## 1 . Criteria

|                                                                    |                     |
|--------------------------------------------------------------------|---------------------|
| Product Name:generic metformin extended-release (generic Fortamet) |                     |
| Approval Length                                                    | 12 month(s)         |
| Guideline Type                                                     | Prior Authorization |
| Approval Criteria                                                  |                     |

**1** - History of greater than or equal to 12-week trial of metformin extended-release (generic Glucophage XR) as confirmed by claims history or submission of medical records

**AND**

**2** - One of the following:

**2.1** Submission of medical records (e.g. chart notes, laboratory values) documenting an inadequate response to metformin extended-release (generic Glucophage XR) as evidenced by the hemoglobin A1c level being above the patient's goal

**OR**

**2.2** Submission of medical records (e.g. chart notes, laboratory values) documenting an intolerance to metformin extended-release (generic Glucophage XR) which is unable to be resolved with attempts to minimize the adverse effects where appropriate (e.g. dose reduction)

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                     |

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Prior Authorization |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - History of greater than or equal to 12 week trial of metformin extended-release (generic Glucophage XR) as confirmed by claims history or submission of medical records</p> <p><b>AND</b></p> <p><b>2</b> - One of the following:</p> <p><b>2.1</b> Submission of medical records (e.g. chart notes, laboratory values) documenting an inadequate response to metformin extended-release (generic Glucophage XR) as evidenced by the hemoglobin A1c level being above the patient's goal</p> |                     |

**OR**

**2.2** Submission of medical records (e.g. chart notes, laboratory values) documenting an intolerance to metformin extended-release (generic Glucophage XR) which is unable to be resolved with attempts to minimize the adverse effects where appropriate (e.g. dose reduction)

**AND**

**3** - History of greater than or equal to 12 week trial of metformin extended-release (generic Fortamet) as confirmed by claims history or submission of medical records

**AND**

**4** - One of the following:

**4.1** Submission of medical records (e.g. chart notes, laboratory values) documenting an inadequate response to metformin extended-release (generic Fortamet) as evidenced by the hemoglobin A1c level being above the patient's goal

**OR**

**4.2** Submission of medical records (e.g. chart notes, laboratory values) documenting an intolerance to metformin extended-release (generic Fortamet) which is unable to be resolved with attempts to minimize the adverse effects where appropriate (e.g. dose reduction)

**AND**

**5** - Submission of article(s) published in the peer-reviewed medical literature showing that the requested drug is likely to be more efficacious to this patient than metformin extended-release (generic Glucophage XR AND generic Fortamet)

## 1 . Criteria

|                      |                                    |
|----------------------|------------------------------------|
| Product Name:Gavreto |                                    |
| Diagnosis            | Non-Small Cell Lung Cancer (NSCLC) |
| Approval Length      | 12 month(s)                        |
| Therapy Stage        | Initial Authorization              |
| Guideline Type       | Prior Authorization                |

**Approval Criteria**

**1** - Patient has a diagnosis of non-small cell lung cancer (NSCLC)

**AND**

**2** - Disease is ONE of the following:

- Recurrent
- Advanced
- Metastatic

**AND**

**3** - There is presence of RET rearrangement positive tumors

|                                                                                                                                                                                                                                                                                       |                       |

| <p><b>Approval Criteria</b></p> <p><b>1</b> - ALL of the following:</p> <p><b>1.1</b> Diagnosis of ONE of the following:</p> <ul style="list-style-type: none"> <li>• Follicular carcinoma</li> <li>• Oncocytic carcinoma</li> <li>• Papillary carcinoma</li> </ul> <p><b>AND</b></p> |                       |

**1.2 ONE of the following:**

- Unresectable locoregional recurrent disease
- Persistent disease
- Metastatic disease

**AND**

**1.3 Disease is RET gene fusion positive**

**AND**

**1.4 Disease is not amenable to radioactive iodine therapy**

**OR**

**2 - ALL of the following:**

**2.1 Diagnosis of medullary carcinoma**

**AND**

**2.2 ONE of the following:**

- Disease is recurrent, persistent, or progressive
- Disease is symptomatic with distant metastases

**AND**

**2.3 Disease is RET-mutation positive**

**OR**

**3 - ALL of the following:**

**3.1 Diagnosis of anaplastic carcinoma**

**AND**

**3.2 ONE of the following:**

- Disease is stage IVA or IVB (locoregional)
- Disease is metastatic

**AND**

**3.3 Disease is RET gene fusion positive**

|                                                                                                                                                                                                                                                                                                                                                                            |                       |

### Approval Criteria

**1** - ONE of the following:

**1.1** Submission of medical records (e.g., chart notes) confirming diagnosis of type 2 diabetes mellitus as evidenced by ONE of the following laboratory values:

- A1C greater than or equal to 6.5%
- Fasting plasma glucose (FPG) greater than or equal to 126 milligrams per deciliter (mg/dL)
- 2-hour plasma glucose (PG) greater than or equal to 200 mg/dL during oral glucose tolerance test
- Random plasma glucose greater than or equal to 200 mg/dL in patient with classic symptoms of hyperglycemia or hyperglycemic crisis

**OR**

**1.2** For patients requiring ongoing treatment for type 2 diabetes mellitus (i.e., diagnosed greater than 2 years ago), submission of medical records (e.g., chart notes) confirming diagnosis of type 2 diabetes mellitus

**AND**

**2** - History of failure to achieve acceptable glycemic control with Victoza (brand or generic) 1.2mg per day for 90 days (2 Pen Pack), as confirmed by claims history or submission of medical records

Product Name: Brand Victoza 1.8mg per day (3 Pen Pack), generic liraglutide 1.8mg per day (3 Pen Pack)

| Product Name:leuprolide acetate inj kit 5 mg/mL, Lupron Depot-Ped, Triptodur, Fensolvi |                                  |
| Diagnosis                                                                              | Central Precocious Puberty (CPP) |
| Approval Length                                                                        | 12 month(s)                      |
| Therapy Stage                                                                          | Reauthorization                  |
| Guideline Type                                                                         | Prior Authorization              |

**Approval Criteria**

1 - Patient is currently receiving therapy for central precocious puberty

**AND**

2 - Documentation of positive clinical response to therapy (e.g., decrease in height velocity, cessation of menses, arrest pubertal progression, reduction in bone age advancement)

**AND**

3 - Patient is currently younger than the appropriate time point for the onset of puberty, as ONE of the following:

3.1 Female younger than 11 years of age

**OR**

3.2 Male younger than 12 years of age

| Diagnosis      | Prostate Cancer     |
| Guideline Type | Prior Authorization |

### Approval Criteria

**1** - For a diagnosis of advanced or metastatic prostate cancer, the requested medication is not delegated to OptumRx for review and should be processed as a medical benefit

Product Name:Lupron Depot, Lupron Depot-Ped, Fensolvi, Triptodur, leuprolide acetate inj kit 5 mg/mL, leuprolide acetate (3 month) 22.5 mg inj

|                 |                                  |
|-----------------|----------------------------------|
| Diagnosis       | Gender Dysphoria in Adolescents* |
| Approval Length | 12 month(s)                      |
| Therapy Stage   | Initial Authorization            |
| Guideline Type  | Prior Authorization              |

### Approval Criteria

**1** - Submission of medical records (e.g., chart notes, laboratory values) documenting a diagnosis of gender dysphoria, according to the current Diagnostic and Statistical Manual of Mental Disorders (i.e., DSM-5) criteria, by a mental health professional with expertise in child and adolescent psychiatry

**AND**

**2** - Submission of medical records (e.g., chart notes, laboratory values) documenting the medication is prescribed by or in consultation with an endocrinologist or a medical provider experienced in gender dysphoria hormone therapy

**AND**

**3** - Submission of medical records (e.g., chart notes, laboratory values) documenting the patient has experienced puberty development to at least Tanner stage 2

**AND**

**4** - Submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following laboratory tests, based upon the laboratory reference range, confirming:

- Pubertal levels of estradiol in a female
- Pubertal levels of testosterone in a male
- Pubertal basal level of luteinizing hormone (based on laboratory reference ranges)
- A pubertal luteinizing hormone response to a gonadotropin-releasing hormone (GnRH) stimulation test

**AND**

**5** - Submission of medical records (e.g., chart notes, laboratory values) documenting a letter from the prescriber and/or formal documentation stating ALL of the following:

**5.1** Patient has experienced pubertal changes that have resulted in an increase of their gender dysphoria that has significantly impaired psychological or social functioning

**AND**

**5.2** Coexisting psychiatric and medical comorbidities or social problems that may interfere with the diagnostic procedures or treatment have been addressed or removed

**AND**

**5.3 BOTH of the following:**

**5.3.1** Current enrollment, attendance, and active participation in psychological and social support treatment program

**AND**

**5.3.2** Patient will continue enrollment, attendance, and active participation in psychological and social support throughout the course of treatment

**AND**

**5.4** Patient demonstrates knowledge and understanding of the expected outcomes of treatment and related transgender therapies

|       |                                                                         |

| Diagnosis                                                                                                                                           | Congenital Growth Hormone Deficiency (GHD) |
| Approval Length                                                                                                                                     | 12 month(s)                                |
| Therapy Stage                                                                                                                                       | Initial Authorization                      |
| Guideline Type                                                                                                                                      | Prior Authorization                        |

### **Approval Criteria**

**1** - Infant is less than 12 months of age

**AND**

**2** - Submission of medical records documenting evidence of growth failure confirmed by all of the following:

- Growth charts for length/height and weight for age and gender with evidence of growth velocity deceleration over time
- Documentation of length/height and weight for age and gender including percentile and/or standard deviation scores
- Calculated growth velocity

**AND**

**3** - Submission of medical records documenting one of the following:

**3.1** Both of the following:

- Hypothalamic-pituitary defect (e.g., ectopic posterior pituitary, empty sella, hypoplastic pituitary, major congenital malformation, optic nerve hypoplasia, tumor or irradiation)
- Deficiency of at least one additional pituitary hormone

**OR**

**3.2** All of the following:

- Neonatal hypoglycemia and/or micropenis
- Serum GH (growth hormone) concentration less than or equal to 5 micrograms per liter in the first 28 days of life
- Deficiency of at least one additional pituitary hormone
- Classical imaging triad (i.e., ectopic posterior pituitary and pituitary hypoplasia with abnormal stalk)

**AND**

**4** - Submission of medical records documenting one of the following is below the age and gender adjusted normal range as provided by the physician's lab:

- Insulin-like Growth Factor 1 (IGF-1/Somatomedin-C)
- Insulin Growth Factor Binding Protein-3 (IGFBP-3)

**AND**

**5** - Prescribed by an endocrinologist

**AND**

**6** - Request does not exceed a maximum supply limit of 0.3 mg/kg/week (milligrams per kilogram per week)

**AND**

**7** - If the request is for a non-preferred medication, there must be a reason or special circumstance that the patient must be treated with a non-preferred medication\* (document reason or special circumstance)

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Submission of medical records documenting a height increase of at least 2 centimeters per year over the previous year confirmed by all of the following:</p> <ul style="list-style-type: none"> <li>• Previous length/height and date obtained</li> </ul> |                                            |

- Current length/height and date obtained
- Calculated growth velocity
- Growth chart for length/height for age and gender

**AND**

**2** - Submission of medical records documenting both of the following:

- Expected adult height not attained
- Documentation of expected adult height goal (e.g. genetic potential)

**AND**

**3** - Prescribed by an endocrinologist

**AND**

**4** - Request does not exceed a maximum supply limit of 0.3mg/kg/week (milligrams per kilogram per week)

Product Name: Genotropin, Genotropin Miniquick, Humatrope, Norditropin Flexpro, Nutropin AQ NuSpin, Omnitrope, Saizen, Zomacton, Zorbtive, Serostim, Ngenla, Skytrofa, Sogroya

|                 |                                            |
|-----------------|--------------------------------------------|
| Diagnosis       | Pediatric Growth Hormone Deficiency (GHD)* |
| Approval Length | 12 month(s)                                |
| Therapy Stage   | Initial Authorization                      |
| Guideline Type  | Prior Authorization                        |

### Approval Criteria

**1** - Submission of medical records documenting a diagnosis of pediatric GH (growth hormone) deficiency

**AND**

**2** - Submission of medical records documenting evidence of growth failure confirmed by all of the following:

- Growth charts for length/height and weight for age and gender with evidence of growth velocity deceleration over time
- Documentation of length/height and weight for age and gender including percentile and/or standard deviation scores
- Calculated growth velocity

**AND**

**3** - Submission of medical records documenting open epiphyses in the last 12 months

**AND**

**4** - Submission of medical records documenting Tanner stage less than or equal to 4

**AND**

**5** - Submission of medical records documenting both of the following:

**5.1** Patient has undergone two of the following provocative GH stimulation tests:

- Arginine
- Clonidine
- Glucagon
- Insulin
- Levodopa

**AND**

**5.2** Peak GH responses to each agent is less than 10 mcg/L (micrograms per liter)

**AND**

**6** - If patient has a history of malignancy, one of the following:

- Patient is in remission

- Patient has been stable for at least 12 months

**AND**

**7 - Prescribed by an endocrinologist**

**AND**

**8 - One of the following:**

**8.1** If the request is for Ngenla, request does not exceed a maximum supply limit of 0.66 mg/kg/week (milligrams per kilogram per week)

**OR**

**8.2** If the request is for any other product, one of the following:

**8.2.1** Request does not exceed a maximum supply limit of 0.3 mg/kg/week

**OR**

**8.2.2** All of the following:

**8.2.2.1** One of the following:

- Poor catch-up growth while on standard dosing
- IGF-1 (Insulin-like Growth Factor 1) less than 2 standard deviations from the mean while on standard dosing

**AND**

**8.2.2.2** Tanner Stage 2 or greater

**AND**

**8.2.2.3** Request does not exceed a maximum supply limit of 0.7 mg/kg/week

**AND**

**9** - One of the following:

**9.1** If the request is for a non-preferred somatropin medication, there must be a reason or special circumstance that the patient must be treated with a non-preferred medication\*\* (document reason or special circumstance)

**OR**

**9.2** If the request is for Sogroya, one of the following:

**9.2.1** Failure to one of the following, confirmed by claims history or submission of medical records:

- Somatropin (Norditropin)
- Somatropin (Omnitrope)

**OR**

**9.2.2** History of intolerance or contraindication to both of the following (please specify intolerance or contraindication):

- Somatropin (Norditropin)
- Somatropin (Omnitrope)

**OR**

**9.3** If the request is for Ngenla or Skytrofa, one of the following:

**9.3.1** Failure to both of the following, confirmed by claims history or submission of medical records:

- Somatropin (Norditropin or Omnitrope)
- Sogroya (somapacitan)

**OR**

**9.3.2** History of intolerance or contraindication to both of the following (please specify intolerance or contraindication):

- Somatropin (Norditropin or Omnitrope)
- Sogroya (somapacitan)

Notes

\*If patient is a Transition Phase Adolescent or Adult who had childhood onset GH deficiency, utilize criteria for Transition Phase Adolescent or Adult GH Deficiency.  
 \*\*See Table 1 in Background section

**OR**

**2.2** Both of the following:

**2.2.1** Patient has undergone one of the following GH (growth hormone) stimulation tests after discontinuation of therapy for at least 1 month:

- Insulin tolerance test (ITT)
- GH-releasing hormone-arginine test (GHRH and ARG)
- Glucagon stimulation test (GST)
- Macimorelin

**AND**

**2.2.2** One of the following peak GH values:

- ITT less than or equal to 5.1 micrograms per liter
- GHRH and ARG less than or equal to 11 micrograms per liter
- Glucagon less than or equal to 3 micrograms per liter
- Macimorelin less than or equal to 2.8 ng/mL (nanograms per milliliter)

**AND**

**3** - Prescribed by an endocrinologist

**AND**

**4** - One of the following:

**4.1** Request does not exceed a maximum supply limit of 0.3mg/kg/week (milligrams per kilogram per week)

**OR**

**4.2** All of the following:

**4.2.1** One of the following:

- Poor catch-up growth while on standard dosing
- IGF-1 less than 2 standard deviations from the mean while on standard dosing

**AND**

**4.2.2** Tanner Stage 2 or greater

**AND**

**4.2.3** Request does not exceed a maximum supply limit of 0.7 mg/kg/week

**AND**

**5** - If the request is for a non-preferred medication, there must be a reason or special circumstance that the patient must be treated with a non-preferred medication\*\* (document reason or special circumstance)

|       |                                                                                                                                                                                                                                                                   |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Notes | <p>*Use this criteria for patients diagnosed with GHD in childhood during the transition period from puberty to adulthood (the period from mid to late teens until 6 to 7 years after achievement of adult height)</p> <p>**See Table 1 in Background section</p> |

### Approval Criteria

**1** - Submission of medical records documenting both of the following:

**1.1** Diagnosis of Prader-Willi Syndrome

**AND**

**1.2** Diagnosis confirmed by genetic testing

**AND**

**2** - One of the following:

**2.1** Both of the following:

**2.1.1** Patient is less than 18 years of age

**AND**

**2.1.2** Submission of medical records documenting evidence of growth failure confirmed by all of the following:

- Growth charts for length/height and weight for age and gender with evidence of growth velocity deceleration over time
- Documentation of length/height and weight for age and gender including percentile and/or standard deviation scores
- Calculated growth velocity

**OR**

**2.2** Patient is greater than or equal to 18 years of age

**AND**

**3** - Patient does NOT have any one of the following:

- Active malignancy
- Severe obesity (weight greater than 225 percent of ideal body weight)
- Severe respiratory impairment

**AND**

**4** - Prescribed by ONE of the following:

- Endocrinologist
- Geneticist
- Specialist with knowledge in the treatment of Prader-Willi syndrome

**AND**

**5** - If the request is for a non-preferred medication, there must be a reason or special circumstance that the patient must be treated with a non-preferred medication\* (document reason or special circumstance)

Notes

Diagnosis Prader-Willi Syndrome

Approval Length 12 month(s)

Therapy Stage Reauthorization

Guideline Type Prior Authorization

### Approval Criteria

**1** - ONE of the following:

**1.1** All of the following:

**1.1.1** Patient is less than 18 years of age

**AND**

**1.1.2** Submission of medical records documenting a height increase of at least 2 centimeters per year over the previous year of treatment as confirmed by all of the following:

- Previous length/height and date obtained
- Current length/height and date obtained
- Calculated growth velocity

