## **Approval Criteria**

**1** - Diagnosis of uterine fibroids (leiomyomas)

**AND**

**2** - Used for the management of heavy menstrual bleeding

**AND**

**3** - ONE of the following:

**3.1** Failure after a three-month trial to ONE of the following as confirmed by claims history or submission of medical records:

- Estrogen/progestin contraceptive (e.g., Loestrin FE)
- Progestin-releasing intrauterine devices (IUDs) (e.g., Mirena)\*
- Progestin-only contraceptive [e.g., norethindrone (generic Aygestin)]

**OR**

**3.2** Contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

- Estrogen/progestin contraceptive (e.g., Loestrin FE)
- Progestin-releasing intrauterine devices (IUDs) (e.g., Mirena)\*
- Progestin-only contraceptive [e.g., norethindrone (generic Aygestin)]

**AND**

**4** - ONE of the following:

- Failure after a three-month trial of tranexamic acid (e.g., Lysteda) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to tranexamic acid (e.g., Lysteda) (please specify contraindication or intolerance)

## 1 . Criteria

|                              |                       |
|------------------------------|-----------------------|
| Product Name:Orilissa 150 mg |                       |
| Approval Length              | 12 month(s)           |
| Therapy Stage                | Initial Authorization |
| Guideline Type               | Prior Authorization   |

### **Approval Criteria**

**1** - Diagnosis of moderate to severe pain associated with endometriosis

**AND**

**2** - ONE of the following:

**2.1** Failure (e.g., inadequate pain relief) to a three month trial of TWO analgesics (e.g., ibuprofen, meloxicam, naproxen) as confirmed by claims history or submission of medical records

**OR**

**2.2** History of contraindication or intolerance to TWO analgesics (e.g., ibuprofen, meloxicam, naproxen) (please specify contraindication or intolerance)

**AND**

**3** - ONE of the following:

**3.1** Failure to a three month trial to ONE of the following as confirmed by claims history or submission of medical records:

- Hormonal contraceptives
- Progestins [e.g., norethindrone (generic Aygestin)]

**OR**

**3.2** History of contraindication or intolerance to BOTH of the following (please specify contraindication or intolerance)

- Hormonal contraceptives
- Progestins [e.g., norethindrone (generic Aygestin)]

**AND**

**4** - Treatment duration of Orilissa 150 mg once daily has not exceeded a total of 24 months, as confirmed by claims history or submission of medical records

**AND**

**5** - Prescribed by or in consultation with ONE of the following:

- Obstetrics/Gynecologist (OB/GYN)
- Reproductive endocrinologist

| Effective Date: | 6/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                       |                       |
|-----------------------|-----------------------|
| Product Name:Orladeyo |                       |
| Approval Length       | 12 month(s)           |
| Therapy Stage         | Initial Authorization |
| Guideline Type        | Prior Authorization   |

## **Approval Criteria**

**1** - Diagnosis of hereditary angioedema (HAE) as confirmed by ONE of the following:

**1.1** C1 inhibitor (C1-INH) deficiency or dysfunction (Type I or II HAE) as documented by ONE of the following (per laboratory standard):

- C1-INH antigenic level below the lower limit of normal
- C1-INH functional level below the lower limit of normal

**OR**

**1.2** HAE with normal C1 inhibitor levels and ONE of the following:

- Confirmed presence of variant(s) in the gene(s) for factor XII, angiopoietin-1, plasminogen-1, kininogen-1, myoferlin, and heparan sulfate-glucosamine 3-O-sulfotransferase 6
- Recurring angioedema attacks that are refractory to high-dose antihistamines with confirmed family history of angioedema
- Recurring angioedema attacks that are refractory to high-dose antihistamines with unknown background de-novo mutation(s) (i.e., no family history) (HAE-unknown)

**AND**

**2** - ALL of the following:

**2.1** Prescribed for the prophylaxis of HAE attacks

**AND**

**2.2** Not used in combination with other approved products indicated for prophylaxis against HAE attacks (i.e., Cinryze, Haegarda, Takhzyro)

**AND**

**2.3** Prescriber attests that patient has experienced attacks of a severity and/or frequency such that they would clinically benefit from prophylactic therapy with Orladeyo

**AND**

**3** - Prescribed by ONE of the following:

- Immunologist
- Allergist

**AND**

**4** - ONE of the following:

**4.1** Failure to Haegarda as confirmed by history or submission of medical records

**OR**

**4.2** History of contraindication, or intolerance to Haegarda (please specify a contraindication or intolerance)

**OR**

**4.3** Patient is unable to self-inject Haegarda due to ONE of the following:

- Physical impairment
- Visual impairment
- Lipohypertrophy
- Documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure [refer to DSM-5 (Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition) for specific phobia diagnostic criteria]

**OR**

**4.4** Patient is currently on Orladeyo therapy, as confirmed by claims history or submission of medical records

| Approval Length     | 12 month(s)           |
| Therapy Stage       | Initial Authorization |
| Guideline Type      | Prior Authorization   |

**Approval Criteria**

**1** - All of the following:

**1.1** Diagnosis of active psoriatic arthritis

**AND**

**1.2** One of the following:

**1.2.1** Failure to a 3 month trial of methotrexate at the maximally indicated dose, as confirmed by claims history or submission of medical records

**OR**

**1.2.2** History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)

**OR**

**1.2.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of psoriatic arthritis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), Simponi (golimumab), ustekinumab, Tremfya (guselkumab), Xeljanz/Xeljanz XR (tofacitinib), Skyrizi (risankizumab-rzaa)]

**AND**

**1.3** Patient is not receiving Otezla in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**1.4** Prescribed by or in consultation with ONE of the following:

- Rheumatologist
- Dermatologist

**OR**

**2** - All of the following:

**2.1** Patient is currently on Otezla therapy as confirmed by claims history or submission of medical records

**AND**

**2.2** Diagnosis of active psoriatic arthritis

**AND**

**2.3** Patient is not receiving Otezla in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**2.4** Prescribed by or in consultation with ONE of the following:

- Rheumatologist
- Dermatologist

|                     |                       |

## **Approval Criteria**

**1** - All of the following:

**1.1** Diagnosis of plaque psoriasis in those who are candidates for phototherapy or systemic therapy

**AND**

**1.2** One of the following:

**1.2.1** All of the following:

**1.2.1.1** Greater than or equal to 3 percent body surface area involvement, palmoplantar, facial, or genital involvement, or severe scalp psoriasis

**AND**

**1.2.1.2** One of the following:

**1.2.1.2.1** Failure to ONE of the following topical therapy classes confirmed by claims history or submission of medical records:

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Anthralin
- Coal tar

**OR**

**1.2.1.2.2** History of intolerance or contraindication to ALL of the following topical therapy classes (please specify intolerance or contraindication)

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Anthralin

- Coal tar

**AND**

**1.2.1.3** One of the following:

**1.2.1.3.1** Failure to a 3 month trial of methotrexate at the maximally indicated dose confirmed by claims history or submission of medical records

**OR**

**1.2.1.3.2** History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)

**OR**

**1.2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of plaque psoriasis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), Skyrizi (risankizumab-rzaa), ustekinumab, Tremfya (guselkumab)]

**AND**

**1.3** Patient is not receiving Otezla in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**1.4** Prescribed by or in consultation with a dermatologist

**OR**

**2** - All of the following:

**2.1** Patient is currently on Otezla therapy as confirmed by claims history or submission of medical records

**AND**

**2.2** Diagnosis of plaque psoriasis in those who are candidates for phototherapy or systemic therapy

**AND**

**2.3** Patient is not receiving Otezla in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**2.4** Prescribed by or in consultation with a dermatologist

| Diagnosis       | Pulmonary Arterial Hypertension (PAH) |
| Approval Length | 12 month(s)                           |
| Therapy Stage   | Initial Authorization                 |
| Guideline Type  | Prior Authorization                   |

### Approval Criteria

1 - ONE of the following:

1.1 BOTH of the following:

- Pulmonary arterial hypertension is symptomatic
- Diagnosis of pulmonary arterial hypertension that is confirmed by right heart catheterization

**OR**

1.2 Patient is currently on any therapy for the diagnosis of pulmonary arterial hypertension

**AND**

2 - ONE of the following:

2.1 Failure to BOTH of the following as confirmed by claims history or submission of medical records:

2.1.1 ONE of the following:

- Adempas

- Sildenafil citrate oral suspension (generic Revatio)

**AND**

**2.1.2** An ERA (endothelin receptor antagonist) [e.g., ambrisentan (generic Letairis), Opsumit, or bosentan (generic Tracleer)]

**OR**

**2.2** History of contraindication or intolerance to BOTH of the following (please specify contraindication or intolerance):

**2.2.1** ONE of the following:

- Adempas
- Sildenafil citrate oral suspension (generic Revatio)

**AND**

**2.2.2** An ERA [e.g., ambrisentan (generic Letairis), Opsumit, or bosentan (generic Tracleer)]

| Effective Date: | 7/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                        |                       |
|------------------------|-----------------------|
| Product Name:Palforzia |                       |
| Approval Length        | 12 month(s)           |
| Therapy Stage          | Initial Authorization |
| Guideline Type         | Prior Authorization   |

### **Approval Criteria**

**1** - Diagnosis and clinical history of peanut allergy as documented by BOTH of the following:

- A serum peanut-specific IgE (immunoglobulin E) level of greater than or equal to 0.35 kUA/L (kilounits of allergen/liter)
- A mean wheal diameter that is at least 3 mm (millimeters) larger than the negative control on skin-prick testing for peanut

**AND**

**2** - ONE of the following:

**2.1** BOTH of the following:

- Patient is 1 to 17 years of age
- Patient is in the initial dose escalation phase of therapy

**OR**

**2.2** BOTH of the following:

- Patient is 1 year of age and older
- Patient is in the up-dosing or maintenance phase of therapy

**AND**

**3** - Used in conjunction with a peanut-avoidant diet

**AND**

**4** - Patient does not have any of the following:

- History of eosinophilic esophagitis (EoE) or eosinophilic gastrointestinal disease
- History of severe or life-threatening episode(s) of anaphylaxis or anaphylactic shock within the past 2 months

- Severe or poorly controlled asthma

**AND**

**5** - Prescribed by or in consultation with an allergist/immunologist

**AND**

**6** - Prescriber is certified/enrolled in the Palforzia REMS (Risk Evaluation and Mitigation Strategy) Program

|-----------------|----------|

## 1 . Criteria

|                        |                       |
|------------------------|-----------------------|
| Product Name: Pemazyre |                       |
| Diagnosis              | Cholangiocarcinoma    |
| Approval Length        | 12 month(s)           |
| Therapy Stage          | Initial Authorization |
| Guideline Type         | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of cholangiocarcinoma

**AND**

**2** - Disease is ONE of the following:

- Unresectable locally advanced
- Resected gross residual (R2)
- Metastatic

**AND**

**3** - Disease has presence of a fibroblast growth factor receptor 2 (FGFR2) fusion or other rearrangement

**AND**

**4** - Patient has been previously treated

|-----------------|----------|

## 1 . Criteria

|                     |                     |
|---------------------|---------------------|
| Product Name:Phexxi |                     |
| Approval Length     | 12 month(s)         |
| Guideline Type      | Prior Authorization |

## **Approval Criteria**

**1** - Used for the prevention of pregnancy

**AND**

**2** - ONE of the following:

**2.1** Failure to ALL of the following methods of contraception as confirmed by claims history or submission of medical records:

- Injection (e.g., Depo-Provera)
- Oral Contraceptive [e.g., norethindrone (generic Micronor), Yaz]
- Transdermal Patch (e.g., Twirla, Xulane)
- Vaginal Contraceptive Ring (e.g., Annovera, NuvaRing)
- Diaphragm
- Cervical Cap (e.g., FemCap)
- Female Condom

**OR**

**2.2** History of intolerance or contraindication to ALL of the following methods of contraception (please document intolerance or contraindication):

- Injection (e.g., Depo-Provera)
- Oral Contraceptive [e.g., norethindrone (generic Micronor), Yaz]
- Transdermal Patch (e.g., Twirla, Xulane)
- Vaginal Contraceptive Ring (e.g., Annovera, NuvaRing)
- Diaphragm
- Cervical Cap (e.g., FemCap)
- Female Condom

**AND**

**3** - ONE of the following:

**3.1** Failure to nonoxynol-9 based spermicide as confirmed by claims history or submission of medical records

**OR**

**3.2** History of intolerance or contraindication to nonoxynol-9 based spermicide (please document intolerance or contraindication)

**AND**

**4** - Provider attests they have counseled the patient regarding higher rate of pregnancy prevention with the use of other methods of contraception (e.g., injection, oral contraception, transdermal patch, vaginal ring) compared to Phexxi

| Guideline Type        | Prior Authorization                                                                                                                    |

## **Approval Criteria**

**1 - Diagnosis of ONE of the following:**

- Heterozygous familial hypercholesterolemia (HeFH)
- Atherosclerotic cardiovascular disease (ASCVD) (e.g., acute coronary syndromes, history of myocardial infarction, stable or unstable angina, coronary or other arterial revascularization, stroke, transient ischemic attack, or peripheral arterial disease presumed to be of atherosclerotic origin)
- Primary hyperlipidemia

**AND**

**2 - Submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following (prescription claims history may be used in conjunction as documentation of medication use, dose, and duration):**

**2.1 Patient has been receiving at least 12 consecutive weeks of high-intensity statin therapy [i.e., atorvastatin 40-80 milligrams (mg), rosuvastatin 20-40 mg] and will continue to receive high intensity statin at maximally tolerated dose**

**OR**

**2.2 BOTH of the following:**

**2.2.1 Patient is unable to tolerate high-intensity statin as evidenced by ONE of the following intolerable and persistent (i.e., more than 2 weeks) symptoms:**

- Myalgia [muscle symptoms without creatine kinase (CK) elevations]
- Myositis [muscle symptoms with CK elevations less than 10 times upper limit of normal (ULN)]

**AND**

**2.2.2 Patient has been receiving at least 12 consecutive weeks of low-intensity or moderate-intensity statin therapy [i.e., atorvastatin 10-20 mg, rosuvastatin 5-10 mg, simvastatin greater than or equal to 10 mg, pravastatin greater than or equal to 10 mg, lovastatin 20-40 mg, fluvastatin XL 80 mg, fluvastatin 20-40 mg up to 40 mg twice daily, or Livalo (pitavastatin) greater than or equal to 1 mg] and will continue to receive a low-intensity or moderate-intensity statin at maximally tolerated dose**

**OR**

**2.3** Patient is unable to tolerate low- or moderate-, and high-intensity statins as evidenced by ONE of the following:

**2.3.1** ONE of the following intolerable and persistent (i.e., more than 2 weeks) symptoms for low or moderate-, and high-intensity statins:

- Myalgia (muscle symptoms without CK elevations)
- Myositis (muscle symptoms with CK elevations less than 10 times ULN)

**OR**

**2.3.2** Patient has a contraindication to all statins as documented in medical records

**OR**

**2.3.3** Patient has experienced rhabdomyolysis or muscle symptoms with statin treatment with CK elevations greater than 10 times ULN

**AND**

**3** - Submission of medical records (e.g., laboratory values) documenting LDL-C greater than or equal to 55 mg/dL

**AND**

**4** - Prescribed by ONE of the following:

- Cardiologist
- Endocrinologist
- Lipid specialist

**AND**

**5** - Not used in combination with another proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Repatha (evolocumab)]

**AND**

**6** - Not used in combination with Leqvio (inclisiran)

**AND**

**7** - If the request is for a non-preferred\* product, ONE of the following:

**7.1** History of failure to at least THREE preferred alternatives as confirmed by claims history or submission of medical records.\* NOTE: In instances where there are fewer than three preferred alternatives, the patient must have a history of failure to all of the preferred products.

**OR**

**7.2** History of contraindication or intolerance to THREE preferred alternatives (please specify contraindication or intolerance).\* NOTE: In instances where there are fewer than three preferred alternatives, the patient must have a history of contraindication or intolerance to all of the preferred products.

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of homozygous familial hypercholesterolemia (HoFH) as confirmed by submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following:</p> <p><b>1.1</b> Submission of medical records (e.g., chart notes, laboratory values) confirming genetic confirmation of bi-allelic pathogenic/likely pathogenic variants on different chromosomes at the low-density lipoprotein receptor (LDLR), apolipoprotein B (APOB), proprotein convertase subtilisin kexin type 9 (PCSK9), or low-density lipoprotein receptor adaptor protein 1 (LDLRAP1) genes or greater than or equal to 2 such variants at different loci</p> |                                                 |

**OR**

**1.2** BOTH of the following:

**1.2.1** Untreated low density lipoprotein cholesterol (LDL-C) greater than 400mg/dL

**AND**

**1.2.2** ONE of the following:

- Xanthoma before 10 years of age
- Evidence of familial hypercholesterolemia in at least one parent

**AND**

**2** - Patient is receiving other lipid-lowering therapy confirmed by claims history or submitted medical records (e.g., statin, ezetimibe, LDL apheresis)

**AND**

**3** - Prescribed by ONE of the following:

- Cardiologist
- Endocrinologist
- Lipid specialist

**AND**

**4** - Not used in combination with another proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Repatha (evolocumab)]

**AND**

**5** - Not used in combination with Juxtapid (lomitapide)

**AND**

**6** - If the request is for a non-preferred\* product, ONE of the following:

**6.1** History of failure to at least THREE preferred alternatives as confirmed by claims history or submission of medical records.\* NOTE: In instances where there are fewer than three preferred alternatives, the patient must have a history of failure to all of the preferred products.

**OR**

**6.2** History of contraindication or intolerance to THREE preferred alternatives (please specify contraindication or intolerance).\* NOTE: In instances where there are fewer than three preferred alternatives, the patient must have a history of contraindication or intolerance to all of the preferred products.

### Approval Criteria

**1** - Prescribed by ONE of the following:

- Cardiologist
- Endocrinologist
- Lipid specialist

**AND**

**2** - Submission of medical records (e.g., chart notes, laboratory values) documenting low density lipoprotein cholesterol (LDL-C) reduction while on Praluent therapy

**AND**

**3** - Not used in combination with another proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Repatha (evolocumab)]

**AND**

**4** - Not used in combination with Juxtapid (lomitapide)

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Administrative |
| <p><b>Approval Criteria</b></p> <p><b>1 - ONE of the following:</b></p> <p><b>1.1</b> Requested drug must be used for an FDA (Food and Drug Administration)-approved indication</p> <p style="text-align: center;"><b>OR</b></p> <p><b>1.2</b> The use of this drug is supported by information from ONE of the following appropriate compendia of current literature:</p> <ul style="list-style-type: none"> <li>• American Hospital Formulary Service Drug Information</li> <li>• National Comprehensive Cancer Network Drugs and Biologics Compendium</li> <li>• Thomson Micromedex DrugDex</li> <li>• Clinical pharmacology</li> <li>• United States Pharmacopeia-National Formulary (USP-NF)</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>2 -</b> The drug is being prescribed for a medically accepted indication that is recognized as a covered benefit by the applicable health plans' program</p> <p style="text-align: center;"><b>AND</b></p> <p><b>3 - ONE of the following:</b></p> <p><b>3.1 BOTH of the following:</b></p> <p><b>3.1.1</b> The patient is able to swallow a solid dosage form</p> <p style="text-align: center;"><b>AND</b></p> <p><b>3.1.2 ONE of the following:</b></p> <p><b>3.1.2.1</b> History of failure to at least THREE preferred* solid oral dosage forms as confirmed</p> |                |

by claims history or submission of medical records. NOTE: In instances where there are fewer than three preferred alternatives, the patient must have a history of failure to ALL of the preferred products.

**OR**

**3.1.2.2** History of contraindication or intolerance to THREE preferred\* solid oral dosage forms (please specify contraindication or intolerance). NOTE: In instances where there are fewer than three preferred alternatives, the patient must have a history of contraindication or intolerance to ALL of the preferred products.

**OR**

**3.1.2.3** There are no preferred formulary alternatives for the requested drug

**OR**

**3.2** Patient is unable to swallow a solid dosage form

**OR**

**3.3** Patient utilizes a feeding tube for medication administration

**OR**

**3.4** Request is for a nebulized formulation of an inhaled medication for a patient who has an inability to effectively utilize an agent in an inhaler formulation due to neuromuscular or cognitive disability, or other evidence of lack of response to the inhaled formulation supported by clinical documentation

Notes

\*See Table 1 in Background for PDL links. Prior trials of formulary/PDL alternatives must sufficiently demonstrate that the formulary/PDL alternatives are either ineffective or inappropriate at the time of the request.

| Approval Length                            | 12 month(s)           |
| Therapy Stage                              | Initial Authorization |
| Guideline Type                             | Prior Authorization   |
|                                            |                       |

## **Approval Criteria**

**1** - Diagnosis of pyruvate kinase (PK) deficiency based on ALL of the following:

**1.1** Presence of at least 2 variant alleles in the pyruvate kinase liver and red blood cell (PKLR) gene, of which at least 1 is a missense variant

**AND**

**1.2** Patient is not homozygous for the c.1436G > A (p.R479H) variant

**AND**

**1.3** Patient does not have 2 non-missense variants (without the presence of another missense variant) in the PKLR gene

**AND**

**2** - Used for the treatment of hemolytic anemia

**AND**

**3** - ONE of the following:

**3.1** BOTH of the following:

**3.1.1** Baseline hemoglobin less than or equal to 10 grams/deciliter (g/dL)

**AND**

**3.1.2** Patient has had no more than 4 transfusions in the previous 52 weeks and no transfusions in the preceding 3-month period

**OR**

**3.2** Patient has had a minimum of 6 transfusion episodes in the preceding 52 weeks

**AND**

**4** - Prescribed by a nephrologist or hematologist

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                        |

### Guideline Note:

|                 |           |
|-----------------|-----------|
| Effective Date: | 11/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                      |                              |
|----------------------|------------------------------|
| Product Name:Qfitlia |                              |
| Diagnosis            | Hemophilia A with Inhibitors |
| Approval Length      | 12 month(s)                  |
| Therapy Stage        | Initial Authorization        |
| Guideline Type       | Prior Authorization          |

**Approval Criteria**

1 - Diagnosis of hemophilia A

**AND**

2 - Patient has developed high-titer factor VIII inhibitors (i.e., patient has developed factor VIII inhibitors greater than or equal to 5 Bethesda units [BU])

**AND**

3 - Patient is 12 years of age or older

**AND**

4 - Qfitlia is prescribed for the prevention of bleeding episodes (i.e., routine prophylaxis)

## 1 . Criteria

|                                                 |                                 |
|-------------------------------------------------|---------------------------------|
| Product Name:Quantity Limit, Prescription Limit |                                 |
| Diagnosis                                       | Quantity limit review (General) |
| Approval Length                                 | 12 month(s)                     |
| Guideline Type                                  | Administrative                  |

## **Approval Criteria**

**1 - ONE of the following:**

**1.1** The requested drug must be used for an FDA (Food and Drug Administration)-approved indication

**OR**

**1.2** The use of this drug is supported by information from ONE of the following appropriate compendia of current literature:

- American Hospital Formulary Service Drug Information
- National Comprehensive Cancer Network Drugs and Biologics Compendium
- Thomson Micromedex DrugDex
- Clinical pharmacology
- United States Pharmacopoeia-National Formulary (USP-NF)

**AND**

**2 - ONE of the following:**

**2.1** The drug is being prescribed within the manufacturer's published dosing guidelines

**OR**

**2.2** The request falls within dosing guidelines found in ONE of the following compendia of current literature:

- American Hospital Formulary Service Drug Information
- National Comprehensive Cancer Network Drugs and Biologics Compendium
- Thomson Micromedex DrugDex
- Clinical pharmacology
- United States Pharmacopoeia-National Formulary (USP-NF)

**AND**

**3** - The requested dosage cannot be achieved using the plan accepted quantity limit of a different dose or formulation.

**AND**

**4** - The drug is being prescribed for a medically accepted indication that is recognized as a covered benefit by the applicable health plans' program.

**Product Name:**Quantity Limit, Prescription Limit

### Guideline Note:

|                 |           |
|-----------------|-----------|
| Effective Date: | 12/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                    |                     |
|--------------------|---------------------|
| Product Name:Rayos |                     |
| Approval Length    | 12 month(s)         |
| Guideline Type     | Prior Authorization |

## **Approval Criteria**

**1** - ONE of the following:

**1.1** Rayos must be used for a Food and Drug Administration (FDA)-approved indication

**OR**

**1.2** The intended use of Rayos is supported by information from ONE of the following appropriate compendia of current literature:

- American Hospital Formulary Service Drug Information
- National Comprehensive Cancer Network Drugs and Biologics Compendium
- Thomson Micromedex DrugDex
- Clinical pharmacology
- United States Pharmacopoeia-National Formulary (USP-NF)

**AND**

**2** - Rayos is being prescribed for a medically accepted indication that is recognized as a covered benefit by the applicable health plan's program

**AND**

**3** - Submission of medical records (e.g., chart notes, laboratory values) documenting an intolerance to generic prednisone tablets which is unable to be resolved with attempts to minimize the adverse effects where appropriate

**AND**

**4** - ONE of the following:

**4.1** Failure to TWO of the following as confirmed by claims history or submission of medical records:

- Dexamethasone tablet/oral solution
- Hydrocortisone tablet
- Methylprednisolone tablet

- Prednisolone tablet/oral solution

**OR**

**4.2** History of contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

- Dexamethasone tablet/oral solution
- Hydrocortisone tablet
- Methylprednisolone tablet
- Prednisolone tablet/oral solution

| Effective Date: | 7/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                       |                                                                                         |
|-----------------------|-----------------------------------------------------------------------------------------|
| Product Name: Repatha |                                                                                         |
| Diagnosis             | Primary Hyperlipidemia (including heterozygous familial hypercholesterolemia) and ASCVD |
| Approval Length       | 12 month(s)                                                                             |
| Therapy Stage         | Initial Authorization                                                                   |
| Guideline Type        | Prior Authorization                                                                     |

## **Approval Criteria**

**1 - ONE of the following diagnoses:**

- Heterozygous familial hypercholesterolemia (HeFH)
- Atherosclerotic cardiovascular disease (ASCVD) (e.g., acute coronary syndromes, history of myocardial infarction, stable or unstable angina, coronary or other arterial revascularization, stroke, transient ischemic attack, or peripheral arterial disease presumed to be of atherosclerotic origin)
- Primary hyperlipidemia

**AND**

**2 - Submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following (prescription claims history may be used in conjunction as documentation of medication use, dose, and duration):**

**2.1 Patient has been receiving at least 12 consecutive weeks of high-intensity statin therapy (i.e., atorvastatin 40-80 mg, rosuvastatin 20-40 mg) and will continue to receive high-intensity statin at maximally tolerated dose**

**OR**

**2.2 BOTH of the following:**

**2.2.1 Patient is unable to tolerate high-intensity statin as evidenced by ONE of the following intolerable and persistent (i.e., more than 2 weeks) symptoms:**

- Myalgia [muscle symptoms without creatine kinase (CK) elevations]
- Myositis [muscle symptoms with CK elevations less than 10 times upper limit of normal (ULN)]

**AND**

**2.2.2 Patient has been receiving at least 12 consecutive weeks of low-intensity or moderate-intensity statin therapy [i.e., atorvastatin 10-20 mg, rosuvastatin 5-10 mg, simvastatin greater than or equal to 10 mg, pravastatin greater than or equal to 10 mg, lovastatin 20-40 mg, fluvastatin XL 80 mg, fluvastatin 20-40 mg up to 40 mg twice daily or Livalo (pitavastatin) greater than or equal to 1 mg] and will continue to receive a low-intensity or moderate-intensity statin at maximally tolerated dose**

**OR**

**2.3** Patient is unable to tolerate low- or moderate-, and high-intensity statins as evidenced by ONE of the following:

**2.3.1** ONE of the following intolerable and persistent (i.e., more than 2 weeks) symptoms for low- or moderate-, and high-intensity statins:

- Myalgia (muscle symptoms without CK elevations)
- Myositis [muscle symptoms with CK elevations less than 10 times upper limit of normal (ULN)]

**OR**

**2.3.2** Patient has a contraindication to all statins as confirmed by medical records

**OR**

**2.3.3** Patient has experienced rhabdomyolysis or muscle symptoms with statin treatment with CK elevations greater than 10 times ULN

**AND**

**3** - Submission of medical records (e.g., laboratory values) documenting a LDL-C greater than or equal 55 mg/dL

**AND**

**4** - Prescribed by ONE of the following:

- Cardiologist
- Endocrinologist
- Lipid specialist

**AND**

**5** - Not used in combination with another proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Praluent (alirocumab)]

**AND**

**6** - Not used in combination with Leqvio (inclisiran)

**Product Name:** Repatha

|                 |                                                                                         |
|-----------------|-----------------------------------------------------------------------------------------|
| Diagnosis       | Primary Hyperlipidemia (including heterozygous familial hypercholesterolemia) and ASCVD |
| Approval Length | 12 month(s)                                                                             |
| Therapy Stage   | Reauthorization                                                                         |
| Guideline Type  | Prior Authorization                                                                     |

### Approval Criteria

**1** - Prescribed by ONE of the following:

- Cardiologist
- Endocrinologist
- Lipid specialist

**AND**

**2** - Submission of medical records (e.g. chart notes, laboratory values) documenting LDL-C (low-density lipoprotein cholesterol) reduction while on Repatha therapy

**AND**

**3** - Not used in combination with another proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Praluent (alirocumab)]

**AND**

**4** - Not used in combination with Leqvio (inclisiran)

**Product Name:** Repatha

|                 |                                                 |
|-----------------|-------------------------------------------------|
| Diagnosis       | Homozygous Familial Hypercholesterolemia (HoFH) |
| Approval Length | 12 month(s)                                     |
| Therapy Stage   | Initial Authorization                           |
| Guideline Type  | Prior Authorization                             |

### Approval Criteria

**1** - Diagnosis of homozygous familial hypercholesterolemia (HoFH) as confirmed by submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following:

**1.1** Genetic confirmation of bi-allelic pathogenic/likely pathogenic variants on different chromosomes at the low-density lipoprotein receptor (LDLR), apolipoprotein B (APOB), proprotein convertase subtilisin kexin type 9 (PCSK9), or low-density lipoprotein receptor adaptor protein 1 (LDLRAP1) genes or 2 or more such variants at different loci

**OR**

**1.2** BOTH of the following:

**1.2.1** Untreated LDL-C (low-density lipoprotein cholesterol) greater than 400 mg/dL

**AND**

**1.2.2** ONE of the following:

- Xanthoma before 10 years of age
- Evidence of familial hypercholesterolemia in at least one parent

**AND**

**2** - Patient is receiving other lipid-lowering therapy confirmed by claims history or submitted medical records (e.g., statin, ezetimibe, LDL apheresis)

**AND**

**3** - Prescribed by ONE of the following:

- Cardiologist
- Endocrinologist
- Lipid specialist

**AND**

**4** - Not used in combination with another proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Praluent (alirocumab)]

