound size, decrease in procedural pain, less frequent dressing changes, decreased total body wound burden)

**AND**

**2** - Wound(s) being treated meets ALL of the following criteria:

- Adequate granulation tissue
- Excellent vascularization
- No evidence of active wound infection
- No evidence or history of basal or squamous cell carcinomas (SCC)

**AND**

**3** - Filsuvez is prescribed by, or in consultation with, a dermatologist with expertise in the treatment of epidermolysis bullosa (EB)

**AND**

**4** - Patient is not receiving Filsuvez in combination with Vyjuvek on the same wound(s)

## 1 . Criteria

|                                                        |                             |
|--------------------------------------------------------|-----------------------------|
| Product Name:Sajazir, Brand Firazyr, generic icatibant |                             |
| Diagnosis                                              | Hereditary angioedema (HAE) |
| Approval Length                                        | 12 month(s)                 |
| Therapy Stage                                          | Initial Authorization       |
| Guideline Type                                         | Prior Authorization         |

## **Approval Criteria**

**1** - Diagnosis of hereditary angioedema (HAE) as confirmed by ONE of the following:

**1.1** C1 inhibitor (C1-INH) deficiency or dysfunction (Type I or II HAE) as documented by ONE of the following (per laboratory standard):

- C1-INH antigenic level below the lower limit of normal
- C1-INH functional level below the lower limit of normal

**OR**

**1.2** HAE with normal C1 inhibitor levels and ONE of the following:

- Confirmed presence of variant(s) in the gene(s) for factor XII, angiotensin-converting enzyme 1, plasminogen-1, kininogen-1, myoferlin, or heparan sulfate-glucosaminase 3-O-sulfotransferase 6
- Recurring angioedema attacks that are refractory to high-dose antihistamines with confirmed family history of angioedema
- Recurring angioedema attacks that are refractory to high-dose antihistamines with unknown background de-novo mutation(s) (i.e., no family history) (HAE-unknown)

**AND**

**2** - Prescribed for the acute treatment of HAE attacks

**AND**

**3** - Not used in combination with other products indicated for the acute treatment of HAE attacks (e.g., Berinert, Kalbitor, or Ruconest)

**AND**

**4** - Prescribed by ONE of the following:

- Immunologist
- Allergist

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                             |