- Growth charts for length/height for age and gender

**AND**

**1.1.3** Submission of medical records documenting both of the following:

- Expected adult height not attained
- Documentation of expected adult height goal

**OR**

**1.2** Both of the following:

**1.2.1** Patient is greater than or equal to 18 years of age

**AND**

**1.2.2** Submission of medical records documenting a positive response to therapy (e.g., reduction in fat mass, increase in lean body mass, improved strength and exercise tolerance)

**AND**

**2** - Prescribed by ONE of the following:

- Endocrinologist
- Geneticist
- Specialist with knowledge in the treatment of Prader-Willi syndrome

Product Name: Genotropin, Genotropin Miniquick, Humatrope, Norditropin Flexpro, Nutropin AQ NuSpin, Omnitrope, Saizen, Zomacton, Zorbtive, Serostim

|                 |                                                            |
|-----------------|------------------------------------------------------------|
| Diagnosis       | Growth Failure in Children Small for Gestational Age (SGA) |
| Approval Length | 12 month(s)                                                |
| Therapy Stage   | Initial Authorization                                      |
| Guideline Type  | Prior Authorization                                        |

**Approval Criteria**

**1** - Submission of medical records documenting diagnosis of growth failure associated with SGA (small for gestational age)

**AND**

**2** - Submission of medical records documenting diagnosis has been confirmed by all of the following:

**2.1** Growth charts for length/height and weight for gestational age and gender at birth

**AND**

**2.2** Documentation that birth length/height and/or weight greater than or equal to 2 SD (standard deviations) below mean for gestational age

**AND**

**2.3** Infant growth charts for length/height and weight for age and gender between birth and 24 to 36 months of age do not show evidence of catch-up growth in length/height and/or weight (i.e., length/height or weight remained greater than or equal 2 SD below mean for age and gender from birth to age 2 to 3)

**AND**

**2.4** Documentation that current length/height and/or weight remains greater than or equal to 2 SD below mean for age and gender

**AND**

**2.5** Calculated growth velocity

**AND**

**3** - Prescribed by an endocrinologist

**AND**

**4** - If the request is for a non-preferred medication, there must be a reason or special circumstance that the patient must be treated with a non-preferred medication\* (document reason or special circumstance)

Notes

\*See Table 1 in Background section

Product Name: Genotropin, Genotropin Miniquick, Humatrope, Norditropin Flexpro, Nutropin AQ NuSpin, Omnitrope, Saizen, Zomacton, Zorbtive, Serostim

|                 |                                                            |
|-----------------|------------------------------------------------------------|
| Diagnosis       | Growth Failure in Children Small for Gestational Age (SGA) |
| Approval Length | 12 month(s)                                                |
| Therapy Stage   | Reauthorization                                            |
| Guideline Type  | Prior Authorization                                        |

### Approval Criteria

**1** - Submission of medical records documenting a height increase of at least 2 centimeters per year over the previous year confirmed by all of the following:

- Previous length/height and date obtained
- Current length/height and date obtained
- Calculated growth velocity
- Growth chart for length/height for age and gender

**AND**

**2** - Submission of medical records documenting both of the following:

- Expected adult height not attained
- Expected adult height goal

**AND**

**3 - Prescribed by an endocrinologist**

Product Name: Genotropin, Genotropin Miniquick, Humatrope, Norditropin Flexpro, Nutropin AQ NuSpin, Omnitrope, Saizen, Zomacton, Zorbtive, Serostim

|                 |                                    |
|-----------------|------------------------------------|
| Diagnosis       | Turner Syndrome or Noonan Syndrome |
| Approval Length | 12 month(s)                        |
| Therapy Stage   | Initial Authorization              |
| Guideline Type  | Prior Authorization                |

**Approval Criteria**

**1 - Submission of medical records documenting one of the following:**

**1.1 BOTH of the following:**

**1.1.1** Diagnosis of Turner Syndrome

**AND**

**1.1.2** Diagnosis confirmed by genetic testing

**OR**

**1.2 BOTH of the following:**

**1.2.1** Diagnosis of Noonan Syndrome

**AND**

**1.2.2** Diagnosis confirmed by the presence of clinical features consistent with Noonan Syndrome (e.g., distinct facial features such as high forehead, hypertelorism, down slanting palpebral fissures with high arched eyebrows, epicanthic folds, full upper lip with a depressed nasal bridge, low set ears, blue irises, ptosis and neck webbing, pulmonary valve stenosis, hypertrophic cardiomyopathy, pectus carinatum/excavatum, mild developmental delay, cryptorchidism, lymphatic dysplasia)

**AND**

**2** - Submission of medical records documenting all of the following:

- Growth charts for length/height and weight for age and gender with evidence of growth velocity deceleration over time
- Documentation of length/height and weight for age and gender including percentile and/or standard deviation score
- Calculated growth velocity

**AND**

**3** - Submission of medical records documenting open epiphyses in the last 12 months

**AND**

**4** - Submission of medical records documenting Tanner staging less than or equal to 4

**AND**

**5** - Prescribed by an endocrinologist

**AND**

**6** - If the request is for a non-preferred medication, there must be a reason or special circumstance that the patient must be treated with a non-preferred medication\* (document reason or special circumstance)

### **Approval Criteria**

**1** - Submission of medical records documenting all of the following:

**1.1** Diagnosis of chronic renal insufficiency

**AND**

**1.2** Documentation of all of the following:

- Growth charts for length/height and weight for age and gender with evidence of growth velocity deceleration over time
- Documentation of length/height and weight for age and gender including percentile and/or standard deviation scores
- Calculated growth velocity

**AND**

**1.3** Documentation of open epiphyses in the last 12 months

**AND**

**1.4** Tanner stage less than or equal to 4

**AND**

**2** - Patient has not yet had a renal transplant

**AND**

**3** - Prescribed by ONE of the following:

- Endocrinologist
- Nephrologist

**AND**

**4** - If the request is for a non-preferred medication, there must be a reason or special circumstance that the patient must be treated with a non-preferred medication\* (document reason or special circumstance)

Notes

### Approval Criteria

**1** - Submission of medical records documenting a height increase of at least 2 centimeters per year over the previous year confirmed by all of the following:

- Previous length/height and date obtained
- Current length/height and date obtained
- Calculated growth velocity
- Growth chart for height for age and gender

**AND**

**2** - Submission of medical records documenting of both of the following:

- Expected adult height not attained
- Expected adult height goal

**AND**

**3** - Patient has not yet had a renal transplant

**AND**

**4** - Prescribed by ONE of the following:

- Endocrinologist
- Nephrologist

**Product Name:** Serostim

|-----------------|----------------------------------------------------------------------------|
| Diagnosis       | Human Immunodeficiency Virus (HIV)-associated wasting syndrome or cachexia |
| Approval Length | 3 month(s)                                                                 |
| Therapy Stage   | Initial Authorization                                                      |
| Guideline Type  | Prior Authorization                                                        |

**Approval Criteria**

**1** - Submission of medical records documenting all of the following:

**1.1** Diagnosis of HIV (human immunodeficiency virus)-associated wasting syndrome or cachexia

**AND**

**1.2** Involuntary weight loss of greater than 10 percent

**AND**

**1.3** One of the following:

**1.3.1** Chronic diarrhea (2 loose stools daily for more than 30 days)

**OR**

**1.3.2 Both of the following:**

- Chronic weakness
- Fever

**AND**

**1.4 Symptoms lasting greater than or equal to 30 days (intermittent or constant)**

**AND**

**1.5 Absence of a concurrent condition other than HIV infection that may cause these findings (e.g., depression, mycobacterium avium complex, chronic infectious diarrhea, or malignancy except for Kaposi's sarcoma limited to skin or mucous membranes)**

**AND**

**1.6 A nutritional evaluation has been completed since onset of wasting first occurred**

**AND**

**1.7 Patient's anti-retroviral therapy has been optimized to decrease the viral load**

|                                                                                                                    |                                                                            |

**1.1** Documentation of a positive response to therapy (i.e., greater than or equal to 2 percent increase in body weight and/or body cell mass)

**AND**

**1.2** One of the following targets or goals has not been achieved:

- Weight
- Body cell mass (BCM)
- Body mass index (BMI)

| <p><b>Approval Criteria</b></p> <p>1 - Submission of medical records documenting all of the following:</p> <p>1.1 Diagnosis of severe primary IGF-1 deficiency (PIGFD)</p> <p style="text-align: center;"><b>AND</b></p> <p>1.2 Documentation of height below -3.0 SD (standard deviation) mean for age and gender</p> <p style="text-align: center;"><b>AND</b></p> <p>1.3 Documentation of IGF-1 below -3.0 SD mean for age and gender</p> <p style="text-align: center;"><b>AND</b></p> <p>1.4 Documentation of both of the following:</p> <ul style="list-style-type: none"> <li>• Growth charts for length/height and weight for age and gender with evidence of growth velocity deceleration over time</li> <li>• Calculated growth velocity</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p>1.5 One of the following:</p> <p>1.5.1 Patient is unresponsive to a trial of growth hormone therapy</p> |                                                                |

**OR**

**1.5.2** Documentation of one of the following:

- Very low or undetectable level of GHBP (growth hormone-binding protein)
- Very low or undetectable level of GHR (growth hormone receptor) mutations known to cause Laron syndrome/GH insensitivity syndrome
- GH1 gene deletion (GHD type 1A)
- GH-neutralizing antibodies
- STT5b gene mutation
- IGF-1 gene deletion or mutation

**AND**

**2** - Other causes of low IGF-I levels have been ruled out (e.g., growth hormone deficiency, undernutrition, hepatic disease)

**AND**

**3** - Patient will not be treated with concurrent growth hormone therapy

**AND**

**4** - Prescribed by an endocrinologist

| <b>Approval Criteria</b> |                                                                |

**1** - Submission of medical records documenting a height increase of at least 2 centimeters per year over the previous year of treatment as confirmed by all of the following:

- Previous length/height and date obtained
- Current length/height and date obtained
- Calculated growth velocity
- Growth chart for height for age and gender

**AND**

**2** - Submission of medical records documenting both of the following:

- Expected adult height not obtained
- Expected adult height goal

**AND**

**3** - Patient is not treated with concurrent growth hormone therapy

**AND**

**4** - Prescribed by an endocrinologist

## 2 . Background

### Benefit/Coverage/Program Information

#### Table 1: Human Growth Hormone:

##### Preferred Agents:

- Somatropin (Norditropin)
- Somatropin (Omnitrope)
- Sogroya (somapacitan)

**Nonpreferred Agents:**

- Somatropin (Genotropin, Humatrope, Nutropin AQ NuSpin, Saizen, Zorbtive, Serostim, and Zomacton)
- Skytrofa (lonapegsomatropin-tcgd)
- Ngenla (somatrogen)

**Growth Stimulating Products:**

- Mecasermin (Increlex)

| Effective Date: | 6/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                       |                       |
|-----------------------|-----------------------|
| Product Name:Haegarda |                       |
| Approval Length       | 12 month(s)           |
| Therapy Stage         | Initial Authorization |
| Guideline Type        | Prior Authorization   |

## **Approval Criteria**

**1** - Diagnosis of hereditary angioedema (HAE) as confirmed by ONE of the following:

**1.1** C1 inhibitor (C1-INH) deficiency or dysfunction (Type I or II HAE) as documented by ONE of the following (per laboratory standard):

- C1-INH antigenic level below the lower limit of normal
- C1-INH functional level below the lower limit of normal

**OR**

**1.2** HAE with normal C1 inhibitor levels and ONE of the following:

- Confirmed presence of variant(s) in the gene(s) for factor XII, angiotensin-converting enzyme 1, plasminogen-1, kininogen-1, myoferlin, and heparan sulfate-glucosaminase 3-O-sulfotransferase 6
- Recurring angioedema attacks that are refractory to high-dose antihistamines with confirmed family history of angioedema
- Recurring angioedema attacks that are refractory to high-dose antihistamines with unknown background de-novo mutation(s) (i.e., no family history) (HAE-unknown)

**AND**

**2** - Prescribed for the prophylaxis of HAE attacks

**AND**

**3** - Not used in combination with other products indicated for prophylaxis against HAE attacks (e.g., Cinryze, Orladeyo, Takhzyro)

**AND**

**4** - Prescriber attests that patient has experienced attacks of a severity and/or frequency such that they would clinically benefit from prophylactic therapy with Haegarda

**AND**

**5** - Prescribed by ONE of the following:

- Immunologist
- Allergist

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                     |

| Diagnosis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Treatment Experienced Patients |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Prior Authorization            |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - The requested medication is age-appropriate according to FDA (Food and Drug Administration)-approved package labeling, nationally recognized compendia, or peer-reviewed medical literature</p> <p><b>AND</b></p> <p><b>2</b> - Diagnosis of chronic hepatitis C virus (HCV) with labs showing genotype and detectable HCV RNA (ribonucleic acid) levels from within the past 90 days</p> <p><b>AND</b></p> <p><b>3</b> - BOTH of the following must be provided:</p> <ul style="list-style-type: none"> <li>• Previous treatment history including medication name(s) and length of therapy</li> <li>• Whether patient is a relapser, null responder, partial responder or non-compliant</li> </ul> |                                |

**AND**

**4** - Patient has been educated on the importance of compliance with their treatment regimen

**AND**

**5** - All of the following:

**5.1** Patient does not have contraindications to the requested Hepatitis C therapy

**AND**

**5.2** Patient is not on any therapies identified by the prescribing information or American Association for the Study of Liver Diseases/Infectious Diseases Society of America (AASLD/IDSA) guidelines as therapies not recommended for co-administration

**AND**

**5.3** Patient does not have limited life expectancy (< 12 months due to non-liver related comorbidities)

**AND**

**6** - If combined with ribavirin, patient will meet ALL of the following:

**6.1** Patient has no contraindication to ribavirin

**AND**

**6.2** Neither the patient nor the partner of the patient is pregnant

**AND**

**6.3** If the patient or their partner is of child bearing age, the patient has been or will be

instructed to practice effective contraception during therapy and for 6 months after stopping ribavirin therapy

**AND**

**7** - For patients with decompensated cirrhosis, the requested drug(s) must be prescribed by or in consultation with a liver transplant specialist

**AND**

**8** - Prior to treatment, patient has been assessed for HBV coinfection (e.g., HBsAG, anti-HBc), copy of lab work must be received

**AND**

**9** - For regimens that depend on testing [e.g., baseline high fold-change NS5A (nonstructural protein 5A) RASs (resistance-associated substitutions) (includes G1a polymorphisms at amino acid positions 28, 30, 31, or 93), baseline Q80K polymorphism, Y93H mutation], a copy of the lab work must be received

**AND**

**10** - Patient is genotype 1,2,3,4,5, or 6

**AND**

**11** - Patient is NOT receiving the requested medication in combination with another HCV direct acting antiviral agent [e.g., Epclusa (sofosbuvir/velpatasvir), Harvoni (ledipasvir/sofosbuvir), Sovaldi (sofosbuvir), Zepatier (elbasvir/grazoprevir)]

**AND**

**12** - The regimen is an approvable regimen, based on patient genotype and characteristics (see Table 1 in Background section)

|       |                                                                                         |
|-------|-----------------------------------------------------------------------------------------|
| Notes | Approval length is by regimen based on patient genotype and characteristics in Table 1. |

**3 - BOTH of the following must be provided:**

- Previous treatment history including medication name(s) and length of therapy
- Whether patient is a relapser, null responder, partial responder or non-compliant

**AND**

**4 - Patient has been educated on the importance of compliance with their treatment regimen**

**AND**

**5 - All of the following:**

**5.1 Patient does not have contraindications to the requested Hepatitis C therapy**

**AND**

**5.2 Patient is not on any therapies identified by the prescribing information or American Association for the Study of Liver Diseases/Infectious Diseases Society of America (AASLD/IDSA) guidelines as therapies not recommended for co-administration**

**AND**

**5.3 Patient does not have limited life expectancy (< 12 months due to non-liver related comorbidities)**

**AND**

**6 - If combined with ribavirin, patient will meet ALL of the following:**

**6.1 Patient has no contraindication to ribavirin**

**AND**

**6.2 Neither the patient nor the partner of the patient is pregnant**

**AND**

**6.3** If the patient or their partner is of child bearing age, the patient has been or will be instructed to practice effective contraception during therapy and for 6 months after stopping ribavirin therapy

**AND**

**7** - For patients with decompensated cirrhosis, the requested drug(s) must be prescribed by or in consultation with a liver transplant specialist

**AND**

**8** - Prior to treatment, patient has been assessed for HBV coinfection (e.g., HBsAG, anti-HBc), copy of lab work must be received

**AND**

**9** - For regimens that depend on testing [e.g., baseline high fold-change NS5A (nonstructural protein 5A) RASs (resistance-associated substitutions) (includes G1a polymorphisms at amino acid positions 28, 30, 31, or 93), baseline Q80K polymorphism, Y93H mutation], a copy of the lab work must be received

**AND**

**10** - Patient is NOT receiving the requested medication in combination with another HCV direct acting antiviral agent [e.g., Epclusa, Harvoni (ledipasvir/sofosbuvir), Mavyret (glecaprevir/pibrentasvir), Sovaldi (sofosbuvir), Zepatier (elbasvir/grazoprevir)]

**AND**

**11** - The regimen is an approvable regimen, based on patient genotype and characteristics (see Table 2 in Background section)

Notes

Approval length is by regimen based on patient genotype and characteristics in Table 2.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                          |

Administration)-approved package labeling, nationally recognized compendia, or peer-reviewed medical literature

**AND**

**2** - Diagnosis of chronic hepatitis C virus (HCV) with labs showing genotype and detectable HCV RNA (ribonucleic acid) levels from within the past 90 days

**AND**

**3** - BOTH of the following must be provided:

- Previous treatment history including medication name(s) and length of therapy
- Whether patient is a relapser, null responder, partial responder or non-compliant

**AND**

**4** - Patient has been educated on the importance of compliance with their treatment regimen

**AND**

**5** - All of the following:

**5.1** Patient does not have contraindications to the requested Hepatitis C therapy

**AND**

**5.2** Patient is not on any therapies identified by the prescribing information or American Association for the Study of Liver Diseases/Infectious Diseases Society of America (AASLD/IDSA) guidelines as therapies not recommended for co-administration