**AND**

**5** - Not used in combination with Juxtapid (lomitapide)

|                                                                                                                                                                                                                                                                                                                                                                                        |                                                 |

|-----------------|----------|

## 1 . Criteria

|                      |                                    |
|----------------------|------------------------------------|
| Product Name:Retevmo |                                    |
| Diagnosis            | Non-Small Cell Lung Cancer (NSCLC) |
| Approval Length      | 12 month(s)                        |
| Therapy Stage        | Initial Authorization              |
| Guideline Type       | Prior Authorization                |

**Approval Criteria**

**1** - Diagnosis of non-small cell lung cancer (NSCLC)

**AND**

**2** - Disease is ONE of the following:

- Recurrent
- Advanced
- Metastatic

**AND**

**3** - Presence of RET gene fusion-positive or RET rearrangement positive tumors

Product Name:Retevmo

|           |                |
|-----------|----------------|
| Diagnosis | Thyroid Cancer |
|-----------|----------------|

|                 |             |
|-----------------|-------------|
| Approval Length | 12 month(s) |
|-----------------|-------------|

|               |                       |

|----------------|---------------------|
| Guideline Type | Prior Authorization |
|----------------|---------------------|

**Approval Criteria**

**1** - All of the following:

**1.1** Diagnosis of medullary thyroid cancer (MTC)

**AND**

**1.2** Disease is one of the following:

- Advanced

- Metastatic

**AND**

**1.3** Disease has presence of RET gene mutation

**AND**

**1.4** Disease requires treatment with systemic therapy

**OR**

**2** - All of the following:

**2.1** Diagnosis of thyroid cancer

**AND**

**2.2** Disease is one of the following:

- Advanced
- Metastatic

**AND**

**2.3** Disease is RET gene fusion-positive

**AND**

**2.4** Disease requires treatment with systemic therapy

**AND**

**2.5** One of the following:

- Patient is radioactive iodine-refractory
- Treatment with radioactive iodine is not appropriate

**AND**

**2.2.2.3** Used in combination with an erythropoietin stimulating agent (ESA) [e.g., Epogen, Procrit, Retacrit (epoetin alfa)] or darbepoetin alfa

**OR**

**2.2.3** ALL of the following:

**2.2.3.1** Serum erythropoietin levels greater than 500 mU/mL

**AND**

**2.2.3.2** Ring sideroblasts less than 15% (or less than 5% with an SF3B1 mutation)

**AND**

**2.2.3.3** History of failure, contraindication, intolerance, or a poor probability of responding to immunosuppressive therapy (e.g., azacitidine, decitabine)

**OR**

**3 - BOTH of the following:**

**3.1** Diagnosis of myelodysplastic/myeloproliferative neoplasms (MDS/MPN) overlap neoplasm

**AND**

**3.2** One of the following:

- Patient has SF3B1 mutation and thrombocytosis
- Patient has ring sideroblasts and thrombocytosis (MDS/MPN-RS-T)

**Product Name:**Brand Revlimid, generic lenalidomide

### Approval Criteria

**1 - ONE of the following diagnoses:**

- Mantle cell lymphoma (MCL)
- Extranodal marginal zone lymphoma of nongastric sites (noncutaneous)
- Extranodal marginal zone lymphoma (EMZL) of the stomach
- Classic follicular lymphoma
- Nodal marginal zone lymphoma
- Splenic marginal zone lymphoma

**OR**

**2 - BOTH of the following:**

**2.1 ONE of the following diagnoses:**

- HIV-related B-cell lymphoma
- Diffuse large B-cell lymphoma
- High-grade B-cell lymphoma
- Histologic transformation of indolent lymphomas to diffuse large B-cell lymphoma
- Post-transplant lymphoproliferative disorders

**AND**

**2.2 Used as second line and subsequent therapy**

|                                                                                                                                                                                                                                                                                                                                                                      |                       |

| Therapy Stage       | Initial Authorization |
| Guideline Type      | Prior Authorization   |
| Approval Criteria   |                       |

**1** - Used for acute treatment of migraine

**AND**

**2** - Patient is 18 years of age or older

**AND**

**3** - ONE of the following:

**3.1** Failure (after at least 3 migraine episodes and a minimum of a 30-day trial), to BOTH of the following as confirmed by claims history or submission of medical records:

**3.1.1** TWO of the following:

- eletriptan (generic Relpax)
- naratriptan (generic Amerge)
- rizatriptan (generic Maxalt/Maxalt MLT)
- sumatriptan (generic Imitrex)
- zolmitriptan (generic Zomig)

**AND**

**3.1.2** ONE of the following:

- Nurtec ODT
- Ubrelvy

**OR**

**3.2** History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

- eletriptan (generic Relpax)
- naratriptan (generic Amerge)
- rizatriptan (generic Maxalt/Maxalt MLT)
- sumatriptan (generic Imitrex)
- zolmitriptan (generic Zomig)
- Nurtec ODT

- Ubrelvy

**AND**

**4** - Prescriber attests to BOTH of the following:

**4.1** Patient has been informed the use of Reyvow may result in significant CNS (central nervous system) impairment, and may impact the patient's ability to drive or operate machinery for 8 hours after each dose

**AND**

**4.2** If used concurrently with a benzodiazepine or other drugs that could potentially cause CNS depression, the prescriber has acknowledged that they have completed an assessment of increased risk for sedation and other cognitive and/or neuropsychiatric adverse events

**AND**

**5** - ONE of the following:

**5.1** Patient is currently treated with ONE of the following prophylactic therapies:

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol\*)
- Candesartan (generic Atacand)\*
- A calcitonin gene-related peptide receptor (CGRP) antagonist for preventive treatment of migraine [i.e., Aimovig (erenumab)\*, Ajovy (fremanezumab), Emgality (galcanezumab), Nurtec ODT, Qulipta\*, Vyepti (eptinezumab-jjmr)\*\*]\*\*\*
- Divalproex sodium (generic Depakote/Depakote ER)
- OnabotulinumtoxinA (generic Botox)\*\*
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- Topiramate (generic Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**OR**

**5.2** Patient has less than 4 migraine days per month

**OR**

**5.3** Patient has greater than or equal to 4 migraine days per month and has contraindication or intolerance to TWO of the following prophylactic therapies:

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol\*)
- Candesartan (generic Atacand)\*
- A calcitonin gene-related peptide receptor (CGRP) antagonist for preventive treatment of migraine [i.e., Aimovig (erenumab)\*, Ajovy (fremanezumab), Emgality (galcanezumab), Nurtec ODT, Qulipta\*, Vyepti (eptinezumab-jjmr)\*\*]\*\*\*
- Divalproex sodium (generic Depakote/Depakote ER)
- OnabotulinumtoxinA (generic Botox)\*\*
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- Topiramate (generic Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**Notes**

\*Timolol, candesartan, Aimovig, and Qulipta are non-preferred  
 \*\*Vyepti and OnabotulinumtoxinA (generic Botox) are medical benefits  
 \*\*\*CGRP antagonists for preventive treatment of migraines require a prior authorization.

## 1 . Criteria

|                     |                           |
|---------------------|---------------------------|
| Product Name:Rinvoq |                           |
| Diagnosis           | Rheumatoid Arthritis (RA) |
| Approval Length     | 12 month(s)               |
| Therapy Stage       | Initial Authorization     |
| Guideline Type      | Prior Authorization       |

## **Approval Criteria**

**1** - Diagnosis of moderately to severely active rheumatoid arthritis (RA)

**AND**

**2** - ONE of the following:

**2.1** ALL of the following:

**2.1.1** ONE of the following:

- Failure to a 3 month trial of ONE non-biologic disease modifying anti-rheumatic drug (DMARD) (e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine) at maximally indicated doses as confirmed by claims history or submission of medical records
- History of intolerance or contraindication to ONE non-biologic DMARD (e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine) (please specify intolerance or contraindication)
- Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of rheumatoid arthritis as confirmed by claims history or submission of medical records [e.g., Enbrel (etanercept), Cimzia (certolizumab), adalimumab, Simponi (golimumab), Orencia (abatacept), Olumiant (baricitinib), Xeljanz/Xeljanz XR (tofacitinib)]

**AND**

**2.1.2** ONE of the following:

**2.1.2.1** Failure to ALL of the following as confirmed by claims history or submission of medical records:

- Enbrel (etanercept)
- One of the preferred adalimumab products\*
- Tysen (tocilizumab-aazg)

**OR**

**2.1.2.2** History of contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

- Enbrel (etanercept)
- One of the preferred adalimumab products\*
- Tyenne (tocilizumab-aazg)

**OR**

**2.1.2.3** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria)

**AND**

**2.1.3** ONE of the following:

- Failure to Olumiant as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to Olumiant (please specify contraindication or intolerance)

**OR**

**2.2** Patient is currently on Rinvoq therapy as confirmed by claims history or submission of medical records

**AND**

**3** - Patient is NOT receiving Rinvoq in combination with either of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib)]
- Potent immunosuppressant (e.g., azathioprine or cyclosporine)

**AND**

**4** - Prescribed by or in consultation with a rheumatologist

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

**OR**

**2.1.2.1.1.2** History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

**AND**

**2.1.2.1.2** ONE of the following:

- Failure to Cosentyx (secukinumab) as confirmed by claims history or submission of medical records
- History of intolerance or contraindication to Cosentyx (secukinumab) (please specify intolerance or contraindication)

**OR**

**2.1.2.2** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria)

**OR**

**2.2** Patient is currently on Rinvoq or Rinvoq LQ therapy as confirmed by claims history or submission of medical records

**AND**

**3 - Patient is NOT receiving Rinvoq or Rinvoq LQ in combination with either of the following:**

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Otezla (apremilast)]
- Potent immunosuppressant (e.g., azathioprine or cyclosporine)

**AND**

**4 - Prescribed by or in consultation with ONE of the following:**

- Rheumatologist
- Dermatologist

### Approval Criteria

**1 - Diagnosis of moderate-to-severe chronic atopic dermatitis**

**AND**

**2 - ONE of the following:**

**2.1 BOTH of the following:**

**2.1.1 ONE of the following:**

**2.1.1.1** Failure to TWO of the following therapeutic classes of topical therapies, as confirmed by claims history or submission of medical records:

- One medium to very-high potency topical corticosteroid [e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)] (see Table 1 in Background)
- One topical calcineurin inhibitor [e.g., pimecrolimus (generic Elidel), tacrolimus (generic Protopic)]
- Eucrisa (crisaborole)

**OR**

**2.1.1.2** History of intolerance or contraindication to ALL of the following therapeutic classes of topical therapies (please specify intolerance or contraindication):

- One medium to very-high potency topical corticosteroid [e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)] (see Table 1 in Background)
- One topical calcineurin inhibitor [e.g., pimecrolimus (generic Elidel), tacrolimus (generic Protopic)]
- Eucrisa (crisaborole)

**AND**

**2.1.2** ONE of the following:

**2.1.2.1** BOTH of the following:

- Submission of medical records (e.g., chart notes, laboratory values) documenting a 3 month trial of a systemic drug product for the treatment of atopic dermatitis [e.g., Adbry (tralokinumab-ldrm), Dupixent (dupilumab), Ebglyss (lebrikizumab-lbkz), Nemluvio (nemolizumab-ilto), cyclosporine, azathioprine, methotrexate, mycophenolate mofetil, etc.]
- Physician attests that the patient was not adequately controlled with the documented systemic drug product

**OR**

**2.1.2.2** Physician attests that systemic treatment with ALL of the following FDA-approved atopic dermatitis therapies is inadvisable (document drug and contraindication rationale):

- Adbry (tralokinumab-ldrm)
- Dupixent (dupilumab)
- Ebglyss (lebrikizumab-lbkz)

- Nemluvio (nemolizumab-ilto)

**OR**

**2.1.2.3** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure [refer to Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition Text Revision (DSM-V-TR) 300.29 for specific phobia diagnostic criteria]

**OR**

**2.2** Patient is currently on Rinvoq therapy as confirmed by claims history or submission of medical records

**AND**

**3** - Patient is NOT receiving Rinvoq in combination with either of the following:

- Targeted immunomodulator [e.g., Adbry (tralokinumab-ldrm), Dupixent (dupilumab), Cibinqo (abrocitinib), Ebglyss (lebrikizumab-lbkz), Nemluvio (nemolizumab-ilto), Xeljanz/XR (tofacitinib), Olumiant (baricitinib), Opzelura (topical ruxolitinib)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**4** - Prescribed by or in consultation with ONE of the following:

- Dermatologist
- Allergist
- Immunologist

|                     |                         |
|---------------------|-------------------------|
| Product Name:Rinvoq |                         |
| Diagnosis           | Ulcerative Colitis (UC) |
| Approval Length     | 12 month(s)             |
| Therapy Stage       | Initial Authorization   |
| Guideline Type      | Prior Authorization     |

## **Approval Criteria**

**1** - Diagnosis of moderately to severely active ulcerative colitis (UC)

**AND**

**2** - ONE of the following:

**2.1** BOTH of the following:

**2.1.1** ONE of the following:

- Patient has had prior or concurrent inadequate response to a therapeutic course of oral corticosteroids and/or immunosuppressants (e.g., azathioprine, 6-mercaptopurine)
- Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ulcerative colitis as confirmed by claims history or submission of medical records [e.g., adalimumab, Simponi (golimumab), ustekinumab, Xeljanz/XR (tofacitinib)]

**AND**

**2.1.2** ONE of the following:

**2.1.2.1** Failure to ONE of the following as confirmed by claims history or submission of medical records:

- One of the preferred adalimumab products\*
- One of the preferred ustekinumab products\*

**OR**

**2.1.2.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication)

- One of the preferred adalimumab products\*
- One of the preferred ustekinumab products\*

**OR**

**2.1.2.3** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria)

**OR**

**2.2** Patient is currently on Rinvoq therapy as confirmed by claims history or submission of medical records

**AND**

**3** - Patient is NOT receiving Rinvoq in combination with either of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), ustekinumab, Skyrizi (risankizumab)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**4** - Prescribed by or in consultation with a gastroenterologist

**AND**

**1.2 ONE of the following:**

- Failure to TWO NSAIDs (non-steroidal anti-inflammatory drugs) (e.g., ibuprofen, naproxen) at maximally indicated doses, each used for at least 4 weeks, as confirmed by claims history or submission of medical records
- History of intolerance or contraindication to two NSAIDs (e.g., ibuprofen, naproxen) (please specify intolerance or contraindication)
- Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ankylosing spondylitis as confirmed by claims history or submission of medical records [e.g., Enbrel (etanercept), Cimzia (certolizumab), adalimumab, Simponi (golimumab), Xeljanz/Xeljanz XR (tofacitinib)]

**AND**

**1.3 ONE of the following:**

**1.3.1 BOTH of the following:**

**1.3.1.1 ONE of the following:**

**1.3.1.1.1** Failure to BOTH of the following as confirmed by claims history or submission of medical records:

- One of the preferred adalimumab products\*
- Enbrel (etanercept)

**OR**

**1.3.1.1.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

- One of the preferred adalimumab products\*
- Enbrel (etanercept)

**AND**

**1.3.1.2 ONE of the following:**

- Failure to Cosentyx (secukinumab), as confirmed by claims history or submission of medical records
- History of intolerance or contraindication to Cosentyx (secukinumab) (please specify intolerance or contraindication)

**OR**

**1.3.2** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria)

**AND**

**1.4** Patient is NOT receiving Rinvoq in combination with either of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**1.5** Prescribed by or in consultation with a rheumatologist

**OR**

**2** - ALL of the following:

**2.1** Patient is currently on Rinvoq therapy, as confirmed by claims history or submission of medical records

**AND**

**2.2** Diagnosis of active ankylosing spondylitis

**AND**

**2.3** Patient is NOT receiving Rinvoq in combination with either of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**2.4** Prescribed by or in consultation with a rheumatologist

history or submission of medical records [e.g., Cimzia (certolizumab), Cosentyx (secukinumab)]

**AND**

**2.1.2** ONE of the following:

**2.1.2.1** ONE of the following:

- Failure to Cosentyx (secukinumab), as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to Cosentyx (secukinumab) (please specify contraindication or intolerance)

**OR**

**2.1.2.2** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria)

**OR**

**2.2** Patient is currently on Rinvoq therapy as confirmed by claims history or submission of medical records

**AND**

**3** - Patient is NOT receiving Rinvoq in combination with either of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**4** - Prescribed by or in consultation with a rheumatologist

| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

  

**Approval Criteria**

1 - Diagnosis of moderately to severely active Crohn's Disease

**AND**

2 - ONE of the following:

2.1 BOTH of the following:

2.1.1 ONE of the following:

2.1.1.1 Failure to ONE of the following conventional therapy drugs or classes at maximally indicated dose confirmed by claims history or submitted medical records:

- Corticosteroids (e.g., prednisone, methylprednisolone, budesonide)
- 6-mercaptopurine (Purinethol)
- Azathioprine (Imuran)
- Methotrexate (Rheumatrex, Trexall)

**OR**

2.1.1.2 History of intolerance or contraindication to ALL of the following conventional therapy drugs or classes (please specify intolerance or contraindication)

- Corticosteroids (e.g., prednisone, methylprednisolone, budesonide)
- 6-mercaptopurine (Purinethol)
- Azathioprine (Imuran)
- Methotrexate (Rheumatrex, Trexall)

**OR**

**2.1.1.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of Crohn's disease as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), adalimumab]

**AND**

**2.1.2** ONE of the following:

**2.1.2.1** Failure to ONE of the following as confirmed by claims history or submission of medical records:

- One of the preferred adalimumab products\*
- One of the preferred ustekinumab products\*

**OR**

**2.1.2.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

- One of the preferred adalimumab products\*
- One of the preferred ustekinumab products\*

**OR**

**2.2** Patient is currently on Rinvoq therapy for moderately to severely active Crohn's disease as confirmed by claims history or submitted medical records

**AND**

**3** - Patient is NOT receiving Rinvoq in combination with either of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), ustekinumab, Skyrizi (risankizumab)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**OR**

**2.2** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria)

**OR**

**2.3** Patient is currently on Rinvoq or Rinvoq LQ therapy as confirmed by claims history or submission of medical records

**AND**

**3** - Patient is not receiving Rinvoq or Rinvoq LQ in combination with either of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Olumiant (baricitinib), Xeljanz (tofacitinib)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**4** - Prescribed by or in consultation with a rheumatologist

**3.2** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria)

**OR**

**3.3** Patient is currently on Rinvoq or Rinvoq LQ therapy as confirmed by claims history or submission of medical records

**AND**

**4** - Patient is not receiving Rinvoq in combination with either of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Olumiant (baricitinib), tocilizumab, Xeljanz (tofacitinib)]
- Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**5** - Prescribed by or in consultation with a rheumatologist

|                        |                       |
|------------------------|-----------------------|
| Product Name: Rivfloza |                       |
| Approval Length        | 12 month(s)           |
| Therapy Stage          | Initial Authorization |

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Prior Authorization |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <p><b>Approval Criteria</b></p> <p><b>1 - ALL of the following:</b></p> <p><b>1.1</b> Patient has been established on therapy with Rivfloza under an active UnitedHealthcare medical benefit prior authorization for the treatment of primary hyperoxaluria type 1 (PH1)</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.2</b> Submission of medical records (e.g., chart notes, laboratory values) documenting a positive clinical response to therapy from pre-treatment baseline (e.g., decreased urinary oxalate concentrations, decreased urinary oxalate: creatinine ratio, decreased plasma oxalate concentrations)</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.3</b> Patient has NOT received a liver transplant</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.4</b> Patient has relatively preserved kidney function (e.g., eGFR [estimated glomerular filtration rate] greater than or equal to 30 mL/min/1.73 m<sup>2</sup>)</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.5</b> Patient is NOT receiving Rivfloza in combination with Oxlumo (lumasiran)</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.6</b> Prescribed by, or in consultation with, a specialist (e.g., geneticist, nephrologist, urologist) with expertise in the treatment of PH1</p> |                     |

**OR**

**2** - ALL of the following:

**2.1** Diagnosis of primary hyperoxaluria type 1 (PH1)

**AND**

**2.2** Confirmation of diagnosis based on BOTH of the following:

**2.2.1** Metabolic testing demonstrating ONE of the following:

**2.2.1.1** Increased urinary oxalate excretion (e.g., greater than 1 mmol/1.73 m<sup>2</sup> per day [90 mg/1.73 m<sup>2</sup> per day], increased urinary oxalate: creatinine ratio relative to normative values for age)

**OR**

**2.2.1.2** Increased plasma oxalate and glyoxylate concentrations

**AND**

**2.2.2** Genetic testing has confirmed a mutation in the alanine: glyoxylate aminotransferase (AGT or AGXT) gene

**AND**

**2.3** Patient has NOT received a liver transplant

**AND**

**2.4** Patient is at least 2 years of age or older

**AND**

**2.5** Patient has relatively preserved kidney function (e.g., eGFR [estimated glomerular filtration rate] greater than or equal to 30 mL/min/1.73 m<sup>2</sup>)

**AND**

**2.6** Patient is NOT receiving Rivfloza in combination with Oxlumio (lumasiran)

**AND**

**2.7** Prescribed by, or in consultation with, a specialist (e.g., geneticist, nephrologist, urologist) with expertise in the treatment of PH1

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                     |

| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of metastatic, castration-resistant prostate cancer</p> |                       |

**AND**

**2** - Cancer has a deleterious BRCA mutation

**AND**

**3** - ONE of the following:

**3.1** Failure to androgen receptor-directed therapy [e.g., Zytiga (abiraterone), Xtandi (enzalutamide), Erleada (apalutamide)] as confirmed by claims history or submission of medical records

**OR**

**3.2** Contraindication or intolerance to androgen receptor-directed therapy [e.g., Zytiga (abiraterone), Xtandi (enzalutamide), Erleada (apalutamide)] (please specify intolerance or contraindication)

**AND**

**4** - ONE of the following:

**4.1** Used in combination with a gonadotropin-releasing hormone (GnRH) analog [e.g., Lupron (leuprolide), Zoladex (goserelin), Trelstar (triptorelin), Vantas (histrelin), Firmagon (degarelix)]

**OR**

**4.2** Patient has had bilateral orchiectomy

|                       |                       |
|-----------------------|-----------------------|
| Product Name: Rubraca |                       |
| Diagnosis             | Uterine cancer        |
| Approval Length       | 12 month(s)           |
| Therapy Stage         | Initial Authorization |
| Guideline Type        | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of BRCA altered uterine leiomyosarcoma (uLMS)

**AND**

**2** - Disease has progressed following prior treatment with ONE of the following:

- Gemcitabine plus docetaxel
- Doxorubicin

|                                                                                                                                                                                                                                                                                                                      |                       |

## 1 . Criteria

|                       |                             |
|-----------------------|-----------------------------|
| Product Name:Ruconest |                             |
| Diagnosis             | Hereditary Angioedema (HAE) |
| Approval Length       | 12 month(s)                 |
| Therapy Stage         | Initial Authorization       |
| Guideline Type        | Prior Authorization         |

## **Approval Criteria**

**1** - Diagnosis of hereditary angioedema (HAE) as confirmed by ONE of the following:

**1.1** C1 inhibitor (C1-INH) deficiency or dysfunction (Type I or II HAE) as documented by ONE of the following (per laboratory standard):

- C1-INH antigenic level below the lower limit of normal
- C1-INH functional level below the lower limit of normal

**OR**

**1.2** HAE with normal C1 inhibitor levels and ONE of the following:

- Confirmed presence of variant(s) in the gene(s) for factor XII, angiotensin-1, plasminogen-1, kininogen-1, myoferlin, or heparan sulfate-glucosamine 3-O-sulfotransferase 6
- Recurring angioedema attacks that are refractory to high-dose antihistamines with confirmed family history of angioedema
- Recurring angioedema attacks that are refractory to high-dose antihistamines with unknown background de-novo mutation(s) (i.e., no family history) (HAE-unknown)

**AND**

**2** - Prescribed for the acute treatment of HAE attacks

**AND**

**3** - Not used in combination with other products indicated for the acute treatment of HAE attacks (e.g., Berinert, Firazyr)

**AND**

**4** - Prescribed by ONE of the following:

- Immunologist
- Allergist

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                             |

## Approval Criteria

1 - Diagnosis of thymoma or thymic carcinoma

**AND**

2 - ONE of the following:

2.1 Used as a second-line therapy for ONE of the following:

- Unresectable locally advanced disease
- Solitary metastasis or ipsilateral pleural metastasis
- Extrathoracic metastatic disease

**OR**

2.2 BOTH of the following:

2.2.1 Used as first line therapy for ONE of the following:

- Potentially resectable locally advanced disease
- Potentially resectable solitary metastasis or ipsilateral pleural metastasis
- Consideration following surgery for solitary metastasis or ipsilateral pleural metastasis
- Medically inoperable/unresectable solitary metastasis or ipsilateral pleural metastasis
- Extrathoracic metastatic disease
- Postoperative treatment for thymoma after R2 resection
- Preoperative systemic therapy for surgically resectable disease if R0 resection uncertain

**AND**

2.2.2 Patient is unable to tolerate first-line combination regimens

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 4/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                      |                                 |
|----------------------|---------------------------------|
| Product Name:Savaysa |                                 |
| Diagnosis            | Therapy upon hospital discharge |
| Approval Length      | 35 Day(s)                       |
| Guideline Type       | Prior Authorization             |

**Approval Criteria**

1 - Medication is being used as continuation of therapy upon hospital discharge

Product Name:Savaysa

|           |                                                                                               |
|-----------|-----------------------------------------------------------------------------------------------|
| Diagnosis | Stroke & Systemic Embolism Prevention in Adult Patients with Non-Valvular Atrial Fibrillation |
|-----------|-----------------------------------------------------------------------------------------------|

|                 |             |
|-----------------|-------------|
| Approval Length | 12 month(s) |
|-----------------|-------------|

|                |                     |
|----------------|---------------------|
| Guideline Type | Prior Authorization |
|----------------|---------------------|

**Approval Criteria**

1 - Diagnosis of atrial fibrillation (AF)

**AND**

2 - Patient does not have an artificial heart valve

**AND**

3 - One of the following:

3.1 Failure to Eliquis as confirmed by claims history or submission of medical records

**OR**

3.2 History of contraindication or intolerance to Eliquis (please specify contraindication or intolerance)

**OR**

3.3 Continuation of prior Savaysa therapy

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                        |

|-----------------|----------|

## 1 . Criteria

|                                     |                     |
|-------------------------------------|---------------------|
| Product Name: Steglatro, Segluromet |                     |
| Approval Length                     | 12 month(s)         |
| Guideline Type                      | Prior Authorization |
| Approval Criteria                   |                     |

**1 - Submission of medical records (e.g., chart notes) confirming diagnosis of type 2 diabetes mellitus as evidenced by ONE of the following laboratory values**

- A1C greater than or equal to 6.5%
- Fasting plasma glucose (FPG) greater than or equal to 126 mg/dL
- 2-hour plasma glucose (PG) greater than or equal to 200 mg/dL during oral glucose tolerance test
- Random plasma glucose greater than or equal to 200 mg/dL in patient with classic symptoms of hyperglycemia or hyperglycemic crisis

**OR**

**2 - For patients requiring ongoing treatment for type 2 diabetes mellitus (i.e., diagnosed greater than 2 years ago), submission of medical records (e.g., chart notes) confirming diagnosis of type 2 diabetes mellitus**

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                       |

**1.1.2** For patients requiring ongoing treatment for type 2 diabetes mellitus (i.e., diagnosed greater than 2 years ago), submission of medical records (e.g., chart notes) confirming diagnosis of type 2 diabetes mellitus

**AND**

**1.2** ONE of the following:

**1.2.1** Failure to ONE of the following therapies for 90 days confirmed by claims history or submission of medical records:

- Steglatro (ertugliflozin) OR Segluromet (ertugliflozin/metformin)
- Dapagliflozin (Farxiga authorized generic)

**OR**

**1.2.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

- Steglatro (ertugliflozin) OR Segluromet (ertugliflozin/metformin)
- Dapagliflozin (Farxiga authorized generic)

**OR**

**2** - For diagnosis of heart failure (NYHA class II-IV), ONE of the following:

- Failure to dapagliflozin (Farxiga authorized generic) as confirmed by claims history or submission of medical records
- History of intolerance or contraindication to dapagliflozin (Farxiga authorized generic) (please specify intolerance or contraindication)

**OR**

**3** - For diagnosis of chronic kidney disease (CKD), BOTH of the following:

**3.1** ONE of the following:

- Patient is currently taking an ACE inhibitor or ARB, confirmed by claims history or submission of medical records

- History of intolerance or contraindication to ACE inhibitor or ARB (please specify intolerance or contraindication)

**AND**

**3.2 ONE of the following:**

- Failure to dapagliflozin (Farxiga authorized generic) as confirmed by claims history or submission of medical records
- History of intolerance or contraindication to dapagliflozin (Farxiga authorized generic) (please specify intolerance or contraindication)

### Approval Criteria

**1 - ONE of the following:**

**1.1** For diagnosis of type 2 diabetes mellitus, ONE of the following:

**1.1.1** Submission of medical records (e.g., chart notes) confirming diagnosis of type 2 diabetes mellitus as evidenced by ONE of the following laboratory values

- A1C greater than or equal to 6.5%
- Fasting plasma glucose (FPG) greater than or equal to 126 mg/dL
- 2-hour plasma glucose (PG) greater than or equal to 200 mg/dL during oral glucose tolerance test
- Random plasma glucose greater than or equal to 200 mg/dL in patient with classic symptoms of hyperglycemia or hyperglycemic crisis

**OR**

**1.1.2** For patients requiring ongoing treatment for type 2 diabetes mellitus (i.e., diagnosed greater than 2 years ago), submission of medical records (e.g., chart notes) confirming diagnosis of type 2 diabetes mellitus

**OR**

**1.2** Diagnosis of heart failure (NYHA class II-IV)

**OR**

**1.3** Diagnosis of chronic kidney disease

**AND**

**2** - The prescriber has given a clinical reason or special circumstance why the patient is unable to use dapagliflozin (Farxiga authorized generic) (please document reason/special circumstance)

## **Approval Criteria**

**1** - ONE of the following:

**1.1** Submission of medical records (e.g., chart notes) confirming diagnosis of type 2 diabetes mellitus as evidenced by ONE of the following laboratory values

- A1C greater than or equal to 6.5%
- Fasting plasma glucose (FPG) greater than or equal to 126 mg/dL
- 2-hour plasma glucose (PG) greater than or equal to 200 mg/dL during oral glucose tolerance test
- Random plasma glucose greater than or equal to 200 mg/dL in patient with classic symptoms of hyperglycemia or hyperglycemic crisis

**OR**

**1.2** For patients requiring ongoing treatment for type 2 diabetes mellitus (i.e., diagnosed greater than 2 years ago), submission of medical records (e.g., chart notes) confirming diagnosis of type 2 diabetes mellitus

**AND**

**2** - ONE of the following:

**2.1** Failure to ONE of the following therapies for 90 days confirmed by claims history or submission of medical records:

- Steglatro (ertugliflozin) OR Segluromet (ertugliflozin/metformin)
- Dapagliflozin (Farxiga authorized generic)