**AND**

**5.3** Patient does not have limited life expectancy (< 12 months due to non-liver related comorbidities)

**AND**

**6** - If combined with ribavirin, patient will meet ALL of the following:

**6.1** Patient has no contraindication to ribavirin

**AND**

**6.2** Neither the patient nor the partner of the patient is pregnant

**AND**

**6.3** If the patient or their partner is of child bearing age, the patient has been or will be instructed to practice effective contraception during therapy and for 6 months after stopping ribavirin therapy

**AND**

**7** - For patients with decompensated cirrhosis, the requested drug(s) must be prescribed by or in consultation with a liver transplant specialist

**AND**

**8** - Prior to treatment, patient has been assessed for HBV coinfection (e.g., HBsAG, anti-HBc), copy of lab work must be received

**AND**

**9** - For regimens that depend on testing [e.g., baseline high fold-change NS5A (nonstructural protein 5A) RASs (resistance-associated substitutions) (includes G1a polymorphisms at amino acid positions 28, 30, 31, or 93), baseline Q80K polymorphism, Y93H mutation], a copy of the lab work must be received

**AND**

**10** - Patient is NOT receiving the requested medication in combination with another HCV direct acting antiviral agent [e.g., Epclusa (sofosbuvir/velpatasvir), Harvoni (ledipasvir/sofosbuvir), Mavyret (glecaprevir/pibrentasvir), Sovaldi (sofosbuvir)]

**AND**

**11** - The regimen is an approvable regimen, based on patient genotype and characteristics (see Table 3 in Background section)

|       |                                                                                         |

| Product Name: Sovaldi                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                     |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Prior Authorization |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - The requested medication is age-appropriate according to FDA (Food and Drug Administration)-approved package labeling, nationally recognized compendia, or peer-reviewed medical literature</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - Diagnosis of chronic hepatitis C virus (HCV) with labs showing genotype and detectable HCV RNA (ribonucleic acid) levels from within the past 90 days</p> <p style="text-align: center;"><b>AND</b></p> <p><b>3</b> - For treatment-experienced patients, BOTH of the following must be provided:</p> <ul style="list-style-type: none"> <li>• Previous treatment history including medication name(s) and length of therapy</li> <li>• Whether patient is a relapser, null responder, partial responder or non-compliant</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>4</b> - Patient has been educated on the importance of compliance with their treatment regimen</p> |                     |

**AND**

**5** - All of the following:

**5.1** Patient does not have contraindications to the requested Hepatitis C therapy

**AND**

**5.2** Patient is not on any therapies identified by the prescribing information or American Association for the Study of Liver Diseases/Infectious Diseases Society of America (AASLD/IDSA) guidelines as therapies not recommended for co-administration

**AND**

**5.3** Patient does not have limited life expectancy (< 12 months due to non-liver related comorbidities)

**AND**

**6** - If combined with ribavirin, patient will meet ALL of the following:

**6.1** Patient has no contraindication to ribavirin

**AND**

**6.2** Neither the patient nor the partner of the patient is pregnant

**AND**

**6.3** If the patient or their partner is of child bearing age, the patient has been or will be instructed to practice effective contraception during therapy and for 6 months after stopping ribavirin therapy

**AND**

**7** - For patients with decompensated cirrhosis, the requested drug(s) must be prescribed by or in consultation with a liver transplant specialist

**AND**

**8** - Prior to treatment, patient has been assessed for HBV coinfection (e.g., HBsAG, anti-HBc), copy of lab work must be received

**AND**

**9** - For regimens that depend on testing [e.g., baseline high fold-change NS5A (nonstructural protein 5A) RASs (resistance-associated substitutions) (includes G1a polymorphisms at amino acid positions 28, 30, 31, or 93), baseline Q80K polymorphism, Y93H mutation], a copy of the lab work must be received

**AND**

**10** - One of the following:

**10.1** Patient is genotype 1 or 4 and has a history of intolerance or contraindication to all of the following (please specify intolerance or contraindication):

- sofosbuvir/velpatasvir (authorized generic of Epclusa)
- Mavyret
- Zepatier

**OR**

**10.2** Patient is genotype 2 or 3 and has a history of intolerance or contraindication to both of the following (please specify intolerance or contraindication):

- sofosbuvir/velpatasvir (authorized generic of Epclusa)
- Mavyret

**OR**

**10.3** Patient is currently on Sovaldi therapy

**AND**

**11** - Patient is NOT receiving the requested medication in combination with another HCV direct acting antiviral agent [e.g., Epclusa (sofosbuvir/velpatasvir), Harvoni (ledipasvir/sofosbuvir), Mavyret (glecaprevir/pibrentasvir), Zepatier (elbasvir/grazoprevir)]

**AND**

**12** - The regimen is an approvable regimen, based on patient genotype and characteristics (see Table 5 in Background section)

|       |                                                                                         |
|-------|-----------------------------------------------------------------------------------------|
| Notes | Approval length is by regimen based on patient genotype and characteristics in Table 5. |
|-------|-----------------------------------------------------------------------------------------|

Product Name: Vosevi

|                |                     |
|----------------|---------------------|
| Guideline Type | Prior Authorization |
|----------------|---------------------|

### Approval Criteria

**1** - The requested medication is age-appropriate according to FDA (Food and Drug Administration)-approved package labeling, nationally recognized compendia, or peer-reviewed medical literature

**AND**

**2** - Diagnosis of chronic hepatitis C virus (HCV) with labs showing genotype and detectable HCV RNA (ribonucleic acid) levels from within the past 90 days

**AND**

**3** - For treatment-experienced patients, BOTH of the following must be provided:

- Previous treatment history including medication name(s) and length of therapy
- Whether patient is a relapser, null responder, partial responder or non-compliant

**AND**

**4** - Patient has been educated on the importance of compliance with their treatment regimen

**AND**

**5** - All of the following:

**5.1** Patient does not have contraindications to the requested Hepatitis C therapy

**AND**

**5.2** Patient is not on any therapies identified by the prescribing information or American Association for the Study of Liver Diseases/Infectious Diseases Society of America (AASLD/IDSA) guidelines as therapies not recommended for co-administration

**AND**

**5.3** Patient does not have limited life expectancy (< 12 months due to non-liver related comorbidities)

**AND**

**6** - If combined with ribavirin, patient will meet ALL of the following:

**6.1** Patient has no contraindication to ribavirin

**AND**

**6.2** Neither the patient nor the partner of the patient is pregnant

**AND**

**6.3** If the patient or their partner is of child bearing age, the patient has been or will be

instructed to practice effective contraception during therapy and for 6 months after stopping ribavirin therapy

**AND**

**7** - For patients with decompensated cirrhosis, the requested drug(s) must be prescribed by or in consultation with a liver transplant specialist

**AND**

**8** - Prior to treatment, patient has been assessed for HBV coinfection (e.g., HBsAG, anti-HBc), copy of lab work must be received

**AND**

**9** - For regimens that depend on testing [e.g., baseline high fold-change NS5A (nonstructural protein 5A) RASs (resistance-associated substitutions) (includes G1a polymorphisms at amino acid positions 28, 30, 31, or 93), baseline Q80K polymorphism, Y93H mutation], a copy of the lab work must be received

**AND**

**10** - One of the following:

**10.1** Both of the following:

**10.1.1** Patient is genotype 1, 2, 3, 4, 5, or 6 and had virologic failure after completing previous treatment of at least 4 weeks' duration with an HCV regimen containing an NS5A inhibitor as confirmed by claims history or submission of medical records

**AND**

**10.1.2** If patient is genotype 1 and has not been previously treated with an NS3/4A inhibitor, history of intolerance or contraindication to Mavyret (please specify intolerance or contraindication)

**OR**

**10.2** All of the following:

**10.2.1** Patient is genotype 1a or 3 and had virologic failure after completing previous treatment of at least 4 weeks' duration with an HCV regimen containing sofosbuvir without an NS5A inhibitor as confirmed by claims history or submission of medical records

**AND**

**10.2.2** If patient is genotype 1a and has been treated with or without an NS3/4A inhibitor, history of intolerance or contraindication to Mavyret (please specify intolerance or contraindication)

**AND**

**10.2.3** If patient is genotype 3 and has not been treated with an NS3/4A inhibitor, history of intolerance or contraindication to Mavyret (please specify intolerance or contraindication)

**OR**

**10.3** Patient is currently on Vosevi therapy

**AND**

**11** - The patient is without cirrhosis or has compensated cirrhosis (Child-Pugh A)

**AND**

**12** - Patient is NOT receiving the requested medication in combination with another HCV direct acting antiviral agent [e.g., Epclusa (sofosbuvir/velpatasvir), Harvoni (ledipasvir/sofosbuvir), Mavyret (glecaprevir/pibrentasvir), Sovaldi (sofosbuvir), Zepatier (elbasvir/grazoprevir)]

**AND**

**13** - The regimen is an approvable regimen, based on patient genotype and characteristics (see Table 6 in Background section)

|       |                                                                                         |
|-------|-----------------------------------------------------------------------------------------|
| Notes | Approval length is by regimen based on patient genotype and characteristics in Table 6. |
|-------|-----------------------------------------------------------------------------------------|

## 2 . Background

### Benefit/Coverage/Program Information

**Table 1. Mavyret**

#### Treatment Experienced Patients

| HCV Genotype     | Patients previously treated with a regimen containing:                                                                                                                                        | Treatment Duration |                                      |
|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|--------------------------------------|
|                  |                                                                                                                                                                                               | No cirrhosis       | Compensated cirrhosis (Child-Pugh A) |
| 1                | An NS5A inhibitor <sup>1</sup><br>[e.g., Daklinza (daclatasvir), Epclusa (sofosbuvir/velpatasvir), Harvoni (ledipasvir/sofosbuvir)] without prior treatment with an NS3/4A protease inhibitor | 16 weeks           | 16 weeks                             |
|                  | An NS3/4A PI <sup>2</sup> [e.g., Incivek (telaprevir), Victrelis (boceprevir)] without prior treatment with an NS5A inhibitor                                                                 | 12 weeks           | 12 weeks                             |
| 1, 2, 4, 5, or 6 | PRS <sup>3</sup>                                                                                                                                                                              | 8 weeks            | 12 weeks                             |
| 3                | PRS <sup>3</sup>                                                                                                                                                                              | 16 weeks           | 16 weeks                             |

#### Kidney Transplant Recipients

| HCV Genotype | Treatment Duration |                                      |
|--------------|--------------------|--------------------------------------|
|              | No cirrhosis       | Compensated cirrhosis (Child-Pugh A) |

|                     |          |          |
|---------------------|----------|----------|
| 1, 2, 3, 4, 5, or 6 | 12 weeks | 12 weeks |
|---------------------|----------|----------|

1. In clinical trials, subjects were treated with prior regimens containing ledipasvir and sofosbuvir or daclatasvir with pegylated interferon and ribavirin.
2. In clinical trials, subjects were treated with prior regimens containing simeprevir and sofosbuvir, or simeprevir, boceprevir, or telaprevir with pegylated interferon and ribavirin.
3. PRS = prior treatment experience with regimens containing interferon, pegylated interferon, ribavirin, and/or sofosbuvir, but no prior treatment experience with an HCV NS3/4A PI [e.g., Incivek (telaprevir), Victrelis (boceprevir), Viekira (dasabuvir/ombitasvir/paritaprevir/ritonavir), Zepatier (elbasvir/grazoprevir)] or NS5A inhibitor [e.g., Daklinza (daclatasvir), Epclusa (sofosbuvir/velpatasvir), Harvoni (ledipasvir/sofosbuvir), Viekira (dasabuvir/ombitasvir/paritaprevir/ritonavir), Zepatier (elbasvir/grazoprevir)].

**Table 2. Epclusa or sofosbuvir/velpatasvir (authorized generic of Epclusa)**

| Patient Population                                                                    | Recommended Treatment Regimen                             |
|---------------------------------------------------------------------------------------|-----------------------------------------------------------|
| Patients <sup>1</sup> without cirrhosis and with compensated cirrhosis (Child-Pugh A) | EPCLUSA (sofosbuvir/velpatasvir) for 12 weeks             |
| Patients <sup>1</sup> with decompensated cirrhosis (Child-Pugh B and C)               | EPCLUSA (sofosbuvir/velpatasvir) + ribavirin for 12 weeks |

1 = In clinical trials, regimens contained peginterferon alfa/ribavirin with or without an HCV NS3/4A protease inhibitor (boceprevir, simeprevir, or telaprevir)

**Table 3: Zepatier**
**Dosage Regimens and Durations for ZEPATIER in Patients with Genotype 1 or 4 HCV with or without Cirrhosis**

| Patient Population                                                                           | Treatment            | Duration |
|----------------------------------------------------------------------------------------------|----------------------|----------|
| Genotype 1a: PegIFN/RBV experienced* <u>without</u> baseline NS5A polymorphisms <sup>+</sup> | ZEPATIER             | 12 weeks |
| Genotype 1a: PegIFN/RBV                                                                      | ZEPATIER + ribavirin | 16 weeks |

\*Peginterferon alfa + ribavirin

+Polymorphisms at amino acid positions 28, 30, 31, or 93

++Peginterferon alfa + ribavirin + HCV NS3/4 A protease inhibitor

**Table 4. Harvoni or ledipasvir/sofosbuvir (authorized generic of Harvoni)**

**Recommended treatment regimen and duration:**

| Genotype        | Patient Population                                                                                 | Regimen and Duration          |
|-----------------|----------------------------------------------------------------------------------------------------|-------------------------------|
| Genotype 1      | Treatment-naïve without cirrhosis or with compensated cirrhosis (Child-Pugh A)                     | HARVONI 12 weeks*             |
|                 | Treatment-experienced** without cirrhosis                                                          | HARVONI 12 weeks              |
|                 | Treatment-experienced** with compensated cirrhosis (Child-Pugh A)                                  | HARVONI 24 weeks <sup>+</sup> |
|                 | Treatment-naïve and treatment-experienced** with decompensated cirrhosis (Child-Pugh B or C)       | HARVONI + ribavirin 12 weeks  |
| Genotype 1 or 4 | Treatment-naïve and treatment-experienced** liver transplant recipients without cirrhosis, or with | HARVONI + ribavirin 12 weeks  |

|                     |                                                                                                            |                  |
|---------------------|------------------------------------------------------------------------------------------------------------|------------------|
|                     | compensated cirrhosis (Child-Pugh A)                                                                       |                  |
| Genotype 4, 5, or 6 | Treatment-naïve and treatment-experienced** without cirrhosis or with compensated cirrhosis (Child-Pugh A) | HARVONI 12 weeks |

\*HARVONI for 8 weeks can be considered in treatment-naïve genotype 1 patients without cirrhosis who have pre-treatment HCV RNA less than 6 million IU/mL

(Harvoni once daily for 8 weeks is recommended for treatment-naïve patients without cirrhosis who are non-black, HIV-uninfected, and whose HCV RNA level is <6 million IU/mL)

\*\*Treatment-experienced adult and pediatric patients have failed a peginterferon alfa +/- ribavirin based regimen with or without an HCV protease inhibitor

+HARVONI + ribavirin for 12 weeks can be considered in treatment-experienced genotype 1 patients with cirrhosis who are eligible for ribavirin

**Table 5. Sovaldi**

**Recommended Adult Treatment Regimen and Duration**

|                 | <b>Adult Patient Population</b>                                                                           | <b>Regimen and Duration</b>                          |
|-----------------|-----------------------------------------------------------------------------------------------------------|------------------------------------------------------|
| Genotype 1 or 4 | Treatment naïve without cirrhosis or with compensated cirrhosis (Child-Pugh A)                            | SOVALDI + peginterferon alfa + ribavirin<br>12 weeks |
| Genotype 2      | Treatment naïve and treatment experienced* without cirrhosis or with compensated cirrhosis (Child-Pugh A) | SOVALDI + ribavirin<br>12 weeks                      |
| Genotype 3      | Treatment naïve and treatment experienced* without cirrhosis or with compensated cirrhosis (Child-Pugh A) | SOVALDI + ribavirin<br>24 weeks                      |

SOVALDI in combination with ribavirin for 24 weeks can be considered for adult patients with genotype 1 infection who are interferon ineligible.

SOVALDI should be used in combination with ribavirin for treatment of HCV in adult patients with hepatocellular carcinoma awaiting liver transplantation for up to 48 weeks or until liver transplantation, whichever occurs first.

\*Treatment-experienced patients have failed an interferon based regimen with or without ribavirin

**Recommended Treatment Regimen and Duration for Pediatric Patients 3 Years of Age and Older**

|            | <b>Pediatric Patient Population 3 Years of Age and Older</b>                                              | <b>Regimen and Duration</b>     |
|------------|-----------------------------------------------------------------------------------------------------------|---------------------------------|
| Genotype 2 | Treatment naïve and treatment experienced* without cirrhosis or with compensated cirrhosis (Child-Pugh A) | SOVALDI + ribavirin<br>12 weeks |
| Genotype 3 | Treatment naïve and treatment experienced* without cirrhosis or with compensated cirrhosis (Child-Pugh A) | SOVALDI + ribavirin<br>24 weeks |

\*Treatment experienced patients have failed an interferon based regimen with or without ribavirin

**Table 6. Vosevi**

| <b>Genotype</b>     | <b>Patients previously treated with an HCV regimen containing:</b> | <b>VOSEVI Duration</b> |
|---------------------|--------------------------------------------------------------------|------------------------|
| 1, 2, 3, 4, 5, or 6 | An NS5A inhibitor <sup>1</sup>                                     | 12 weeks               |
| 1a or 3             | Sofosbuvir without an NS5A inhibitor <sup>2</sup>                  | 12 weeks               |

1. In clinical trials, prior NS5A inhibitor experience included daclatasvir, elbasvir, ledipasvir, ombitasvir, or velpatasvir.

2. In clinical trials, prior treatment experience included sofosbuvir with or without any of the following: peginterferon alfa/ribavirin, ribavirin, HCV NS3/4A protease inhibitor (boceprevir, simeprevir or telaprevir).

|---------------------|-----------------------|
| Product Name:Hyftor |                       |
| Approval Length     | 6 month(s)            |
| Therapy Stage       | Initial Authorization |
| Guideline Type      | Prior Authorization   |
|                     |                       |

## **Approval Criteria**

**1** - Diagnosis of tuberous sclerosis

**AND**

**2** - One of the following:

**2.1** One or more of the following major features:

- Hypomelanotic macules (At least 3; at least 5 mm diameter)
- Angiofibroma (At least 3) or fibrous cephalic plaque
- Ungual fibromas (At least 2)
- Shagreen patch
- Multiple retinal hamartomas
- Multiple cortical tubers and/or radial migration lines
- Subependymal nodule (At least 2)
- Subependymal giant cell astrocytoma
- Cardiac rhabdomyoma
- Lymphangiomyomatosis (LAM)
- Angiomyolipomas (At least 2)

**OR**

**2.2** Two or more of the following minor features:

- “Confetti” skin lesions
- Dental enamel pits (At least 3)
- Intraoral fibromas (At least 2)
- Retinal achromic patch
- Multiple renal cysts
- Nonrenal hamartomas
- Sclerotic bone lesions

**OR**

**2.3** Confirmed presence of a mutation in the TSC1 or TSC2 gene

**AND**

**3** - Patient has facial angiofibroma associated with tuberous sclerosis

**AND**

**4** - Patient is not receiving Hyftor in combination with a systemic mTOR (mechanistic target of rapamycin) inhibitor [e.g., Rapamune (sirolimus), Afinitor (everolimus)]

**AND**

**5** - Hyftor is being prescribed by, or in consultation, with a dermatologist, neurologist, or oncologist

| Effective Date: | 11/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                       |                                 |
|-----------------------|---------------------------------|
| Product Name:Hypmavzi |                                 |
| Diagnosis             | Hemophilia A Without Inhibitors |
| Approval Length       | 12 month(s)                     |
| Therapy Stage         | Initial Authorization           |
| Guideline Type        | Prior Authorization             |

**Approval Criteria**

1 - Diagnosis of hemophilia A

**AND**

2 - Patient has not developed high-titer factor VIII inhibitors (i.e., patient has NOT developed factor VIII inhibitors greater than or equal to 5 Bethesda units [BU])

**AND**

3 - Patient is 12 years of age or older

**AND**

4 - Himpavzi is prescribed for the prevention of bleeding episodes (i.e., routine prophylaxis)

| Guideline Type       | Prior Authorization                          |

## Approval Criteria

1 - Diagnosis of chronic myelogenous/ myeloid leukemia (CML)

**AND**

2 - One of the following:

2.1 BOTH of the following:

- Disease is in the chronic phase
- Patient has resistance or intolerance to two or more tyrosine kinase inhibitor (TKI) therapies [e.g., imatinib mesylate, Sprycel (dasatinib), or Tasigna (nilotinib)]

**OR**

2.2 Confirmed documentation of T315I mutation

**OR**

2.3 BOTH of the following:

- Disease is in the accelerated or blast phase
- No other kinase inhibitors are indicated

### Approval Criteria

**1** - All of the following:

**1.1** Diagnosis of asthma

**AND**

**1.2** ONE of the following:

**1.2.1** BOTH of the following:

**1.2.1.1** Patient is less than 12 years of age

**AND**

**1.2.1.2** ONE of the following:

**1.2.1.2.1** Failure of Breyna or budesonide/formoterol (generic of Symbicort) confirmed by claims history or submitted medical records

**OR**

**1.2.1.2.2** History of intolerance or contraindication to Breyna or budesonide/formoterol (generic of Symbicort) (please specify intolerance or contraindication)

**OR**

**1.2.2** BOTH of the following:

**1.2.2.1** ONE of the following:

**1.2.2.1.1** Failure of ONE of the following confirmed by claims history or submitted medical records:

- fluticasone/salmeterol (authorized generic of AirDuo Respiclick)
- fluticasone propionate/salmeterol diskus (generic Advair Diskus)
- Wixela Inhub (generic Advair Diskus)

**OR**

**1.2.2.1.2** History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

- fluticasone/salmeterol (authorized generic of AirDuo Respiclick)
- fluticasone propionate/salmeterol diskus (generic Advair Diskus)
- Wixela Inhub (generic Advair Diskus)

**AND**

**1.2.2.2** ONE of the following:

**1.2.2.2.1** Failure of BOTH of the following confirmed by claims history or submitted medical records:

- Breyna or budesonide/formoterol (generic of Symbicort)
- fluticasone/vilanterol (authorized generic of Breo Ellipta)

**OR**

**1.2.2.2.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

- Breyna or budesonide/formoterol (generic of Symbicort)
- fluticasone/vilanterol (authorized generic of Breo Ellipta)

**OR**

**2 - ALL of the following:**

**2.1** Diagnosis of chronic obstructive pulmonary disease (COPD)

**AND**

**2.2** ONE of the following:

**2.2.1** Failure of ONE of the following confirmed by claims history or submitted medical records:

- fluticasone propionate/salmeterol diskus (generic Advair Diskus)
- Wixela Inhub (generic Advair Diskus)

**OR**

**2.2.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

- fluticasone propionate/salmeterol diskus (generic Advair Diskus)
- Wixela Inhub (generic Advair Diskus)

**AND**

**2.3** ONE of the following:

**2.3.1** Failure of BOTH of the following confirmed by claims history or submitted medical records:

- Breyna or budesonide/formoterol (generic of Symbicort)
- fluticasone/vilanterol (authorized generic of Breo Ellipta)

**OR**

**2.3.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

- Breyna or budesonide/formoterol (generic of Symbicort)
- fluticasone/vilanterol (authorized generic of Breo Ellipta)

| Diagnosis           | Cryopyrin-Associated Periodic Syndromes (CAPS) |
| Approval Length     | 12 month(s)                                    |
| Therapy Stage       | Initial Authorization                          |
| Guideline Type      | Prior Authorization                            |

**Approval Criteria**

**1** - Diagnosis of ONE of the following:

- Familial cold autoinflammatory syndrome (FCAS)
- Muckle-Wells Syndrome (MWS)

**AND**

**2** - Diagnosis is made by, or in consultation with, a rheumatologist or immunologist with expertise in the diagnosis of FCAS and MWS

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 4/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                     |                       |
|---------------------|-----------------------|
| Product Name:Ilumya |                       |
| Approval Length     | 12 month(s)           |
| Therapy Stage       | Initial Authorization |
| Guideline Type      | Prior Authorization   |
|                     |                       |

## **Approval Criteria**

**1** - Diagnosis of chronic moderate to severe plaque psoriasis

**AND**

**2** - Patient is NOT receiving Ilumya in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Siliq (brodalumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**3** - Prescribed by, or in consultation with, a dermatologist

**AND**

**4** - One of the following:

**4.1** Patient is currently on Ilumya therapy as confirmed by claims history or submission of medical records

**OR**

**4.2** BOTH of the following:

**4.2.1** ONE of the following:

**4.2.1.1** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of plaque psoriasis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), adalimumab, Otezla (apremilast), Skyrizi (risankizumab-rzaa), ustekinumab, Tremfya (guselkumab), Enbrel (etanercept)]

**OR**

**4.2.1.2** ALL of the following:

**4.2.1.2.1** Greater than or equal to 3% body surface area involvement, palmoplantar, facial, genital involvement, or severe scalp psoriasis

**AND**

**4.2.1.2.2** ONE of the following:

- Failure to ONE of the following topical therapy classes confirmed by claims history or submission of medical records: Corticosteroids (e.g., betamethasone, clobetasol, desonide), Vitamin D analogs (e.g., calcitriol, calcipotriene), Tazarotene, Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus), Anthralin, Coal tar
- History of intolerance or contraindication to ALL of the following topical therapy classes (please specify intolerance or contraindication): Corticosteroids (e.g., betamethasone, clobetasol, desonide), Vitamin D analogs (e.g., calcitriol, calcipotriene), Tazarotene, Calcineurin inhibitors (e.g., tacrolimus, pimecrolimus), Anthralin, Coal tar

**AND**

**4.2.1.2.3** ONE of the following:

- Failure to a 3 month trial of methotrexate at the maximally indicated dose confirmed by claims history or submission of medical records
- History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)

**AND**

**4.2.2** ONE of the following:

**4.2.2.1** Failure to TWO of the following preferred products as confirmed by claims history or submitted medical records

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

**OR**

**4.2.2.2** History of intolerance or contraindication to ALL of the following preferred products (please specify intolerance or contraindication)

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 1/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                        |                       |
|------------------------|-----------------------|
| Product Name:Imbruvica |                       |
| Diagnosis              | B-Cell Lymphoma       |
| Approval Length        | 12 month(s)           |
| Therapy Stage          | Initial Authorization |
| Guideline Type         | Prior Authorization   |

### **Approval Criteria**

**1 - BOTH of the following:**

**1.1** Diagnosis of mantle cell lymphoma (MCL)

**AND**

**1.2** ONE of the following:

**1.2.1** Patient has received at least one prior therapy for MCL

**OR**

**1.2.2** Used in pre-treatment therapy in combination with Rituxan (rituximab) to limit the number of cycles with RHyperCVAD (rituximab, cyclophosphamide, vincristine, doxorubicin, and dexamethasone) regimen

**OR**

**2 - Diagnosis of ONE of the following:**

- Chronic Lymphocytic Leukemia (CLL)
- Small Lymphocytic Lymphoma (SLL)

**OR**

**3 - BOTH of the following:**

**3.1** Diagnosis of ONE of the following:

- Diffuse large B-cell lymphoma [non-GCB DLBCL (non-germinal center B-cell diffuse large B-cell) and non-candidate for transplant]
- Human Immunodeficiency Virus (HIV)-related B-cell lymphoma
- Post-transplant lymphoproliferative disorders
- Histologic transformation to diffuse large B-cell lymphoma
- Hairy cell leukemia
- Nodal or splenic marginal zone lymphoma (MZL)

- Extranodal marginal zone lymphoma (EMZL) of the stomach
- Extranodal marginal zone lymphoma (EMZL) of nongastric sites (noncutaneous)
- High grade B-cell lymphoma

**AND**

**3.2** Used as second-line or a subsequent therapy

|-----------------|----------|
| Effective Date: | 5/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Inbrija |                       |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of Parkinson's disease

**AND**

**2** - Inbrija will be used as intermittent treatment for OFF episodes

**AND**

**3** - Prescribed by, or in consultation with, a neurologist or specialist in the treatment of Parkinson's disease

**AND**

**4** - Patient is currently on a stable dose of a carbidopa/levodopa-containing medication and will continue receiving treatment with a carbidopa/levodopa-containing medication while on therapy

**AND**

**5** - Patient continues to experience greater than or equal to 2 hours of OFF time per day despite optimal management of carbidopa/levodopa therapy including BOTH of the following:

- Taking carbidopa/levodopa on an empty stomach or at least one half-hour or more before or one hour after a meal or avoidance of high protein diet
- Dose and dosing interval optimization

**AND**

**6** - ONE of the following:

**6.1** Failure to TWO anti-Parkinson's disease therapies from the following adjunctive pharmacotherapy classes confirmed by claims history or submission of medical records (trial must be from two different classes):

- Dopamine agonists (e.g., pramipexole, ropinirole)
- Catechol-O-methyl transferase (COMT) inhibitors (e.g., entacapone)
- Monoamine oxidase (MAO) B inhibitors (e.g., selegiline)

**OR**

**6.2** History of contraindication or intolerance to ALL anti-Parkinson's disease therapies from the following adjunctive pharmacotherapy classes (please specify intolerance or contraindication):

- Dopamine agonists (e.g., pramipexole, ropinirole)
- Catechol-O-methyl transferase (COMT) inhibitors (e.g., entacapone)
- Monoamine oxidase (MAO) B inhibitors (e.g., selegiline)

| Effective Date: | 1/1/2024 |
|-----------------|----------|

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Inrebic |                       |
| Diagnosis            | Myelofibrosis         |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of intermediate-2 or high-risk primary or secondary (post-polycythemia vera or post-essential thrombocythemia) myelofibrosis

**AND**

**2** - One of the following:

**2.1** Failure to Jakafi (ruxolitinib) confirmed by claims history or submitted medical records

**OR**

**2.2** History of intolerance or contraindication to Jakafi (ruxolitinib) (please specify intolerance or contraindication)

**OR**

**2.3** Patient is currently on Inrebic therapy

|                                                                                                                                                                     |                     |

|----------------|---------------------|
| Guideline Type | Prior Authorization |
|----------------|---------------------|

**Approval Criteria**

1 - ONE of the following:

1.1 Failure to Insulin lispro protamine/insulin lispro Kwikpen 75/25 100U/ML confirmed by claims history or submission of medical records

**OR**

1.2 History of contraindication or intolerance to Insulin lispro protamine/insulin lispro Kwikpen 75/25 100U/ML (please specify intolerance or contraindication)

Product Name:Humulin R U-500 vial, Humulin R U-500 Kwikpen

|                 |             |
|-----------------|-------------|
| Approval Length | 12 month(s) |
|-----------------|-------------|

|                |                     |
|----------------|---------------------|
| Guideline Type | Prior Authorization |
|----------------|---------------------|

**Approval Criteria**

1 - Patient requires more than 200 units of insulin per day

Product Name: Insulin Lispro Kwikpen, Insulin Lispro Junior Kwikpen

Approval Length 12 month(s)

Guideline Type Prior Authorization

**Approval Criteria**

1 - ONE of the following:

1.1 A visual impairment that prevents the patient from using a vial and syringe to accurately draw up the dose of insulin

**OR**

1.2 A physical disability or handicap that prevents the patient from using a vial and syringe to draw up the dose and administer the insulin

**OR**

1.3 History of failure to insulin lispro vial as demonstrated by poorly controlled diabetes based on hemoglobin A1c

**OR**

1.4 The patient is unable to use the vial dosage form of the drug due to documented poor compliance with vials and syringes resulting in poorly controlled diabetes based on hemoglobin A1c

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                     |

- Insulin aspart pen or cartridge

**OR**

**2.2** History of contraindication or intolerance to BOTH of the following (please specify intolerance or contraindication):

- Insulin lispro Kwikpen
- Insulin aspart pen or cartridge

|                                                          |                     |
|----------------------------------------------------------|---------------------|
| Product Name:Novolin R Flexpen, Novolin R Flexpen Relion |                     |
| Approval Length                                          | 12 month(s)         |
| Guideline Type                                           | Prior Authorization |

**Approval Criteria**

**1 - ONE of the following:**

**1.1** Failure to ONE of the following confirmed by claims history or submission of medical records:

- Humulin R U-100 vial
- Novolin R U-100 vial

**OR**

**1.2** History of contraindication or intolerance to BOTH of the following (please specify intolerance or contraindication):

- Humulin R U-100 vial
- Novolin R U-100 vial

**OR**

**2 - ONE of the following:**

**2.1** A visual impairment that prevents the patient from using a vial and syringe to accurately draw up the dose of insulin

**OR**

**2.2** A physical disability or handicap that prevents the patient from using a vial and syringe to draw up the dose and administer the insulin

**OR**

**2.3** The patient is unable to use the vial dosage form of the drug due to documented poor compliance with vials and syringes resulting in poorly controlled diabetes based on hemoglobin A1c

Product Name:Humulin N Kwikpen, Novolin N Flexpen, Novolin N Flexpen Relion

### Approval Criteria

**1** - ONE of the following:

**1.1** Failure to ONE of the following confirmed by claims history or submission of medical records:

- Humulin N U-100 vial
- Novolin N U-100 vial

**OR**

**1.2** History of contraindication or intolerance to BOTH of the following (please specify intolerance or contraindication):

- Humulin N U-100 vial
- Novolin N U-100 vial

**OR**

**2 - ONE of the following:**

**2.1** A visual impairment that prevents the patient from using a vial and syringe to accurately draw up the dose of insulin

**OR**

**2.2** A physical disability or handicap that prevents the patient from using a vial and syringe to draw up the dose and administer the insulin

**OR**

**2.3** The patient is unable to use the vial dosage form of the drug due to documented poor compliance with vials and syringes resulting in poorly controlled diabetes based on hemoglobin A1c

Product Name:Humalog Mix Kwikpen 50/50, Insulin Aspart Flexpen 70/30, Humulin Kwikpen 70/30, Novolin Flexpen 70/30, Novolin Flexpen Relion 70/30

### Approval Criteria

**1** - BOTH of the following:

**1.1** ONE of the following:

**1.1.1** Failure to BOTH of the following confirmed by claims history or submission of medical records:

- Rezvoglar Kwikpen
- Lantus (pens or vials)

**OR**

**1.1.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

- Rezvoglar Kwikpen
- Lantus (pens or vials)

**AND**

**1.2** The provider has given clinical justification why the patient is unable to use the preferred insulin glargine products

**Product Name:** Basaglar Tempo Pen

**Approval Length** 12 month(s)

**Guideline Type** Prior Authorization

**Approval Criteria**

**1** - BOTH of the following:

**1.1** ONE of the following:

**1.1.1** Failure to BOTH of the following confirmed by claims history or submission of medical records:

- Rezvoglar Kwikpen
- Lantus (pens or vials)

**OR**

**1.1.2** History of intolerance or contraindication to BOTH of the following (please specify intolerance or contraindication):

- Rezvoglar Kwikpen
- Lantus (pens or vials)

**AND**

**1.2** Prescriber provides a reason or special circumstance the patient has to use the Tempo product

## 1 . Criteria

|                                               |                                    |
|-----------------------------------------------|------------------------------------|
| Product Name: Brand Iressa, generic gefitinib |                                    |
| Diagnosis                                     | Non-Small Cell Lung Cancer (NSCLC) |
| Approval Length                               | 12 month(s)                        |
| Therapy Stage                                 | Initial Authorization              |
| Guideline Type                                | Prior Authorization                |

**Approval Criteria**

1 - Diagnosis of metastatic non-small cell lung cancer (NSCLC)

**AND**

2 - ONE of the following:

2.1 Tumors are positive for epidermal growth factor receptor (EGFR) exon 19 deletions

**OR**

2.2 Tumors are positive for exon 21 (L858R) substitution mutations

**OR**

2.3 Tumors are positive for a known sensitizing EGFR mutation (e.g, exon 20 S7681 mutation, exon 18 G719X mutation, exon 21 L861Q mutation)

## 1 . Criteria

|                                                |                       |
|------------------------------------------------|-----------------------|
| Product Name:generic alosetron, Brand Lotronex |                       |
| Approval Length                                | 12 month(s)           |
| Therapy Stage                                  | Initial Authorization |
| Guideline Type                                 | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of severe diarrhea-predominant irritable bowel syndrome (IBS) with symptoms for at least six months

**AND**

**2** - Patient was female at birth

**AND**

**3** - ONE of the following:

**3.1** Failure to a tricyclic antidepressant (e.g., amitriptyline) as confirmed by claims history or submitted medical records

**OR**

**3.2** History of intolerance or contraindication to a tricyclic antidepressant (e.g., amitriptyline) (please specify intolerance or contraindication)

**AND**

**4** - Anatomic or biochemical abnormalities of the GI (gastrointestinal) tract have been excluded

| <b>Approval Criteria</b><br><b>1</b> - ONE of the following: <ul style="list-style-type: none"> <li>• Diagnosis of severe recalcitrant nodular acne unresponsive to conventional therapy</li> <li>• Diagnosis of treatment resistant acne</li> </ul> |                       |

**AND**

**2** - ONE of the following:

**2.1** Failure to an adequate trial on TWO of the following conventional therapy regimens confirmed by claims history or submission of medical records:

- Topical retinoid or retinoid-like agent [e.g., Retin-A/Retin-A Micro (tretinoin)]
- Oral antibiotic [e.g., Ery-Tab (erythromycin), Biaxin (clarithromycin), Minocin (minocycline)]
- Topical antibiotic with or without benzoyl peroxide [e.g., Cleocin-T (clindamycin), erythromycin, BenzaClin (benzoyl peroxide/clindamycin), Benzamycin (benzoyl peroxide/erythromycin)]

**OR**

**2.2** History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

- Topical retinoid or retinoid-like agent [e.g., Retin-A/Retin-A Micro (tretinoin)]
- Oral antibiotic [e.g., Ery-Tab (erythromycin), Biaxin (clarithromycin), Minocin (minocycline)]
- Topical antibiotic with or without benzoyl peroxide [e.g., Cleocin-T (clindamycin), erythromycin, BenzaClin (benzoyl peroxide/clindamycin), Benzamycin (benzoyl peroxide/erythromycin)]

**AND**

**3** - If the request is non-preferred\*, the prescriber has given a clinical reason or special circumstance why the patient is unable to use the preferred product (please document reason or special circumstance)

Notes

\*PDL links are listed in Background.