**OR**

**2.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

- Steglatro (ertugliflozin) OR Segluromet (ertugliflozin/metformin)
- Dapagliflozin (Farxiga authorized generic)

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Opioid naïve patients (defined as not having filled an opioid in the past 60 days) may receive greater than the 5 day supply limit and/or greater than 50 morphine milligram equivalents (MME) based on ALL of the following:</p> <p><b>1.1</b> If the request is for greater than the 5 day supply limit, ONE of the following:</p> <p><b>1.1.1</b> Cancer-related pain (i.e., patients undergoing active cancer treatment; or cancer survivors with chronic pain who have completed cancer treatment, are in clinical remission, or are under cancer surveillance)</p> <p style="text-align: center;"><b>OR</b></p> <p><b>1.1.2</b> End of life care, including hospice care</p> <p style="text-align: center;"><b>OR</b></p> <p><b>1.1.3</b> Palliative care</p> <p style="text-align: center;"><b>OR</b></p> <p><b>1.1.4</b> Sickle cell anemia</p> <p style="text-align: center;"><b>OR</b></p> <p><b>1.1.5</b> BOTH of the following:</p> <p><b>1.1.5.1</b> ONE of the following:</p> <ul style="list-style-type: none"> <li>• Traumatic injury</li> <li>• Post-surgical procedures, excluding dental procedures</li> <li>• Prescriber attests that the patient has received an opioid within the past 60 days</li> </ul> |                     |

**AND**

**1.1.5.2** Prescriber attests if requested for traumatic injury or post-surgical procedure, that based on injury or surgical procedure performed the patient requires greater than a 5 day supply of short-acting opioid to adequately control pain

**AND**

**1.2** If the request is for 50 MME to 90 MME, ONE of the following (NOTE: If the request exceeds 90 MME please skip this section and proceed to the MME Reviews section):

**1.2.1** Diagnosis of ONE of the following:

- Cancer-related pain (i.e., patients undergoing active cancer treatment; or cancer survivors with chronic pain who have completed cancer treatment, are in clinical remission, or are under cancer surveillance)
- End of life pain (including hospice care)
- Palliative care
- Sickle cell anemia

**OR**

**1.2.2** Patient is currently exceeding 50 MME and prescriber attests patient has been on opioids in the past 60 days

**OR**

**1.2.3** Document ALL of the following:

- The diagnosis is associated with the need for pain management with opioids
- If used in patients with medical comorbidities or if used concurrently with a benzodiazepine or other drugs that could potentially cause drug-drug interactions, the prescriber has acknowledged that they have completed an assessment of increased risk for respiratory depression
- The prescriber has acknowledged that they have completed an addiction risk and risk of overdose assessment
- Prescriber attests the patient requires more than 50 MME per day to adequately control pain

|-----------------|------------------------|
| Diagnosis       | Non-Preferred Reviews* |
| Approval Length | 12 month(s)            |
| Guideline Type  | Prior Authorization    |

### Approval Criteria

#### 1 - ONE of the following:

**1.1** If the request is for tramadol 100 mg (milligram) tablets, the physician has provided rationale for needing to use the 100 mg tramadol tablet instead of two 50 mg tramadol tablets

**OR**

**1.2** If the request is for tramadol 25 mg tablets, the physician has provided rationale why the patient is unable to use half of a 50 mg tramadol tablet

**OR**

#### **1.3** If the request is for Qdolo (tramadol soln), ONE of the following:

**1.3.1** Failure of tramadol 50mg tablets as confirmed by claims history or submission of medical records

**OR**

**1.3.2** History of intolerance or contraindication to tramadol 50mg tablets (please specify intolerance or contraindication)

**OR**

**1.3.3** Patient is unable to swallow a solid dosage form

**OR**

**1.3.4** Patient utilizes a feeding tube for medication administration

**OR**

**1.4** If the request is for another non-preferred medication\*\*, then ONE of the following:

**1.4.1** Failure of at least three unique active ingredients from the preferred short-acting opioids list as confirmed by claims history or submission of medical records

**OR**

**1.4.2** History of intolerance or contraindication to three unique active ingredients from the preferred short-acting opioids list (please specify intolerance or contraindication)

| Effective Date: | 4/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                    |                       |
|--------------------|-----------------------|
| Product Name:Siliq |                       |
| Approval Length    | 12 month(s)           |
| Therapy Stage      | Initial Authorization |
| Guideline Type     | Prior Authorization   |
|                    |                       |

## **Approval Criteria**

**1** - Diagnosis of chronic moderate to severe plaque psoriasis

**AND**

**2** - Patient is not receiving Siliq in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Ilumya (tildrakizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**3** - Prescribed by or in consultation with a dermatologist

**AND**

**4** - One of the following:

**4.1** Patient is currently on Siliq therapy as confirmed by claims history or submitted medical records

**OR**

**4.2** All of the following:

**4.2.1** One of the following:

**4.2.1.1** All of the following:

**4.2.1.1.1** Greater than or equal to 3% body surface area involvement, palmoplantar, facial, or genital involvement, or severe scalp psoriasis

**AND**

**4.2.1.1.2** One of the following:

- Failure of ONE of the following topical therapy classes as confirmed by claims history or submitted medical records: Corticosteroids (e.g., betamethasone, clobetasol, desonide), Vitamin D analogs (e.g., calcitriol, calcipotriene), Tazarotene, Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus), Anthralin, Coal tar
- History of intolerance or contraindication to ALL of the following topical therapy classes (please specify intolerance or contraindication): Corticosteroids (e.g., betamethasone, clobetasol, desonide), Vitamin D analogs (e.g., calcitriol, calcipotriene), Tazarotene, Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus), Anthralin, Coal tar

**AND**

**4.2.1.1.3** One of the following:

- Failure of a 3 month trial of methotrexate, at maximally indicated dose, confirmed by claims history or submitted medical records
- History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)

**OR**

**4.2.1.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of plaque psoriasis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), adalimumab, Otezla (apremilast), Skyrizi (risankizumab-rzaa), ustekinumab, Tremfya (guselkumab)]

**AND**

**4.2.2** One of the following:

**4.2.2.1** Failure to TWO of the following preferred products, confirmed by claims history or submitted medical records:

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

**OR**

**4.2.2.2** History of intolerance or contraindication to ALL of the following preferred products (please specify intolerance or contraindication):

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

**AND**

**4.2.3** One of the following:

**4.2.3.1** Failure to Cosentyx (secukinumab) as confirmed by claims history or submitted medical records

**OR**

**4.2.3.2** History of contraindication or intolerance to Cosentyx (secukinumab) (please specify contraindication or intolerance)

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 4/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                       |                           |
|-----------------------|---------------------------|
| Product Name: Simponi |                           |
| Diagnosis             | Rheumatoid Arthritis (RA) |
| Approval Length       | 12 month(s)               |
| Therapy Stage         | Initial Authorization     |
| Guideline Type        | Prior Authorization       |

### **Approval Criteria**

**1** - Diagnosis of moderately to severely active rheumatoid arthritis (RA)

**AND**

**2** - Patient is NOT receiving Simponi in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**3** - Prescribed by or in consultation with a rheumatologist

**AND**

**4** - ONE of the following:

**4.1** Patient is currently on Simponi therapy as confirmed by claims history or submission of medical records

**OR**

**4.2** BOTH of the following:

**4.2.1** ONE of the following:

**4.2.1.1** Failure to a 3 month trial of ONE non-biologic DMARD (e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine) at maximally indicated doses, confirmed by claims history or submitted medical records

**OR**

**4.2.1.2** History of intolerance or contraindication to ONE non-biologic DMARD (e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine) (please specify intolerance or contraindication)

**OR**

**4.2.1.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of rheumatoid arthritis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), adalimumab, Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz/Xeljanz XR (tofacitinib)]

**AND**

**4.2.2** ONE of the following:

- Failure to THREE of the following as confirmed by claims history or submitted medical records: One of the preferred adalimumab products\*, Enbrel (etanercept), Olumiant (baricitinib), Tyenne (tocilizumab-aazg)
- History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication): One of the preferred adalimumab products\*, Enbrel (etanercept), Olumiant (baricitinib), Tyenne (tocilizumab-aazg)

**2** - Patient is NOT receiving Simponi in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Orenzia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), ustekinumab, Skyrizi (risankizumab)]

**AND**

**3** - Prescribed by or in consultation with a gastroenterologist

**AND**

**4** - ONE of the following:

**4.1** Patient is currently on Simponi therapy as confirmed by claims history or submission of medical records

**OR**

**4.2** BOTH of the following:

**4.2.1** ONE of the following:

**4.2.1.1** Patient has had prior or concurrent inadequate response to a therapeutic course of oral corticosteroids and/or immunosuppressants (e.g., azathioprine, 6-mercaptopurine) as confirmed by claims history or submitted medical records

**OR**

**4.2.1.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ulcerative colitis as confirmed by claims history or submission of medical records [e.g., adalimumab, ustekinumab, Xeljanz (tofacitinib), Rinvoq (upadacitinib)]

**AND**

**4.2.2** ONE of the following:

- Failure to one of the following as confirmed by claims history or submitted medical records: One of the preferred adalimumab products\*, One of the preferred ustekinumab products\*

### Guideline Note:

|                 |           |
|-----------------|-----------|
| Effective Date: | 10/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Skyrizi |                       |
| Diagnosis            | Plaque Psoriasis      |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

## **Approval Criteria**

**1** - Diagnosis of moderate to severe plaque psoriasis

**AND**

**2** - Patient is NOT receiving Skyrizi in combination with another targeted immunomodulator [e.g., adalimumab, Bimzelx (bimekizumab-bkzx), Cimzia (certolizumab), Cosentyx (secukinumab), Enbrel (etanercept), Ilumya (tildrakizumab), Otezla (apremilast), Siliq (brodalumab), Sotyktu (deucravacitinib), Taltz (ixekizumab), Tremfya (guselkumab), ustekinumab]

**AND**

**3** - Prescribed by or in consultation with a dermatologist

**AND**

**4** - One of the following:

**4.1** Patient is currently on Skyrizi therapy as confirmed by claims history or submission of medical records

**OR**

**4.2** ALL of the following:

**4.2.1** One of the following:

**4.2.1.1** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of plaque psoriasis as confirmed by claims history or submission of medical records [e.g., adalimumab, Cimzia (certolizumab), Cosentyx (secukinumab), Enbrel (etanercept), Otezla (apremilast), Sotyktu (deucravacitinib), Tremfya (guselkumab), ustekinumab]

**OR**

**4.2.1.2** All of the following:

**4.2.1.2.1** Greater than or equal to 3% body surface area involvement, palmoplantar, facial, or genital involvement, or severe scalp psoriasis

**AND**

**4.2.1.2.2** One of the following:

- Failure to ONE of the following topical therapy classes confirmed by claims history or submission of medical records: Corticosteroids (e.g., betamethasone, clobetasol, desonide), Vitamin D analogs (e.g., calcitriol, calcipotriene), Tazarotene, Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus), Anthralin, Coal tar
- History of intolerance or contraindication to ALL of the following topical therapies classes (please specify intolerance or contraindication): Corticosteroids (e.g., betamethasone, clobetasol, desonide), Vitamin D analogs (e.g., calcitriol, calcipotriene), Tazarotene, Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus), Anthralin, Coal tar

**AND**

**4.2.1.2.3** One of the following:

- Failure to a 3 month trial of methotrexate at maximally indicated dose confirmed by claims history or submission of medical records
- History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)

**AND**

**4.2.2** One of the following:

**4.2.2.1** Failure to TWO of the following preferred\* products, confirmed by claims history or submitted medical records:

- One of the preferred adalimumab products
- Enbrel (etanercept)
- One of the preferred ustekinumab products

**OR**

**4.2.2.2** History of intolerance or contraindication to ALL of the following preferred\* products (please specify intolerance or contraindication):

- One of the preferred adalimumab products
- Enbrel (etanercept)
- One of the preferred ustekinumab products

**AND**

**4.2.3** One of the following:

- Failure to Cosentyx (secukinumab) confirmed by claims history or submission of medical records
- History of intolerance or contraindication to Cosentyx (secukinumab) (please specify intolerance or contraindication)

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Sotyktu |                       |
| Diagnosis            | Plaque Psoriasis      |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

## **Approval Criteria**

**1** - Diagnosis of moderate to severe plaque psoriasis

**AND**

**2** - ONE of the following:

**2.1** ALL of the following:

**2.1.1** Greater than or equal to 3% body surface area involvement, palmoplantar, facial, or genital involvement, or severe scalp psoriasis

**AND**

**2.1.2** ONE of the following:

**2.1.2.1** Failure to ONE of the following topical therapy classes confirmed by claims history or submission of medical records:

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Anthralin
- Coal tar

**OR**

**2.1.2.2** History of intolerance or contraindication to ALL of the following topical therapy classes (please specify intolerance or contraindication):

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Anthralin
- Coal tar

**AND**

**2.1.3** ONE of the following:

**2.1.3.1** Failure to a 3 month trial of methotrexate at the maximally indicated dose confirmed by claims history or submission of medical records

**OR**

**2.1.3.2** History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of plaque psoriasis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), adalimumab, Otezla (apremilast), Skyrizi (risankizumab-rzaa), ustekinumab, Tremfya (guselkumab)]

**AND**

**3** - ONE of the following:

**3.1** Patient is currently on Sotyktu therapy as confirmed by claims history or submission of medical records

**OR**

**3.2** BOTH of the following:

**3.2.1** ONE of the following:

**3.2.1.1** Failure to ALL of the following preferred products confirmed by claims history or submission of medical records:

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

**OR**

**3.2.1.2** History of intolerance or contraindication to ALL of the following preferred products (please specify intolerance or contraindication):

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

**AND**

**3.2.2** ONE of the following:

**3.2.2.1** Failure to Cosentyx (secukinumab) confirmed by claims history or submission of medical records

**OR**

**3.2.2.2** History of intolerance or contraindication to Cosentyx (secukinumab) (please specify intolerance or contraindication)

**AND**

**4** - Patient is NOT receiving Sotyktu in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Siliq (brodalumab), Ilumya (tildrakizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**5** - Prescribed by or in consultation with a dermatologist

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 8/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                         |                       |
|-------------------------|-----------------------|
| Product Name:Spevigo SC |                       |
| Approval Length         | 12 month(s)           |
| Therapy Stage           | Initial Authorization |
| Guideline Type          | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of generalized pustular psoriasis (GPP) based on BOTH of the following:

**1.1** Presence of primary, sterile, macroscopically visible pustules on erythematous

**AND**

**1.2** Pustulation is NOT restricted to the acral region or within psoriatic plaques

**AND**

**2** - BOTH of the following:

- Used to prevent GPP flares
- Patient is NOT currently experiencing a GPP flare

**AND**

**3** - ONE of the following:

**3.1** Patient has been established on therapy with Spevigo for GPP under an active UnitedHealthcare medical benefit prior authorization

**OR**

**3.2** Patient is currently on Spevigo therapy for GPP as documented by claims history or submission of medical records

**AND**

**4** - Patient is NOT receiving Spevigo in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), ustekinumab, Skyrizi (risankizumab)] for treatment of the same indication

**AND**

**5** - Prescribed by a dermatologist

Product Name:Spevigo SC

|                 |             |
|-----------------|-------------|
| Approval Length | 12 month(s) |
|-----------------|-------------|

|               |                 |
|---------------|-----------------|
| Therapy Stage | Reauthorization |
|---------------|-----------------|

|                |                     |
|----------------|---------------------|
| Guideline Type | Prior Authorization |
|----------------|---------------------|

### Approval Criteria

**1** - Documentation of positive clinical response to therapy [e.g., preventing flares, reducing frequency of flares, prolonging time between flares, controlling signs and symptoms of GPP (e.g. pustules, erythema, pain, itching) between flares]

**AND**

**2** - Reduction in the utilization of therapy (e.g., intravenous Spevigo) used for GPP flares

**AND**

**3** - Patient is NOT receiving Spevigo in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), ustekinumab, Skyrizi (risankizumab)] for treatment of the same indication

**AND**

**4** - Prescribed by a dermatologist

## 2 . Revision History

UnitedHealthcare Community Plan of New Jersey – Clinical Pharmacy Guidelines

| Date      | Notes                                                                                                                                                                    |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7/10/2025 | Revised diagnostic criteria per consensus guidelines. Updated combination use language. Removed date and duration requirement for patients currently on Spevigo therapy. |

| Guideline Type                                                                                                                                                                                                                                    | Prior Authorization                             |
| <b>Approval Criteria</b><br><br>1 - Diagnosis of major depressive disorder (treatment-resistant), according to the current Diagnostic and Statistical Manual of Mental Disorders (DSM) (i.e., DSM-5-TR) criteria, by a mental health professional |                                                 |

**AND**

**2** - Submission of medical records (e.g., chart notes, laboratory values) documenting baseline scoring (prior to starting Spravato) on at least ONE of the following clinical assessments has been completed:<sup>^</sup>

- Beck Depression Inventory (BDI)
- Hamilton Rating Scale for Depression (HAM-D)
- Montgomery-Asberg Depression Rating Scale (MADRS)
- 9-item Patient Health Questionnaire (PHQ-9)
- Quick Inventory of Depressive Symptomatology (QIDS)

**AND**

**3** - History of failure of a trial of at least TWO different antidepressant medications or treatment regimens for a duration of at least 3 weeks each, confirmed by claims history or submitted medical records. An antidepressant or treatment regimen would include any of the following classes or combinations:<sup>^</sup>

- Selective serotonin reuptake inhibitors (e.g., citalopram, fluoxetine, paroxetine, sertraline)
- Serotonin norepinephrine reuptake inhibitors (e.g., duloxetine, venlafaxine, etc.)
- Bupropion
- Tricyclic antidepressants (e.g., amitriptyline, clomipramine, nortriptyline, etc.)
- Mirtazapine
- Monoamine oxidase inhibitors (e.g., selegiline, tranylcypromine, etc.)
- Serotonin modulators (e.g., nefazodone, trazodone, etc.)
- Augmentation with antipsychotics, lithium, or thyroid hormone

**AND**

**4** - Provider and/or the provider's healthcare setting is certified in the Spravato REMS (Risk Evaluation and Mitigation Strategy) program

| 4/9/2025 | Revised options for clinical assessments to reflect different item versions of the same scale as well as added BDI. Removed requirement for combination with oral antidepressant for TRD per updated label. Revised coverage criteria for TRD to require history of failure of a trial of at least two different antidepressant medications or treatment regimens, removed reference to current depressive episode, and removed augmentation with anticonvulsants as a treatment regimen based on latest clinical evidence. |

| Guideline Type           | Prior Authorization                   |
| <b>Approval Criteria</b> |                                       |

**1 - Diagnosis of gastrointestinal stromal tumor (GIST)**

**AND**

**2 - Disease is one of the following:**

- Gross residual (R2 resection)
- Unresectable primary
- Tumor rupture
- Recurrent/metastatic

**AND**

**3 - One of the following:**

**3.1 SDH-deficient GIST**

**OR**

**3.2 History of disease progression on BOTH of the following as confirmed by claims history or submission of medical records:**

**3.2.1 Imatinib mesylate (generic Gleevec)**

**AND**

**3.2.2 One of the following:**

- sunitinib malate (generic Sutent)
- Qinlock (ripretinib)

## 1 . Criteria

|                       |                       |
|-----------------------|-----------------------|
| Product Name:Strensiq |                       |
| Approval Length       | 6 month(s)            |
| Therapy Stage         | Initial Authorization |
| Guideline Type        | Prior Authorization   |
|                       |                       |

## **Approval Criteria**

**1** - Diagnosis of perinatal/infantile or juvenile-onset hypophosphatasia based on ALL of the following:

**1.1** ONE of the following:

**1.1.1** Onset of clinical signs and symptoms of hypophosphatasia prior to age 18 years (e.g., respiratory insufficiency, vitamin B6 responsive seizures, hypotonia, failure to thrive, delayed walking, waddling gait, dental abnormalities, low trauma fractures)

**OR**

**1.1.2** Radiographic evidence supporting the diagnosis of hypophosphatasia at the age of onset prior to age 18 years (e.g., craniosynostosis, infantile rickets, non-traumatic fractures)

**AND**

**1.2** ONE of the following:

**1.2.1** BOTH of the following:

**1.2.1.1** Patient has low level activity of serum alkaline phosphatase (ALP) evidenced by an ALP level below the age and gender-adjusted normal range

**AND**

**1.2.1.2** Patient has an elevated level of tissue non-specific alkaline phosphatase (TNSALP) substrate [e.g., serum pyridoxal 5'-phosphate (PLP) level, serum or urine phosphoethanolamine (PEA) level, urinary inorganic pyrophosphate (PPi level)]

**OR**

**1.2.2** Confirmation of tissue-nonspecific alkaline phosphatase (TNSALP) gene mutation by ALPL genomic DNA (deoxyribonucleic acid) testing\*

**AND**

**2** - Prescribed by ONE of the following:

- Endocrinologist
- A specialist experienced in the treatment of metabolic bone disorders

**AND**

**3 - ONE of the following:**

**3.1 BOTH of the following:**

**3.1.1** Diagnosis of perinatal/infantile-onset hypophosphatasia

**AND**

**3.1.2** Request does not exceed a maximum supply limit of 9 mg/kg/week (milligrams/kilogram/week)

**OR**

**3.2 BOTH of the following:**

**3.2.1** Diagnosis of juvenile-onset hypophosphatasia

**AND**

**3.2.2** Request does not exceed a maximum supply limit of 6 mg/kg/week

**AND**

**4 - ONE of the following:**

**4.1** Patient is prescribed Strensiq 18 mg/0.45 mL (milliliter), Strensiq 28 mg/0.7 mL, or Strensiq 40 mg/mL vials

**OR**

**4.2 BOTH of the following:**

**4.2.1** Patient is prescribed Strensiq 80 mg/0.8 mL vial

**AND**

**4.2.2** Patient's weight is greater than or equal to 40 kg

|       |                                                                                                                                                                                                                                                       |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Notes | *Results of prior genetic testing can be submitted as confirmation of diagnosis of HPP, however please note that the provider should confirm coverage status of any new genetic testing under the patient's United Healthcare plan prior to ordering. |

|-----------------|----------|
| Effective Date: | 6/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Grastek |                       |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

### **Approval Criteria**

**1** - Diagnosis of moderate to severe grass pollen-induced allergic rhinitis defined by symptoms severe enough to interfere with quality of life (e.g., sleep disturbances; impairment of daily, sport, or leisure activities; impairment of school or work performance)

**AND**

**2** - Diagnosis confirmed by ONE of the following:

**2.1** Positive skin test to Timothy grass or cross-reactive grass pollens (e.g., Sweet Vernal, Orchard/Cocksfoot, Perennial Rye, Kentucky blue/June grass, Meadow Fescue, or Redtop)

**OR**

**2.2** In vitro testing for pollen-specific IgE (immunoglobulin E) antibodies for Timothy grass or cross-reactive grass pollens (e.g., Sweet Vernal, Orchard/Cocksfoot, Perennial Rye, Kentucky blue/June grass, Meadow Fescue, or Redtop)

**AND**

**3** - Treatment is started or will be started at least 12 weeks before the beginning of the grass pollen season

**AND**

**4** - ONE of the following:

**4.1** Failure to TWO of the following as confirmed by claims history or submission of medical records:

- oral antihistamine [e.g., cetirizine (Zyrtec)]
- intranasal antihistamine [e.g., azelastine (Astelin)]
- intranasal corticosteroid [e.g., fluticasone (Flonase)]
- leukotriene inhibitor [e.g., montelukast (Singulair)]

**OR**

**4.2** History of contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

- oral antihistamine [e.g., cetirizine (Zyrtec)]
- intranasal antihistamine [e.g., azelastine (Astelin)]
- intranasal corticosteroid [e.g., fluticasone (Flonase)]
- leukotriene inhibitor [e.g., montelukast (Singulair)]

**AND**

**5** - Not received in combination with similar cross-reactive grass pollen immunotherapy (e.g., Oralair)

**AND**

**6** - Patient does not have unstable and/or uncontrolled asthma

**AND**

**7** - Prescribed by or in consultation with a specialist in allergy and immunology

**Approval Criteria**

**1 - Diagnosis of moderate to severe short ragweed pollen-induced allergic rhinitis defined by symptoms severe enough to interfere with quality of life (e.g., sleep disturbances; impairment of daily, sport, or leisure activities; impairment of school or work performance)**

**AND**

**2 - Diagnosis confirmed by ONE of the following:**

- Positive skin test to short ragweed pollen
- In vitro testing for pollen-specific IgE (immunoglobulin E) antibodies for short ragweed pollen

**AND**

**3 - Treatment is started or will be started at least 12 weeks before the beginning of the short ragweed pollen season**

**AND**

**4 - ONE of the following:**

**4.1 Failure to TWO of the following as confirmed by claims history or submission of medical records:**

- oral antihistamine [e.g., cetirizine (Zyrtec)]
- intranasal antihistamine [e.g., azelastine (Astelin)]
- intranasal corticosteroid [e.g., fluticasone (Flonase)]

- leukotriene inhibitor [e.g., montelukast (Singulair)]

## **Approval Criteria**

**1** - Diagnosis of house dust mite (HDM)-induced allergic rhinitis

**AND**

**2** - Diagnosis confirmed by ONE of the following:

- Positive skin test to licensed house dust mite allergen extracts
- In vitro testing for IgE (immunoglobulin E) antibodies to *Dermatophagoides farinae* or *Dermatophagoides pteronyssinus* house dust mites

**AND**

**3** - ONE of the following:

**3.1** Failure to TWO of the following as confirmed by claims history or submission of medical records:

- oral antihistamine [e.g., cetirizine (Zyrtec)]
- intranasal antihistamine [e.g., azelastine (Astelin)]
- intranasal corticosteroid [e.g., fluticasone (Flonase)]
- leukotriene inhibitor [e.g., montelukast (Singulair)]

**OR**

**3.2** History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

- oral antihistamine [e.g., cetirizine (Zyrtec)]
- intranasal antihistamine [e.g., azelastine (Astelin)]
- intranasal corticosteroid [e.g., fluticasone (Flonase)]
- leukotriene inhibitor [e.g., montelukast (Singulair)]

**AND**

**4** - Patient does not have unstable and/or uncontrolled asthma

**AND**

**5** - Prescribed by or in consultation with a specialist in allergy and immunology

| Effective Date: | 12/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                     |                       |
|---------------------|-----------------------|
| Product Name:Sunosi |                       |
| Diagnosis           | Narcolepsy            |
| Approval Length     | 12 month(s)           |
| Therapy Stage       | Initial Authorization |
| Guideline Type      | Prior Authorization   |

## **Approval Criteria**

**1** - Submission of medical records (e.g., chart notes, lab values) documenting a diagnosis of narcolepsy with BOTH of the following:

**1.1** The patient has daily periods of irrepressible need to sleep or daytime lapses into sleep occurring for at least three months.

**AND**

**1.2** A mean sleep latency of less than or equal to 8 minutes and two or more sleep onset rapid eye movement (REM) periods (SOREMPs) are found on a multiple sleep latency test (MSLT) performed according to standard techniques following a normal overnight polysomnogram. A SOREMP (within 15 minutes of sleep onset) on the preceding nocturnal polysomnogram may replace one of the SOREMPs on the MSLT.