Product Name: Accutane, generic isotretinoin, Claravis, Amnesteem, Zenatane, Brand Absorica, Absorica LD

Diagnosis

Acne

Approval Length

6 month(s)

Therapy Stage

Reauthorization

Guideline Type

Prior Authorization

### Approval Criteria

**1** - After greater than or equal to 2 months OFF therapy, persistent or recurring severe recalcitrant nodular acne is still present

**OR**

**2** - Total cumulative dose for total duration of therapy is less than 150 mg/kg (document patient's dose and weight)\*

Notes

\*Will be approved up to a total of 150 mg/kg

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 2/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name: Jakafi |                       |
| Diagnosis            | Myelofibrosis         |
| Approval Length      | 6 month(s)            |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

**Approval Criteria**

**1** - ONE of the following diagnoses:

**1.1** Symptomatic lower-risk myelofibrosis

**OR**

**1.2** Intermediate or higher-risk myelofibrosis

**OR**

**1.3** Post-polycythemia vera myelofibrosis

**OR**

**1.4** Post-essential thrombocythemia myelofibrosis

**OR**

**1.5** Both of the following:

- Myelofibrosis-associated anemia
- Presence of symptomatic splenomegaly and/or constitutional symptoms

|                      |                       |
|----------------------|-----------------------|
| Product Name: Jakafi |                       |
| Diagnosis            | Polycythemia Vera     |
| Approval Length      | 6 month(s)            |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

### Approval Criteria

**1** - Both of the following:

**1.1** Diagnosis of low-risk polycythemia vera

**AND**

**1.2** One of the following:

**1.2.1** Failure to ONE of the following as confirmed by claims history or submission of medical records:

- Hydroxyurea
- Interferon therapy (e.g., Intron A, Pegasys)

**OR**

**1.2.2** History of contraindication or intolerance to both of the following (please specify contraindication or intolerance):

- Hydroxyurea
- Interferon therapy (e.g., Intron A, Pegasys)

**OR**

**2** - Diagnosis of high-risk polycythemia vera

**1 - Both of the following:**

**1.1** Diagnosis of one of the following:

- Peripheral T-cell lymphoma not otherwise specified (PTCL-NOS)
- Enteropathy-associated T-cell lymphoma (EATL)
- Monomorphic epitheliotropic intestinal T-cell lymphoma (MEITL)
- Angioimmunoblastic T-cell lymphoma (AITL)
- Nodal peripheral T-cell lymphoma with T-follicular helper phenotype (PTCL, TFH)
- Follicular T-cell lymphoma (FTCL)
- Anaplastic large cell lymphoma (ALCL)

**AND**

**1.2** Used as initial palliative intent therapy or second-line and subsequent therapy for relapsed/refractory disease

**OR**

**2 - Both of the following:**

**2.1** One of the following diagnoses:

- T-cell large granular lymphocytic leukemia
- T-cell prolymphocytic leukemia

**AND**

**2.2** Used as second-line or subsequent therapy

**OR**

**3 - Both of the following:**

**3.1** Diagnosis of hepatosplenic T-cell lymphoma

**AND**

**3.2** Used for refractory disease after two first-line therapy regimens

**Approval Criteria**

1 - Both of the following:

1.1 Diagnosis of CAR-T induced G4 cytokine release syndrome

**AND**

1.2 Disease is refractory to high-dose corticosteroids and anti-IL-6 therapy (e.g., Actemra [tocilizumab])

**OR**

2 - Both of the following:

2.1 Diagnosis of immune checkpoint inhibitor-related toxicities

**AND**

2.2 Used in combination with Orencia (abatacept) for the management of concomitant myositis and myocarditis

## 1 . Criteria

|                        |                       |
|------------------------|-----------------------|
| Product Name:Jesduvroq |                       |
| Approval Length        | 12 month(s)           |
| Therapy Stage          | Initial Authorization |
| Guideline Type         | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of anemia due to chronic kidney disease (CKD)

**AND**

**2** - Patient has been receiving dialysis for at least four months

**AND**

**3** - BOTH of the following:

- Ferritin greater than 100 mcg/L (micrograms per liter)
- Transferrin saturation (TSAT) greater than 20%

**AND**

**4** - Hemoglobin level is less than 11 g/dL (grams per deciliter)

**AND**

**5** - ONE of the following:

**5.1** Failure to an erythropoietin stimulating agent (ESA) [e.g., Aranesp (darbepoetin), Epogen (epoetin alfa), Procrit (epoetin alfa), Retacrit (epoetin alfa-epbx)] as confirmed by claims history or submission of medical records

**OR**

**5.2** History of contraindication or intolerance to an erythropoietin stimulating agent (ESA) (please specify contraindication or intolerance)

**AND**

**6** - Prescribed by or in consultation with ONE of the following:

- Hematologist
- Nephrologist

Product Name:Jesduvroq

### Approval Criteria

**1** - Documentation of positive clinical response to Jesduvroq therapy (e.g., clinically meaningful increase in hemoglobin level)

**AND**

**2** - Adequate iron stores confirmed by both of the following:

- Ferritin greater than 100 mcg/L (micrograms per liter)
- Transferrin saturation (TSAT) greater than 20%

**AND**

**3** - Hemoglobin level does not exceed 12 g/dL (grams per deciliter)

**AND**

**4** - Patient is not on concurrent treatment with an erythropoietin stimulating agent (ESA) [e.g., Aranesp (darbepoetin), Epogen (epoetin alfa), Procrit (epoetin alfa), Retacrit (epoetin alfa-epbx)]

**AND**

**5** - Prescribed by or in consultation with ONE of the following:

- Hematologist
- Nephrologist

## 1 . Criteria

|                     |                       |
|---------------------|-----------------------|
| Product Name:Joenna |                       |
| Approval Length     | 12 month(s)           |
| Therapy Stage       | Initial Authorization |
| Guideline Type      | Prior Authorization   |
|                     |                       |

**Approval Criteria**

**1** - Diagnosis of activated phosphoinositide 3-kinase delta syndrome (APDS)

**AND**

**2** - Diagnosis has been confirmed by the presence of an APDS-associated genetic variant in either PIK3CD or PIK3R1

**AND**

**3** - Documentation of other clinical findings and manifestations consistent with APDS (e.g., recurrent respiratory tract infections, recurrent herpesvirus infections, lymphadenopathy, hepatosplenomegaly, autoimmune cytopenia)

**AND**

**4** - ONE of the following:

**4.1** Failure to one current standard of care for APDS (e.g., antimicrobial prophylaxis, immunoglobulin replacement therapy, immunosuppressive therapy) as confirmed by claims history or submission of medical records

**OR**

**4.2** History of contraindication or intolerance to one current standard of care for APDS (e.g., antimicrobial prophylaxis, immunoglobulin replacement therapy, immunosuppressive therapy) (please specify intolerance or contraindication)

**AND**

**5** - Prescribed by ONE of the following:

- Hematologist
- Immunologist

**AND**

**6 - BOTH of the following:**

- Patient is 12 years of age or older
- Patient weighs greater than or equal to 45 kg (kilograms)

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 5/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                        |                       |
|------------------------|-----------------------|
| Product Name: Juxtapid |                       |
| Approval Length        | 12 month(s)           |
| Therapy Stage          | Initial Authorization |
| Guideline Type         | Prior Authorization   |

## **Approval Criteria**

**1** - Diagnosis of homozygous familial hypercholesterolemia (HoFH) as confirmed by ONE of the following:

**1.1** Submission of medical records (e.g., chart notes, laboratory values) confirming genetic confirmation of bi-allelic pathogenic/likely pathogenic variants on different chromosomes at the low-density lipoprotein receptor (LDLR), apolipoprotein B (APOB), proprotein convertase subtilisin kexin type 9 (PCSK9), or low-density lipoprotein receptor adaptor protein 1 (LDLRAP1) genes or greater than or equal to 2 such variants at different loci

**OR**

**1.2** BOTH of the following:

**1.2.1** Untreated low-density lipoprotein cholesterol (LDL-C) greater than 400 mg/dL

**AND**

**1.2.2** ONE of the following:

- Xanthoma before 10 years of age
- Evidence of familial hypercholesterolemia in at least one parent

**AND**

**2** - Patient is on a low-fat diet

**AND**

**3** - Patient is receiving other lipid-lowering therapy (e.g., statin, ezetimibe, LDL apheresis)

**AND**

**4** - Prescribed by ONE of the following:

- Cardiologist
- Endocrinologist
- Lipid specialist

**AND**

**5 - ONE of the following:**

**5.1** Failure to Repatha (evolocumab) as confirmed by claims history or submission of medical records

**OR**

**5.2** History of intolerance or contraindication to Repatha (evolocumab) (please specify intolerance or contraindication)

**AND**

**6 -** Not used in combination with a proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Praluent (alirocumab), Repatha (evolocumab)]

**AND**

**7 -** Not used in combination with Evkeeza (evinacumab-dgnb)

|                                                                     |                     |

| <b>Approval Criteria</b><br><b>1 -</b> Patient is on a low-fat diet |                     |

**AND**

**2** - Patient continues to receive other lipid-lowering therapy (e.g., statin, low density lipoprotein [LDL] apheresis)

**AND**

**3** - Documentation of a positive clinical response to therapy from pre-treatment baseline

**AND**

**4** - Prescribed by ONE of the following:

- Cardiologist
- Endocrinologist
- Lipid specialist

**AND**

**5** - Not used in combination with a proprotein convertase subtilisin/kexin type 9 (PCSK9) inhibitor [e.g., Praluent (alirocumab), Repatha (evolocumab)]

**AND**

**6** - Not used in combination with Evkeeza (evinacumab-dgnb)

**Approval Criteria**

**1** - Diagnosis of cystic fibrosis (CF)

**AND**

**2** - Submission of laboratory results confirming that patient has at least ONE of the mutations in the cystic fibrosis transmembrane conductance regulator (CFTR) gene that is responsive to Kalydeco, listed in Table 1 (see Background)

**AND**

**3** - Prescribed by, or in consultation with a provider who specializes in the treatment of CF

\* Clinical data exist for these mutations.

† Complex/compound mutations where a single allele of the CFTR gene has multiple mutations; these exist independent of the presence of mutations on the other allele.

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Kevzara |                       |
| Diagnosis            | Rheumatoid Arthritis  |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

### **Approval Criteria**

**1** - Diagnosis of moderately to severely active rheumatoid arthritis (RA)

**AND**

**2** - One of the following:

**2.1** Patient is currently on Kevzara therapy as confirmed by claims history or submission of medical records

**OR**

**2.2** All of the following:

**2.2.1** One of the following:

**2.2.1.1** Failure to a 3-month trial of one non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at maximally indicated doses as confirmed by claims history or submitted medical records

**OR**

**2.2.1.2** History of intolerance or contraindication to one non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] (please specify intolerance or contraindication)

**OR**

**2.2.1.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of rheumatoid arthritis as confirmed by claims history or submission of medical records [e.g., adalimumab, Cimzia (certolizumab), Enbrel (etanercept), Olumiant (baricitinib), Orencia (abatacept), Rinvoq (upadacitinib), Simponi (golimumab), Xeljanz/Xeljanz XR (tofacitinib)]

**AND**

**2.2.2** One of the following:

**2.2.2.1** Failure of one preferred adalimumab product\* confirmed by claims history or submitted medical records

**OR**

**2.2.2.2** History of intolerance or contraindication to all preferred adalimumab products\* (please specify intolerance or contraindication)

**AND**

**2.2.3** One of the following:

**2.2.3.1** Failure of Tyenne (tocilizumab-aazg) confirmed by claims history or submitted medical records

**OR**

**2.2.3.2** History of intolerance or contraindication to Tyenne (tocilizumab-aazg) (please specify intolerance or contraindication)

**AND**

**3** - Patient is not receiving Kevzara in combination with another targeted immunomodulator [e.g., adalimumab, Cimzia (certolizumab), Enbrel (etanercept), Olumiant (baricitinib), Orencia (abatacept), Rinvoq (upadacitinib), Simponi (golimumab), Xeljanz/Xeljanz XR (tofacitinib)]

**AND**

**4** - Prescribed by or in consultation with a rheumatologist

| Diagnosis                                                                                                                                                                                                                                                 | Polyarticular Juvenile Idiopathic Arthritis (pJIA) |
| Approval Length                                                                                                                                                                                                                                           | 12 month(s)                                        |
| Therapy Stage                                                                                                                                                                                                                                             | Initial Authorization                              |
| Guideline Type                                                                                                                                                                                                                                            | Prior Authorization                                |
| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of active polyarticular juvenile idiopathic arthritis</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - Patient is NOT receiving Kevzara in combination with another targeted immunomodulator</p> |                                                    |

[e.g., adalimumab, Cimzia (certolizumab), Enbrel (etanercept), Olumiant (baricitinib), Orencia (abatacept), Rinvoq (upadacitinib), Simponi (golimumab), Xeljanz/Xeljanz XR (tofacitinib)]

**AND**

**3** - One of the following:

- Failure of one preferred adalimumab product\* confirmed by claims history or submitted medical records
- History of intolerance or contraindication to all preferred adalimumab products\* (please specify intolerance or contraindication)

**AND**

**4** - One of the following:

- Failure of Tyenne (tocilizumab-aazg) confirmed by claims history or submitted medical records
- History of intolerance or contraindication to Tyenne (tocilizumab-aazg) (please specify intolerance or contraindication)

**AND**

**5** - Prescribed by or in consultation with a rheumatologist

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 1/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                      |                           |
|----------------------|---------------------------|
| Product Name:Kineret |                           |
| Diagnosis            | Rheumatoid Arthritis (RA) |
| Approval Length      | 12 month(s)               |
| Therapy Stage        | Initial Authorization     |
| Guideline Type       | Prior Authorization       |
|                      |                           |

## **Approval Criteria**

**1** - Diagnosis of moderately to severely active rheumatoid arthritis (RA)

**AND**

**2** - Patient is NOT receiving Kineret in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**3** - Prescribed by or in consultation with a rheumatologist

**AND**

**4** - One of the following:

**4.1** Patient is currently on Kineret therapy as confirmed by claims history or submission of medical records

**OR**

**4.2** Both of the following:

**4.2.1** One of the following:

**4.2.1.1** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of rheumatoid arthritis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz (tofacitinib)]

**OR**

**4.2.1.2** Failure to a 3 month trial of one non-biologic DMARD [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at maximally indicated doses confirmed by claims history or submission of medical records

**OR**

**4.2.1.3** History of intolerance or contraindication to one non-biologic DMARD [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] (please specify intolerance or contraindication)

**AND**

**4.2.2** One of the following:

**4.2.2.1** Failure of THREE of the following confirmed by claims history or submission of medical records:

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- Olumiant (baricitinib)
- Tyenne (tocilizumab-aazg)

**OR**

**4.2.2.2** History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- Olumiant (baricitinib)
- Tyenne (tocilizumab-aazg)

Notes

\* For a list of preferred adalimumab products please reference drug coverage tools.

### Approval Criteria

**1** - Diagnosis of Langerhans cell histiocytosis

**AND**

**2** - ONE of the following:

- Presence of mitogen-activated protein (MAP) kinase pathway mutation
- No detectable mutation
- Genetic testing not available

**AND**

**3** - Used as monotherapy

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 1/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                       |                                    |
|-----------------------|------------------------------------|
| Product Name:Lazcluze |                                    |
| Diagnosis             | Non-Small Cell Lung Cancer (NSCLC) |
| Approval Length       | 12 month(s)                        |
| Therapy Stage         | Initial Authorization              |
| Guideline Type        | Prior Authorization                |

**Approval Criteria**

1 - Diagnosis of non-small cell lung cancer (NSCLC)

**AND**

2 - Disease is ONE of the following:

- Recurrent
- Advanced
- Metastatic

**AND**

3 - Disease is positive for ONE of the following:

- Epidermal growth factor receptor (EGFR) exon 19 deletion
- EGFR exon 21 L858R mutation

**AND**

4 - Used in combination with Rybrevant (amivantamab-vmjw)

resonance imaging (MRI) has been completed after the initiation of intravenous Leqembi therapy

**AND**

**4.2** ONE of the following:

**4.2.1** Amyloid-related imaging abnormalities (ARIA) have not been observed on MRI

**OR**

**4.2.2** ALL of the following:

**4.2.2.1** ARIA has been observed on MRI

**AND**

**4.2.2.2** Prescriber attests that continuation of therapy with Leqembi IQLIK is appropriate based on the severity of the patient's clinical symptoms

**AND**

**4.2.2.3** ONE of the following:

- Follow-up MRI demonstrates radiographic resolution and/or stabilization
- Prescriber attests that continuation of therapy with Leqembi IQLIK is appropriate based on the radiographic severity of ARIA

**AND**

**5** - Not used in combination with other A $\beta$  monoclonal antibodies (mAbs) for Alzheimer's Disease (e.g., Kisunla)

**AND**

**6** - Prescribed by a neurologist, geriatric psychiatrist, or geriatrician who specializes in treating dementia

## 1 . Criteria

|                          |                       |
|--------------------------|-----------------------|
| Product Name:Leqselvi    |                       |
| Approval Length          | 12 month(s)           |
| Therapy Stage            | Initial Authorization |
| Guideline Type           | Prior Authorization   |
| <b>Approval Criteria</b> |                       |

**1** - Diagnosis of severe alopecia areata

**AND**

**2** - Other causes of hair loss have been ruled out (e.g., androgenetic alopecia, cicatricial alopecia, secondary syphilis, tinea capitis, triangular alopecia, and trichotillomania)

**AND**

**3** - Patient requesting therapy for current episode of alopecia areata

**AND**

**4** - ONE of the following:

- Failure to Olumiant confirmed by claims history or submission of medical records
- History of intolerance or contraindication to Olumiant (please specify intolerance or contraindication)

**AND**

**5** - Patient is not receiving Leqselvi in combination with any of the following:

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Rinvoq (upadacitinib), Litfulo (ritlecitinib), Olumiant (baricitinib)]
- Potent immunosuppressant (e.g., azathioprine or cyclosporine)

**AND**

**6** - Prescribed by or in consultation with a dermatologist

## 1 . Criteria

|                       |                                                      |
|-----------------------|------------------------------------------------------|
| Product Name:Livmarli |                                                      |
| Diagnosis             | Progressive Familial Intrahepatic Cholestasis (PFIC) |
| Approval Length       | 12 month(s)                                          |
| Therapy Stage         | Initial Authorization                                |
| Guideline Type        | Prior Authorization                                  |

### Approval Criteria

**1** - Diagnosis of progressive familial intrahepatic cholestasis (PFIC)

**AND**

**2** - Patient does not have a ABCB11 variant resulting in non-functional or complete absence of bile salt export pump (BSEP) protein

**AND**

**3** - Patient is experiencing cholestatic pruritus associated with PFIC

**AND**

**4** - Patient has a serum bile acid concentration above the upper limit of the normal reference range for the reporting laboratory

**AND**

**5** - Patient has had an inadequate response to at least two conventional treatments for the symptomatic relief of pruritus (e.g., ursodeoxycholic acid, diphenhydramine, cholestyramine, rifampin, naltrexone, and sertraline)

**AND**

**6** - Prescribed by a gastroenterologist or hepatologist

**AND**

**3.2** If applicable, any underlying conditions have been or will be addressed

**AND**

**4** - ONE of the following:

**4.1** Prior to the start of therapy with the long-acting opioid, the patient has failed an adequate (minimum of 2 week) trial of a short-acting opioid within the last 30 days [document drug(s) and date of trial]

**OR**

**4.2** The patient is already receiving chronic opioid therapy prior to surgery for postoperative pain

**OR**

**4.3** Postoperative pain is expected to be moderate to severe and persist for an extended period of time

**OR**

**4.4** Patient is new to plan and currently established on long-acting opioid therapy for at least the past 30 days

**AND**

**5** - If the request is for neuropathic pain (examples of neuropathic pain include neuralgias and neuropathies), ONE of the following:

**5.1** BOTH of the following:

**5.1.1** Unless it is contraindicated, the patient has not exhibited an adequate response to 8

weeks of treatment with gabapentin titrated to a therapeutic dose (document date of trial) (if contraindicated, document contraindication)

**AND**

**5.1.2** Unless it is contraindicated, the patient has not exhibited an adequate response to at least 6 weeks of treatment with a tricyclic antidepressant titrated to the maximum tolerated dose (document drug and date of trial) (if contraindicated, document contraindication)

**OR**

**5.2** Patient is new to plan and currently established on long-acting opioid therapy for at least the past 30 days

|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Notes | *If the patient is currently taking the requested long-acting opioid for at least 30 days and does not meet the medical necessity authorization criteria requirements for treatment with an opioid, a denial should be issued and a maximum 60-day authorization may be authorized one time for the requested drug/strength combination up to the requested quantity for transition to an alternative treatment. |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**Product Name:**hydrocodone bitartrate ER caps, methadone 5 mg or 10 mg tablets

|                 |                                                                                  |
|-----------------|----------------------------------------------------------------------------------|
| Diagnosis       | Non-cancer/Non-hospice/Non-sickle cell anemia/Non-end of life care related pain* |
| Approval Length | 6 month(s)                                                                       |
| Therapy Stage   | Initial Authorization                                                            |
| Guideline Type  | Prior Authorization                                                              |

### Approval Criteria

**1** - Prescriber attests to BOTH of the following:

**1.1** Patient has been screened for substance abuse/opioid dependence

**AND**

**1.2** Pain is moderate to severe and expected to persist for an extended period of time (chronic)

**AND**

**2** - Treatment goals are defined and include estimated duration of treatment (must document treatment goals)

**AND**

**3** - BOTH of the following:

**3.1** Patient has been screened for underlying depression and/or anxiety

**AND**

**3.2** If applicable, any underlying conditions have been or will be addressed

**AND**

**4** - ONE of the following:

**4.1** Prior to the start of therapy with the long-acting opioid, the patient has failed an adequate (minimum of 2 week) trial of a short-acting opioid within the last 30 days [document drug(s) and date of trial]

**OR**

**4.2** The patient is already receiving chronic opioid therapy prior to surgery for postoperative pain

**OR**

**4.3** Postoperative pain is expected to be moderate to severe and persist for an extended period of time

**OR**

**4.4** Patient is new to plan and currently established on long-acting opioid therapy for at least the past 30 days

**AND**

**5** - If the request is for neuropathic pain (examples of neuropathic pain include neuralgias and neuropathies), **ONE** of the following:

**5.1** BOTH of the following:

**5.1.1** Unless it is contraindicated, the patient has not exhibited an adequate response to 8 weeks of treatment with gabapentin titrated to a therapeutic dose (document date of trial) (if contraindicated, document contraindication)

**AND**

**5.1.2** Unless it is contraindicated, the patient has not exhibited an adequate response to at least 6 weeks of treatment with a tricyclic antidepressant titrated to the maximum tolerated dose (document drug and date of trial) (if contraindicated, document contraindication)

**OR**

**5.2** Patient is new to plan and currently established on long-acting opioid therapy for at least the past 30 days

**AND**

**6** - **ONE** of the following:

**6.1** Patient has failed a trial of at least **ONE** of the following, as confirmed by claims history or submission of medical records:

- morphine sulfate controlled release tablets (generic MS Contin)
- preferred fentanyl transdermal

**OR**

**6.2** Patient has a history of contraindication or intolerance to BOTH of the following (please specify contraindication or intolerance):

- morphine sulfate controlled release tablets (generic MS Contin)
- preferred fentanyl transdermal

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

**AND**

**1.2** Pain is moderate to severe and expected to persist for an extended period of time (chronic)

**AND**

**2** - Treatment goals are defined and include estimated duration of treatment (must document treatment goals)

**AND**

**3** - BOTH of the following:

**3.1** Patient has been screened for underlying depression and/or anxiety

**AND**

**3.2** If applicable, any underlying conditions have been or will be addressed

**AND**

**4** - ONE of the following:

**4.1** Prior to the start of therapy with the long-acting opioid, the patient has failed an adequate (minimum of 2 week) trial of a short-acting opioid within the last 30 days [document drug(s) and date of trial]

**OR**

**4.2** The patient is already receiving chronic opioid therapy prior to surgery for postoperative pain

**OR**

**4.3** Postoperative pain is expected to be moderate to severe and persist for an extended period of time

**OR**

**4.4** Patient is new to plan and currently established on long-acting opioid therapy for at least the past 30 days

**AND**

**5** - If the request is for neuropathic pain (examples of neuropathic pain include neuralgias and neuropathies), **ONE** of the following:

**5.1** **BOTH** of the following:

**5.1.1** Unless it is contraindicated, the patient has not exhibited an adequate response to 8 weeks of treatment with gabapentin titrated to a therapeutic dose (document date of trial) (if contraindicated, document contraindication)

**AND**

**5.1.2** Unless it is contraindicated, the patient has not exhibited an adequate response to at least 6 weeks of treatment with a tricyclic antidepressant titrated to the maximum tolerated dose (document drug and date of trial) (if contraindicated, document contraindication)

**OR**

**5.2** Patient is new to plan and currently established on long-acting opioid therapy for at least the past 30 days

**AND**

**6** - **ONE** of the following:

**6.1** Patient has failed a trial of **ALL** of the following, as confirmed by claims history or submission of medical records:

- morphine sulfate controlled release tablets (generic MS Contin)

- preferred fentanyl transdermal
- hydrocodone extended-release capsules (generic Zohydro ER)

**OR**

**6.2** Patient has a history of contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

- morphine sulfate controlled release tablets (generic MS Contin)
- preferred fentanyl transdermal
- hydrocodone extended-release capsules (generic Zohydro ER)

**Approval Criteria**

**1** - Documented meaningful improvement in pain and function when assessed against treatment goals (document improvement in function or pain score improvement)

**AND**

**2** - Document rationale for not tapering or discontinuing opioid if treatment goals are not being met

**AND**

**3** - Prescriber attests to BOTH of the following:

**3.1** Patient has been screened for substance abuse/opioid dependence

**AND**

**3.2** Pain is moderate to severe and expected to persist for an extended period of time (chronic)

**AND**

**4** - ONE of the following:

**4.1** Patient has failed a trial of at least ONE of the following, as confirmed by claims history or submission of medical records:

- morphine sulfate controlled release tablets (generic MS Contin)
- preferred fentanyl transdermal

**OR**

**4.2** Patient has a history of contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

**AND**

**3** - Prescriber attests to BOTH of the following:

**3.1** Patient has been screened for substance abuse/opioid dependence

**AND**

**3.2** Pain is moderate to severe and expected to persist for an extended period of time (chronic)

**AND**

**4** - ONE of the following:

**4.1** Patient has failed a trial of ALL the following, as confirmed by claims history or submission of medical records (document drugs and date of trials):

- morphine sulfate controlled release tablets (generic MS Contin)
- preferred fentanyl transdermal
- hydrocodone extended-release capsules (generic Zohydro ER)

**OR**

**4.2** Patient has a history of contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

- morphine sulfate controlled release tablets (generic MS Contin)
- preferred fentanyl transdermal
- hydrocodone extended-release capsules (generic Zohydro ER)

Notes

\*If the patient is currently taking the requested long-acting opioid for at least 30 days and does not meet the medical necessity authorization criteria requirements for treatment with an opioid, a denial should be issued and a maximum 60-day authorization may be authorized one time for the requested drug/strength combination up to the requested quantity for transition to an alternative treatment.  
If the request is for a non-preferred product and the patient is currently taking the requested long-acting opioid for at least 30 days and has

| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Prior Authorization |
| <p><b>Approval Criteria</b></p> <p><b>1 - ONE of the following:</b></p> <p><b>1.1</b> The patient has failed a trial of tramadol IR (immediate release) as confirmed by claims history or submission of medical records</p> <p style="text-align: center;"><b>OR</b></p> <p><b>1.2</b> The patient has a history of contraindication or intolerance to tramadol IR (please specify contraindication or intolerance)</p> <p style="text-align: center;"><b>OR</b></p> <p><b>2 - BOTH of the following:</b></p> <p><b>2.1</b> ONE of the following:</p> |                     |

**2.1.1** Patient is being treated for cancer-related pain (i.e., patients undergoing active cancer treatment; or cancer survivors with chronic pain who have completed cancer treatment, are in clinical remission, or are under cancer surveillance)

**OR**

**2.1.2** Patient is in hospice or is receiving end of life care

**OR**

**2.1.3** Patient is being treated for sickle cell anemia related pain

**AND**

**2.2** BOTH of the following:

**2.2.1** Patient is established on pain therapy with the requested medication for cancer-related pain (i.e., patients undergoing active cancer treatment; or cancer survivors with chronic pain who have completed cancer treatment, are in clinical remission, or are under cancer surveillance), hospice related pain, sickle cell anemia related pain, or end of life care related pain

**AND**

**2.2.2** The medication is not a new regimen for treatment of cancer-related pain (i.e., patients undergoing active cancer treatment; or cancer survivors with chronic pain who have completed cancer treatment, are in clinical remission, or are under cancer surveillance), hospice, sickle cell anemia related pain, or end of life care pain (document date regimen was started)

Product Name:generic morphine sulfate ER/CR tabs, fentanyl patches, hydrocodone bitartrate ER caps, oxymorphone ER, morphine sulfate ER caps, hydromorphone ER, generic hydrocodone bitartrate ER tabs, Brand Hysingla ER, Brand MS Contin, Nucynta ER, Oxycodone ER, Oxycontin, Xtampza ER, methadone 5 mg or 10 mg tabs/soln, generic methadone conc, Brand Methadose conc, tramadol ER, Conzip, Brand Zohydro ER

|                |                |
|----------------|----------------|
| Guideline Type | Quantity Limit |
|----------------|----------------|

### Approval Criteria

1 - The requested dose cannot be achieved by moving to a higher strength of the product

**AND**

2 - The requested dose is within the Food and Drug Administration (FDA) maximum dose per day, where an FDA maximum dose per day exists

|       |                                                                                                                                                                                                                                                                                                                                                         |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Notes | <p>Authorization will be issued for:</p> <ul style="list-style-type: none"> <li>• 12 months for cancer/hospice/sickle cell anemia related pain/end of life related pain.</li> <li>• 12 months for all Tramadol ER requests.</li> <li>• 6 months for non-cancer/non-hospice/non-sickle cell anemia related pain/non-end of life related pain.</li> </ul> |

|-----------------|----------------------------------------------------------------------------|
| Diagnosis       | Non-cancer/non-hospice/non-sickle cell anemia/non-end of life related pain |
| Approval Length | 6 Months*                                                                  |
| Therapy Stage   | Reauthorization                                                            |
| Guideline Type  | Morphine Milligram Equivalent (MME)                                        |

### Approval Criteria

**1** - If the dose exceeds the maximum cumulative morphine milligram equivalent (MME) of 90 milligrams, ALL of the following:

**1.1** Prescriber attests the patient has been screened for substance abuse/opioid dependence

**AND**

**1.2** Document rationale for not tapering or discontinuing opioid if treatment goals are not being met

|                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|                                                                    |                       |
|--------------------------------------------------------------------|-----------------------|
| Product Name:Lonhala Magnair (Starter Kit and Refill Kit), Yupelri |                       |
| Approval Length                                                    | 12 month(s)           |
| Therapy Stage                                                      | Initial Authorization |
| Guideline Type                                                     | Prior Authorization   |
|                                                                    |                       |

## Approval Criteria

**1** - Diagnosis of moderate to severe chronic obstructive pulmonary disease (COPD)

**AND**

**2** - ONE of the following:

**2.1** One of the following:

- Failure of Incruse Ellipta confirmed by claims history or submitted medical records
- History of intolerance or contraindication to Incruse Ellipta (please specify intolerance or contraindication)

**OR**

**2.2** BOTH of the following:

**2.2.1** Patient is unable to use a metered-dose, dry powder or slow mist inhaler (e.g. Incruse Ellipta) to control his/her COPD due to ONE of the following:

- Cognitive or physical impairment limiting coordination of handheld devices (e.g., cognitive decline, arthritis in the hands) (Document impairment)
- Patient is unable to generate adequate inspiratory force (e.g., peak inspiratory flow rate (PIFR) resistance is less than 60 liters per minute)

**AND**

**2.2.2** One of the following:

- Failure of ipratropium nebulized solution (generic Atrovent) confirmed by claims history or submitted medical records
- History of intolerance or contraindication to ipratropium nebulized solution (generic Atrovent) (please specify intolerance or contraindication)

### Approval Criteria

1 - Diagnosis of ONE of the following:

- Unresectable locally advanced, recurrent, or metastatic gastric cancer
- Unresectable locally advanced, recurrent, or metastatic gastroesophageal junction adenocarcinoma

**AND**

2 - History of failure, contraindication, or intolerance to treatment with at least TWO prior lines of chemotherapy that consisted of the following agents:

- Fluoropyrimidine (e.g., fluorouracil)
- Platinum (e.g., carboplatin, cisplatin, oxaliplatin)
- Taxane (e.g., docetaxel, paclitaxel) or irinotecan
- Human epidermal growth factor receptor 2 (HER2)/neu-targeted therapy (e.g., trastuzumab) (if HER2 overexpression)

### Approval Criteria

**1** - Diagnosis of ONE of the following:

**1.1** Metastatic breast cancer

**OR**

**1.2** Recurrent breast cancer

**AND**

**2** - Presence of deleterious or suspected deleterious germline breast cancer (BRCA)-mutations (gBRCAm)

**AND**

**3** - ONE of the following:

**3.1** BOTH of the following:

**3.1.1** Disease is human epidermal growth factor receptor 2 (HER2)-negative

**AND**

**3.1.2** ONE of the following:

**3.1.2.1** Disease is hormone receptor (HR) negative

**OR**

**3.1.2.2** BOTH of the following:

**3.1.2.2.1** Disease is hormone receptor (HR) positive

**AND**

**3.1.2.2.2** ONE of the following:

- Disease has progressed on previous endocrine therapy
- Provider attestation that treatment with endocrine therapy is inappropriate

**OR**

**3.2** Disease is human epidermal growth factor receptor 2 (HER2)-positive

|                                                                                      |                                      |
|--------------------------------------------------------------------------------------|--------------------------------------|
| Product Name:Lynparza                                                                |                                      |
| Diagnosis                                                                            | Ovarian Cancer (Maintenance Therapy) |
| Approval Length                                                                      | 12 month(s)                          |
| Therapy Stage                                                                        | Initial Authorization                |
| Guideline Type                                                                       | Prior Authorization                  |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of ONE of the following:</p> |                                      |