**AND**

**2** - Physician attestation that other causes of sleepiness have been ruled out or treated (including but not limited to obstructive sleep apnea, insufficient sleep syndrome, shift work, the effects of substances or medications or their withdrawal, sleep phase disorder, or other sleep disorders)

**AND**

**3** - ONE of the following:

**3.1** Failure to BOTH of the following as confirmed by claims history or submission of medical records:

**3.1.1** ONE of the following:

- Amphetamine based stimulant (e.g., amphetamine, dextroamphetamine)
- Methylphenidate based stimulant

**AND**

**3.1.2** ONE of the following:

- Modafinil (generic Provigil)
- Armodafinil (generic Nuvigil)

**OR**

**3.2** History of contraindication or intolerance to ALL of the following drugs or classes (please specify contraindication or intolerance):

- Amphetamine based stimulant (e.g., amphetamine, dextroamphetamine)
- Methylphenidate based stimulant
- Modafinil (generic Provigil)
- Armodafinil (generic Nuvigil)

**AND**

**4** - Prescribed by ONE of the following:

- Neurologist
- Psychiatrist
- Sleep Medicine Specialist
- Pulmonologist

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Submission of medical records (e.g., chart notes, lab values) documenting a diagnosis of obstructive sleep apnea with <b>ONE</b> of the following:</p> <p><b>1.1</b> Fifteen or more obstructive respiratory events per hour of sleep confirmed by a sleep study</p> <p style="text-align: center;"><b>OR</b></p> <p><b>1.2</b> BOTH of the following:</p> <p><b>1.2.1</b> Five or more obstructive respiratory events per hour of sleep confirmed by a sleep study</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.2.2</b> ONE or more of the following signs/symptoms are present:</p> <ul style="list-style-type: none"> <li>• Daytime sleepiness</li> <li>• Nonrestorative sleep</li> <li>• Fatigue</li> <li>• Insomnia</li> <li>• Waking up with breath holding, gasping, or choking</li> <li>• Habitual snoring noted by bed partner or other observer</li> <li>• Observed apnea</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - BOTH of the following:</p> <p><b>2.1</b> Standard treatments for the underlying airway obstruction [e.g., continuous positive airway pressure (CPAP), bi-level positive airway pressure (BiPAP)] have been used for one month or longer</p> |                       |

**AND**

**2.2** Patient is fully compliant with ongoing treatment(s) for the underlying airway obstruction

**AND**

**3** - ONE of the following:

**3.1** Failure to ONE of the following as confirmed by claims history or submission of medical records:

- Modafinil (generic Provigil)
- Armodafinil (generic Nuvigil)

**OR**

**3.2** History of contraindication or intolerance to BOTH of the following (please specify contraindication or intolerance):

- Modafinil (generic Provigil)
- Armodafinil (generic Nuvigil)

**AND**

**4** - Prescribed by ONE of the following:

- Neurologist
- Psychiatrist
- Sleep Medicine Specialist
- Pulmonologist

| Effective Date: | 9/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                       |                       |
|-----------------------|-----------------------|
| Product Name: Symdeko |                       |
| Approval Length       | 12 month(s)           |
| Therapy Stage         | Initial Authorization |
| Guideline Type        | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of cystic fibrosis (CF)

**AND**

**2** - Submission of laboratory result documenting ONE of the following:

**2.1** The patient is homozygous for the F508del mutation in the cystic fibrosis transmembrane conductance regulator (CFTR) gene

**OR**

**2.2** The patient has at least ONE mutation in the CFTR gene that is responsive to Symdeko (See Table in Background Section)

**AND**

**3** - Prescribed by, or in consultation with, a provider who specializes in the treatment of CF

|                                                                                                                                                                       |                     |

### Guideline Note:

|                 |           |
|-----------------|-----------|
| Effective Date: | 12/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                       |                     |
|-----------------------|---------------------|
| Product Name:Synagis* |                     |
| Diagnosis             | Prematurity         |
| Guideline Type        | Prior Authorization |

**Approval Criteria**

**1** - BOTH of the following:

**1.1** Patient is an infant born before 29 weeks, 0 days gestation

**AND**

**1.2** Patient is less than 12 months of age at the start of RSV “season”

**AND**

**2** - Administered during RSV season\*\*

**AND**

**3** - Monthly dose of Synagis does not exceed 15 milligram per kilogram per dose

**AND**

**4** - Dosage of Synagis does not exceed 5 monthly doses per single RSV “season”\*\*\*

**AND**

**5** - Patient has not previously received treatment with Beyfortus (nirsevimab-alip) or Enflonsia (clesrovimab-cfor) during or entering the current RSV “season”

**AND**

**6** - Synagis is not being requested for any of the following situations alone:

- Infants and children with hemodynamically insignificant heart disease (e.g., secundum atrial septal defect, small ventricular septal defect, pulmonic stenosis, uncomplicated aortic stenosis, mild coarctation of the aorta, and patent ductus arteriosus)
- Infants with congenital heart disease and cardiac lesions adequately corrected by surgery, unless they continue to require medication for congestive heart failure
- Infants with cardiomyopathy sufficiently mild that they do not require pharmacotherapy
- Routine use of prophylaxis in children with Down syndrome [unless qualifying heart disease, CLD, airway clearance issues (the inability to clear secretions from the upper airway because of ineffective cough), or prematurity (less than 29 weeks, 0 days gestation) is present]
- Routine use of prophylaxis in children with cystic fibrosis (unless indications noted in proven indications above are present)
- Prophylaxis for primary asthma prevention or to reduce subsequent episodes of wheezing in infants and children
- Synagis prophylaxis for prevention of nosocomial disease

**AND**

**7 - The request is NOT for one of the following:**

- Administration of monthly Synagis prophylaxis after an infant or child has experienced a breakthrough RSV hospitalization during the current season if child had met criteria for palivizumab
- Treatment of symptomatic RSV disease

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Notes | <p>*Approval for up to 5 doses per single RSV “season.”</p> <p>**Information regarding RSV season may be found at:</p> <ul style="list-style-type: none"> <li>• Centers for Disease and Prevention (CDC) surveillance reports: <a href="https://www.cdc.gov/nrevss/php/dashboard/index.html">https://www.cdc.gov/nrevss/php/dashboard/index.html</a></li> </ul> <p>***Infants in a neonatal intensive care unit who qualify for prophylaxis may receive the first dose 48 to 72 hours before discharge to home or promptly after discharge. If the first dose is administered in the hospital, this dose will be considered the first dose of the maximum 5 dose series for the season. Any subsequent doses received in the hospital setting, are also considered as part of the maximum 5 dose series. For infants born during the RSV “season,” fewer than 5 monthly doses may be needed.</p> |

| Product Name: Synagis* |                            |
| Diagnosis              | Chronic Lung Disease (CLD) |
| Guideline Type         | Prior Authorization        |

**Approval Criteria**

**1 - ONE of the following:**

**1.1 ALL of the following for patients age 0 to less than 12 months:**

**1.1.1** The patient is a preterm infant defined as gestational age less than 32 weeks, 0 days

**AND**

**1.1.2** Patient has developed chronic lung disease (CLD) of prematurity

**AND**

**1.1.3** There was a requirement for greater than 21% oxygen for at least the first 28 days after birth

**OR**

**1.2 ALL of the following for patients age greater than or equal to 12 months to less than 24 months:**

**1.2.1** The patient was born at less than 32 weeks, 0 days gestation

**AND**

**1.2.2** The patient required at least 28 days of oxygen after birth

**AND**

**1.2.3** The patient continues to require supplemental oxygen, diuretics, or chronic systemic corticosteroid therapy within 6 months of the start of the second RSV “season”

**AND**

**2** - Administered during RSV season\*\*

**AND**

**3** - Monthly dose of Synagis does not exceed 15 milligram per kilogram per dose

**AND**

**4** - Dosage of Synagis does not exceed 5 monthly doses per single RSV “season”\*\*\*

**AND**

**5** - Patient has not previously received treatment with Beyfortus (nirsevimab-alip) or Enflonia (clesrovimab-cfor) during or entering the current RSV “season”

**AND**

**6** - Synagis is not being requested for any of the following situations alone:

- Infants and children with hemodynamically insignificant heart disease (e.g., secundum atrial septal defect, small ventricular septal defect, pulmonic stenosis, uncomplicated aortic stenosis, mild coarctation of the aorta, and patent ductus arteriosus)
- Infants with congenital heart disease and cardiac lesions adequately corrected by surgery, unless they continue to require medication for congestive heart failure

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Prior Authorization            |
| <p><b>Approval Criteria</b></p> <p>1 - ONE of the following:</p> <p>1.1 ONE of the following for patients age 0 to less than 12 months:</p> <p>1.1.1 Patient has hemodynamically significant congenital heart disease (CHD) including ONE of the following:</p> <ul style="list-style-type: none"> <li>Acyanotic heart disease and receiving medication to control congestive heart failure and will require cardiac surgical procedures</li> <li>Moderate to severe pulmonary hypertension</li> <li>Documentation that decisions regarding prophylaxis for infants with cyanotic heart defects were made in consultation with a pediatric cardiologist</li> </ul> <p style="text-align: center;"><b>OR</b></p> <p>1.1.2 The patient is undergoing cardiac transplantation during the RSV “season”</p> |                                |

**OR**

**1.2** BOTH of the following:

**1.2.1** The patient is greater than or equal to 12 months to less than 24 months of age

**AND**

**1.2.2** ONE of the following:

- After cardiac bypass
- At the conclusion of extracorporeal membrane oxygenation
- The patient is undergoing cardiac transplantation during the RSV “season”

**AND**

**2** - Administered during RSV season\*\*

**AND**

**3** - Monthly dose of Synagis does not exceed 15 milligram per kilogram per dose

**AND**

**4** - Dosage of Synagis does not exceed 5 monthly doses per single RSV “season”\*\*\*

**AND**

**5** - Patient has not previously received treatment with Beyfortus (nirsevimab-alip) or Enflonsia (clesrovimab-cfor) during or entering the current RSV “season”

**AND**

**6 - Synagis is not being requested for any of the following situations alone:**

- Infants and children with hemodynamically insignificant heart disease (e.g., secundum atrial septal defect, small ventricular septal defect, pulmonic stenosis, uncomplicated aortic stenosis, mild coarctation of the aorta, and patent ductus arteriosus)
- Infants with congenital heart disease and cardiac lesions adequately corrected by surgery, unless they continue to require medication for congestive heart failure
- Infants with cardiomyopathy sufficiently mild that they do not require pharmacotherapy
- Routine use of prophylaxis in children with Down syndrome [unless qualifying heart disease, CLD, airway clearance issues (the inability to clear secretions from the upper airway because of ineffective cough), or prematurity (less than 29 weeks, 0 days gestation) is present]
- Routine use of prophylaxis in children with cystic fibrosis (unless indications noted in proven indications above are present)
- Prophylaxis for primary asthma prevention or to reduce subsequent episodes of wheezing in infants and children
- Synagis prophylaxis for prevention of nosocomial disease

**AND**

**7 - The request is NOT for one of the following:**

- Administration of monthly Synagis prophylaxis after an infant or child has experienced a breakthrough RSV hospitalization during the current season if child had met criteria for palivizumab
- Treatment of symptomatic RSV disease

|                        |                                                       |
|------------------------|-------------------------------------------------------|
| Product Name: Synagis* |                                                       |
| Diagnosis              | Immunocompromised children less than 24 months of age |
| Guideline Type         | Prior Authorization                                   |

**Approval Criteria**

**1** - BOTH of the following:

**1.1** Patient is less than 24 months of age

**AND**

**1.2** The patient is immunocompromised (e.g. receiving cancer chemotherapy, undergoing hematopoietic stem cell transplantation, or solid organ transplantation)

**AND**

**2** - Administered during RSV season\*\*

**AND**

**3** - Monthly dose of Synagis does not exceed 15 milligram per kilogram per dose

**AND**

**4** - Dosage of Synagis does not exceed 5 monthly doses per single RSV “season”\*\*\*

**AND**

**5** - Patient has not previously received treatment with Beyfortus (nirsevimab-alip) or Enflonsia (clesrovimab-cfor) during or entering the current RSV “season”

**AND**

**6** - Synagis is not being requested for any of the following situations alone:

- Infants and children with hemodynamically insignificant heart disease (e.g., secundum atrial septal defect, small ventricular septal defect, pulmonic stenosis, uncomplicated aortic stenosis, mild coarctation of the aorta, and patent ductus arteriosus)
- Infants with congenital heart disease and cardiac lesions adequately corrected by surgery, unless they continue to require medication for congestive heart failure
- Infants with cardiomyopathy sufficiently mild that they do not require pharmacotherapy
- Routine use of prophylaxis in children with Down syndrome [unless qualifying heart disease, CLD, airway clearance issues (the inability to clear secretions from the upper airway because of ineffective cough), or prematurity (less than 29 weeks, 0 days gestation) is present]
- Routine use of prophylaxis in children with cystic fibrosis (unless indications noted in proven indications above are present)
- Prophylaxis for primary asthma prevention or to reduce subsequent episodes of wheezing in infants and children
- Synagis prophylaxis for prevention of nosocomial disease

**AND**

**7 - The request is NOT for one of the following:**

- Administration of monthly Synagis prophylaxis after an infant or child has experienced a breakthrough RSV hospitalization during the current season if child had met criteria for palivizumab
- Treatment of symptomatic RSV disease

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

### **Approval Criteria**

**1** - ONE of the following:

**1.1** BOTH of the following for patients age 0 to less than 12 months:

**1.1.1** Patient has cystic fibrosis

**AND**

**1.1.2** Patient has clinical evidence of at least ONE of the following:

- Chronic lung disease (CLD)
- Nutritional compromise
- Failure to thrive defined as weight for length less than the 10th percentile on a pediatric growth chart

**OR**

**1.2** BOTH of the following:

**1.2.1** Patient is greater than or equal to 12 months to less than 24 months of age

**AND**

**1.2.2** Patient has manifestations of severe lung disease including ONE of the following:

- Previous hospitalization for pulmonary exacerbation in the first year of life
- Abnormalities on chest radiography or chest computed tomography that persists when stable
- Weight for length less than the 10th percentile on a pediatric growth chart

**AND**

**2** - Administered during RSV season\*\*

**AND**

**3** - Monthly dose of Synagis does not exceed 15 milligram per kilogram per dose

**AND**

**4** - Dosage of Synagis does not exceed 5 monthly doses per single RSV “season”\*\*\*

**AND**

**5** - Patient has not previously received treatment with Beyfortus (nirsevimab-alip) or Enflonsia (clesrovimab-cfor) during or entering the current RSV “season”

## 2 . Background

| Benefit/Coverage/Program Information                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Additional Information</b></p> <p>Because the timing of the onset, peak, and decline of RSV activity might vary geographically, providers can adjust administration schedules based on local epidemiology. RSV seasonality in tropical climates (including southern Florida, Guam, Hawaii, Puerto Rico, U.S.-affiliated Pacific Islands, and U.S. Virgin Islands) might differ from that of most of the continental United States or be unpredictable. In Alaska, RSV seasonality is less predictable, and the duration of RSV activity is often longer than the national average duration.</p> <p>For analysis of National Respiratory and Enteric Virus Surveillance System (NREVSS) reports in the CDC Morbidity and Mortality Weekly Report, season onset is defined as the first of 2 consecutive weeks during which the mean percentage of specimens testing positive for RSV antigen is <math>\geq 10\%</math> or the mean percentage of specimens testing positive for RSV by PCR is <math>\geq 3\%</math>, whichever occurs first. RSV “season” offset is defined as the last week during which the mean percentage of positive specimens by antigen is <math>\geq 10\%</math>, or the mean percentage of positive specimens by PCR is <math>\geq 3\%</math>, whichever occurs last. Use of specimens</p> |

to determine the start of the RSV “season” requires that the number of specimens tested be statistically significant.

### Approval Criteria

1 - Diagnosis of BRAF V600E-mutated gastrointestinal stromal tumor (GIST)

**AND**

2 - Disease is ONE of the following:

- Gross residual disease (R2 resection)
- Unresectable primary disease
- Tumor rupture
- Progressive
- Recurrent
- Metastatic

**AND**

3 - Used in combination with Mekinist (trametinib)

**AND**

4 - If the request is for Tafenlar tablets for oral solution, there is a reason or special circumstance why the patient is unable to use Tafenlar capsules (document reason or special circumstance)

**AND**

**2** - Disease is positive for at least ONE of the following EGFR mutations:

- Exon 19
- Exon 21 L858R
- S768I
- L861Q
- G719X
- T790M

**AND**

**3** - One of the following:

**3.1** All of the following:

- disease is stage IB, II, IIIA, or IIIB (T3, N2)
- Patient has undergone complete resection
- Patient has received previous adjuvant chemotherapy or ineligible to receive platinum-based chemotherapy

**OR**

**3.2** All of the following:

- Disease is stage II-III
- Disease is locally advanced or unresectable
- No disease progression during or following concurrent or sequential chemoradiation

**OR**

**3.3** Disease is recurrent, advanced, or metastatic

| Effective Date: | 6/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                       |                       |
|-----------------------|-----------------------|
| Product Name:Takhzyro |                       |
| Therapy Stage         | Initial Authorization |
| Guideline Type        | Prior Authorization   |
|                       |                       |

## **Approval Criteria**

**1** - Diagnosis of hereditary angioedema (HAE) as confirmed by ONE of the following:

**1.1** C1 inhibitor (C1-INH) deficiency or dysfunction (Type I or II HAE) as documented by ONE of the following (per laboratory standard):

- C1-INH antigenic level below the lower limit of normal
- C1-INH functional level below the lower limit of normal

**OR**

**1.2** HAE with normal C1 inhibitor levels and ONE of the following:

**1.2.1** Confirmed presence variant(s) in the gene(s) for factor XII, angiotensin-1, plasminogen-1, kininogen-1, myoferlin, and heparan sulfate-glucosamine 3-O-sulfotransferase 6

**OR**

**1.2.2** Recurring angioedema attacks that are refractory to high-dose antihistamines with confirmed family history of angioedema

**OR**

**1.2.3** Recurring angioedema attacks that are refractory to high-dose antihistamines with unknown background de-novo mutation(s) (i.e., no family history) (HAE-unknown)

**AND**

**2** - BOTH of the following:

**2.1** For prophylaxis against HAE attacks

**AND**

**2.2** Not used in combination with other products indicated for prophylaxis against HAE attacks (e.g., Cinryze, Haegarda, Orladeyo)

**AND**

**3 - BOTH** of the following:

**3.1** Prescriber attests that patient has experienced attacks of a severity and/or frequency such that they would clinically benefit from prophylactic therapy with Takhzyro

**AND**

**3.2** Documentation of baseline HAE attack rate is greater than or equal to one attack per 4 weeks

**AND**

**4 - Prescribed by ONE** of the following:

- Immunologist
- Allergist

**AND**

**5 - ONE** of the following:

**5.1** Failure to Haegarda confirmed by claims history or submitted medical records

**OR**

**5.2** History of contraindication or intolerance to Haegarda (please specify intolerance or contraindication)

**OR**

**5.3** Patient is currently on Takhzyro therapy confirmed by claims history or submitted medical records

**AND**

**6** - ONE of the following:

**6.1** For adult and pediatric patients 12 years and older, Takhzyro 300 mg (milligrams) is given every 2 weeks\*

**OR**

**6.2** For pediatric patients 6 to less than 12 years of age, Takhzyro 150 mg is given every 2 weeks\*

**OR**

**6.3** For pediatric patients less than 6 years of age, Takhzyro 150 mg is given every 4 weeks\*\*

| Guideline Type                                                                                                                                                                                                                                                                                                                                      | Prior Authorization |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - Documentation of positive clinical response while on Takhzyro therapy</p> <p><b>AND</b></p> <p><b>2</b> - Reduction in the utilization of on-demand therapies used for acute attacks (e.g., Berinert, Ruconest, Firazyf, Kalbitor) as determined by claims information, while on Takhzyro therapy</p> |                     |

**AND**

**3** - Prescribed by ONE of the following:

- Immunologist
- Allergist

**AND**

**4** - BOTH of the following:

**4.1** For prophylaxis against hereditary angioedema (HAE) attacks

**AND**

**4.2** Not used in combination with other products indicated for prophylaxis against HAE attacks (e.g., Cinryze, Haegarda, Orladeyo)

**AND**

**5** - ONE of the following:

**5.1** Patient is less than 6 years of age and Takhzyro 150 mg (milligrams) is given every 4 weeks\*

**OR**

**5.2** Patient is at least 6 years of age, and BOTH of the following:

**5.2.1** Documentation of the number of acute HAE attacks in the previous 6 months, while on Takhzyro therapy

**AND**

**5.2.2** ONE of the following:

**5.2.2.1** If the patient experienced no (zero) acute HAE attacks in the previous 6 months, ONE of the following\*:

- For adult and pediatric patients 12 years of age and older, Takhzyro 300 mg is given every 4 weeks\*\*
- For pediatric patients 6 to less than 12 years of age, Takhzyro 150 mg is given every 4 weeks\*\*

**OR**

**5.2.2.2** If the patient experienced one or more HAE attacks in the previous 6 months, ONE of the following\*\*\*:

- For adult and pediatric patients 12 years of age and older, Takhzyro 300 mg is given every 2 weeks
- For pediatric patients 6 to less than 12 years of age, Takhzyro 150 mg is given every 2 weeks

|-----------------|----------|

## 1 . Criteria

|                    |                       |
|--------------------|-----------------------|
| Product Name:Taltz |                       |
| Diagnosis          | Plaque Psoriasis      |
| Approval Length    | 12 month(s)           |
| Therapy Stage      | Initial Authorization |
| Guideline Type     | Prior Authorization   |

## **Approval Criteria**

**1** - ALL of the following:

**1.1** Diagnosis of chronic moderate to severe plaque psoriasis

**AND**

**1.2** ONE of the following:

**1.2.1** ALL of the following:

**1.2.1.1** Greater than or equal to 3% body surface area involvement, palmoplantar, facial, or genital involvement, or severe scalp psoriasis

**AND**

**1.2.1.2** One of the following:

**1.2.1.2.1** Failure to ONE of the following topical therapy classes as confirmed by claims history or submission of medical records:

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Anthralin
- Coal tar

**OR**

**1.2.1.2.2** History of intolerance or contraindication to ALL of the following topical therapy classes (please specify intolerance or contraindication)

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Anthralin

- Coal tar

**AND**

**1.2.1.3** ONE of the following:

- Failure to a 3 month trial of methotrexate at the maximally indicated dose as confirmed by claims history or submission of medical records
- History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)

**OR**

**1.2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of plaque psoriasis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), adalimumab, Otezla (apremilast), Skyrizi (risankizumab-rzaa), ustekinumab, Tremfya (guselkumab)]

**AND**

**1.3** One of the following:

**1.3.1** Failure to TWO of the following preferred products, as confirmed by claims history or submission of medical records:

- One of the preferred adalimumab products^
- Enbrel (etanercept)
- One of the preferred ustekinumab products^

**OR**

**1.3.2** History of intolerance or contraindication to ALL of the following preferred products (please specify intolerance or contraindication):

- One of the preferred adalimumab products^
- Enbrel (etanercept)
- One of the preferred ustekinumab products^

**AND**

**1.4 ONE of the following:**

- Failure to Cosentyx (secukinumab) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to Cosentyx (secukinumab) (please specify contraindication or intolerance)

**AND**

**1.5** Patient is NOT receiving Taltz in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Siliq (brodalumab), Ilumya (tildrakizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**1.6** Prescribed by or in consultation with a dermatologist

**OR**

**2 - ALL of the following:**

**2.1** Patient is currently on Taltz therapy as confirmed by claims history or submission of medical records

**AND**

**2.2** Diagnosis of chronic moderate to severe plaque psoriasis

**AND**

**2.3** Patient is NOT receiving Taltz in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Siliq (brodalumab), Ilumya (tildrakizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

records [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), ustekinumab, Tremfya (guselkumab), Xeljanz/Xeljanz XR (tofacitinib), Otezla (apremilast), Skyrizi (risankizumab)]

**AND**

**1.3** One of the following:

**1.3.1** Failure to TWO of the following preferred products as confirmed by claims history or submission of medical records

- One of the preferred adalimumab products^
- Enbrel (etanercept)
- One of the preferred ustekinumab products^

**OR**

**1.3.2** History of intolerance or contraindication to ALL of the following preferred products (please specify intolerance or contraindication)

- One of the preferred adalimumab products^
- Enbrel (etanercept)
- One of the preferred ustekinumab products^

**AND**

**1.4** ONE of the following:

- Failure to Cosentyx (secukinumab) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to Cosentyx (secukinumab) (please specify contraindication or intolerance)

**AND**

**1.5** Patient is NOT receiving Taltz in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**1.6** Prescribed by or in consultation with one of the following:

- Rheumatologist
- Dermatologist

**OR**

**2** - ALL of the following:

**2.1** Patient is currently on Taltz therapy as confirmed by claims history or submission of medical records

**AND**

**2.2** Diagnosis of active psoriatic arthritis

**AND**

**2.3** Patient is NOT receiving Taltz in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**2.4** Prescribed by or in consultation with one of the following:

- Rheumatologist
- Dermatologist

## 1 . Criteria

|                                                   |                           |
|---------------------------------------------------|---------------------------|
| Product Name: Brand Targretin, generic bexarotene |                           |
| Diagnosis                                         | Cutaneous T-Cell Lymphoma |
| Approval Length                                   | 12 month(s)               |
| Therapy Stage                                     | Initial Authorization     |
| Guideline Type                                    | Prior Authorization       |

**Approval Criteria**

**1** - Diagnosis of cutaneous T-cell lymphoma (CTCL)

**AND**

**2** - ONE of the following:

**2.1** Failure to at least one prior therapy (including skin-directed therapies [e.g., corticosteroids (clobetasol, diflorasone, halobetasol, augmented betamethasone dipropionate), phototherapy, or systemic therapies [e.g., interferons]] as confirmed by claims history or submission of medical records

**OR**

**2.2** History of contraindication or intolerance to at least one prior therapy (including skin-directed therapies [e.g., corticosteroids (clobetasol, diflorasone, halobetasol, augmented betamethasone dipropionate), phototherapy, or systemic therapies [e.g., interferons]] (please specify contraindication or intolerance)

| Effective Date: | 5/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                       |                     |
|-----------------------|---------------------|
| Product Name: Tarpeyo |                     |
| Approval Length       | 9 month(s)          |
| Guideline Type        | Prior Authorization |

**Approval Criteria**

**1** - Diagnosis of primary immunoglobulin A nephropathy (IgAN) confirmed by renal biopsy

**AND**

**2** - Patient is at risk for disease progression

**AND**

**3** - Used to reduce the loss of kidney function

**AND**

**4** - Estimated glomerular filtration rate (eGFR) greater than or equal to 35 mL/min/1.73 m<sup>2</sup> (milliliters/minute/1.73 square meters)

**AND**

**5** - ONE of the following:

**5.1** Patient is on a stabilized dose and receiving concomitant therapy with ONE of the following, as confirmed by claims history or submitted medical records:

- Maximally tolerated angiotensin converting enzyme (ACE) inhibitor (e.g., captopril, enalapril)
- Maximally tolerated angiotensin II receptor blocker (ARB) (e.g., candesartan, valsartan)

**OR**

**5.2** Patient has an allergy, contraindication, or intolerance to ACE inhibitors and ARBs (please specify allergy, contraindication, or intolerance)

**AND**

**6** - ONE of the following:

**6.1** Failure of ONE 30-day trial of a glucocorticoid (e.g., methylprednisolone, prednisone) confirmed by claims history or submitted medical records

**OR**

**6.2** History of intolerance or contraindication to ONE glucocorticoid (please specify intolerance or contraindication)

**AND**

**7** - Prescribed by or in consultation with a nephrologist

## 1 . Criteria

|                        |                                       |
|------------------------|---------------------------------------|
| Product Name:Tavalisse |                                       |
| Diagnosis              | Chronic immune thrombocytopenia (ITP) |
| Approval Length        | 12 month(s)                           |
| Therapy Stage          | Initial Authorization                 |
| Guideline Type         | Prior Authorization                   |

## **Approval Criteria**

**1** - Diagnosis of chronic immune thrombocytopenia (ITP)

**AND**

**2** - ONE of the following:

**2.1** BOTH of the following:

**2.1.1** ONE of the following:

**2.1.1.1** Failure to at least ONE of the following classes confirmed by claims history or submitted medical records:

- Corticosteroids
- Immunoglobulins

**OR**

**2.1.1.2** History of contraindication or intolerance to BOTH of the following classes (please specify intolerance or contraindication):

- Corticosteroids
- Immunoglobulins

**AND**

**2.1.2** ONE of the following:

**2.1.2.1** Failure to eltrombopag (generic Promacta) confirmed by claims history or submitted medical records

**OR**

**2.1.2.2** History of contraindication or intolerance to eltrombopag (generic Promacta) (please specify intolerance or contraindication)

**OR**

**2.2** Patient is currently on Tavalisse therapy

## 1 . Criteria

|                      |                                                                           |
|----------------------|---------------------------------------------------------------------------|
| Product Name:Tegsedi |                                                                           |
| Diagnosis            | Hereditary transthyretin-mediated (hATTR) amyloidosis with polyneuropathy |
| Approval Length      | 12 month(s)                                                               |
| Therapy Stage        | Initial Authorization                                                     |
| Guideline Type       | Prior Authorization                                                       |

### **Approval Criteria**

**1** - BOTH of the following:

- Diagnosis of Hereditary transthyretin-mediated (hATTR) amyloidosis with polyneuropathy
- Documentation that the patient has a pathogenic transthyretin (TTR) mutation (e.g., V30M)

**AND**

**2** - Prescribed by or in consultation with a neurologist

**AND**

**3** - Documentation of ONE of the following:

- Patient has a baseline polyneuropathy disability (PND) score less than or equal to IIIb
- Patient has a baseline familial amyloidotic polyneuropathy (FAP) Stage 1 or 2
- Patient has a baseline neuropathy impairment (NIS) score greater than or equal to 10 and less than or equal to 130

**AND**

**4** - Patient has not had a liver transplant

**AND**

**5** - Presence of clinical signs and symptoms of the disease (e.g., peripheral sensorimotor polyneuropathy, autonomic neuropathy, motor disability, etc.)

**AND**

**6** - Patient is not receiving Tegsedi in combination with ONE of the following:

- Oligonucleotide agents [e.g., Onpattro (patisiran), Amvuttra (vutrisiran)]
- Tafamidis (e.g., Vyndaqel, Vyndamax)

| Guideline Type                                                                                                                                                                                                                                                         | Quantity Limit |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - If the patient is insulin dependent or pregnant, the physician must confirm the patient requires a greater quantity because of more frequent blood glucose testing (e.g., patients on intravenous insulin infusions)</p> |                |

**OR**

**2** - If the patient is not insulin dependent nor pregnant, **ONE** the following:

- The patient is experiencing or is prone to hypoglycemia or hyperglycemia and requires additional testing to achieve glycemic control
- The patient's physician is adjusting medications and the patient requires additional blood glucose testing during this time
- The patient's physician is adjusting MNT (medical nutrition therapy) and the patient requires additional blood glucose testing during this time
- The patient requires additional testing due to fluctuations in blood glucose due to physical activity/exercise
- Other circumstances where prescribing physician confirms that the patient requires a greater quantity because of more frequent blood glucose testing (clinical review required by UnitedHealthcare reviewing pharmacist and/or medical director)

Notes

The quantity limit for insulin-dependent and pregnant patients is 6 test strips/day. The quantity limit for non-insulin dependent and non-pregnant patients is 2 test strips/day.

## **Approval Criteria**

**1** - ONE of the following:

**1.1** TWO pre-treatment serum total testosterone levels less than 300 ng/dL (nanograms/deciliter) [less than 10.4 nmol/L (nanomoles/liter)] or less than the reference range for the lab, taken at separate times (This may require treatment to be temporarily held. Document lab value and date for both levels)

**OR**

**1.2** BOTH of the following:

**1.2.1** Patient has a condition that may cause altered sex-hormone binding globulin (SHBG) [e.g., thyroid disorder, HIV (human immunodeficiency virus) disease, liver disorder, diabetes, obesity]

**AND**

**1.2.2** ONE pre-treatment calculated free or bioavailable testosterone level less than 50 pg/mL (picograms/milliliter) (< 5 ng/dL or < 0.17 nmol/L) or less than the reference range for the lab (This may require treatment to be temporarily held. Document lab value and date)

**OR**

**1.3** Patient has a history of ONE of the following:

- Bilateral orchiectomy
- Panhypopituitarism
- A genetic disorder known to cause hypogonadism (e.g., congenital anorchia, Klinefelter's syndrome)

**AND**

**2** - Patient is NOT taking any of the following growth hormones, unless diagnosed with panhypopituitarism:

- Genotropin

- Humatrope
- Norditropin FlexPro
- Nutropin AQ
- Omnitrope
- Saizen

**AND**

**3** - Patient is NOT taking any aromatase inhibitor [e.g., Arimidex (anastrozole), Femara (letrozole), Aromasin (exemestane)]

**AND**

**4** - Patient was male at birth

**AND**

**5** - Diagnosis of hypogonadism

**AND**

**6** - ONE of the following:

- Significant reduction in weight (less than 90% ideal body weight) [e.g., AIDS (acquired immunodeficiency syndrome) wasting syndrome]
- Osteopenia
- Osteoporosis
- Decreased bone density
- Decreased libido
- Organic cause of testosterone deficiency (e.g., injury, tumor, infection, or genetic defects)

**AND**

**7** - ONE of the following:

**7.1** If the request is for a non-preferred\*\* topical testosterone (gel, solution) or testosterone transdermal systems (patches), ONE of the following:

**7.1.1** Failure to ONE of the following, confirmed by claims history or submitted medical records

- generic testosterone 1% topical gel
- testosterone 1.62% pump (generic Androgel 1.62% pump)

**OR**

**7.1.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

- generic testosterone 1% topical gel
- testosterone 1.62% pump (generic Androgel 1.62% pump)

**OR**

**7.2** If the request is for Xyosted, BOTH of the following:

**7.2.1** ONE of the following:

**7.2.1.1** Failure to testosterone cypionate injection (generic Depo-Testosterone), confirmed by claims history or submitted medical records

**OR**

**7.2.1.2** History of intolerance or contraindication to testosterone cypionate injection (generic Depo-Testosterone) (please specify intolerance or contraindication)

**AND**

**7.2.2** ONE of the following:

**7.2.2.1** Failure to intramuscular testosterone enanthate injection, confirmed by claims history or submitted medical records

**OR**

**7.2.2.2** History of intolerance or contraindication to intramuscular testosterone enanthate injection (please specify intolerance or contraindication)

**OR**

**7.3** If the request is for Jatenzo, Kyzatrex, Tlando, or Undecatrex, ONE of the following:

**7.3.1** Failure to ALL of the following:

- testosterone cypionate vials
- testosterone enanthate vials
- testosterone gel - tube, pack, or pump bottle, or testosterone 1.62% pump (generic Androgel 1.62% pump)

**OR**

**7.3.2** History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

- testosterone cypionate vials
- testosterone enanthate vials
- testosterone gel - tube, pack, or pump bottle or testosterone 1.62% pump (generic Androgel 1.62% pump)

### **Approval Criteria**

**1** - Patient is using hormones to change physical characteristics to align with gender expression

**AND**

**2** - Patient must be diagnosed with gender dysphoria, as defined by the current version of the Diagnostic and Statistical Manual of Mental Disorders (DSM)

**AND**

**3** - Patient is NOT taking any of the following growth hormones, unless diagnosed with panhypopituitarism:

- Genotropin
- Humatrope
- Norditropin FlexPro
- Nutropin AQ
- Omnitrope
- Saizen

**AND**

**4** - Patient is NOT taking any aromatase inhibitors [e.g., Arimidex (anastrozole), Femara (letrozole), Aromasin (exemestane)]

**AND**

**5** - ONE of the following:

**5.1** If the request is for a non-preferred\*\* topical testosterone (gel, solution) or testosterone transdermal systems (patches), ONE of the following:

**5.1.1** Failure to ONE of the following, confirmed by claims history or submitted medical records:

- generic testosterone 1% topical gel

- testosterone 1.62% pump (generic Androgel 1.62% pump)

**OR**

**5.1.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

- generic testosterone 1% topical gel
- testosterone 1.62% pump (generic Androgel 1.62% pump)

**OR**

**5.2** If the request is for Xyosted, BOTH of the following:

**5.2.1** ONE of the following:

**5.2.1.1** Failure to testosterone cypionate injection (generic Depo-Testosterone), confirmed by claims history or submitted medical records

**OR**

**5.2.1.2** History of intolerance or contraindication to testosterone cypionate injection (generic Depo-Testosterone) (please specify intolerance or contraindication)

**AND**

**5.2.2** ONE of the following:

**5.2.2.1** Failure to intramuscular testosterone enanthate injection, confirmed by claims history or submitted medical records

**OR**

**5.2.2.2** History of intolerance or contraindication to intramuscular testosterone enanthate injection (please specify intolerance or contraindication)

**OR**

**5.3** If the request is for Jatenzo, Kyzatrex, Tlando, or Undecatrex, ONE of the following:

**5.3.1** Failure to ALL of the following:

- testosterone cypionate vials
- testosterone enanthate vials
- testosterone gel - tube, pack, or pump bottle or testosterone 1.62% pump (generic Androgel 1.62% pump)

**OR**

**5.3.2** History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

- testosterone cypionate vials
- testosterone enanthate vials
- testosterone gel - tube, pack, or pump bottle or testosterone 1.62% pump (generic Androgel 1.62% pump)

**1.2.1** Patient has a diagnosis of ONE of the following:

- Hypogonadism
- Gender dysphoria, as defined by the current version of the Diagnostic and Statistical Manual of Mental Disorders (DSM)

**AND**

**1.2.2 ONE of the following:**

**1.2.2.1** Follow-up total serum testosterone level drawn within the past 12 months is within or below the normal male limits of the reporting lab (document value and date)

**OR**

**1.2.2.2** Follow-up total serum testosterone level drawn within the past 12 months is outside of upper male limits of normal for the reporting lab and the dose is adjusted (document value and date)

**OR**

**1.2.2.3 BOTH of the following:**

**1.2.2.3.1** Patient has a condition that may cause altered sex-hormone binding globulin (SHBG) [e.g., thyroid disorder, HIV (human immunodeficiency virus) disease, liver disorder, diabetes, obesity]

**AND**

**1.2.2.3.2 ONE of the following:**

- Follow-up calculated free or bioavailable testosterone level drawn within the past 12 months is within or below the normal male limits of the reporting lab (document lab value and date)
- Follow-up calculated free or bioavailable testosterone level drawn within the past 12 months is outside of upper male limits of normal for the reporting lab and the dose is adjusted (document value and date)

**AND**

**2 - Patient is NOT taking any of the following growth hormones, unless diagnosed with panhypopituitarism:**

- Genotropin
- Humatrope
- Norditropin FlexPro
- Nutropin AQ
- Omnitrope
- Saizen

**AND**

**3 - Patient is NOT taking any aromatase inhibitors [e.g., Arimidex (anastrozole), Femara (letrozole), Aromasin (exemestane)]**

| Effective Date: | 10/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                                          |                                                                 |
|------------------------------------------|-----------------------------------------------------------------|
| Product Name: Tezspire auto-injector pen |                                                                 |
| Diagnosis                                | Severe Asthma                                                   |
| Approval Length                          | 6 month(s)                                                      |
| Therapy Stage                            | Initial Authorization - Transitioning from UHC medical benefits |
| Guideline Type                           | Prior Authorization                                             |

**Approval Criteria**

**1** - Patient has been established on therapy with Tezspire under an active UnitedHealthcare medical benefit prior authorization for the treatment of severe asthma

**AND**

**2** - Documentation of positive clinical response to Tezspire therapy as demonstrated by at least ONE of the following:

**2.1** Reduction in the frequency of exacerbations

**OR**

**2.2** Decreased utilization of rescue medications

**OR**

**2.3** Increase in percent predicted FEV1 (forced expiratory volume in 1 second) from pretreatment baseline

**OR**

**2.4** Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing, etc.)

**AND**

**3** - Tezspire is being used in combination with an inhaled corticosteroid (ICS)-containing maintenance medication [e.g., Advair/AirDuo Respiclick (fluticasone propionate/salmeterol), Symbicort (budesonide/formoterol), Breo Ellipta (fluticasone furoate/vilanterol)]

**AND**

**4** - Patient is NOT receiving Tezspire in combination with any of the following for treatment of the same indication:

- Anti-interleukin-5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab), Nucala (mepolizumab)]
- Anti-IgE-therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin-4 therapy [e.g., Dupixent (dupilumab)]

**AND**

**5** - Prescribed by ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

|                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                     |

| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                         | Initial Authorization - Not transitioning from UHC medical benefits |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                        | Prior Authorization                                                 |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of severe asthma</p> <p><b>AND</b></p> <p><b>2</b> - Classification of asthma as uncontrolled or inadequately controlled as defined by at least ONE of the following:</p> <p><b>2.1</b> Poor symptom control (e.g., Asthma Control Questionnaire [ACQ] score consistently greater than 1.5 or Asthma Control test [ACT] score consistently less than 20)</p> <p><b>OR</b></p> |                                                                     |

**2.2** Two or more bursts of systemic corticosteroids for at least 3 days each in the previous 12 months

**OR**

**2.3** Asthma-related emergency treatment (e.g., emergency room visit, hospital admission, or unscheduled physician's office visit for nebulizer or other urgent treatment)

**OR**

**2.4** Airflow limitation (e.g., after appropriate bronchodilator withhold forced expiratory volume in 1 second [FEV1] less than 80% predicted [in the face of reduced FEV1/forced vital capacity [FVC] defined as less than the lower limit of normal])

**OR**

**2.5** Patient is currently dependent on oral corticosteroids for the treatment of asthma

**AND**

**3** - Tezspire will be used in combination with ONE of the following:

**3.1** ONE maximally-dosed (appropriately adjusted for age) combination inhaled corticosteroid (ICS)/long-acting beta2 agonist (LABA) product [e.g., Advair/AirDuo Resplick (fluticasone propionate/salmeterol), Symbicort (budesonide/formoterol), Breo Ellipta (fluticasone furoate/vilanterol)]

**OR**

**3.2** Combination therapy including BOTH of the following:

**3.2.1** ONE maximally-dosed (appropriately adjusted for age) ICS product [e.g., ciclesonide (Alvesco), mometasone furoate (Asmanex), beclomethasone dipropionate (QVAR)]

**AND**

**3.2.2** ONE additional asthma controller medication [e.g., LABA - olodaterol (Striverdi) or indacaterol (Arcapta); leukotriene receptor antagonist – montelukast (Singulair); theophylline]

**AND**

**4** - ONE of the following:

**4.1** BOTH of the following:

**4.1.1** Tezspire will be used to treat eosinophilic asthma

**AND**

**4.1.2** BOTH of the following:

**4.1.2.1** ONE of the following

- Failure to a 4-month trial of an anti-interleukin 5 therapy [e.g., Nucala (mepolizumab), Fasenra (benralizumab)] as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to an anti-interleukin 5 therapy [e.g., Nucala (mepolizumab), Fasenra (benralizumab)] (please specify contraindication or intolerance)

**AND**

**4.1.2.2** ONE of the following:

- Failure to a 4-month trial of Dupixent (dupilumab) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to Dupixent (dupilumab) (please specify contraindication or intolerance)

**OR**

**4.2** BOTH of the following:

**4.2.1** Tezspire will be used to treat persistent allergic asthma

**AND**

**4.2.2** ONE of the following:

- Failure to a 4-month trial of Xolair (omalizumab) as confirmed by claims history or submission of medical records
- History of intolerance or contraindication to Xolair (omalizumab) (please specify contraindication or intolerance)

**OR**

**4.3** BOTH of the following:

**4.3.1** Tezspire will be used to treat oral corticosteroid dependent asthma

**AND**

**4.3.2** ONE of the following:

- Failure to a 4-month trial of Dupixent (dupilumab) as confirmed by claims history or submission of medical records
- History of intolerance or contraindication to Dupixent (dupilumab) (please specify contraindication or intolerance)

**OR**

**4.4** Patient's asthma is not of the eosinophilic, allergic, or oral corticosteroid dependent phenotype

**AND**

**5** - Patient is NOT receiving Tezspire in combination with any of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab), Nucala (mepolizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]

- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]

**AND**

**6** - Prescribed by ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                     |

### Approval Criteria

**1** - The requested medication will be used exclusively, and the previously prescribed medication will be discontinued

**OR**

**2** - All of the following:

**2.1** The requested medication combination is supported by information from ONE of the following appropriate compendia of current literature:

- American Hospital Formulary Service Drug Information
- National Comprehensive Cancer Network Drugs and Biologics Compendium
- Thomson Micromedex DrugDex
- Clinical pharmacology
- United States Pharmacopoeia-National Formulary (USP-NF)

**AND**

**2.2** The drug combination is being prescribed for a medically accepted indication that is recognized as a covered benefit by the applicable health plan's program

**AND**

**2.3** The provider attests that they are aware that the patient is using duplicate therapy

**AND**

**2.4** Special clinical circumstances exist that necessitate the need for duplicate therapy (document special circumstances)

**AND**

**2.5** Provider attests that the necessity for continued concomitant therapy and safety will be periodically assessed

**1** - ALL of the following:

**1.1** Diagnosis of moderately to severely active rheumatoid arthritis (RA)

**AND**

**1.2** ONE of the following:

**1.2.1** Failure to a 3 month trial of ONE non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at maximally indicated doses confirmed by claims history or submitted medical records

**OR**

**1.2.2** History of intolerance or contraindication to ONE non-biologic DMARD [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] (please specify intolerance or contraindication)

**OR**

**1.2.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of rheumatoid arthritis as confirmed by claims history or submission of medical records [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orenzia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**1.3** ONE of the following:

**1.3.1** Failure of ONE of the preferred adalimumab products confirmed by claims history or submitted medical records

**OR**

**1.3.2** History of intolerance or contraindication to ALL preferred adalimumab products (please specify intolerance or contraindication)

**AND**

**1.4** If the request is for a non-preferred tocilizumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred tocilizumab products (please document reason/special circumstances)

**AND**

**1.5** Patient is NOT receiving tocilizumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**1.6** Prescribed by or in consultation with a rheumatologist

**AND**

**1.7** If the request is for BRAND Actemra, one of the following:

**1.7.1** Submission of medical records confirming patient allergy or intolerance to at least one preferred tocilizumab biosimilar's inactive ingredients

**OR**

**1.7.2** Both of the following:

- Submission of medical records confirming patient has previously been successfully treated with brand Actemra
- Submission of medical records confirming patient has tried at least one preferred tocilizumab biosimilar for 6-8 weeks per product and saw a decrease in effectiveness

**OR**

**2 - ALL of the following:**

**2.1** Patient is currently on tocilizumab therapy as confirmed by claims history or submitted medical records

**AND**

**2.2** Diagnosis of moderately to severely active RA

**AND**

**2.3** Patient is NOT receiving tocilizumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**2.4** If the request is for a non-preferred tocilizumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred tocilizumab products (please document reason/special circumstances)

**AND**

**2.5** Prescribed by or in consultation with a rheumatologist

**AND**

**2.6** If the request is for BRAND Actemra, one of the following:

**2.6.1** Submission of medical records confirming patient allergy or intolerance to at least one preferred tocilizumab biosimilar's inactive ingredients

**OR**

**2.6.2** Both of the following:

- Submission of medical records confirming patient has previously been successfully treated with brand Actemra
- Submission of medical records confirming patient has tried at least one preferred tocilizumab biosimilar for 6-8 weeks per product and saw a decrease in effectiveness

| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 12 month(s)           |
| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Initial Authorization |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Prior Authorization   |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of systemic sclerosis-associated interstitial lung disease (SSc-ILD) as documented by ALL of the following:</p> <p><b>1.1</b> ONE of the following:</p> <p><b>1.1.1</b> Skin thickening of the fingers of both hands extending proximal to the metacarpophalangeal joints</p> <p style="text-align: center;"><b>OR</b></p> <p><b>1.1.2</b> At least TWO of the following:</p> <ul style="list-style-type: none"> <li>• Skin thickening of the fingers (e.g., puffy fingers, sclerodactyly of the fingers)</li> <li>• Fingertip lesions (e.g., digital tip ulcers, fingertip pitting scars)</li> <li>• Telangiectasia</li> <li>• Abnormal nailfold capillaries</li> <li>• Pulmonary arterial hypertension</li> <li>• Raynaud's phenomenon</li> <li>• SSc-related autoantibodies (e.g., anticentromere, anti-topoisomerase I, anti-RNA polymerase III)</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>1.2</b> Presence of interstitial lung disease as determined by finding evidence of pulmonary fibrosis on HRCT (high-resolution computed tomography), involving at least 10% of the lungs</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - Patient is NOT receiving tocilizumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]</p> |                       |

**AND**

**3** - If the request is for a non-preferred tocilizumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred tocilizumab products (please document reason/special circumstances)

**AND**

**4** - Prescribed by or in consultation with a pulmonologist

**AND**

**5** - If the request is for BRAND Actemra, one of the following:

**5.1** Submission of medical records confirming patient allergy or intolerance to at least one preferred tocilizumab biosimilar's inactive ingredients

**OR**

**5.2** Both of the following:

- Submission of medical records confirming patient has previously been successfully treated with brand Actemra
- Submission of medical records confirming patient has tried at least one preferred tocilizumab biosimilar for 6-8 weeks per product and saw a decrease in effectiveness

|                                                                 |                              |

## Approval Criteria

**1** - Documentation of positive clinical response to tocilizumab therapy

**AND**

**2** - Patient is NOT receiving tocilizumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]\*

**AND**

**3** - If the request is for a non-preferred tocilizumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred tocilizumab products (please document reason/special circumstances)

**AND**

**4** - If the request is for BRAND Actemra, one of the following:

**4.1** Submission of medical records confirming patient allergy or intolerance to at least one preferred tocilizumab biosimilar's inactive ingredients

**OR**

**4.2** Both of the following:

- Submission of medical records confirming patient has previously been successfully treated with brand Actemra
- Submission of medical records confirming patient has tried at least one preferred tocilizumab biosimilar for 6-8 weeks per product and saw a decrease in effectiveness

Notes

\* Examples of drug(s) may not be applicable based on the requested indication.

|---------------------------------------------------------------|---------------------|
| Product Name: Brand Diclofenac Epolamine patch, Flector patch |                     |
| Approval Length                                               | 12 month(s)         |
| Guideline Type                                                | Prior Authorization |
| Approval Criteria                                             |                     |

**1 - Diagnosis of acute pain due to minor strains, sprains, or contusions**

**AND**

**2 - The patient did not receive adequate pain relief when treated with at least TWO preferred\* non-steroidal anti-inflammatory drugs (NSAIDs), one of which must be celecoxib (generic for Celebrex), as confirmed by claims history or submitted medical records. An inadequate response to treatment is defined as pain and/or inflammatory symptoms not resolved after 14 days of therapy**

**AND**

**3 - ONE of the following:**

**3.1 Failure to ONE of the following, as confirmed by claims history or submission of medical records:**

- diclofenac topical gel 1% [Rx (prescription) formulation]
- diclofenac topical gel 1% [OTC (over-the-counter) formulation]

**OR**

**3.2 History of intolerance or contraindication to BOTH of the following (please provide intolerance or contraindication):**

- diclofenac topical gel 1% (Rx formulation)
- diclofenac topical gel 1% (OTC formulation)

Notes

\*PDL links are listed in Background.

Product Name: Brand Pennsaid, generic diclofenac sodium soln 2%, diclofenac sodium soln 1.5%

Approval Length 12 month(s)

Guideline Type Prior Authorization

**Approval Criteria**

**1 - Diagnosis of pain due to osteoarthritis of the knee(s)**

**AND**

**2 - The patient did not receive adequate pain relief when treated with at least TWO preferred\* non-steroidal anti-inflammatory drugs (NSAIDs), one of which must be celecoxib (generic for Celebrex), as confirmed by claims history or submitted medical records. An inadequate response to treatment is defined as pain and/or inflammatory symptoms not resolved after 14 days of therapy**

**AND**

**3 - ONE of the following:**

**3.1 If the request is for Pennsaid (diclofenac sodium soln 2%), ONE of the following:**

**3.1.1 Failure to BOTH of the following, as confirmed by claims history or submission of medical records:**

- diclofenac topical gel 1% [Rx (prescription) or OTC (over-the-counter) formulation] (generic for Voltaren)
- diclofenac 1.5% topical solution

**OR**

**3.1.2 History of intolerance or contraindication to BOTH of the following (please provide intolerance or contraindication):**

- diclofenac topical gel 1% (Rx or OTC formulation) (generic for Voltaren)
- diclofenac 1.5% topical solution

**OR**

**3.2 If the request is for diclofenac topical solution 1.5%, ONE of the following:**

**3.2.1 Failure to ONE of the following, as confirmed by claims history or submission of medical records:**

- diclofenac topical gel 1% (Rx formulation) (generic for Voltaren)

- diclofenac topical gel 1% (OTC formulation) (generic for Voltaren)

**OR**

**3.2.2** History of intolerance or contraindication to BOTH of the following (please provide intolerance or contraindication):

- diclofenac topical gel 1% (Rx formulation) (generic for Voltaren)
- diclofenac topical gel 1% (OTC formulation) (generic for Voltaren)

12 month(s)

Guideline Type

Prior Authorization

### Approval Criteria

**1** - Diagnosis of pain due to osteoarthritis of joints amenable to topical treatment, including but not limited to the hands, knees, ankles, elbows, feet, and wrists

**AND**

**2** - ONE of the following:

**2.1** If the request is for Brand Voltaren Rx (prescription) formulation, BOTH of the following:

**2.1.1** The patient did not receive adequate pain relief when treated with at least TWO preferred\* non-steroidal anti-inflammatory drugs (NSAIDs), one of which must be celecoxib (generic for Celebrex), as confirmed by claims history or submitted medical records. An inadequate response to treatment is defined as pain and/or inflammatory symptoms not resolved after 14 days of therapy

**AND**

**2.1.2** ONE of the following:

**2.1.2.1** Failure to BOTH of the following, as confirmed by claims history or submission of medical records:

- diclofenac topical gel 1% [Rx or OTC (over-the-counter) formulation] (generic Voltaren)
- Brand Voltaren topical gel 1% (OTC formulation)

**OR**

**2.1.2.2** History of intolerance or contraindication to BOTH of the following (please provide intolerance or contraindication):

- diclofenac topical gel 1% (Rx or OTC formulation) (generic Voltaren)
- Brand Voltaren topical gel 1% (OTC formulation)

**OR**

**2.2** If the request is for Brand Voltaren OTC formulation, ONE of the following:

**2.2.1** Failure to ONE of the following, as confirmed by claims history or submission of medical records:

- diclofenac topical gel 1% (Rx formulation) (generic Voltaren)
- diclofenac topical gel 1% (OTC formulation) (generic Voltaren)

**OR**

**2.2.2** History of intolerance or contraindication to BOTH of the following (please provide intolerance or contraindication):

- diclofenac topical gel 1% (Rx formulation) (generic Voltaren)
- diclofenac topical gel 1% (OTC formulation) (generic Voltaren)

**1** - The patient has a non-cosmetic medical condition (e.g., acne vulgaris, psoriasis, precancerous skin lesions) (See Table 1 in Background for additional list of non-cosmetic medical conditions)

**AND**

**2** - Medication is not being requested solely for cosmetic purposes (e.g., photo-aging, wrinkling, hyperpigmentation, sun damage, melasma) (See Table 1 in Background for additional list of non-cosmetic medical conditions)

**AND**

**3** - ONE of the following:

**3.1** BOTH of the following:

**3.1.1** Patient has a diagnosis of acne vulgaris

**AND**

**3.1.2** ONE of the following:

**3.1.2.1** Failure to a trial of BOTH of the following as confirmed by claims history or submission of medical records:

- Differin OTC (over the counter)
- Tretinoin cream (generic Retin-A cream)

**OR**

**3.1.2.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

- Differin OTC
- Tretinoin cream (generic Retin-A cream)

**OR**

**3.2** BOTH of the following:

**3.2.1** Patient does NOT have a diagnosis of acne vulgaris

**AND**

**3.2.2** ONE of the following:

**3.2.2.1** Failure to a trial of at least THREE preferred\* products as confirmed by claims history or submission of medical records

**OR**

**3.2.2.2** History of intolerance or contraindication to ALL preferred\* products (please specify intolerance or contraindication)

Notes

\*Step therapy is not limited to topical retinoids. In instances where there are fewer than three preferred alternatives, the patient must have a history of failure, contraindication, or intolerance to ALL of the preferred products.  
\*See Table 2 in Background for PDL links.

Product Name:generic tretinoin cream

Approval Length 12 month(s)

Guideline Type Prior Authorization

**Approval Criteria**

**1** - Patient is less than 18 years old

**OR**

**2** - ALL of the following:

**2.1** Patient is 18 years of age or older

**AND**

**2.2** Patient has a non-cosmetic medical condition (e.g., acne vulgaris, psoriasis, precancerous skin lesions) (See Table 1 in Background for additional list of non-cosmetic medical conditions)

**AND**

**2.3** Medication is not being requested solely for cosmetic purposes (e.g., photo-aging, wrinkling, hyperpigmentation, sun damage, melasma) (See Table 1 in Background for additional list of non-cosmetic medical conditions)

## 2 . Background

### Benefit/Coverage/Program Information

**Table 1: Examples of non-cosmetic medical conditions include, but are not limited to, the following:**

|                        |                                   |
|------------------------|-----------------------------------|
| Acanthosis nigricans   | Keratoderma                       |
| Acne                   | Keratoderma palmaris et plantaris |
| Acne keloidalis nuchae | Keratosis rubra figurata          |
| Acne rosacea           | Kyrle's disease                   |
| Acne vulgaris          | Lamellar ichthyosis               |
| Actinic cheilitis      | Leukoplakia                       |
| Actinic dermatitis     | Lichen planus                     |
| Actinic keratosis      | Mal de Meleda                     |
|                        | Malignancy                        |
| Basal cell carcinoma   | Mendes da Costa syndrome          |

|                               |                                       |
|-------------------------------|---------------------------------------|
| Bowen's disease               | Molluscum contagiosum                 |
| Cystic acne                   | Non-bullous congenital ichthyosis     |
| Darier's disease              | Papillon-Lefevre syndrome             |
| Darier-White Disease          | Porokeratosis                         |
| Dermal mucinosis              | Pseudofollicular barbae               |
| Discoid lupus erythematosus   | Pseudoacanthosis nigricans            |
| Epidermoid cysts              | Psoriasis                             |
| Epidermolytic hyperkeratosis  | Psoriasis erythrodermic, palmoplantar |
| Erythrokeratoderma variabilis | Psoriasis pustular                    |
| Favre Racouchot disease       | Psoriatic arthritis                   |
| Flat warts                    | Rosacea                               |
| Folliculitis                  | Sebaceous cysts                       |
| Fox Fordyce disease           | Senile keratosis                      |
| Grover's disease              | Solar keratosis                       |
| Hidradenitis suppurativa      | Squamous cell carcinoma               |
| Hyperkeratosis                | Systematized epidermal nevus          |
| Hyperkeratosis follicularis   | Transient acantholytic dermatosis     |
| Hyperkeratotic eczema         | Tylotic eczema                        |
| Ichthyoses                    | X-linked ichthyosis                   |
| Ichthyosis vulgaris           | Verruca planae                        |
| Keloid scar                   | Von Zumbusch pustular                 |
| Keratoacanthoma               | Warts                                 |
| Keratosis follicularis        | Wound healing (mild)                  |

## 1 . Criteria

|                                                   |                                              |
|---------------------------------------------------|----------------------------------------------|
| Product Name: Trelegy Ellipta, Breztri Aerosphere |                                              |
| Diagnosis                                         | Chronic Obstructive Pulmonary Disease (COPD) |
| Approval Length                                   | 12 month(s)                                  |
| Guideline Type                                    | Prior Authorization                          |
|                                                   |                                              |

## **Approval Criteria**

**1** - Diagnosis of chronic obstructive pulmonary disease (COPD), including chronic bronchitis and/or emphysema

**AND**

**2** - ONE of the following:

**2.1** Failure to a 30 day trial of ONE of the following combinations as confirmed by claims history or submission of medical records:

**2.1.1** ONE of the following long-acting muscarinic antagonist (LAMA) plus long-acting beta2-agonist (LABA)

- Anoro Ellipta (umeclidinium/vilanterol)
- Stiolto Respimat (tiotropium/olodaterol)

**OR**

**2.1.2** ONE of the following inhaled corticosteroid (ICS) plus long-acting beta2-agonist (LABA)

- Fluticasone propionate/salmeterol diskus (generic Advair Diskus) or Wixela Inhub (generic Advair Diskus)
- Breyna or budesonide/formoterol (generic of Symbicort)
- Fluticasone/vilanterol (authorized generic of Breo Ellipta)

**OR**

**2.2** History of contraindication or intolerance to ALL of the following (please specify intolerance or contraindication):

- Anoro Ellipta (umeclidinium/vilanterol)
- Stiolto Respimat (tiotropium/olodaterol)
- fluticasone propionate/salmeterol diskus (generic Advair Diskus) or Wixela Inhub (generic Advair Diskus)
- Breyna or budesonide/formoterol (generic of Symbicort)
- Fluticasone/vilanterol (authorized generic of Breo Ellipta)

**OR**

**2.3** Eosinophil count greater than or equal to 300 cells/microliter as confirmed by submission of medical records

|                               |                     |
|-------------------------------|---------------------|
| Product Name: Trelegy Ellipta |                     |
| Diagnosis                     | Asthma              |

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 7/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Tremfya |                       |
| Diagnosis            | Plaque Psoriasis      |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

## **Approval Criteria**

**1** - Diagnosis of chronic moderate to severe plaque psoriasis

**AND**

**2** - Patient is NOT receiving Tremfya in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Cosentyx (secukinumab), Taltz (ixekizumab), Siliq (brodalumab), Ilumya (tildrakizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**3** - Prescribed by or in consultation with a dermatologist

**AND**

**4** - One of the following:

**4.1** Patient is currently on Tremfya therapy as confirmed by claims history or submission of medical records

**OR**

**4.2** All of the following:

**4.2.1** One of the following:

**4.2.1.1** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of plaque psoriasis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), adalimumab, Otezla (apremilast), Skyrizi (risankizumab-rzaa), ustekinumab]

**OR**

**4.2.1.2** All of the following:

**4.2.1.2.1** Greater than or equal to 3% body surface area involvement, palmoplantar, facial, or genital involvement, or severe scalp psoriasis

**AND**

**4.2.1.2.2** One of the following:

- Failure to ONE of the following topical therapy classes confirmed by claims history or submission of medical records: Corticosteroids (e.g., betamethasone, clobetasol, desonide), Vitamin D analogs (e.g., calcitriol, calcipotriene), Tazarotene, Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus), Anthralin, Coal tar
- History of intolerance or contraindication to ALL of the following topical therapy classes (please specify intolerance or contraindication): Corticosteroids (e.g., betamethasone, clobetasol, desonide), Vitamin D analogs (e.g., calcitriol, calcipotriene), Tazarotene, Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus), Anthralin, Coal tar

**AND**

**4.2.1.2.3** One of the following:

- Failure to a 3 month trial of methotrexate at maximally indicated dose confirmed by claims history or submitted medical records
- History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)

**AND**

**4.2.2** One of the following:

**4.2.2.1** Failure to TWO of the following preferred products as confirmed by claims history or submitted medical records:

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

**OR**

**4.2.2.2** History of intolerance or contraindication to ALL of the following preferred products (please specify intolerance or contraindication):

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

**AND**

**4.2.3** One of the following:

- Failure to Cosentyx (secukinumab) as confirmed by claims history or submission of medical records
- History of intolerance or contraindication to Cosentyx (secukinumab) (please specify intolerance or contraindication)

| Effective Date: | 5/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                        |                       |
|------------------------|-----------------------|
| Product Name: Trikafta |                       |
| Diagnosis              | Cystic Fibrosis       |
| Approval Length        | 12 month(s)           |
| Therapy Stage          | Initial Authorization |
| Guideline Type         | Prior Authorization   |

**Approval Criteria**

1 - Diagnosis of cystic fibrosis (CF)

**AND**

2 - Submission of laboratory results documenting that the patient has at least ONE of the following responsive mutations in the CFTR gene (see Table 1 in Background):

- F508del mutation
- A mutation that is responsive based on clinical data
- A mutation that is responsive based on in vitro data
- A mutation that is responsive based on extrapolated data

**AND**

3 - Patient is 2 years of age or older

**AND**

4 - Prescribed by, or in consultation with a provider who specializes in the treatment of CF

Product Name: Imitrex Statdose System, sumatriptan auto-inj, sumatriptan inj, Brand Imitrex Statdose Refill, generic sumatriptan refill

|                 |                   |
|-----------------|-------------------|
| Diagnosis       | Cluster Headaches |
| Approval Length | 12 month(s)       |
| Guideline Type  | Quantity Limit    |

### Approval Criteria

**1** - Diagnosis of cluster headaches

**AND**

**2** - Patient has experienced at least 2 cluster periods lasting from 7 days to 365 days, separated by pain-free periods lasting at least three months

**AND**

**3** - ONE of the following:

**3.1** Higher dose or quantity is supported in the dosage and administration section of the manufacturer's prescribing information

**OR**

**3.2** Higher dose or quantity is supported by one of the following compendia:

- American Hospital Formulary Service Drug Information
- Thomson Micromedex DrugDex
- Clinical pharmacology
- United States Pharmacopoeia-National Formulary (USP-NF)