- Epithelial ovarian cancer
- Fallopian tube cancer
- Primary peritoneal cancer

**AND**

**2** - Disease is ONE of the following:

- Advanced
- Recurrent

**AND**

**3** - ONE of the following:

**3.1** Presence of deleterious or suspected deleterious germline or somatic BRCA-mutations

**OR**

**3.2** BOTH of the following:

**3.2.1** Cancer is associated with homologous recombination deficiency (HRD)-positive status defined by either a deleterious or suspected deleterious BRCA mutation or genomic instability

**AND**

**3.2.2** Used in combination with bevacizumab (e.g., Avastin, Mvasi)

**AND**

**4** - Patient has had a complete or partial response to platinum-based chemotherapy

**AND**

**5** - Request is for maintenance therapy

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                            |

**2 - ONE of the following:**

**2.1 BOTH of the following:**

**2.1.1** Presence of deleterious or suspected deleterious germline or somatic homologous recombination repair (HRR) gene mutations

**AND**

**2.1.2** Disease has progressed following prior treatment with ONE of the following:

- Enzalutamide (Xtandi)
- Abiraterone (e.g., Zytiga, Yonsa)

**OR**

**2.2 ALL of the following:**

**2.2.1** Presence of deleterious or suspected deleterious BRCA-mutation

**AND**

**2.2.2** Used in combination with abiraterone (e.g., Zytiga, Yonsa)

**AND**

**2.2.3** Used in combination with steroids (e.g., methylprednisolone, prednisolone, prednisone)

**AND**

**3 - ONE of the following:**

**3.1** Used in combination with a gonadotropin-releasing hormone (GnRH) analog [e.g., Lupron (leuprolide), Zoladex (goserelin), Trelstar (triptorelin), Vantas (histrelin), Firmagon (degarelix)]

**OR**

**3.2 Patient has had bilateral orchiectomy**

|-----------------|----------|

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Lytgobi |                       |
| Diagnosis            | Cholangiocarcinoma    |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of cholangiocarcinoma (intrahepatic or extrahepatic)

**AND**

**2** - Disease is ONE of the following:

- Unresectable
- Resected gross residual (R2)
- Metastatic

**AND**

**3** - Positive for fibroblast growth factor receptor 2 (FGFR2) fusions or rearrangements

**AND**

**4** - Used as second line or subsequent treatment

## 1 . Criteria

|                       |                                          |
|-----------------------|------------------------------------------|
| Product Name: Syndros |                                          |
| Diagnosis             | Chemotherapy-induced nausea and vomiting |
| Approval Length       | 12 month(s)                              |
| Guideline Type        | Prior Authorization                      |
|                       |                                          |

**Approval Criteria**

**1** - Patient is receiving cancer chemotherapy

**AND**

**2** - ONE of the following:

**2.1** Failure to formulary generic dronabinol as confirmed by claims history or submission of medical records

**OR**

**2.2** History of contraindication or intolerance to formulary generic dronabinol (please specify contraindication or intolerance)

**OR**

**2.3** Patient is unable to swallow capsules

**AND**

**3** - ONE of the following:

**3.1** Failure to a 5HT-3 (5-hydroxytryptamine type 3) receptor antagonist [e.g., Anzemet (dolasetron), Kytril (granisetron), or Zofran (ondansetron)] as confirmed by claims history or submission of medical records

**OR**

**3.2** History of contraindication or intolerance to a 5HT-3 receptor antagonist [e.g., Anzemet (dolasetron), Kytril (granisetron), or Zofran (ondansetron)] (please specify contraindication or intolerance)

**AND**

**4** - ONE of the following:

**4.1** Failure to ONE of the following as confirmed by claims history or submission of medical records:

- Lorazepam (generic Ativan)
- Prochlorperazine (generic Compazine)
- Dexamethasone (generic Decadron)
- Haloperidol (generic Haldol)
- Promethazine (generic Phenergan)
- Metoclopramide (generic Reglan)
- Olanzapine (generic Zyprexa)

**OR**

**4.2** History of contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

- Lorazepam (generic Ativan)
- Prochlorperazine (generic Compazine)
- Dexamethasone (generic Decadron)
- Haloperidol (generic Haldol)
- Promethazine (generic Phenergan)
- Metoclopramide (generic Reglan)
- Olanzapine (generic Zyprexa)

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 7/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                        |                       |
|------------------------|-----------------------|
| Product Name:Mavenclad |                       |
| Approval Length        | 2 month(s)            |
| Therapy Stage          | Initial Authorization |
| Guideline Type         | Prior Authorization   |

### **Approval Criteria**

**1** - Diagnosis of relapsing form of multiple sclerosis (MS) (e.g., relapsing-remitting MS, secondary progressive MS with relapses)

**AND**

**2** - Prescribed by, or in consultation with, a specialist in the treatment of MS (e.g., neurologist)

**AND**

**3** - ONE of the following:

**3.1** Trial and failure (after trial of at least 4 weeks) to TWO of the following disease-modifying therapies for MS (one of which must be a preferred dimethyl fumarate product) as confirmed by claims history or submission of medical records:

- Interferon beta-1a (Avonex\*, Rebif\*, Plegridy)
- Interferon beta-1b (Betaseron\*, Extavia\*)
- Glatiramer acetate products (e.g., Copaxone, Glatopa)
- A preferred dimethyl fumarate product (e.g., Tecfidera)
- Teriflunomide (generic Aubagio)
- Fingolimod (generic Gilenya)
- Mayzent (siponimod)
- Tyruko (natalizumab-sztn)\*\*
- Tysabri (natalizumab)\*\*
- Ocrevus (ocrelizumab)\*\*
- Lemtrada (alemtuzumab)\*\*
- Zeposia (ozanimod)\*
- Kesimpta (ofatumumab)\*
- Bafiertam (monomethyl fumarate)\*
- Briumvi (ublituximab)\*\*

**OR**

**3.2** History of contraindication or intolerance to TWO of the following disease-modifying therapies for MS (please specify contraindication or intolerance)

- Interferon beta-1a (Avonex\*, Rebif\*, Plegridy)
- Interferon beta-1b (Betaseron\*, Extavia\*)

- Glatiramer acetate products (e.g., Copaxone, Glatopa)
- A preferred dimethyl fumarate product (e.g., Tecfidera)
- Teriflunomide (generic Aubagio)
- Fingolimod (generic Gilenya)
- Mayzent (siponimod)
- Tyruko (natalizumab-sztn)\*\*
- Tysabri (natalizumab)\*\*
- Ocrevus (ocrelizumab)\*\*
- Lemtrada (alemtuzumab)\*\*
- Zeposia (ozanimod)\*
- Kesimpta (ofatumumab)\*
- Bafiertam (monomethyl fumarate)\*
- Briumvi (ublituximab)\*\*

**OR**

**3.3** Patient is currently on Mavenclad

**AND**

**4** - Patient is NOT receiving Mavenclad in combination with another disease modifying therapy [e.g., interferon beta preparations, glatiramer acetate products, Tecfidera (dimethyl fumarate), Tysabri (natalizumab), Gilenya (fingolimod), Mayzent (siponimod), Ocrevus (ocrelizumab), Lemtrada (alemtuzumab), or Aubagio (teriflunomide)]

**AND**

**5** - Patient has not already received the FDA-recommended limit of 2 lifetime treatment courses (4 treatment cycles) of Mavenclad

|       |                                                                                                                                                                             |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Notes | <p>*Avonex, Rebif, Betaseron, Bafiertam, Kesimpta, Zeposia, and Extavia are non-preferred</p> <p>**Briumvi, Tyruko, Tysabri, Ocrevus, and Lemtrada are medical benefits</p> |

| Effective Date: | 8/7/2024 |
|-----------------|----------|

## 1 . Criteria

|                       |                       |
|-----------------------|-----------------------|
| Product Name:Mekinist |                       |
| Diagnosis             | Melanoma              |
| Approval Length       | 12 month(s)           |
| Therapy Stage         | Initial Authorization |
| Guideline Type        | Prior Authorization   |

**Approval Criteria**

**1** - ONE of the following:

**1.1** BOTH of the following:

**1.1.1** ONE of the following:

**1.1.1.1** Unresectable melanoma

**OR**

**1.1.1.2** Metastatic melanoma

**OR**

**1.1.1.3** BOTH of the following:

**1.1.1.3.1** Prescribed as adjuvant therapy for melanoma involving the lymph node(s)

**AND**

**1.1.1.3.2** Used in combination with Tafenlar (dabrafenib)

**AND**

**1.1.2** Cancer is positive for BRAF V600 (gene) mutation

**OR**

**1.2** Distant metastatic uveal melanoma

**AND**

**2** - If the request is for Mekinist solution, there is a reason or special circumstance why the patient is unable to use Mekinist tablets (document reason or special circumstance)

|                               |                                    |
|-------------------------------|------------------------------------|

**Approval Criteria**

**1** - Diagnosis of ONE of the following:

- Pancreatic adenocarcinoma
- Ampullary adenocarcinoma

**AND**

**2** - Disease is ONE of the following:

- Metastatic
- Locally advanced
- Unresectable

**AND**

**3** - Cancer is positive for BRAF V600E mutation

**AND**

**4** - Used in combination with Tafenlar (dabrafenib)

**AND**

**5** - If the request is for Mekinist solution, there is a reason or special circumstance why the patient is unable to use Mekinist tablets (document reason or special circumstance)

### Approval Criteria

**1** - Diagnosis of non-small cell lung cancer (NSCLC)

**AND**

**2** - Disease is one of the following:

- Recurrent
- Advanced
- Metastatic

**AND**

**3** - Patient is positive for BRAFV600 mutation

**AND**

**4** - Used in combination with Braftovi (encorafenib)

**AND**

**5 - ONE of the following:**

**5.1** Patient has a contraindication or history of intolerance to Tafenlar (dabrafenib) plus Mekinist (trametinib) (please specify intolerance or contraindication)

**OR**

**5.2** Provider attests that the patient is not an appropriate candidate based on the patient's clinical status or comorbidities for Tafenlar (dabrafenib) plus Mekinist (trametinib)

**OR**

**5.3** For continuation of prior Mektovi therapy

| Guideline Type | Quantity Limit |
|----------------|----------------|

**Approval Criteria**

**1** - Diagnosis of migraine headaches with or without aura

**AND**

**2** - Prescribed by, or in consultation with, ONE of the following:

- Neurologist
- Pain management specialist

**AND**

**3** - Currently receiving prophylactic therapy with at least ONE of the following:

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol\*)
- Candesartan (generic Atacand)\*
- A calcitonin gene-related peptide receptor\*\*\* (CGRP) antagonist or inhibitor for preventive treatment of migraine [i.e., Aimovig (erenumab), Ajovy\* (fremanezumab), Emgality (galcanezumab), Qulipta\* (atogepant), Vyepti\*\* (eptinezumab-jjmr)]
- Divalproex sodium (Depakote/Depakote ER)
- OnabotulinumtoxinA (Botox)\*\*
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- Topiramate (Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**AND**

**4 - BOTH of the following:**

**4.1 ONE of the following:**

**4.1.1** Higher dose or quantity is supported by the manufacturer's prescribing information

**OR**

**4.1.2** Higher dose or quantity is supported by ONE of the following compendia:

- American Hospital Formulary Service Drug Information
- Thomson Micromedex DrugDex
- Clinical pharmacology
- United States Pharmacopoeia-National Formulary (USP-NF)

**OR**

**4.1.3** Physician provides evidence from published biomedical literature to support safety and additional efficacy at doses/quantities greater than those approved by the Food and Drug Administration (FDA) for the diagnosis indicated

**AND**

**4.2** Physician acknowledges that the potential benefit outweighs the risk associated with the higher dose or quantity

|-----------------------|---------------------|
| Product Name:Miplyffa |                     |
| Approval Length       | 12 month(s)         |
| Therapy Stage         | Reauthorization     |
| Guideline Type        | Prior Authorization |

### Approval Criteria

**1** - Documentation of positive clinical response to Miplyffa therapy (e.g., slowed disease progression from baseline based on assessment with NPC–specific scales)

**AND**

**2** - Miplyffa continues to be prescribed in combination with miglustat

**AND**

**3** - Patient is NOT receiving Miplyffa in combination with Aqneursa (levacetylleucine)

**AND**

**4** - Miplyffa is prescribed by or in consultation with a provider with expertise in the treatment of NPC

**AND****3 - ONE of the following:**

- The brand is being requested because of an adverse reaction, allergy or sensitivity to a generic/authorized generic equivalent (specify the adverse reaction, allergy, or sensitivity)
- The brand is being requested due to an incomplete response with a generic/authorized generic equivalent, as documented by submission of medical records
- The brand is being requested because transition to a generic/authorized generic equivalent could result in destabilization of the patient.
- Special clinical circumstances exist that preclude the use of a generic/authorized generic equivalent of the brand medication for the patient (document special clinical circumstances)

## **Approval Criteria**

**1** - Diagnosis of moderate-to-severe chronic atopic dermatitis

**AND**

**2** - One of the following:

**2.1** Inadequate response to TWO of the following therapeutic classes of topical therapies as confirmed by claims history or submission of medical records:

- One medium, high or very-high potency topical corticosteroid [e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)]\*
- One topical calcineurin inhibitor [e.g., pimecrolimus (generic Elidel), tacrolimus (generic Protopic)]
- Eucrisa (crisaborole)

**OR**

**2.2** History of contraindication or intolerance to ALL of the following therapeutic classes of topical therapies (please specify contraindication or intolerance):

- One medium, high very-high potency topical corticosteroid [e.g., mometasone furoate (generic Elocon), fluocinolone acetonide (generic Synalar), fluocinonide (generic Lidex)]\*
- One topical calcineurin inhibitor [e.g., pimecrolimus (generic Elidel), tacrolimus (generic Protopic)]
- Eucrisa (crisaborole)

**OR**

**2.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of atopic dermatitis as documented by claims history or submission of medical records [e.g., Adbry (tralokinumab-ldrm), Cibinqo (abrocitinib), Dupixent (dupilumab), Ebglyss (lebrikizumab-lbkz), Opzelura (ruxolitinib), Rinvoq (upadacitinib)]

**AND**

**3 - One of the following:**

**3.1** Failure to BOTH of the following as confirmed by claims history or submission of medical records:

- Adbry (tralokinumab-ldrm)
- Dupixent (dupilumab)

**OR**

**3.2** History of contraindication or intolerance to BOTH of the following (please specify contraindication or intolerance):

- Adbry (tralokinumab-ldrm)
- Dupixent (dupilumab)

**OR**

**3.3** Patient is currently on Nemluvio therapy as confirmed by claims history or submission of medical records

**AND**

**4 -** Nemluvio will be used in combination with a topical corticosteroid and/or topical calcineurin inhibitor

**AND**

**5 -** Patient is not receiving Nemluvio in combination with either of the following for treatment of the same indication:

- Biologic immunomodulator [e.g., Adbry (tralokinumab-ldrm), Dupixent (dupilumab), Ebglyss (lebrikizumab-lbkz)]
- Janus kinase inhibitor [e.g., Cibinqo (abrocitinib), Opzelura (topical ruxolitinib), Rinvoq (upadacitinib), Xeljanz/XR (tofacitinib)]

**AND**

**6** - Prescribed by or in consultation with one of the following:

- Dermatologist
- Allergist
- Immunologist

Notes

\*See Table 1 for relative potencies of topical corticosteroids.

Product Name:Nemluvio

Diagnosis Atopic Dermatitis

Therapy Stage Reauthorization

Guideline Type Prior Authorization

### Approval Criteria

**1** - Documentation of positive clinical response to Nemluvio therapy

**AND**

**2** - Patient is not receiving Nemluvio in combination with either of the following for the treatment of the same indication:

- Biologic immunomodulator [e.g., Adbry (tralokinumab-ldrm), Dupixent (dupilumab), Ebglyss (lebrikizumab-lbkz)]
- Janus kinase inhibitor [e.g., Cibinqo (abrocitinib), Opzelura (topical ruxolitinib), Rinvoq (upadacitinib), Xeljanz/XR (tofacitinib)]

**AND**

**3** - Prescribed by or in consultation with one of the following:

- Dermatologist
- Allergist
- Immunologist

**AND**

**4** - One of the following:

**4.1** Patient has achieved clear or almost clear skin and the request is for Nemluvio 30 milligrams given every 8 weeks (authorize approval length for 12 months)

**OR**

**4.2** Patient has not yet achieved clear or almost clear skin and the request is for Nemluvio 30 milligrams given every 4 weeks (authorize approval length for 6 months)

| Product Name:Nemluvio                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                       |

## 1 . Criteria

|                      |                                            |
|----------------------|--------------------------------------------|
| Product Name:Nerlynx |                                            |
| Diagnosis            | Early-Stage or Node-Positive Breast Cancer |
| Approval Length      | 12 month(s)                                |
| Guideline Type       | Prior Authorization                        |

**Approval Criteria**

**1** - ALL of the following:

**1.1** Diagnosis of early-stage breast cancer

**AND**

**1.2** Disease is human epidermal growth factor receptor 2 (HER2)-positive

**AND**

**1.3** Used as extended adjuvant therapy following adjuvant trastuzumab containing therapy (e.g., Herceptin, Kanjinti)

**AND**

**1.4** Patient will not have more than 12 months of treatment per occurrence\*

**OR**

**2** - ALL of the following:

**2.1** Diagnosis of node positive breast cancer

**AND**

**2.2** Disease is hormone receptor (HR)-positive and HER2-positive

**AND**

**2.3** Used as extended adjuvant therapy following adjuvant trastuzumab containing therapy (e.g., Herceptin, Kanjinti)

**AND**

**2.4** Patient has a perceived high risk of recurrence

**AND**

**2.5** Patient will not have more than 12 months of treatment per occurrence\*

| <p><b>Approval Criteria</b></p> <p><b>1</b> - ALL of the following:</p> <p><b>1.1</b> Diagnosis of advanced or metastatic breast cancer</p> <p><b>AND</b></p> <p><b>1.2</b> Disease is human epidermal growth factor receptor 2 (HER2)-positive</p> <p><b>AND</b></p> <p><b>1.3</b> Patient has received two or more prior anti-HER2 based regimens in metastatic setting</p> <p><b>AND</b></p> |                                      |