**OR**

**3.3** Provider provides evidence from published biomedical literature to support safety and additional efficacy at doses/quantities greater than those approved by the FDA for the diagnosis indicated

**AND**

**4** - Provider acknowledges that the potential benefit outweighs the risk associated with the higher dose or quantity

|       |                            |

#### Approval Criteria

**1** - Diagnosis of migraine headaches with or without aura

**AND**

**2** - Currently receiving prophylactic therapy with at least ONE of the following as confirmed by claims history or submission of medical records:

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol\*)
- Candesartan\* (generic Atacand)
- A calcitonin gene-related peptide receptor (CGRP) antagonist or inhibitor for preventive treatment of migraine\*\*\* [i.e., Aimovig, Ajovy\*, Emgality, Qulipta\*, Vyepti\*\*]
- Divalproex sodium (generic Depakote/Depakote ER)
- OnabotulinumtoxinA (generic Botox)\*\*
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- Topiramate (generic Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**AND**

**3** - ONE of the following:

**3.1** Higher dose or quantity is supported in the dosage and administration section of the manufacturer's prescribing information

**OR**

**3.2** Higher dose or quantity is supported by one of the following compendia:

|-----------------|-----------|
| Effective Date: | 11/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                        |                       |
|------------------------|-----------------------|
| Product Name:Tryngolza |                       |
| Approval Length        | 12 month(s)           |
| Therapy Stage          | Initial Authorization |
| Guideline Type         | Prior Authorization   |

### Approval Criteria

**1** - Diagnosis of familial chylomicronemia syndrome (FCS) (i.e., monogenic chylomicronemia, type 1 hyperlipoproteinemia)

**AND**

**2** - Diagnosis has been confirmed by BOTH of the following:

**2.1** One of the following:

**2.1.1** Genetic confirmation of biallelic pathogenic variants (i.e., homozygosity, compound heterozygosity or double heterozygosity) in FCS-causing genes (i.e., LPL, GPIHBP1, APOA5, APOC2, or LMF1)

**OR**

**2.1.2** North American FCS (NAFCS) score greater than or equal to 45

**AND**

**2.2** Untreated fasting triglyceride levels greater than or equal to 880 mg/dL

**AND**

**3** - Prescribed by one of the following:

- Cardiologist
- Endocrinologist
- Gastroenterologist
- Lipid specialist (lipidologist)

**3 - ONE of the following:**

**3.1** Patient has previously been treated with ONE of the following regimens:

- Fluoropyrimidine-based chemotherapy
- Oxaliplatin-based chemotherapy
- Irinotecan-based chemotherapy

**OR**

**3.2** Patient is not appropriate for intensive therapy

**AND**

**4 -** Used in combination with trastuzumab (e.g., Kanjinti, Ogivri, Trazimera)

## 1 . Criteria

|                                              |                       |
|----------------------------------------------|-----------------------|
| Product Name:Brand Tykerb, generic lapatinib |                       |
| Diagnosis                                    | Breast Cancer         |
| Approval Length                              | 12 month(s)           |
| Therapy Stage                                | Initial Authorization |
| Guideline Type                               | Prior Authorization   |

**Approval Criteria**

**1** - ALL of the following:

**1.1** Diagnosis of recurrent unresectable (local or regional) or stage IV breast cancer

**AND**

**1.2** Disease is hormone receptor positive and human epidermal growth factor receptor 2-positive (HER2+)

**AND**

**1.3** Used in combination with an aromatase inhibitor [e.g., Aromasin (exemestane), Femara (letrozole), Arimidex (anastrozole)]

**OR**

**2** - ALL of the following:

**2.1** ONE of the following:

- Diagnosis of recurrent unresectable (local or regional) or stage IV breast cancer
- Breast cancer that is unresponsive to preoperative systemic therapy

**AND**

**2.2** Disease is HER2+

**AND**

**2.3** Used as fourth line therapy and beyond in combination with ONE of the following:

- Herceptin (trastuzumab)

- Xeloda (capecitabine)

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                      |

| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 12 month(s)                          |
| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Initial Authorization                |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Prior Authorization                  |
| <p><b>Approval Criteria</b></p> <p><b>1 - ALL of the following:</b></p> <p><b>1.1</b> Diagnosis of recurrent, central nervous system (CNS) cancer with metastatic lesions</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.2</b> Tykerb is active against primary (breast) tumor</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.3</b> Used in combination with Xeloda (capecitabine)</p> <p style="text-align: center;"><b>OR</b></p> <p><b>2 - ALL of the following:</b></p> <p><b>2.1</b> Diagnosis of progressive or recurrent intracranial or spinal ependymoma (excluding subependymoma)</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2.2</b> Patient has received previous radiation therapy</p> |                                      |

**AND**

**2.3 ONE of the following:**

- Patient has received gross total or subtotal resection with negative cerebrospinal fluid (CSF) cytology
- Patient has received subtotal resection and evidence of metastasis (brain, spine, or CSF)
- Patient has unresectable disease

**AND**

**2.4 Used in combination with Temodar (temozolomide)**

**1** - Diagnosis of rectal cancer

**AND**

**2** - Disease is human epidermal growth factor receptor 2 (HER2)-amplified and RAS and BRAF wild type

**AND**

**3** - ONE of the following:

**3.1** Disease is proficient mismatch repair/microsatellite-stable (pMMR/MSS)

**OR**

**3.2** BOTH of the following:

**3.2.1** Disease is positive for deficient mismatch repair/microsatellite instability-high (dMMR/MSI-H) or polymerase epsilon/delta (POLE/POLD1) mutation

**AND**

**3.2.2** ONE of the following:

- Patient is ineligible for or progressed on checkpoint inhibitor immunotherapy [e.g., Opdivo (nivolumab), Keytruda (pembrolizumab), Jemperli (dostarlimab-gxly)]
- Patient has a contraindication to checkpoint inhibitor immunotherapy

**AND**

**4** - ONE of the following:

**4.1** BOTH of the following:

- Used as initial therapy for unresectable metachronous metastases
- Previous therapy with FOLFOX (fluorouracil, leucovorin, and oxaliplatin) or CapeOX (capecitabine and oxaliplatin) within the past 12 months

**OR**

**4.2** Intensive chemotherapy with one of the following is not recommended:

- Oxaliplatin
- Irinotecan
- Capecitabine

**OR**

**4.3** Used as second-line and subsequent therapy for progression of advanced or metastatic disease

**AND**

**5** - Used in combination with trastuzumab

**AND**

**6** - Patient has not previously been treated with a HER2 inhibitor [e.g., trastuzumab, Perjeta (pertuzumab), Nerlynx (neratinib)]

| Effective Date: | 1/1/2024 |
|-----------------|----------|

## 1 . Criteria

|                     |                     |
|---------------------|---------------------|
| Product Name:Tymlos |                     |
| Approval Length     | 24 Months*          |
| Guideline Type      | Prior Authorization |
| Approval Criteria   |                     |

**1 - ONE of the following:**

**1.1 BOTH of the following:**

- Patient is female
- Diagnosis of postmenopausal osteoporosis

**OR**

**1.2 BOTH of the following:**

- Patient is male
- Diagnosis of osteoporosis

**AND**

**2 - ONE of the following:**

**2.1** Patient is at high risk of fracture [e.g., recent fracture (e.g., within the past 12 months), fractures while on approved osteoporosis therapy, multiple fractures, fractures while on drugs causing skeletal harm (e.g., long-term glucocorticoids), very low T-score (e.g., less than -3.0), high risk for falls or history of injurious falls, and very high fracture probability by FRAX (fracture risk assessment tool) (e.g., major osteoporosis fracture greater than 30%, hip fracture greater than 4.5%)]

**OR**

**2.2** Patient has a history of failure, intolerance, or contraindication to other available osteoporosis therapy (e.g., alendronate, denosumab, risedronate, zoledronate)

**AND**

**3 - Treatment duration has not exceeded a total of 24 months\* of cumulative use of parathyroid hormone analogs (e.g., Teriparatide Injection, Forteo, Tymlos) during the patient's lifetime**

|       |                                                                                                                                                                               |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Notes | *Duration of coverage will be limited to 24 months of cumulative parathyroid hormone analog therapy (e.g., Teriparatide Injection, Forteo, Tymlos) in the patient's lifetime. |

## **Approval Criteria**

**1** - ALL of the following:

**1.1** Diagnosis of chronic moderate to severe plaque psoriasis

**AND**

**1.2** ONE of the following:

**1.2.1** ALL of the following:

**1.2.1.1** Greater than or equal to 3% body surface area involvement, palmoplantar, facial, or genital involvement, or severe scalp psoriasis

**AND**

**1.2.1.2** ONE of the following:

**1.2.1.2.1** Failure to ONE of the following topical therapy classes, confirmed by claims history or submitted medical records:

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Anthralin
- Coal tar

**OR**

**1.2.1.2.2** History of intolerance or contraindication to ALL of the following topical therapy classes (please specify intolerance or contraindication):

- Corticosteroids (e.g., betamethasone, clobetasol, desonide)
- Vitamin D analogs (e.g., calcitriol, calcipotriene)
- Tazarotene
- Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)
- Anthralin

- Coal tar

**AND**

**1.2.1.3 ONE of the following:**

- Failure to a 3 month trial of methotrexate at maximally indicated dose, confirmed by claims history or submitted medical records
- History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)

**OR**

**1.2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of plaque psoriasis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), adalimumab, Otezla (apremilast), Skyrizi (risankizumab-rzaa), Tremfya (guselkumab)]

**AND**

**1.3 ONE of the following:**

- Failure to one of the preferred adalimumab products confirmed by claims history or submitted medical records
- History of intolerance or contraindication to one of the preferred adalimumab products (please specify intolerance or contraindication)

**AND**

**1.4** Patient is NOT receiving ustekinumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Siliq (brodalumab), Ilumya (tildrakizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**1.5 ONE of the following:**

**1.5.1** Requested medication is ustekinumab 45 mg (milligrams)/0.5 mL (milliliters)

**OR**

**1.5.2** BOTH of the following:

- Requested medication is ustekinumab 90 mg/1 mL
- Patient's weight is greater than 100 kilograms (220 pounds)

**AND**

**1.6** Prescribed by or in consultation with a dermatologist

**AND**

**1.7** If the request is for a non-preferred ustekinumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred ustekinumab products (please document reason/special circumstances)\*

**AND**

**1.8** If the request is for Brand Stelara, ONE of the following:

**1.8.1** Submission of medical records confirming patient allergy or intolerance to at least two preferred ustekinumab biosimilars' inactive ingredients\*

**OR**

**1.8.2** BOTH of the following:

- Submission of medical records confirming patient has previously been successfully treated with brand Stelara
- Submission of medical records confirming patient has tried at least two preferred ustekinumab biosimilars for 6-8 weeks per product and saw a decrease in effectiveness\*

**OR**

**2** - ALL of the following:

**2.1** Patient is currently on ustekinumab therapy as confirmed by claims history or submitted medical records

**AND**

**2.2** Diagnosis of chronic moderate to severe plaque psoriasis

**AND**

**2.3** Patient is NOT receiving ustekinumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Siliq (brodalumab), Ilumya (tildrakizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**2.4** Prescribed by or in consultation with a dermatologist

**AND**

**2.5** If the request is for a non-preferred ustekinumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred ustekinumab products (please document reason/special circumstances)\*

**AND**

**2.6** If the request is for Brand Stelara, ONE of the following:

**2.6.1** Submission of medical records confirming patient allergy or intolerance to at least two preferred ustekinumab biosimilars' inactive ingredients\*

**OR**

**2.6.2 BOTH of the following:**

- Submission of medical records confirming patient has previously been successfully treated with brand Stelara
- Submission of medical records confirming patient has tried at least two preferred ustekinumab biosimilars for 6-8 weeks per product and saw a decrease in effectiveness\*

Product Name: All subcutaneous formulations of the following: Stelara, Imuldosa, Otulfi, Pyzchiva, Selarsdi, Steqeyma, Ustekinumab, Wezlana, Yesintek, Starjemza

|                 |                                                                                                                                                                                           |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Diagnosis       | Psoriatic Arthritis                                                                                                                                                                       |
| Approval Length | 12 month(s) NOTE: If approving a non-preferred ustekinumab, please enter: 1) The group authorization CSPREFUSTE and 2) An authorization for the non-preferred ustekinumab at GPI-12 level |
| Therapy Stage   | Initial Authorization                                                                                                                                                                     |
| Guideline Type  | Prior Authorization                                                                                                                                                                       |

**Approval Criteria**

**1 - ALL of the following:**

**1.1 ONE of the following:**

**1.1.1 BOTH of the following:**

- Requested medication is ustekinumab 45 mg (milligrams)/0.5 mL (milliliters)
- Diagnosis of active psoriatic arthritis

**OR**

**1.1.2 ALL of the following:**

- Requested medication is ustekinumab 90 mg/1 mL

- Patient's weight is greater than 100 kilograms (220 pounds)
- Diagnosis of active psoriatic arthritis
- Diagnosis of co-existent moderate to severe plaque psoriasis

**AND**

**1.2** Patient is NOT receiving ustekinumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**1.3** ONE of the following:

- Failure to a 3 month trial of methotrexate at maximally indicated dose, confirmed by claims history or submitted medical records
- History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)
- Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of psoriatic arthritis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Tremfya (guselkumab) Xeljanz (tofacitinib), Otezla (apremilast), Rinvoq (upadacitinib)]

**AND**

**1.4** ONE of the following:

- Failure to one of the preferred adalimumab products confirmed by claims history or submitted medical records
- History of intolerance or contraindication to one of the preferred adalimumab products (please specify intolerance or contraindication)

**AND**

**1.5** Prescribed by or in consultation with ONE of the following:

- Rheumatologist
- Dermatologist

**AND**

**1.6** If the request is for a non-preferred ustekinumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred ustekinumab products (please document reason/special circumstances)\*

**AND**

**1.7** If the request is for Brand Stelara, ONE of the following:

**1.7.1** Submission of medical records confirming patient allergy or intolerance to at least two preferred ustekinumab biosimilars' inactive ingredients\*

**OR**

**1.7.2** BOTH of the following:

- Submission of medical records confirming patient has previously been successfully treated with brand Stelara
- Submission of medical records confirming patient has tried at least two preferred ustekinumab biosimilars for 6-8 weeks per product and saw a decrease in effectiveness\*

**OR**

**2** - ALL of the following:

**2.1** Patient is currently on ustekinumab therapy as confirmed by claims history or submitted medical records

**AND**

**2.2** Diagnosis of active psoriatic arthritis

**AND**

**2.3** Patient is NOT receiving ustekinumab in combination with another targeted

immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**2.4** Prescribed by or in consultation with ONE of the following:

- Rheumatologist
- Dermatologist

**AND**

**2.5** If the request is for a non-preferred ustekinumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred ustekinumab products (please document reason/special circumstances)\*

**AND**

**2.6** If the request is for Brand Stelara, ONE of the following:

**2.6.1** Submission of medical records confirming patient allergy or intolerance to at least two preferred ustekinumab biosimilars' inactive ingredients\*

**OR**

**2.6.2** BOTH of the following:

- Submission of medical records confirming patient has previously been successfully treated with brand Stelara
- Submission of medical records confirming patient has tried at least two preferred ustekinumab biosimilars for 6-8 weeks per product and saw a decrease in effectiveness\*

**OR**

**2.1.1.2** History of intolerance or contraindication to ALL of the following conventional therapy drugs or classes (please specify intolerance or contraindication):

- Corticosteroids (e.g., prednisone, methylprednisolone, budesonide)
- 6-mercaptopurine (Purinethol)
- Azathioprine (Imuran)
- Methotrexate (Rheumatrex, Trexall)

**OR**

**2.1.1.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of Crohn's disease as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), adalimumab]

**AND**

**2.1.2** ONE of the following:

- Failure to one of the preferred adalimumab products, as confirmed by claims history or submitted medical records
- History of intolerance or contraindication to one of the preferred adalimumab products (please specify intolerance or contraindication)

**OR**

**2.2** Patient is currently on ustekinumab therapy for moderately to severely active Crohn's disease as confirmed by claims history or submitted medical records

**OR**

**2.3** Patient has been established on therapy with ustekinumab under an active UnitedHealthcare medical benefit prior authorization for treatment of moderately to severely active Crohn's disease

**AND**

**3** - Patient is NOT receiving ustekinumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Skyrizi (risankizumab)]

**AND**

**4** - Prescribed by or in consultation with a gastroenterologist

**AND**

**5** - If the request is for a non-preferred ustekinumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred ustekinumab products (please document reason/special circumstances)\*

**AND**

**6** - If the request is for Brand Stelara, ONE of the following:

**6.1** Submission of medical records confirming patient allergy or intolerance to at least two preferred ustekinumab biosimilars' inactive ingredients\*

**OR**

**6.2** BOTH of the following:

- Submission of medical records confirming patient has previously been successfully treated with brand Stelara
- Submission of medical records confirming patient has tried at least two preferred ustekinumab biosimilars for 6-8 weeks per product and saw a decrease in effectiveness\*

Notes

\*See PDL links in Background

Product Name: 90 mg/mL subcutaneous formulation of the following: Stelara, Imuldosa, Otulfi, Pyzchiva, Selarsdi, Steqeyma, Ustekinumab, Wezlana, Yesintek, Starjemza

Diagnosis

Ulcerative Colitis

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                           |

**OR**

**2.3** Patient has been established on therapy with ustekinumab under an active UnitedHealthcare medical benefit prior authorization for treatment of moderately to severely active ulcerative colitis

**AND**

**3** - Patient is NOT receiving ustekinumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Skyrizi (risankizumab)]

**AND**

**4** - Prescribed by or in consultation with a gastroenterologist

**AND**

**5** - If the request is for a non-preferred ustekinumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred ustekinumab products (please document reason/special circumstances)\*

**AND**

**6** - If the request is for Brand Stelara, ONE of the following:

**6.1** Submission of medical records confirming patient allergy or intolerance to at least two preferred ustekinumab biosimilars' inactive ingredients\*

**OR**

**6.2** BOTH of the following:

- Submission of medical records confirming patient has previously been successfully treated with brand Stelara

- Submission of medical records confirming patient has tried at least two preferred ustekinumab biosimilars for 6-8 weeks per product and saw a decrease in effectiveness\*

| Approval Length | 12 month(s) NOTE: If approving a non-preferred ustekinumab, please enter: 1) The group authorization CSPREFUSTE and 2) An authorization for the non-preferred ustekinumab at GPI-12 level |
| Therapy Stage   | Reauthorization                                                                                                                                                                           |
| Guideline Type  | Prior Authorization                                                                                                                                                                       |

### Approval Criteria

1 - Documentation of positive clinical response to ustekinumab therapy

**AND**

2 - Patient is NOT receiving ustekinumab in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Skyrizi (risankizumab)]

**AND**

3 - If the request is for a non-preferred ustekinumab product, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred ustekinumab products (please document reason/special circumstances)\*

**AND**

4 - If the request is for Brand Stelara, ONE of the following:

**4.1** Submission of medical records confirming patient allergy or intolerance to at least two preferred ustekinumab biosimilars' inactive ingredients\*

**OR**

**4.2** BOTH of the following:

- Submission of medical records confirming patient has previously been successfully treated with brand Stelara
- Submission of medical records confirming patient has tried at least two preferred ustekinumab biosimilars for 6-8 weeks per product and saw a decrease in effectiveness\*

|-----------------|----------|

## 1 . Criteria

|                       |                             |
|-----------------------|-----------------------------|
| Product Name:Valchlor |                             |
| Diagnosis             | Primary Cutaneous Lymphomas |
| Approval Length       | 12 month(s)                 |
| Therapy Stage         | Initial Authorization       |
| Guideline Type        | Prior Authorization         |

### Approval Criteria

1 - Diagnosis of ONE of the following:

- Chronic or smoldering T-cell leukemia/lymphoma
- Primary cutaneous marginal zone or follicle center B-cell lymphoma
- Lymphomatoid papulosis (LyP) with extensive lesions
- Mycosis fungoides (MF)/Sezary syndrome (SS)

Product Name:Valchlor

|                 |                       |
|-----------------|-----------------------|
| Diagnosis       | Histiocytic Neoplasms |
| Approval Length | 12 month(s)           |
| Therapy Stage   | Initial Authorization |
| Guideline Type  | Prior Authorization   |

### Approval Criteria

1 - Diagnosis of Langerhans Cell Histiocytosis (LCH)

**AND**

2 - Skin disease is unifocal and isolated

Product Name:Valchlor

|                 |                                                    |
|-----------------|----------------------------------------------------|
| Diagnosis       | Primary Cutaneous Lymphomas, Histiocytic Neoplasms |
| Approval Length | 12 month(s)                                        |
| Therapy Stage   | Reauthorization                                    |
| Guideline Type  | Prior Authorization                                |

### Approval Criteria

1 - Patient does not show evidence of progressive disease while on Valchlor

| Product Name:Valchlor                                                                                                                   |                           |

Effective Date: 11/15/2019

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Vecamyl |                       |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

**Approval Criteria**

1 - Diagnosis of moderately severe to severe essential hypertension

**OR**

2 - Diagnosis of uncomplicated malignant hypertension

Product Name:Vecamyl

|                 |             |
|-----------------|-------------|
| Approval Length | 12 month(s) |
|-----------------|-------------|

|               |                 |
|---------------|-----------------|
| Therapy Stage | Reauthorization |
|---------------|-----------------|

|                |                     |
|----------------|---------------------|
| Guideline Type | Prior Authorization |
|----------------|---------------------|

**Approval Criteria**

1 - Documentation of a positive clinical response to Vecamyl therapy

|------------------------|-----------------------|
| Product Name:Velsipity |                       |
| Approval Length        | 12 month(s)           |
| Therapy Stage          | Initial Authorization |
| Guideline Type         | Prior Authorization   |
|                        |                       |

## **Approval Criteria**

**1** - Diagnosis of moderately to severely active ulcerative colitis (UC)

**AND**

**2** - ONE of the following:

**2.1** Patient has had prior or concurrent inadequate response to a therapeutic course of oral corticosteroids and/or immunosuppressants (e.g., azathioprine, 6-mercaptopurine)

**OR**

**2.2** Patient has been previously treated with a targeted immunomodulator FDA (Food and Drug Administration)-approved for the treatment of ulcerative colitis as confirmed by claims history or submission of medical records [e.g., adalimumab, Simponi (golimumab), ustekinumab, Xeljanz (tofacitinib), Rinvoq (upadacitinib)]

**AND**

**3** - ONE of the following:

**3.1** Patient is currently on Velsipity therapy as confirmed by claims history or submission of medical records

**OR**

**3.2** Failure to ONE of the following as confirmed by claims history or submission of medical records:

- One of the preferred adalimumab products\*
- One of the preferred ustekinumab products\*

**OR**

**3.3** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

- One of the preferred adalimumab products\*

- One of the preferred ustekinumab products\*

**AND**

**4** - Patient is NOT receiving Velsipity in combination with a targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), ustekinumab, Skyrizi (risankizumab), Omvoh (mirikizumab-mrkz), Entyvio (vedolizumab)]

**AND**

**5** - Prescribed by or in consultation with a gastroenterologist

|       |                                                                                    |
|-------|------------------------------------------------------------------------------------|
| Notes | *For a list of preferred adalimumab products please reference drug coverage tools. |

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 8/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Vemlidy |                       |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

### **Approval Criteria**

**1** - Diagnosis of chronic hepatitis B infection

**AND**

**2** - ONE of the following:

- Failure to entecavir (generic Baraclude) as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to entecavir (generic Baraclude) (please specify contraindication or intolerance)
- Patient is not a suitable candidate for entecavir (generic Baraclude)

**AND**

**3** - ONE of the following:

**3.1** Failure to tenofovir disoproxil fumarate (generic Viread) as confirmed by claims history or submission of medical records

**OR**

**3.2** History of contraindication or intolerance to tenofovir disoproxil fumarate (generic Viread) (please specify contraindication or intolerance)

**OR**

**3.3** Submission of medical records documenting an estimated glomerular filtration rate below 90 mL/min (milliliters/minute)

**OR**

**3.4** Submission of medical records documenting a diagnosis of osteopenia as defined by a BMD (bone mineral density) T-score between -1 and -2.5 (BMD T-score greater than -2.5 and less than or equal to -1) based on BMD measurements from one of the following with

evidence of progressive bone loss on serial DEXA (dual-energy X-ray absorptiometry) scan [Provider must submit patient specific BMD T-scores]:

- Lumbar spine (at least two vertebral bodies)
- Hip (femoral neck, total hip)
- Radius (one-third radius site)

**OR**

**3.5** Submission of medical records documenting a diagnosis of osteoporosis as defined by a BMD T-score less than or equal to -2.5 based on BMD measurements from one of the following [Provider must submit patient specific BMD T-score]:

- Lumbar spine (at least two vertebral bodies)
- Hip (femoral neck, total hip)
- Radius (one-third radius site)

**OR**

**3.6** Submission of medical records documenting a prior low-trauma or non-traumatic fracture

**OR**

**3.7** Patient is less than 20 years of age

| Guideline Type                                               | Prior Authorization          |
| <b>Approval Criteria</b><br><b>1 - ALL of the following:</b> |                              |

**1.1** Diagnosis of newly-diagnosed acute myeloid leukemia (AML)

**AND**

**1.2** ONE of the following:

- Used as treatment induction in candidates for intensive induction therapy
- Used as treatment induction in candidates for lower-intensity induction therapy
- Used as follow-up after induction therapy following response to previous lower intensity therapy with the same regimen
- Used as consolidation therapy as continuation of lower-intensity regimen used for induction

**AND**

**1.3** Used in combination with decitabine, azacitidine, or low-dose cytarabine

**OR**

**2** - ALL of the following:

- Diagnosis of relapsed/refractory acute myeloid leukemia (AML)
- Used as a component of repeating the initial successful induction regimen
- Greater than or equal to 12 months since induction regimen if not administered continuously
- Therapy was not stopped due to development of clinical resistance

**OR**

**3** - ALL of the following:

- Diagnosis of blastic plasmacytoid dendritic cell neoplasm (BPDCN) - acute myeloid leukemia (AML)
- Considered systemic disease and therapy is given as palliative intent
- Patient has low performance and/or nutritional status (i.e., serum albumin less than 3.2 g/dL [grams/deciliter]; not a candidate for intensive remission therapy or Elzonris)
- Venclexta therapy to be given in combination with azacitidine, decitabine, or low-dose cytarabine

| Effective Date: | 2/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                     |                       |
|---------------------|-----------------------|
| Product Name:Veozah |                       |
| Approval Length     | 12 month(s)           |
| Therapy Stage       | Initial Authorization |
| Guideline Type      | Prior Authorization   |
|                     |                       |

## Approval Criteria

**1** - Diagnosis of moderate to severe vasomotor symptoms due to menopause

**AND**

**2** - One of the following:

**2.1** Failure (after a 30-day trial) to ONE of the following as confirmed by claims history or submission of medical records:

- Hormonal therapy (e.g., estradiol, Premarin, Prempro)
- Non-hormonal therapy [e.g., clonidine, gabapentin, selective serotonin inhibitors (e.g., paroxetine), serotonin and norepinephrine reuptake inhibitors (e.g., venlafaxine)]

**OR**

**2.2** History of contraindication or intolerance to BOTH of the following (please specify contraindication or intolerance):

- Hormonal therapy (e.g., estradiol, Premarin, Prempro)
- Non-hormonal therapy [e.g., clonidine, gabapentin, selective serotonin inhibitors (e.g., paroxetine), serotonin and norepinephrine reuptake inhibitors (e.g., venlafaxine)]

**AND**

**3** - Patient has received baseline hepatic laboratory tests to rule out the presence of underlying liver disease

|                      |                     |
|----------------------|---------------------|
| Product Name: Veozah |                     |
| Approval Length      | 12 month(s)         |
| Therapy Stage        | Reauthorization     |
| Guideline Type       | Prior Authorization |
| Approval Criteria    |                     |

**1** - Documentation of positive clinical response to therapy (e.g., decrease in frequency and severity of vasomotor symptoms from baseline)

**AND**

**2** - Patient has received periodic evaluation of hepatic laboratory tests to rule out liver injury associated with Veozah use

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Verquvo |                       |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of heart failure

**AND**

**2** - Ejection fraction is less than 45 percent

**AND**

**3** - Heart failure is classified as ONE of the following:

- New York Heart Association Class II
- New York Heart Association Class III
- New York Heart Association Class IV

**AND**

**4** - ONE of the following:

**4.1** Hospitalization for heart failure within the past six months

**OR**

**4.2** Outpatient IV (intravenous) diuretics for heart failure within the past three months

**AND**

**5** - ONE of the following:

**5.1** Patient is on a stabilized dose and receiving concomitant therapy with a maximally tolerated beta-blocker (e.g., bisoprolol, carvedilol, metoprolol) confirmed by claims history or submission of medical records

**OR**

**5.2** Patient has a contraindication or intolerance to beta-blocker therapy (please specify intolerance or contraindication)

**AND**

**6** - ONE of the following:

**6.1** Patient is on a stabilized dose and receiving concomitant therapy with ONE of the following, confirmed by claims history or submission of medical records:

- Angiotensin converting enzyme (ACE) inhibitor (e.g., captopril, enalapril)
- Angiotensin II receptor blocker (ARB) (e.g., losartan)
- Angiotensin receptor-neprilysin inhibitor (ARNI) (e.g., Entresto)

**OR**

**6.2** Patient has an allergy, contraindication, or intolerance to ACE inhibitors, ARBs, and ARNIs (please specify intolerance or contraindication)

**AND**

**7** - ONE of the following:

**7.1** Patient is on a stabilized dose and receiving concomitant therapy with a maximally tolerated aldosterone antagonist (e.g., spironolactone) confirmed by claims history or submission of medical records

**OR**

**7.2** Patient has a contraindication or intolerance to aldosterone antagonist therapy (please specify intolerance or contraindication)

**AND**

**8 - ONE of the following:**

**8.1** Patient is on a stabilized dose and receiving concomitant therapy with a sodium-glucose cotransporter 2 (SGLT2) inhibitor indicated for heart failure (e.g., Farxiga) confirmed by claims history or submission of medical records

**OR**

**8.2** Patient has a contraindication or intolerance to SGLT2 inhibitor therapy (please specify intolerance or contraindication)

**AND**

**9 - Verquvo is prescribed by or in consultation with a cardiologist**

**OR**

**2** - Used for treatment of myelofibrosis-associated anemia

**OR**

**3** - Both of the following:

**3.1** Diagnosis of accelerated/blast phase myeloproliferative neoplasm

**AND**

**3.2** One of the following:

**3.2.1** Continued treatment near the start of conditioning therapy in transplant candidates for the improvement of splenomegaly and other disease-related symptoms

**OR**

**3.2.2** Palliation in combination with hypomethylating agents (azacitidine or decitabine) as bridging therapy prior to transplant

**OR**

**3.2.3** Palliation in combination with hypomethylating agents (azacitidine or decitabine) if not a candidate for transplant

### Approval Criteria

1 - BOTH of the following

1.1 Diagnosis of renal cell carcinoma (RCC)

**AND**

1.2 ONE of the following:

- Disease has relapsed
- Stage IV disease
- Disease is advanced

**OR**

2 - Diagnosis of von Hippel-Lindau (VHL)-associated renal cell carcinoma

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                           |

**Approval Criteria**

1 - All of the following:

1.1 Diagnosis of one of the following:

- Follicular carcinoma
- Oncocytic carcinoma
- Papillary carcinoma

**AND**

1.2 One of the following:

- Unresectable locoregional recurrent disease
- Persistent disease
- Metastatic disease

**AND**

1.3 One of the following:

- Patient has symptomatic disease
- Patient has progressive disease

**AND**

**1.4** One of the following:

- Disease is refractory to radioactive iodine treatment
- Distant metastatic disease not amenable to radioactive iodine treatment

**OR**

**2** - All of the following:

**2.1** Diagnosis of medullary carcinoma

**AND**

**2.2** One of the following:

- Disease is progressive
- Disease is symptomatic with distant metastases

**AND**

**2.3** One of the following:

**2.3.1** Failure to ONE of the following, as confirmed by claims history or submission of medical records:

- Caprelsa (vandetanib)
- Cometriq (cabozantinib)

**OR**

**2.3.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

- Caprelsa (vandetanib)
- Cometriq (cabozantinib)

|-----------------|----------|

## 1 . Criteria

|                    |                     |
|--------------------|---------------------|
| Product Name:Vowst |                     |
| Approval Length    | 1 month(s)          |
| Guideline Type     | Prior Authorization |

### **Approval Criteria**

**1** - Diagnosis of recurrent *Clostridioides difficile* infection (rCDI) as defined by BOTH of the following:

**1.1** Presence of diarrhea defined as a passage of 3 or more loose bowel movements within a 24-hour period for 2 consecutive days

**AND**

**1.2** A positive stool test for *Clostridioides difficile* toxin

**AND**

**2** - Patient is 18 years of age or older

**AND**

**3** - Patient has had one or more recurrences of CDI following an initial episode of CDI

**AND**

**4** - Patient has completed at least 10 days of ONE of the following antibiotic therapies for rCDI 2 to 4 days prior to initiating Vowst as confirmed by claims history or submission of medical records:

- Oral vancomycin
- Difidol (fidaxomicin)

**AND**

**5** - Previous episode of CDI is under control [e.g., less than 3 unformed/loose (i.e., Bristol Stool Scale type 6-7) stools/day for 2 consecutive days]

**AND**

**6** - Patient will drink magnesium citrate on the day before and at least 8 hours prior to taking the first dose of Vowst

**AND**

**7** - Prescribed by or in consultation with one of the following:

- Gastroenterologist
- Infectious disease specialist

## 1 . Criteria

|                    |                       |
|--------------------|-----------------------|
| Product Name:Vtama |                       |
| Diagnosis          | Plaque Psoriasis      |
| Approval Length    | 12 month(s)           |
| Therapy Stage      | Initial Authorization |
| Guideline Type     | Prior Authorization   |

## **Approval Criteria**

**1** - Diagnosis of plaque psoriasis

**AND**

**2** - ONE of the following:

**2.1** Failure to a minimum duration of a 4-week trial to TWO of the following topical therapies as confirmed by claims history or submission of medical records:

Corticosteroids (e.g., betamethasone, clobetasol, desonide)

Vitamin D analogs (e.g., calcitriol, calcipotriene)

Tazarotene

Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)

Anthralin

Coal tar

**OR**

**2.2** History of intolerance or contraindication to ALL of the following topical therapies (please specify intolerance or contraindication):

Corticosteroids (e.g., betamethasone, clobetasol, desonide)

Vitamin D analogs (e.g., calcitriol, calcipotriene)

Tazarotene

Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)

Anthralin

Coal tar

**OR**

**2.3** Patient is currently on Vtama therapy as confirmed by claims history or submission of medical records

**AND**

**3** - Patient is NOT receiving Vtama in combination with a targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Siliq (brodalumab), Ilumya (tildrakizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                     |

## 1 . Criteria

|                                 |                       |
|---------------------------------|-----------------------|
| Product Name:Vyndaqel, Vyndamax |                       |
| Approval Length                 | 12 month(s)           |
| Therapy Stage                   | Initial Authorization |
| Guideline Type                  | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of transthyretin (ATTR)-mediated amyloidosis with cardiomyopathy (ATTR-CM)

**AND**

**2** - ONE of the following:

**2.1** Documentation that the patient has a pathogenic transthyretin (TTR) mutation (e.g., V30M)

**OR**

**2.2** Cardiac or noncardiac tissue biopsy demonstrating histologic confirmation of ATTR amyloid deposits

**OR**

**2.3** ALL of the following

**2.3.1** Echocardiogram or cardiac magnetic resonance imaging suggestive of amyloidosis

**AND**

**2.3.2** Radionuclide imaging (99mTc-DPD, 99mTc-PYP, or 99m Tc-HMDP) showing grade 2 or 3 cardiac uptake\*

**AND**

**2.3.3** Absence of light chain amyloidosis

**AND**

**3** - Patient has New York Heart Association (NYHA) Functional Class I, II, or III heart failure

**AND**

**4** - Physician attests that the patient has an N-terminal pro-B-type natriuretic peptide (NT-proBNP) level that, when combined with signs and symptoms, is considered definitive for a diagnosis of ATTR-CM

**AND**

**5** - ONE of the following:

History of heart failure, with at least one prior hospitalization for heart failure

Presence of clinical signs and symptoms of heart failure (e.g., dyspnea, edema)

**AND**

**6** - Prescribed by, or in consultation, with a cardiologist

**AND**

**7** - Patient is not receiving Vyndaqel/Vyndamax in combination with an RNA-targeted therapy for ATTR amyloidosis [i.e., Amvuttra (vutrisiran), Attruby (acoramadis), Onpattro (patisiran), Tegsedi (inotersen), or Wainua (eplontersen)]

History of failure of at least one immunosuppressive therapy as confirmed by claims history or submission of medical records

Patient has required four or more courses of plasmapheresis/plasma exchanges and/or immune globulin over the course of at least 12 months without symptom control

**AND**

**6** - Patient is not receiving Vyvgart Hytrulo in combination with ANY of the following for treatment of the same indication:

A complement inhibitor [e.g., eculizumab, Ultomiris (ravulizumab), Zilbrysq (zilucoplan)]

Another neonatal Fc receptor (FcRn) blocker [e.g., Imaavy (nipocalimab), Rystiggo (rozanolixizumab)]

Immune globulin (e.g., Gammagard, Privigen, Hizentra)

**AND**

**7** - Prescribed by or in consultation with a neurologist

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Submission of medical records (e.g., chart notes, laboratory tests) demonstrating ALL of the following:</p> <p>Improvement and/or maintenance of at least a 2-point improvement (reduction in score) in the MG-ADL score from pre-treatment baseline</p> |                               |

Reduction in signs and symptoms of myasthenia gravis

Maintenance, reduction, or discontinuation of dose(s) of baseline immunosuppressive therapy (IST) prior to starting Vyvgart Hytrulo. Note: Add on, dose escalation of IST, or additional rescue therapy from baseline to treat myasthenia gravis or exacerbation of symptoms while on Vyvgart Hytrulo therapy will be considered as treatment failure

**AND**

**2** - Patient is not receiving Vyvgart Hytrulo in combination with ANY of the following for treatment of the same indication:

A complement inhibitor [e.g., eculizumab, Ultomiris (ravulizumab), Zilbrysq (zilucoplan)]

Another neonatal Fc receptor (FcRn) blocker [e.g., Imaavy (nipocalimab), Rystiggo (rozanolixizumab)]

Immune globulin (e.g., Gammagard, Privigen, Hizentra)

**AND**

**3** - Prescribed by or in consultation with a neurologist

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of chronic inflammatory demyelinating polyneuropathy (CIDP)</p> <p><b>AND</b></p> <p><b>2</b> - ALL of the following:</p> |                                                          |

**2.1** Progressive symptoms present for at least 2 months

**AND**

**2.2** Symptomatic polyradiculoneuropathy as indicated by progressive or relapsing motor or sensory impairment of more than one limb

**AND**

**2.3** Electrodiagnostic findings (consistent with EFNS/PNS guidelines for definite CIDP) indicating the presence of at least ONE of the following:

Motor distal latency prolongation in 2 nerves

Reduction of motor conduction velocity in 2 nerves

Prolongation of F-wave latency in 2 nerves

Absence of F-waves in at least 1 nerve

Partial motor conduction block of at least 1 motor nerve

Abnormal temporal dispersion in at least 2 nerves

Distal CMAP duration increase in at least 1 nerve

**AND**

**3** - ONE of the following:

**3.1** Failure (after a trial of at least two months) to a corticosteroid (e.g., prednisone, methylprednisolone) as confirmed by claims history or submission of medical records

**OR**

**3.2** History of contraindication or intolerance to a corticosteroid (please specify contraindication or intolerance)

**AND**

**4** - ONE of the following:

**4.1** Trial and failure (after a trial of at least three months) to an immune globulin (e.g., Gammagard, Privigen, Hizentra) with the maximally allowable and/or tolerated dose as confirmed by claims history or submission of medical records

**OR**

**4.2** BOTH of the following:

Intolerance to all immune globulins (e.g., Gammagard, Privigen, Hizentra) (please specify intolerance)

Dose has been adjusted or escalated to the maximally allowable and/or tolerated dose

**OR**

**4.3** Contraindication to ALL immune globulins (e.g., Gammagard, Privigen, Hizentra) (please specify contraindication)

**AND**

**5** - Patient is not receiving Vyvgart Hytrulo in combination with an immune globulin (e.g., Gammagard, Privigen, Hizentra) for treatment of the same indication

**AND**

**6** - Prescribed by or in consultation with a neurologist

| Effective Date: | 12/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                    |                                                        |
|--------------------|--------------------------------------------------------|
| Product Name:Wakix |                                                        |
| Diagnosis          | Narcolepsy without Cataplexy (i.e., Narcolepsy Type 2) |
| Approval Length    | 12 month(s)                                            |
| Therapy Stage      | Initial Authorization                                  |
| Guideline Type     | Prior Authorization                                    |

### **Approval Criteria**

**1** - Submission of medical records (e.g., chart notes, lab values) documenting a diagnosis of narcolepsy with BOTH of the following:

**1.1** The patient has daily periods of irrepressible need to sleep or daytime lapses into sleep occurring for at least three months

**AND**

**1.2** A mean sleep latency of less than or equal to 8 minutes and two or more sleep onset rapid eye movement (REM) periods (SOREMPs) are found on a MSLT (Multiple Sleep Latency Test) performed according to standard techniques following a normal overnight polysomnogram. A SOREMP (within 15 minutes of sleep onset) on the preceding nocturnal polysomnogram may replace one of the SOREMPs on the MSLT

**AND**

**2** - Physician attestation that other causes of sleepiness have been ruled out or treated (including but not limited to obstructive sleep apnea, insufficient sleep syndrome, shift work, the effects of substances or medications or their withdrawal, sleep phase disorder, or other sleep disorders)

**AND**

**3** - ONE of the following:

**3.1** Failure to ALL of the following, as confirmed by claims history or submission of medical records:

An amphetamine-based stimulant (e.g., amphetamine, dextroamphetamine) OR a methylphenidate-based stimulant

Armodafinil (generic Nuvigil) OR modafinil (generic Provigil)

Sunosi (solriamfetol)

**OR**

**3.2** History of contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

An amphetamine-based stimulant (e.g., amphetamine, dextroamphetamine) OR a methylphenidate-based stimulant

Armodafinil (generic Nuvigil) OR modafinil (generic Provigil)

Sunosi (solriamfetol)

**OR**

**3.3** Patient has a history of or potential for a substance abuse disorder

**AND**

**4** - Prescribed by or in consultation with ONE of the following:

Neurologist

Psychiatrist

Pulmonologist

Sleep Medicine Specialist

|                                                                                                                                       |                                                        |

| Product Name:Wakix |                                                     |
| Diagnosis          | Narcolepsy with Cataplexy (i.e., Narcolepsy Type 1) |
| Approval Length    | 12 month(s)                                         |
| Therapy Stage      | Initial Authorization                               |
| Guideline Type     | Prior Authorization                                 |

  

**Approval Criteria**

**1** - Submission of medical records (e.g., chart notes, lab values) documenting a diagnosis of narcolepsy with cataplexy (i.e., Narcolepsy Type 1) with BOTH of the following:

**1.1** The patient has daily periods of irrepressible need to sleep or daytime lapses into sleep occurring for at least three months

**AND**

**1.2** A mean sleep latency of less than or equal to 8 minutes and two or more sleep onset rapid eye movement (REM) periods (SOREMPs) are found on a MSLT (Multiple Sleep Latency Test) performed according to standard techniques following a normal overnight polysomnogram. A SOREMP (within 15 minutes of sleep onset) on the preceding nocturnal polysomnogram may replace one of the SOREMPs on the MSLT

**AND**

**2** - Physician attestation to BOTH of the following:

**2.1** Patient has experienced cataplexy defined as more than one episode of sudden loss of muscle tone with retained consciousness

**AND**

**2.2** Other causes of sleepiness have been ruled out or treated (including but not limited to obstructive sleep apnea, insufficient sleep syndrome, shift work, the effects of substances or medications or their withdrawal, sleep phase disorder, or other sleep disorders)

**AND**

**3** - Prescribed by or in consultation with ONE of the following:

Neurologist

Psychiatrist

Pulmonologist

Sleep Medicine Specialist

Product Name:Wakix

**AND**

**2** - Patient is 18 years of age or older

**AND**

**3** - Submission of medical records documenting ALL of the following:

**3.1** BMI (body mass index) greater than or equal to 27 kg/m<sup>2</sup> (kilograms per square meter)

**AND**

**3.2** Established cardiovascular disease as evidenced by ONE of the following:

**3.2.1** Prior myocardial infarction (MI)

**OR**

**3.2.2** Prior ischemic or hemorrhagic stroke

**OR**

**3.2.3** Symptomatic peripheral arterial disease (PAD) evidenced by ONE of the following:

Intermittent claudication with ankle-brachial index (ABI) less than 0.85 (at rest)

Peripheral arterial revascularization procedure

Amputation due to atherosclerotic disease

**AND**

**4** - Used in combination with a reduced calorie diet and increased physical activity

**AND**

**5** - ONE of the following:

**5.1** For patients with history of MI, ONE of the following:

**5.1.1** Patient is on therapy from each of the following classes (as confirmed by claims history or submission of medical records):

Cholesterol lowering medication (e.g., statin, PCSK9i)

Beta blocker (i.e., carvedilol, metoprolol, or bisoprolol)

Angiotensin-converting enzyme inhibitor (ACE-I)/angiotensin II receptor blocker (ARB)/angiotensin II receptor blocker neprilysin inhibitor (ARNI)

Antiplatelet (e.g., aspirin, clopidogrel)

**OR**

**5.1.2** Patient has a history of intolerance or contraindication to ALL of the following therapeutic classes (please specify intolerance or contraindication):

Cholesterol lowering medication (e.g., statin, PCSK9i)

Beta blocker (i.e., carvedilol, metoprolol, or bisoprolol)

Angiotensin-converting enzyme inhibitor (ACE-I)/angiotensin II receptor blocker (ARB)/angiotensin II receptor blocker neprilysin inhibitor (ARNI)

Antiplatelet (e.g., aspirin, clopidogrel)

**OR**

**5.2** For patients with history of ischemic or hemorrhagic stroke, or symptomatic PAD, ONE of the following:

**5.2.1** Patient is on therapy from each of the following classes (as confirmed by claims history or submission of medical records):

Cholesterol lowering medication (e.g., statin, PCSK9i)

Angiotensin-converting enzyme inhibitor (ACE-I)/angiotensin II receptor blocker (ARB)/angiotensin II receptor blocker neprilysin inhibitor (ARNI)

Antiplatelet (e.g., aspirin, clopidogrel)

**OR**

**5.2.2** Patient has a history of intolerance or contraindication to ALL of the following therapeutic classes (please specify intolerance or contraindication):

Cholesterol lowering medication (e.g., statin, PCSK9i)

Angiotensin-converting enzyme inhibitor (ACE-I)/angiotensin II receptor blocker (ARB)/angiotensin II receptor blocker neprilysin inhibitor (ARNI)

Antiplatelet (e.g., aspirin, clopidogrel)

**AND**

**6** - Patient does NOT have New York Heart Association class IV heart failure

**AND**

**7** - ONE of the following:

**7.1** HgA1c less than 6.5%

**OR**

**7.2** BOTH of the following:

Diagnosis of diabetes or HgA1c greater than or equal to 6.5%

There is a reason or special circumstance why patient cannot use a commercially available semaglutide product indicated for type 2 diabetes mellitus

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 9/1/2024 |
|-----------------|----------|

## 1 . Criteria

|                         |                       |
|-------------------------|-----------------------|
| Product Name: Winrevair |                       |
| Approval Length         | 12 month(s)           |
| Therapy Stage           | Initial Authorization |
| Guideline Type          | Prior Authorization   |
|                         |                       |

**Approval Criteria**

**1** - One of the following:

**1.1** All of the following:

**1.1.1** Diagnosis of pulmonary arterial hypertension (PAH)

**AND**

**1.1.2** PAH has been confirmed by right heart catheterization

**AND**

**1.1.3** Prescriber attestation that other types of pulmonary hypertension (PH) are excluded as a diagnosis

**AND**

**1.1.4** Pulmonary arterial hypertension is symptomatic

**OR**

**1.2** Both of the following:

**1.2.1** Diagnosis of pulmonary arterial hypertension

**AND**

**1.2.2** Patient is currently on Winrevair therapy as documented by claims history or submission of medical records

**AND**

**2** - One of the following:

**2.1** Both of the following:

**2.1.1** Patient has a cardiopulmonary comorbidity (e.g., obesity, hypertension, diabetes mellitus, coronary heart disease)

**AND**

**2.1.2** Patient is currently taking at least ONE of the following oral therapies:

Endothelin receptor antagonist (ERA) [e.g., ambrisentan, bosentan, Opsumit (macitentan)]

Phosphodiesterase-5 inhibitor (PDE5i) (e.g., sildenafil, tadalafil)

**OR**

**2.2** Both of the following:

**2.2.1** Patient does not have a cardiopulmonary comorbidity (e.g., obesity, hypertension, diabetes mellitus, coronary heart disease)

**AND**

**2.2.2** Patient is currently taking oral combination therapy with BOTH of the following:

**2.2.2.1** Endothelin receptor antagonist (ERA) [e.g., ambrisentan, bosentan, Opsumit (macitentan)]

**AND**

**2.2.2.2** One of the following:

Phosphodiesterase-5 inhibitor (PDE5i) (e.g., sildenafil, tadalafil)

Soluble guanylate cyclase stimulator (sGC) [e.g., Adempas (riociguat)]

**AND**

**3** - Prescribed by, or in consultation with, a cardiologist, pulmonologist, or rheumatologist

|                                                                                                                                                                                                                                                                                                                                                                                                                            |                     |

Deep vein thrombosis (DVT)

Pulmonary embolism (PE)

**AND**

**2** - Patient does not have an artificial heart valve

**AND**

**3** - Patient must have been treated with an anticoagulant [e.g., warfarin, Eliquis (apixaban)] for at least 6 months prior to request as confirmed by claims history or submission of medical records

**AND**

**4** - ONE of the following:

**4.1** Failure to Eliquis as confirmed by claims history or submission of medical records

**OR**

**4.2** History of intolerance or contraindication to Eliquis (please specify intolerance or contraindication)

**OR**

**4.3** Continuation of prior Xarelto therapy

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 4/1/2024 |
|-----------------|----------|

## 1 . Criteria

|                          |                     |
|--------------------------|---------------------|
| Product Name:Xdemvy      |                     |
| Approval Length          | 6 Week(s)           |
| Guideline Type           | Prior Authorization |
| <b>Approval Criteria</b> |                     |

**1** - Diagnosis of Demodex blepharitis

**AND**

**2** - Patient demonstrates ONE of the following signs of Demodex infestation:

Cylindrical cuff at the root of the eyelashes

Lid margin erythema

Eyelash anomalies (e.g., eyelash misdirection, eyelash loss)

**AND**

**3** - Patient demonstrates TWO of the following symptoms of Demodex infestation:

Itching/Burning

Foreign body sensation

Crusting/matted lashes

Blurry vision

Discomfort/irritation

Tearing/lacrimation

Dryness

Purulence/discharge

**AND**

**4** - Patient is practicing good eye-lid hygiene (e.g., non-prescription tree-tea oil)

**AND**

**5** - Prescribed by or in consultation with ONE of the following:

Ophthalmologist

Optometrist

## 2 . Revision History

| Date      | Notes                                                                                                                                                                                       |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2/22/2024 | Updated criteria to include eyelash loss as an example of eyelash anomalies and added tearing/lacrimation, dryness, and purulence/discharge to the list of symptoms of Demodex infestation. |

Xeljanz, Xeljanz XR, Xeljanz Oral Solution

## Prior Authorization Guideline

|                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 4/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                                       |                           |
|---------------------------------------|---------------------------|
| Product Name:Xeljanz tabs, Xeljanz XR |                           |
| Diagnosis                             | Rheumatoid Arthritis (RA) |
| Approval Length                       | 12 month(s)               |
| Therapy Stage                         | Initial Authorization     |
| Guideline Type                        | Prior Authorization       |

## **Approval Criteria**

**1** - ALL of the following:

**1.1** Diagnosis of moderately to severely active rheumatoid arthritis (RA)

**AND**

**1.2** One of the following:

**1.2.1** Failure to a 3 month trial of one non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at maximally indicated doses as confirmed by claims history or submission of medical records

**OR**

**1.2.2** History of intolerance or contraindication to one non-biologic DMARD [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] (please specify intolerance or contraindication)

**OR**

**1.2.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of rheumatoid arthritis as confirmed by claims history or submission of medical records [e.g., Enbrel (etanercept), Cimzia (certolizumab), adalimumab, Simponi (golimumab), Orencia (abatacept), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**1.3** BOTH of the following:

**1.3.1** ONE of the following:

**1.3.1.1** Failure to ALL of the following as confirmed by claims history or submission of medical records:

One of the preferred adalimumab products\*

Enbrel (etanercept)

Tyenne (tocilizumab-aazg)

**OR**

**1.3.1.2** History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

One of the preferred adalimumab products\*

Enbrel (etanercept)

Tyenne (tocilizumab-aazg)

**OR**

**1.3.1.3** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria)

**AND**

**1.3.2** One of the following:

**1.3.2.1** Failure to Olumiant (baricitinib) as confirmed by claims history or submission of medical records

**OR**

**1.3.2.2** History of intolerance or contraindication to Olumiant (baricitinib) (please specify intolerance or contraindication)

**AND**

**1.4** Patient is NOT receiving Xeljanz/Xeljanz XR in combination with either of the following:

Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Rinvoq (upadacitinib), Olumiant (baricitinib)]

Potent immunosuppressant (e.g., azathioprine or cyclosporine)

**AND**

**1.5** Prescribed by or in consultation with a rheumatologist

**OR**

**2** - ALL of the following:

**2.1** Diagnosis of moderately to severely active RA

**AND**

**2.2** Patient is NOT receiving Xeljanz/Xeljanz XR in combination with either of the following:

Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Rinvoq (upadacitinib), Olumiant (baricitinib)]

Potent immunosuppressant (e.g., azathioprine or cyclosporine)

**AND**

**2.3** Patient is currently on Xeljanz/Xeljanz XR therapy as confirmed by claims history or submission of medical records

**AND**

**2.4** Prescribed by or in consultation with a rheumatologist

| Diagnosis                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Ulcerative Colitis (UC) |
| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 12 month(s)             |
| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Initial Authorization   |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Prior Authorization     |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - ALL of the following:</p> <p><b>1.1</b> Diagnosis of moderately to severely active ulcerative colitis (UC)</p> <p><b>AND</b></p> <p><b>1.2</b> ONE of the following:</p> <p><b>1.2.1</b> Patient has had prior or concurrent inadequate response to a therapeutic course of oral corticosteroids and/or immunosuppressants (e.g., azathioprine, 6-mercaptopurine) as confirmed by claims history or submitted medical records</p> |                         |

**OR**

**1.2.2** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ulcerative colitis as confirmed by claims history or submission of medical records [e.g., Simponi (golimumab), ustekinumab, Rinvoq (upadacitinib)]

**AND**

**1.3** ONE of the following:

**1.3.1** Failure to ONE of the following as confirmed by claims history or submission of medical records:

One of the preferred adalimumab products\*

One of the preferred ustekinumab products\*

**OR**

**1.3.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

One of the preferred adalimumab products\*

One of the preferred ustekinumab products\*

**OR**

**1.3.3** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria)

**AND**

**1.4** Patient is NOT receiving Xeljanz/Xeljanz XR in combination with either of the following:

Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Rinvoq (upadacitinib), Olumiant (baricitinib), ustekinumab, Skyrizi (risankizumab)]

Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**1.5** Prescribed by or in consultation with a gastroenterologist

**OR**

**2** - ALL of the following:

**2.1** Patient is currently on Xeljanz/Xeljanz XR therapy as confirmed by claims history or submission of medical records

**AND**

**2.2** Diagnosis of moderately to severely active UC

**AND**

**2.3** Patient is NOT receiving Xeljanz/Xeljanz XR in combination with either of the following:

Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Rinvoq (upadacitinib), Olumiant (baricitinib), ustekinumab, Skyrizi (risankizumab)]

Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**2.4** Prescribed by or in consultation with a gastroenterologist

**1.3.1.1** One of the following:

**1.3.1.1.1** Failure to BOTH of the following as confirmed by claims history or submission of medical records:

One of the preferred adalimumab products\*

Enbrel (etanercept)

**OR**

**1.3.1.1.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

One of the preferred adalimumab products\*

Enbrel (etanercept)

**AND**

**1.3.1.2** ONE of the following:

**1.3.1.2.1** Failure to Cosentyx (secukinumab) as confirmed by claims history or submission of medical records

**OR**

**1.3.1.2.2** History of intolerance or contraindication to Cosentyx (secukinumab) (please specify intolerance or contraindication)

**OR**

**1.3.2** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria)

**AND**

**1.4** Patient is NOT receiving Xeljanz/Xeljanz XR in combination with either of the following:

Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Rinvoq (upadacitinib), Olumiant (baricitinib)]

Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**1.5** Prescribed by or in consultation with a rheumatologist

**OR**

**2** - ALL of the following:

**2.1** Patient is currently on Xeljanz/Xeljanz XR therapy as confirmed by claims history or submission of medical records

**AND**

**2.2** Diagnosis of active ankylosing spondylitis

**AND**

**2.3** Patient is NOT receiving Xeljanz/Xeljanz XR in combination with either of the following:

Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Rinvoq (upadacitinib), Olumiant (baricitinib)]

Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**2.4** Prescribed by or in consultation with a rheumatologist

| Product Name:Xeljanz tabs/oral soln |                                                            |
| Diagnosis                           | Polyarticular Course Juvenile Idiopathic Arthritis (pcJIA) |
| Approval Length                     | 12 month(s)                                                |
| Therapy Stage                       | Initial Authorization                                      |
| Guideline Type                      | Prior Authorization                                        |
| <p><b>Approval Criteria</b></p>     |                                                            |

**1 - ALL of the following:**

**1.1** Diagnosis of active polyarticular course juvenile idiopathic arthritis

**AND**

**1.2** ONE of the following:

**1.2.1** Failure to ALL of the following as confirmed by claims history or submission of medical records:

One of the preferred adalimumab products\*

Enbrel (etanercept)

Tyenne (tocilizumab-aazg)

**OR**

**1.2.2** History of intolerance or contraindication to ALL of the following (please specific intolerance or contraindication):

One of the preferred adalimumab products\*

Enbrel (etanercept)

Tyenne (tocilizumab-aazg)

**OR**

**1.2.3** Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria)

**AND**

**1.3** Patient is NOT receiving Xeljanz/Xeljanz oral solution in combination with either of the following:

Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Olumiant (baricitinib), Rinvoq (upadacitinib)]

Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**1.4** Prescribed by or in consultation with a rheumatologist

**OR**

**2** - ALL of the following:

**2.1** Patient is currently on Xeljanz/Xeljanz Oral Solution as confirmed by claims history or submission of medical records

**AND**

**2.2** Diagnosis of active polyarticular course juvenile idiopathic arthritis

**AND**

**2.3** Patient is NOT receiving Xeljanz/Xeljanz Oral Solution in combination with either of the following:

Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Olumiant (baricitinib), Rinvoq (upadacitinib)]

Potent immunosuppressant (e.g., azathioprine, cyclosporine, mycophenolate mofetil)

**AND**

**2.4** Prescribed by or in consultation with a rheumatologist

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 1/1/2024 |
|-----------------|----------|

## 1 . Criteria

|                                                     |                                             |
|-----------------------------------------------------|---------------------------------------------|
| Product Name: Brand Xenazine, generic tetrabenazine |                                             |
| Diagnosis                                           | Chorea associated with Huntington's Disease |
| Approval Length                                     | 12 month(s)                                 |
| Guideline Type                                      | Prior Authorization                         |
|                                                     |                                             |

**Approval Criteria**

1 - Diagnosis of chorea in patients with Huntington's disease

Product Name: Brand Xenazine, generic tetrabenazine

|           |                                |
|-----------|--------------------------------|
| Diagnosis | Tardive Dyskinesia (Off-Label) |
|-----------|--------------------------------|

|                 |             |
|-----------------|-------------|
| Approval Length | 12 month(s) |
|-----------------|-------------|

|               |                       |
|---------------|-----------------------|
| Therapy Stage | Initial Authorization |
|---------------|-----------------------|

|                |                     |
|----------------|---------------------|
| Guideline Type | Prior Authorization |
|----------------|---------------------|

**Approval Criteria**

1 - Diagnosis of tardive dyskinesia

**AND**

2 - ONE of the following:

**2.1** Patient has persistent symptoms of tardive dyskinesia despite a trial of dose reduction, tapering, or discontinuation of the offending medication

**OR**

**2.2** Patient is not a candidate for a trial of dose reduction, tapering, or discontinuation of the offending medication

**AND**

3 - Prescribed by or in consultation with ONE of the following:

Neurologist

Psychiatrist

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 7/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                     |                                                                 |
|---------------------|-----------------------------------------------------------------|
| Product Name:Xolair |                                                                 |
| Diagnosis           | Asthma                                                          |
| Approval Length     | 12 month(s)                                                     |
| Therapy Stage       | Initial Authorization - Transitioning from UHC medical benefits |
| Guideline Type      | Prior Authorization                                             |

**Approval Criteria**

**1** - Patient has been established on therapy with Xolair for moderate to severe persistent asthma under an active UnitedHealthcare medical benefit prior authorization

**AND**

**2** - Documentation of positive clinical response to Xolair therapy as demonstrated by at least ONE of the following

**2.1** Reduction in the frequency of exacerbations

**OR**

**2.2** Decreased utilization of rescue medications

**OR**

**2.3** Increase in percent predicted forced expiratory volume (FEV1) from pretreatment baseline

**OR**

**2.4** Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing, etc.)

**AND**

**3** - Xolair is being used in combination with an inhaled corticosteroid (ICS)-containing maintenance medication [e.g., Advair/AirDuo (fluticasone/salmeterol), Breo Ellipta (fluticasone furoate/vilanterol), Symbicort (budesonide/ formoterol), Trelegy Ellipta (fluticasone furoate/umeclidinium/vilanterol)]

**AND**

**4** - Patient is not receiving Xolair in combination with any of the following:

Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]

Anti-interleukin 5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]

Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

| Product Name:Xolair                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| Diagnosis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Asthma                                                              |
| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 12 month(s)                                                         |
| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Initial Authorization - Not transitioning from UHC medical benefits |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Prior Authorization                                                 |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of moderate or severe asthma</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - Classification of asthma as uncontrolled or inadequately controlled as defined by at least ONE of the following:</p> <p><b>2.1</b> Poor symptom control [e.g., Asthma Control Questionnaire (ACQ) score consistently greater than 1.5 or Asthma Control Test (ACT) score consistently less than 20]</p> <p style="text-align: center;"><b>OR</b></p> <p><b>2.2</b> Two or more bursts of systemic corticosteroids for at least 3 days each in the previous 12 months</p> <p style="text-align: center;"><b>OR</b></p> |                                                                     |

**2.3** Asthma-related emergency treatment (e.g., emergency room visit, hospital admission, or unscheduled physician's office visit for nebulizer or other urgent treatment)

**OR**

**2.4** Airflow limitation [e.g., after appropriate bronchodilator withhold forced expiratory volume in 1 second (FEV1) less than 80% predicted (in the face of reduced FEV1-forced vital capacity [FVC] defined as less than the lower limit of normal)]

**OR**

**2.5** Patient is currently dependent on oral corticosteroids for the treatment of asthma

**AND**

**3** - Submission of medical records (e.g., chart notes, laboratory values, etc.) documenting a baseline (pre-omalizumab treatment) serum total IgE (immunoglobulin E) level greater than or equal to 30 IU/mL (international units/milliliter) and less than or equal to 1300 IU/mL

**AND**

**4** - Positive skin test or in vitro reactivity to a perennial aeroallergen

**AND**

**5** - Used in combination with ONE of the following:

**5.1** ONE maximally-dosed (appropriately adjusted for age) combination inhaled corticosteroid (ICS)-long-acting beta2-agonist (LABA) product [e.g., fluticasone propionate-salmeterol (AirDuo, Advair), budesonide-formoterol (Symbicort)]

**OR**

**5.2** Combination therapy including BOTH of the following:

**5.2.1** One maximally-dosed (appropriately adjusted for age) ICS (inhaled corticosteroid)

product [e.g., ciclesonide (Alvesco), mometasone furoate (Asmanex), beclomethasone dipropionate (QVAR)]

**AND**

**5.2.2** One additional asthma controller medication [e.g., LABA - olodaterol (Striverdi) or indacaterol (Arcapta); leukotriene receptor antagonist - montelukast (Singulair); theophylline]

**AND**

**6** - Patient is not receiving Xolair in combination with any of the following:

Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]

Anti-interleukin 5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]

Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**7** - Prescribed by ONE of the following:

Allergist

Immunologist

Pulmonologist

|                     |                     |
|---------------------|---------------------|
| Product Name:Xolair |                     |
| Diagnosis           | Asthma              |
| Approval Length     | 12 month(s)         |
| Therapy Stage       | Reauthorization     |
| Guideline Type      | Prior Authorization |
|                     |                     |

## Approval Criteria

**1** - Documentation of positive clinical response as demonstrated by at least ONE of the following:

Reduction in frequency of exacerbations

Decreased utilization of rescue medications

Increase in percent predicted FEV1 (forced expiratory volume in 1 second) from pretreatment baseline

Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing)

**AND**

**2** - Used in combination with an ICS (inhaled corticosteroid)-containing maintenance medication [e.g., Advair/AirDuo (fluticasone/salmeterol), Breo Ellipta (fluticasone furoate/vilanterol), Symbicort (budesonide/ formoterol), Trelegy Ellipta (fluticasone furoate/umeclidinium/vilanterol)]

**AND**

**3** - Patient is not receiving Xolair in combination with any of the following:

Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]

Anti-interleukin 5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]

Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

|                     |                                                                 |

**2 - ONE of the following:**

**2.1** Patient remains symptomatic despite at least a 2-week trial and failure of two H1-antihistamines [e.g., Allegra (fexofenadine), Benadryl (diphenhydramine), Claritin (loratadine)]\* (confirmed by claims history or submitted medical records)

**OR**

**2.2** Patient remains symptomatic despite at least a 2-week trial and failure of BOTH of the following taken in combination (confirmed by claims history or submitted medical records):

**2.2.1** Second generation H1-antihistamine [e.g., Allegra (fexofenadine), Claritin (loratadine), Zyrtec (cetirizine)]

**AND**

**2.2.2** ONE of the following:

Different second generation H1-antihistamine [e.g., Allegra (fexofenadine), Claritin (loratadine), Zyrtec (cetirizine)]

First generation H1-antihistamine [e.g., Benadryl (diphenhydramine), Chlor-Trimeton (chlorpheniramine), Vistaril (hydroxyzine)]\*

H2-antihistamine [e.g., Pepcid (famotidine), Tagamet HB (cimetidine), Zantac (ranitidine)]

Leukotriene modifier [e.g., Singulair (montelukast)]

**OR**

**2.3** History of contraindication or intolerance to ONE of the following (please specify contraindication or intolerance):

**2.3.1** Two H1-antihistamines [e.g., Allegra (fexofenadine), Benadryl (diphenhydramine), Claritin (loratadine)]\*

**OR**

**2.3.2** BOTH of the following taken in combination:

**2.3.2.1** Second generation H1-antihistamine [e.g., Allegra (fexofenadine), Claritin (loratadine), Zyrtec (cetirizine)]

**AND**

**2.3.2.2** ONE of the following:

Different second generation H1-antihistamine [e.g., Allegra (fexofenadine), Claritin (loratadine), Zyrtec (cetirizine)]

First generation H1-antihistamine [e.g., Benadryl (diphenhydramine), Chlor-Trimeton (chlorpheniramine), Vistaril (hydroxyzine)]\*

H2-antihistamine [e.g., Pepcid (famotidine), Tagamet HB (cimetidine), Zantac (ranitidine)]

Leukotriene modifier [e.g., Singulair (montelukast)]

**AND**

**3** - Patient is not receiving Xolair in combination with any of the following:

Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]

Anti-interleukin 5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]

Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**4** - Prescribed by one of the following:

Allergist

Dermatologist

Immunologist

Notes

\*Patients 65 years of age and older in whom first generation H1-antihistamines are considered high risk medications to be avoided (e.g., Be

**AND**

**2** - TWO or more of the following symptoms for longer than 12 weeks duration:

Nasal mucopurulent discharge

Nasal obstruction, blockage, or congestion

Facial pain, pressure, and/or fullness

Reduction or loss of sense of smell

**AND**

**3** - ONE of the following findings using nasal endoscopy and/or sinus computed tomography (CT):

Purulent mucus or edema in the middle meatus or ethmoid regions

Polyps in the nasal cavity or the middle meatus

Radiographic imaging demonstrating mucosal thickening or partial or complete opacification of paranasal sinuses

**AND**

**4** - ONE of the following:

**4.1** Patient has required prior sinus surgery

**OR**

**4.2** Patient has required systemic corticosteroids (e.g., prednisone, methylprednisolone) for nasal polyps in the previous 2 years

**OR**

**4.3** Patient has been unable to obtain symptom relief after trial of BOTH of the following confirmed by claims history or submitted medical records:

Intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)

One other therapy used in management of nasal polyps [i.e., nasal saline irrigations, antileukotriene agents (e.g., montelukast, zafirlukast, zileuton)]

**AND**

**5** - Patient will receive Xolair as add-on maintenance therapy in combination with intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)

**AND**

**6** - Patient is not receiving Xolair in combination with any of the following:

Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab), Nucala (mepolizumab)]

Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]

Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**7** - Prescribed by one of the following:

Allergist

Immunologist

Otolaryngologist

Pulmonologist

Product Name:Xolair

Diagnosis

Nasal Polyps

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                     |

**Approval Criteria**

**1** - Diagnosis of IgE-mediated food allergy to one or more foods

**AND**

**2** - Patient is at least 1 year of age

**AND**

**3** - IgE-mediated food allergy to specific food(s) has been confirmed by both of the following:

**3.1** History of type I allergic reactions (e.g., nausea, vomiting, cramping, diarrhea, flushing, pruritus, urticaria, swelling of the lips, face or throat, wheezing, lightheadedness, syncope)

**AND**

**3.2** One of the following:

Food specific skin prick testing (SPT)

IgE antibody in vitro testing

Oral food challenge (OFC)

**AND**

**4** - Xolair will be used in conjunction with food allergen avoidance

**AND**

**5** - Patient has access to epinephrine

**AND**

**6** - Patient is not receiving Xolair in combination with any of the following:

Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]

Anti-interleukin 5 therapy [e.g., Nucala (mepolizumab), Cinqair (reslizumab), Fasenra (benralizumab)]

Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**7** - Prescribed by allergist or immunologist

|-----------------|----------|
| Effective Date: | 5/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                      |                        |
|----------------------|------------------------|
| Product Name:Xospata |                        |
| Diagnosis            | Acute Myeloid Leukemia |
| Approval Length      | 12 month(s)            |
| Therapy Stage        | Initial Authorization  |
| Guideline Type       | Prior Authorization    |

**Approval Criteria**

**1** - Diagnosis of acute myeloid leukemia (AML)

**AND**

**2** - AML is FMS-like tyrosine kinase 3 (FLT3) mutation-positive

**AND**

**3** - ONE of the following:

Used as low-intensity treatment induction when not a candidate for intensive induction therapy

Follow-up after induction therapy with response to previous lower intensity therapy with the same regimen

Post-allogeneic hematopoietic cell transplantation and in remission

Disease is relapsed or refractory

Consolidation therapy as continuation of low-intensity regimen used for induction in patients with poor-risk AML

**Product Name:**Xospata

| Effective Date: | 9/1/2024 |
|-----------------|----------|

## 1 . Criteria

|                     |                       |
|---------------------|-----------------------|
| Product Name:Xtandi |                       |
| Diagnosis           | Prostate Cancer       |
| Approval Length     | 12 month(s)           |
| Therapy Stage       | Initial Authorization |
| Guideline Type      | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of prostate cancer

**AND**

**2** - ONE of the following:

**2.1** Both of the following:

**2.1.1** Disease is castration-resistant

**AND**

**2.1.2** One of the following:

Used in combination with a gonadotropin-releasing hormone (GnRH) analog [e.g., Lupron (leuprolide), Zoladex (goserelin), Trelstar (triptorelin), Vantas (histrelin), Firmagon (degarelix)]

Patient has had bilateral orchiectomy

**OR**

**2.2** Both of the following:

**2.2.1** Disease is metastatic castration-sensitive

**AND**

**2.2.2** One of the following:

Used in combination with a gonadotropin-releasing hormone (GnRH) analog [e.g., Lupron (leuprolide), Zoladex (goserelin), Trelstar (triptorelin), Vantas (histrelin), Firmagon (degarelix)]

Patient has had bilateral orchiectomy

**OR**

**2.3** Disease is non-metastatic castration-sensitive with biochemical recurrence at high risk for metastasis

**AND**

**3** - ONE of the following:

**3.1** BOTH of the following:

**3.1.1** Disease is castration-resistant

**AND**

**3.1.2** ONE of the following:

**3.1.2.1** Failure to BOTH of the following as confirmed by claims history or submission of medical records:

Erleada (apalutamide)

Nubeqa (darolutamide)

**OR**

**3.1.2.2** History of contraindication or intolerance to BOTH of the following (please specify contraindication or intolerance):

Erleada (apalutamide)

Nubeqa (darolutamide)

**OR**

**3.1.2.3** Continuation of ongoing Xtandi therapy

**OR**

**3.2** BOTH of the following:

**3.2.1** Disease is BOTH of the following:

Metastatic

Castration-sensitive

**AND**

**3.2.2** ONE of the following:

**3.2.2.1** Failure to ALL of the following as confirmed by claims history or submission of medical records:

abiraterone (generic Zytiga)

Erleada (apalutamide)

Nubeqa (darolutamide)

**OR**

**3.2.2.2** History of contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

abiraterone (generic Zytiga)

Erleada (apalutamide)

Nubeqa (darolutamide)

**OR**

**3.2.2.3** Continuation of ongoing Xtandi therapy

**OR**

**3.3** BOTH of the following:

**3.3.1** Disease is ALL of the following:

Non-metastatic

Castration-sensitive

Recurrent

High risk for metastasis

**AND**

**3.3.2** ONE of the following:

**3.3.2.1** Failure to abiraterone (generic Zytiga) as confirmed by claims history or submission of medical records

**OR**

**3.3.2.2** History of contraindication or intolerance to abiraterone (generic Zytiga) (please specify contraindication or intolerance)

**OR**

**3.3.2.3** Continuation of ongoing Xtandi therapy

## 1 . Criteria

|                                                   |                                                     |
|---------------------------------------------------|-----------------------------------------------------|
| Product Name:Xyrem, Sodium Oxybate, Xywav, Lumryz |                                                     |
| Diagnosis                                         | Narcolepsy with Cataplexy (i.e., Narcolepsy Type 1) |
| Approval Length                                   | 12 month(s)                                         |
| Therapy Stage                                     | Initial Authorization                               |
| Guideline Type                                    | Prior Authorization                                 |

### **Approval Criteria**

**1** - Submission of medical records (e.g., chart notes, laboratory values) documenting a diagnosis of narcolepsy with cataplexy (i.e., Narcolepsy Type 1) with BOTH of the following:

**1.1** The patient has daily periods of irrepressible need to sleep or daytime lapses into sleep occurring for at least three months

**AND**

**1.2** A mean sleep latency of less than or equal to 8 minutes and two or more sleep onset rapid eye movement (REM) periods (SOREMPs) on a Multiple Sleep Latency Test (MSLT) performed according to standard techniques following a normal overnight polysomnogram. A SOREMP (within 15 minutes of sleep onset) on the preceding nocturnal polysomnogram may replace one of the SOREMPs on the MSLT

**AND**

**2** - Physician attestation to BOTH of the following:

**2.1** Patient has experienced cataplexy defined as more than one episode of sudden loss of muscle tone with retained consciousness

**AND**

**2.2** Other causes of sleepiness have been ruled out or treated (including but not limited to obstructive sleep apnea, insufficient sleep syndrome, shift work, the effects of substances or medications, or other sleep disorders)

**AND**

**3** - Prescribed by ONE of the following:

Neurologist

Psychiatrist

Sleep Medicine Specialist

Pulmonologist

**AND**

**4 - ONE of the following:**

**4.1** Failure to Wakix (pitolisant) as confirmed by claims history or submission of medical records

**OR**

**4.2** History of contraindication or intolerance to Wakix (pitolisant) (please specify intolerance or contraindication)

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Submission of medical records (e.g., chart notes, lab values) documenting a diagnosis of narcolepsy without cataplexy (i.e., Narcolepsy Type 2) with BOTH of the following:</p> <p><b>1.1</b> The patient has daily periods of irrepressible need to sleep or daytime lapses into sleep occurring for at least three months</p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.2</b> A mean sleep latency of less than or equal to 8 minutes and two or more sleep onset rapid eye movement (REM) periods (SOREMPs) are found on a Multiple Sleep Latency Test (MSLT) performed according to standard techniques following a normal overnight polysomnogram. A SOREMP (within 15 minutes of sleep onset) on the preceding nocturnal polysomnogram may replace one of the SOREMPs on the MSLT</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - Physician attestation to BOTH of the following:</p> <p><b>2.1</b> Cataplexy is absent</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2.2</b> Other causes of sleepiness have been ruled out or treated (including but not limited to obstructive sleep apnea, insufficient sleep syndrome, shift work, the effects of substances or medications or their withdrawal, sleep phase disorder, or other sleep disorders)</p> <p style="text-align: center;"><b>AND</b></p> <p><b>3</b> - ONE of the following:</p> |                       |

**3.1** Failure of BOTH of the following confirmed by claims history or submission of medical records:

**3.1.1** ONE of the following:

Amphetamine based stimulant (e.g., amphetamine, dextroamphetamine)

Methylphenidate based stimulant

**AND**

**3.1.2** ONE of the following:

Modafinil (Provigil)

Armodafinil (Nuvigil)

**OR**

**3.2** History of contraindication or intolerance of ALL of the following (please specify intolerance or contraindication):

Amphetamine based stimulant (e.g., amphetamine, dextroamphetamine)

Methylphenidate based stimulant

Modafinil (Provigil)

Armodafinil (Nuvigil)

**AND**

**4** - ONE of the following:

**4.1** Failure to Sunosi (solriamfetol) as confirmed by claims history or submission of medical records

**OR**

**4.2** History of contraindication or intolerance to Sunosi (solriamfetol) (please specify intolerance or contraindication)

**AND**

**5** - Prescribed by ONE of the following:

Neurologist

Psychiatrist

Sleep Medicine Specialist

Pulmonologist

## **Approval Criteria**

**1** - Submission of medical records (e.g., chart notes, lab values) documenting a diagnosis of idiopathic hypersomnia with both of the following:

**1.1** The patient has daily periods of irrepressible need to sleep or daytime lapses into sleep occurring for at least three months

**AND**

**1.2** A mean sleep latency of < 8 minutes and fewer than two REM (rapid eye movement) periods (SOREMPs) are found on a MSLT (multiple sleep latency test) performed according to standard techniques following a normal overnight polysomnogram, or no SOREMPs if the REM sleep latency on the preceding polysomnogram was < 15 minutes

**AND**

**2** - Physician attestation that other causes of sleepiness have been ruled out or treated (including but not limited to obstructive sleep apnea, insufficient sleep syndrome, shift work, the effects of substances or medications or their withdrawal, sleep phase disorder, or other sleep disorders)

**AND**

**3** - ONE of the following:

**3.1** Failure of BOTH of the following confirmed by claims history or submission of medical records:

**3.1.1** ONE of the following:

Amphetamine based stimulant (e.g., amphetamine, dextroamphetamine)

Methylphenidate based stimulant

**AND**

**3.1.2** ONE of the following:

Modafinil (Provigil)

Armodafinil (Nuvigil)

**OR**

**3.2** History of contraindication or intolerance of ALL of the following (please specify intolerance or contraindication):

Amphetamine based stimulant (e.g., amphetamine, dextroamphetamine)

Methylphenidate based stimulant

Modafinil (Provigil)

Armodafinil (Nuvigil)

**AND**

**4** - Prescribed by ONE of the following:

Neurologist

Psychiatrist

Sleep medicine specialist

Pulmonologist

### Approval Criteria

**1** - Diagnosis of ONE of the following:

Follicular carcinoma

Oncocytic carcinoma

Papillary carcinoma

**AND**

**2** - ONE of the following:

Unresectable locoregional recurrent disease

Metastatic disease

Persistent disease

**AND**

**3** - ONE of the following:

Patient has symptomatic disease

Patient has progressive disease

**AND**

**4** - Disease is refractory to radioactive iodine

**AND**

**5** - Cancer is positive for BRAF V600 mutation

## 1 . Criteria

|                          |                         |
|--------------------------|-------------------------|
| Product Name:Zepbound    |                         |
| Diagnosis                | Obstructive Sleep Apnea |
| Approval Length          | 6 month(s)              |
| Therapy Stage            | Initial Authorization   |
| Guideline Type           | Prior Authorization     |
| <b>Approval Criteria</b> |                         |

**1** - Treatment is being requested for obstructive sleep apnea (OSA)

**AND**

**2** - Patient is greater than or equal to 18 years of age

**AND**

**3** - Submission of medical records confirming all of the following:

**3.1** Moderate-to-severe obstructive sleep apnea evidenced by both of the following:

**3.1.1** Sleep study

**AND**

**3.1.2** One of the following:

Apnea Hypopnea Index (AHI) greater than or equal to 15

Respiratory Disturbance Index (RDI) greater than or equal to 15

Respiratory Event Index (REI) greater than or equal to 15

**AND**

**3.2** BMI (body mass index) greater than or equal to 30 kg/m<sup>2</sup> (kilograms per square meter) in the past 6 months

**AND**

**3.3** At least one previous unsuccessful dietary effort to lose weight

**AND**

**3.4** One of the following:

**3.4.1** Both of the following:

Patient is currently on positive airway pressure (PAP) therapy for at least 3 consecutive months

Patient is adherent to PAP therapy, defined as greater than or equal to 4 hours of use per night for greater than or equal to 70 percent of nights

**OR**

**3.4.2** Patient is not a candidate for, or is intolerant to, PAP therapy (e.g., upper airway anatomic abnormalities, etc.)

**AND**

**4** - Used in combination with a reduced calorie diet and increased physical activity

**AND**

**5** - Provider attests to both of the following:

Patient counseled on appropriate positional therapy

Patient counseled on avoidance of alcohol and/or sedatives before bedtime

**AND**

**6** - Patient does NOT have a diagnosis of diabetes or HgA1c (hemoglobin A1c) greater than 6.5%

**AND**

**7** - Prescriber attests the patient does NOT have any one of the following:

Planned surgery for sleep apnea or obesity

Significant craniofacial abnormalities

A diagnosis of central or mixed sleep apnea

**AND**

**8** - Prescribed by, or in consultation with, a sleep specialist

| <p><b>Approval Criteria</b></p> <p><b>1</b> - One of the following:</p> <p><b>1.1</b> If patient has been on Zepbound for less than 52 weeks of consecutive therapy, submission of medical records confirming a decrease from baseline in one of the following:</p> <p>Apnea Hypopnea Index (AHI)</p> <p>Respiratory Disturbance Index (RDI)</p> <p>Respiratory Event Index (REI)</p> <p><b>OR</b></p> <p><b>1.2</b> If patient has been on Zepbound for greater than or equal to 52 weeks of consecutive therapy, submission of medical records confirming a 50% decrease from baseline in one of the following:</p> |                                                                                                                                                                                                                                                                      |

Apnea Hypopnea Index (AHI)

Respiratory Disturbance Index (RDI)

Respiratory Event Index (REI)

**AND**

**2** - Patient has had a weight loss of greater than or equal to 10% of baseline body weight

**AND**

**3** - Used in combination with a reduced calorie diet and increased physical activity

**AND**

**4** - Patient does NOT have a diagnosis of diabetes or HgA1c (hemoglobin A1c) greater than 6.5%

**AND**

**5** - Patient continues to require treatment for obstructive sleep apnea

|-----------------|----------|
| Effective Date: | 4/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Zeposia |                       |
| Diagnosis            | Multiple Sclerosis    |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

### Approval Criteria

1 - Diagnosis of multiple sclerosis (MS)

**AND**

2 - ONE of the following:

2.1 BOTH of the following:

2.1.1 Failure to a trial of a preferred\* dimethyl fumarate product, as confirmed by claims history or submission of medical records

**AND**

2.1.2 Failure to a trial of at least ONE additional preferred\* alternative, as confirmed by claims history or submission of medical records

**OR**

2.2 History of intolerance or contraindication to ALL preferred\* alternatives (please specify intolerance or contraindication)

**OR**

2.3 Patient is currently on Zeposia therapy as confirmed by claims history or submission of medical records

Notes

**Approval Criteria**

1 - ALL of the following:

1.1 Diagnosis of moderately to severely active ulcerative colitis (UC)

**AND**

1.2 ONE of the following:

1.2.1 Patient has had prior or concurrent inadequate response to a therapeutic course of oral corticosteroids and/or immunosuppressants (e.g., azathioprine, 6-mercaptopurine) as confirmed by claims history or submission of medical records

**OR**

1.2.2 Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of ulcerative colitis as confirmed by claims history or submission of medical records [e.g., adalimumab, Simponi (golimumab), ustekinumab, Xeljanz (tofacitinib), Rinvoq (upadacitinib)]

**AND**

1.3 Patient is not receiving Zeposia in combination with a targeted immunomodulator [e.g.,

adalimumab, Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), ustekinumab, Skyrizi (risankizumab), Omvoh (mirikizumab-mrkz), Entyvio (vedolizumab)]

**AND**

**1.4** ONE of the following:

**1.4.1** Failure to ONE of the preferred adalimumab products\* as confirmed by claims history or submission of medical records

**OR**

**1.4.2** History of intolerance or contraindication to ONE of the preferred adalimumab products\* (please specify intolerance or contraindication)

**AND**

**1.5** Prescribed by or in consultation with a gastroenterologist

**OR**

**2** - ALL of the following:

**2.1** Patient is currently on Zeposia therapy as confirmed by claims history or submission of medical records

**AND**

**2.2** Diagnosis of moderately to severely active ulcerative colitis

**AND**

**2.3** Patient is not receiving Zeposia in combination with a targeted immunomodulator [e.g., adalimumab, Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), ustekinumab, Skyrizi (risankizumab), Omvoh (mirikizumab-mrkz), Entyvio (vedolizumab)]

**AND**

**2.4** Prescribed by or in consultation with a gastroenterologist

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 1/1/2023 |
|-----------------|----------|

## 1 . Criteria

|                      |                           |
|----------------------|---------------------------|
| Product Name:Zolanza |                           |
| Diagnosis            | Cutaneous T-Cell Lymphoma |
| Approval Length      | 12 month(s)               |
| Therapy Stage        | Initial Authorization     |
| Guideline Type       | Prior Authorization       |

**Approval Criteria**

**1** - Diagnosis of cutaneous T-cell lymphoma (CTCL)

**AND**

**2** - Patient has progressive, persistent, or recurrent disease on or following two systemic therapies [e.g., Adcetris (brentuximab vedotin), bexarotene, interferon alfa-db, interferon gamma-1b, methotrexate, Poteligeo (mogamulizumab), romidepsin]

Product Name:Zolinza

|                 |                           |
|-----------------|---------------------------|
| Diagnosis       | Cutaneous T-Cell Lymphoma |
| Approval Length | 12 month(s)               |
| Therapy Stage   | Reauthorization           |
| Guideline Type  | Prior Authorization       |

**Approval Criteria**

**1** - Patient does not show evidence of progressive disease while on Zolinza therapy

Product Name:Zolinza

|                 |                           |
|-----------------|---------------------------|
| Diagnosis       | NCCN Recommended Regimens |
| Approval Length | 12 month(s)               |
| Therapy Stage   | Initial Authorization     |
| Guideline Type  | Prior Authorization       |

**Approval Criteria**

**1** - Use is supported by The National Comprehensive Cancer Network (NCCN) Drugs and Biologics Compendium

|                                                                                                    |                           |

## **Approval Criteria**

**1** - Diagnosis of plaque psoriasis

**AND**

**2** - ONE of the following:

**2.1** Submission of medical records or claims history confirming failure to a minimum duration of a 4-week trial to TWO of the following topical therapies:

Corticosteroids (e.g., betamethasone, clobetasol, desonide)

Vitamin D analogs (e.g., calcitriol, calcipotriene)

Tazarotene

Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)

Anthralin

Coal tar

**OR**

**2.2** History of intolerance or contraindication to ALL of the following topical therapies (please specify intolerance or contraindication):

Corticosteroids (e.g., betamethasone, clobetasol, desonide)

Vitamin D analogs (e.g., calcitriol, calcipotriene)

Tazarotene

Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus)

Anthralin

Coal tar

**AND**

**3** - Patient is not receiving the requested medication in combination with a targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Siliq (brodalumab), Ilumya (tildrakizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                     |

| Guideline Type                                                                                                                                                            | Prior Authorization   |
| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of mild to moderate atopic dermatitis</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - ONE of the following:</p> |                       |

**2.1** For mild atopic dermatitis:

**2.1.1** Submission of medical records or claims history confirming failure to TWO of the following topical therapeutic classes:

A topical corticosteroid [e.g., DesOwen (desonide), hydrocortisone] (any potency)

One topical calcineurin inhibitor [e.g., Elidel (pimecrolimus), Protopic (tacrolimus)]

Eucrisa (crisaborole)

**OR**

**2.1.2** History of intolerance or contraindication to ALL of the following topical therapies (please specify intolerance or contraindication):

A topical corticosteroid [e.g., DesOwen (desonide), hydrocortisone] (any potency)

One topical calcineurin inhibitor [e.g., Elidel (pimecrolimus), Protopic (tacrolimus)]

Eucrisa (crisaborole)

**OR**

**2.2** For moderate atopic dermatitis:

**2.2.1** Submission of medical records or claims history confirming failure to TWO of the following topical therapeutic classes:

A topical corticosteroid of at least a medium- to high-potency [e.g., Elocon (mometasone furoate), Synalar (fluocinolone acetonide), Lidex (fluocinonide)]

One topical calcineurin inhibitor [e.g., Elidel (pimecrolimus), Protopic (tacrolimus)]

Eucrisa (crisaborole)

**OR**

**2.2.2** History of intolerance or contraindication to ALL of the following topical therapies (please specify intolerance or contraindication):

A topical corticosteroid of at least a medium- to high-potency [e.g., Elocon (mometasone furoate), Synalar (fluocinolone acetonide), Lidex (fluocinonide)]

One topical calcineurin inhibitor [e.g., Elidel (pimecrolimus), Protopic (tacrolimus)]

Eucrisa (crisaborole)

**AND**

**3** - Patient is not receiving Zoryve 0.15% cream in combination with a targeted immunomodulator [e.g., Adbry (tralokinumab-ldrm), Cibinqo (abrocitinib), Dupixent (dupilumab), Rinvoq (upadacitinib)]

## 1 . Criteria

|                        |                       |
|------------------------|-----------------------|
| Product Name:Zymfentra |                       |
| Diagnosis              | Ulcerative Colitis    |
| Approval Length        | 12 month(s)           |
| Therapy Stage          | Initial Authorization |
| Guideline Type         | Prior Authorization   |

**Approval Criteria**

**1** - Submission of medical records documenting clinical rationale for need of subcutaneous infliximab (Zymfentra) in place of infliximab administered intravenously (covered under the medical benefit)

**AND**

**2** - Diagnosis of moderately to severely active ulcerative colitis (UC)

**AND**

**3** - One of the following:

**3.1** Patient has been established on therapy with an infliximab product under an active UnitedHealthcare prior authorization for the treatment of moderately to severely active ulcerative colitis

**OR**

**3.2** Patient is currently on Zymfentra therapy for moderately to severely active ulcerative colitis as confirmed by claims history or submission of medical records

**AND**

**4** - Patient is not receiving Zymfentra in combination with a targeted immunomodulator [e.g., adalimumab, Entyvio (vedolizumab), Olumiant (baricitinib), Omvoh (mirikizumab-mrkz), Rinvoq (upadacitinib), Simponi (golimumab), Skyrizi (risankizumab), Stelara (ustekinumab), Xeljanz (tofacitinib)]

**AND**

**5** - Prescribed by or in consultation with a gastroenterologist