**1.4** Will be used in combination with capecitabine (generic Xeloda)

**OR**

**2** - BOTH of the following:

**2.1** Diagnosis of stage IV (M1) breast cancer

**AND**

**2.2** ONE of the following:

**2.2.1** BOTH of the following:

- Disease is hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative disease
- Patient has already received a CDK4/6 inhibitor therapy

**OR**

**2.2.2** Triple negative disease

**Approval Criteria**

1 - ALL of the following:

**1.1** Diagnosis of ONE of the following:

- Follicular carcinoma
- Papillary carcinoma

**AND**

**1.2** Disease is ONE of the following:

- Unresectable locoregional recurrent or persistent
- Metastatic

**AND**

**1.3** ONE of the following:

- Patient has symptomatic disease
- Patient has progressive disease

**AND**

**1.4** Disease is refractory to radioactive iodine treatment

**OR**

**2** - BOTH of the following:

**2.1** Diagnosis of medullary thyroid carcinoma

**AND**

**2.2** Disease is ONE of the following:

- Recurrent
- Metastatic

### Approval Criteria

1 - Documentation of positive clinical response to the requested therapy

## 2 . Revision History

| Date       | Notes                                                                                                                                                                                                                                                                                                                                                                                     |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10/31/2025 | Combined formularies. Updated criteria for renal cell carcinoma, hepatocellular carcinoma, thyroid cancer, soft tissue sarcoma, acute myeloid leukemia, salivary gland tumor, and myeloid/lymphoid neoplasms . Moved gastrointestinal stromal tumors out of soft tissue sarcoma into its own section and updated criteria for initial auth. Updated diagnosis header for reauth criteria. |

|-----------------|-----------|
| Effective Date: | 11/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                                 |                       |
|---------------------------------|-----------------------|
| Product Name:Nexletol, Nexlizet |                       |
| Diagnosis                       | Hyperlipidemia        |
| Approval Length                 | 12 month(s)           |
| Therapy Stage                   | Initial Authorization |
| Guideline Type                  | Prior Authorization   |

### **Approval Criteria**

**1 - ONE of the following diagnoses:**

**1.1** Primary hyperlipidemia, including heterozygous familial hypercholesterolemia (HeFH)

**OR**

**1.2** Established cardiovascular disease (CVD) as documented by one of the following:

- coronary artery disease
- symptomatic peripheral arterial disease
- cerebrovascular atherosclerotic disease

**OR**

**1.3** High risk for cardiovascular disease (CVD) as documented by one of the following:

- Diabetes and over 60 years old
- Reynolds risk score greater than 30%
- Coronary artery calcium score greater than 400 Agatston units
- ASCVD risk score greater than or equal to 20% with the American College of Cardiology/American Heart Association (ACC/AHA) risk estimator

**AND**

**2 - Submission of medical records (e.g., chart notes, laboratory values) confirming ONE of the following [prescription claims history may be used in conjunction as confirmation of medication use, dose, and duration]:**

**2.1** Patient has been receiving at least 12 consecutive weeks of high intensity statin therapy [i.e., atorvastatin 40-80 mg (milligrams), rosuvastatin 20-40 mg] and will continue to receive a high intensity statin at maximally tolerated dose

**OR**

**2.2 BOTH of the following:**

**2.2.1** Patient is unable to tolerate high-intensity statin as evidenced by ONE of the following intolerable and persistent (i.e., more than 2 weeks) symptoms:

- Myalgia [muscle symptoms without CK (creatinine kinase) elevations]
- Myositis [muscle symptoms with CK elevations less than 10 times upper limit of normal (ULN)]

**AND**

**2.2.2** Patient has been receiving at least 12 consecutive weeks of low-intensity or moderate-intensity statin therapy [i.e., atorvastatin 10-20 mg, rosuvastatin 5-10 mg, simvastatin greater than or equal to 10 mg, pravastatin greater than or equal to 10 mg, lovastatin 20-40 mg, fluvastatin extended-release 80 mg, fluvastatin 20-40 mg up to 40mg twice daily or Livalo (pitavastatin) greater than or equal to 1 mg] and will continue to receive a low-intensity or moderate-intensity statin at maximally tolerated dose

**OR**

**2.3** Patient is unable to tolerate low or moderate-, and high-intensity statins as evidenced by ONE of the following:

**2.3.1** ONE of the following intolerable and persistent (i.e., more than 2 weeks) symptoms for low or moderate-, and high-intensity statins:

- Myalgia (muscle symptoms without CK elevations)
- Myositis (muscle symptoms with CK elevations less than 10 times ULN)

**OR**

**2.3.2** Patient has a labeled contraindication to all statins as documented in medical records

**OR**

**2.3.3** Patient has experienced rhabdomyolysis or muscle symptoms with statin treatment with CK elevations greater than 10 times ULN

**AND**

**3 - ONE of the following:**

**3.1** Submission of medical records (e.g., laboratory values) confirming ONE of the following LDL-C (low-density lipoprotein cholesterol) values while on maximally tolerated lipid lowering therapy within the last 120 days:

- LDL-C greater than or equal to 100 mg/dL (milligrams/deciliter) with ASCVD
- LDL-C greater than or equal to 130 mg/dL without ASCVD

**OR**

**3.2 BOTH of the following:**

**3.2.1** Submission of medical records (e.g., laboratory values) confirming ONE of the following LDL-C values while on maximally tolerated lipid lowering therapy for a minimum of at least 12 weeks within the last 120 days:

- LDL-C between 55 mg/dL and 99 mg/dL with ASCVD
- LDL-C between 100 mg/dL and 129 mg/dL without ASCVD

**AND**

**3.2.2** Submission of medical records (e.g., chart notes, laboratory values) confirming ONE of the following [prescription claims history may be used in conjunction as confirmation of medication use, dose, and duration]:

**3.2.2.1** Patient has been receiving at least 12 consecutive weeks of ezetimibe (Zetia) therapy as adjunct to maximally tolerated statin therapy

**OR**

**3.2.2.2** Patient has a history of contraindication, or intolerance to ezetimibe

| <p><b>Approval Criteria</b></p> <p>1 - If the requested medication is a behavioral health medication, ONE of the following:</p> <p>1.1 The patient has been receiving treatment with the requested non-preferred behavioral health medication and is new to the plan (enrollment effective date within the past 90 days)</p> |                |

**OR**

**1.2** The patient is currently receiving treatment with the requested non-preferred behavioral health medication in the hospital and must continue upon discharge

**OR**

**2** - ALL of the following:

**2.1** One of the following^:

**2.1.1** Both of the following:

**2.1.1.1** One of the following:

- History of failure to at least THREE preferred alternatives as confirmed by claims history or submission of medical records.\* NOTE: In instances where there are fewer than three preferred alternatives, the patient must have a history of failure to all of the preferred products.
- History of contraindication or intolerance to THREE preferred alternatives (please specify contraindication or intolerance).\* NOTE: In instances where there are fewer than three preferred alternatives, the patient must have a history of contraindication or intolerance to all of the preferred products.

**AND**

**2.1.1.2** One of the following:

**2.1.1.2.1** If the request is for a multi-source brand medication, OR a branded medication with an authorized generic, one of the following:

- The brand is being requested because of an adverse reaction, allergy or sensitivity to a generic/authorized generic equivalent (specify the adverse reaction, allergy, or sensitivity)
- The brand is being requested due to an incomplete response with a generic/authorized generic equivalent, as documented by submission of medical records
- The brand is being requested because transition to a generic/authorized generic equivalent could result in destabilization of the patient.

- Special clinical circumstances exist that preclude the use of a generic/authorized generic equivalent of the brand medication for the patient (document special clinical circumstances)

**OR**

**2.1.1.2.2** If the request is for a generic when there is a brand available and the brand is the preferred formulation, one of the following:

- The generic is being requested because of an adverse reaction, allergy or sensitivity to the brand (specify the adverse reaction, allergy, or sensitivity).
- The generic is being requested due to an incomplete response with the brand, as documented by submission of medical records.
- The generic is being requested because transition to the brand could result in destabilization of the patient.
- Special clinical circumstances exist that preclude the use of the brand equivalent of the generic medication for the patient (document special clinical circumstances).

**OR**

**2.1.2** There are no preferred formulary alternatives for the requested drug.

**AND**

**2.2** One of the following:

**2.2.1** The requested drug must be used for an FDA-approved indication

**OR**

**2.2.2** The use of this drug is supported by information from ONE of the following appropriate compendia of current literature:

- American Hospital Formulary Service Drug Information
- National Comprehensive Cancer Network Drugs and Biologics Compendium
- Thomson Micromedex DrugDex
- Clinical pharmacology
- United States Pharmacopeia-National Formulary (USP-NF )

**AND**

**2.3** The drug is being prescribed for a medically accepted indication that is recognized as a covered benefit by the applicable health plan's program.

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of symptomatic neurogenic orthostatic hypotension (nOH) as defined by ONE of the following when an upright position is assumed or when using a head-up tilt-table testing at an angle of at least 60 degrees:</p> <ul style="list-style-type: none"> <li>• At least a 20 millimeters of mercury (mm Hg) fall in systolic pressure</li> <li>• At least a 10 mm Hg fall in diastolic pressure</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - nOH caused by ONE of the following:</p> <ul style="list-style-type: none"> <li>• Primary autonomic failure (e.g., Parkinson's disease, multiple system atrophy, and pure autonomic failure)</li> <li>• Dopamine beta-hydroxylase deficiency</li> <li>• Non-diabetic autonomic neuropathy</li> </ul> <p style="text-align: center;"><b>AND</b></p> <p><b>3</b> - Diagnostic evaluation has excluded other causes associated with orthostatic hypotension (e.g., congestive heart failure, fluid restriction, malignancy)</p> <p style="text-align: center;"><b>AND</b></p> <p><b>4</b> - The patient has tried at least TWO of the following non-pharmacologic interventions:</p> <ul style="list-style-type: none"> <li>• Discontinuation of drugs which can cause orthostatic hypotension [e.g., diuretics, antihypertensive medications (primarily sympathetic blockers), anti-anginal drugs (nitrates), alpha-adrenergic antagonists, and antidepressants]</li> <li>• Raising the head of the bed 10 to 20 degrees</li> <li>• Compression garments to the lower extremities or abdomen</li> <li>• Physical maneuvers to improve venous return (e.g., regular modest-intensity exercise)</li> <li>• Increased salt and water intake, if appropriate</li> <li>• Avoiding precipitating factors (e.g., overexertion in hot weather, arising too quickly from supine to sitting or standing)</li> </ul> |                       |

**AND**

**5** - No previous diagnosis of supine hypertension

**AND**

**6** - Prescribed by or in consultation with ONE of the following specialists:

- Cardiologist
- Neurologist
- Nephrologist

**AND**

**7** - ONE of the following:

**7.1** Failure (after a trial of at least 30 days) of BOTH of the following confirmed by claims history or submitted medical records:

- fludrocortisone (generic Florinef)
- midodrine (generic ProAmatine)

**OR**

**7.2** History of contraindication or intolerance to BOTH of the following:

- fludrocortisone (generic Florinef)
- midodrine (generic ProAmatine)

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 3/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                       |                       |
|-----------------------|-----------------------|
| Product Name:Nourianz |                       |
| Approval Length       | 12 month(s)           |
| Therapy Stage         | Initial Authorization |
| Guideline Type        | Prior Authorization   |

## Approval Criteria

**1** - Diagnosis of Parkinson's disease

**AND**

**2** - Used as adjunctive treatment to levodopa/carbidopa in patients experiencing "off" episodes

**AND**

**3** - ONE of the following:

**3.1** Failure to TWO anti-Parkinson's disease therapies from the following adjunctive pharmacotherapy classes (trial must be from two different classes) as confirmed by claims history or submission of medical records:

- Dopamine agonists (e.g., pramipexole, ropinirole)
- Catechol-O-methyl transferase (COMT) inhibitors (e.g., entacapone)
- Monoamine oxidase (MAO) B inhibitors (e.g., rasagiline, selegiline)

**OR**

**3.2** History of contraindication or intolerance to ALL anti-Parkinson's disease therapy from the following adjunctive pharmacotherapy classes (trial must be from all classes) (please specify intolerance or contraindication):

- Dopamine agonists (e.g., pramipexole, ropinirole)
- Catechol-O-methyl transferase (COMT) inhibitors (e.g., entacapone)
- Monoamine oxidase (MAO) B inhibitors (e.g., rasagiline, selegiline)

|                       |                     |
|-----------------------|---------------------|
| Product Name:Nourianz |                     |
| Approval Length       | 12 month(s)         |
| Therapy Stage         | Reauthorization     |
| Guideline Type        | Prior Authorization |

**Approval Criteria**

1 - Documentation of positive clinical response to Nourianz therapy

**AND**

2 - Patient will continue to receive treatment with a carbidopa/levodopa-containing medication

**2 . Revision History**

## 1 . Criteria

|                                                          |                                                                 |
|----------------------------------------------------------|-----------------------------------------------------------------|
| Product Name:Nucala auto-injector and pre-filled syringe |                                                                 |
| Diagnosis                                                | Eosinophilic Granulomatosis with Polyangiitis (EGPA)            |
| Approval Length                                          | 12 month(s)                                                     |
| Therapy Stage                                            | Initial Authorization - Transitioning from UHC medical benefits |
| Guideline Type                                           | Prior Authorization                                             |

### Approval Criteria

**1** - Patient has been established on therapy with Nucala under an active UnitedHealthcare medical benefit prior authorization for the treatment of EGPA

**AND**

**2** - Documentation of positive clinical response to Nucala therapy as demonstrated by at least ONE of the following

- Reduction in the frequency and/or severity of relapses
- Reduction or discontinuation of doses of corticosteroids and/or immunosuppressant
- Disease remission
- Reduction in severity or frequency of EGPA-related symptoms

**AND**

**3** - Patient is not receiving Nucala in combination with ONE of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor therapy [e.g., Tezspire (tezepelumab)]

**AND**

**4** - Prescribed by one of the following

- Allergist
- Immunologist
- Pulmonologist
- Rheumatologist

| <p><b>Approval Criteria</b></p> <p><b>1 - Diagnosis of relapsing or refractory eosinophilic granulomatosis with polyangiitis (EGPA) as defined by ALL of the following:</b></p> <p><b>1.1 Diagnosis of EGPA</b></p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.2 Past medical history or presence of asthma</b></p> <p style="text-align: center;"><b>AND</b></p> <p><b>1.3 Presence of at least TWO of the following characteristics typical of EGPA:</b></p> <p><b>1.3.1 Histopathological evidence of ALL of the following:</b></p> <ul style="list-style-type: none"> <li>• Eosinophilic vasculitis</li> <li>• Perivascular eosinophilic infiltration</li> <li>• Eosinophil-rich granulomatous inflammation</li> </ul> <p style="text-align: center;"><b>OR</b></p> <p><b>1.3.2 Neuropathy, mono or poly (motor deficit or nerve conduction abnormality)</b></p> <p style="text-align: center;"><b>OR</b></p> <p><b>1.3.3 Pulmonary infiltrates, non-fixed</b></p> <p style="text-align: center;"><b>OR</b></p> |                                                                     |

**1.3.4** Sino-nasal abnormality

**OR**

**1.3.5** Cardiomyopathy [established by echocardiography or magnetic resonance imaging (MRI)]

**OR**

**1.3.6** Glomerulonephritis (hematuria, red cell casts, proteinuria)

**OR**

**1.3.7** Alveolar hemorrhage

**OR**

**1.3.8** Palpable purpura

**OR**

**1.3.9** Anti-neutrophil cytoplasmic antibody (ANCA) positive

**AND**

**1.4** History of relapsing or refractory disease defined as ONE of the following:

**1.4.1** Relapsing disease as defined as a past history (within the past 2 years) of at least one EGPA relapse (requiring additional or dose escalation of corticosteroids or immunosuppressant, or hospitalization)

**OR**

**1.4.2** Refractory disease as defined as failure to attain remission within the prior 6 months following induction treatment with standard therapy regimens

**AND**

**2** - Patient is currently taking standard therapy [i.e., systemic glucocorticoids (e.g., prednisone, methylprednisolone)] with or without immunosuppressive therapy (e.g., cyclophosphamide, rituximab) as supported by claims history or submitted medical records

**AND**

**3** - Patient is not receiving Nucala in combination with ONE of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE (immunoglobulin E) therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor therapy [e.g., Tezspire (tezepelumab)]

**AND**

**4** - Prescribed by ONE of the following:

- Allergist
- Immunologist
- Pulmonologist
- Rheumatologist

**1** - Documentation of positive clinical response to Nucala therapy as demonstrated by at least ONE of the following:

**1.1** Reduction in the frequency and/or severity of relapses

**OR**

**1.2** Reduction or discontinuation of doses of corticosteroids and/or immunosuppressant

**OR**

**1.3** Disease remission

**OR**

**1.4** Reduction in severity or frequency of eosinophilic granulomatosis with polyangiitis (EGPA)-related symptoms

**AND**

**2** - Patient is not receiving Nucala in combination with ONE of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE (immunoglobulin E) therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor therapy [e.g., Tezspire (tezepelumab)]

| Guideline Type                                           | Prior Authorization                                             |

### **Approval Criteria**

**1** - Patient has been established on therapy with Nucala under an active UnitedHealthcare medical benefit prior authorization for the treatment of severe asthma

**AND**

**2** - Documentation of positive clinical response to Nucala therapy as demonstrated by at least ONE of the following

- Reduction in the frequency of exacerbations
- Decreased utilization of rescue medications
- Increase in percent predicted FEV1 from pretreatment baseline
- Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing, etc.)
- Reduction in oral corticosteroid requirements

**AND**

**3** - Nucala is being used in combination with an inhaled corticosteroid (ICS) containing maintenance medication [e.g., Advair/AirDuo (fluticasone/salmeterol), Breo Ellipta (fluticasone furoate/vilanterol), Symbicort (budesonide/ formoterol), Trelegy Ellipta (fluticasone furoate/umeclidinium/vilanterol)]

**AND**

**4** - Patient is not receiving Nucala in combination with ONE of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**5** - Prescribed by ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

| Product Name:Nucala auto-injector and pre-filled syringe                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                     |
| Diagnosis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Severe Asthma                                                       |
| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 12 month(s)                                                         |
| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Initial Authorization – Not transitioning from UHC medical benefits |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Prior Authorization                                                 |
| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of severe asthma</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - Classification of asthma as uncontrolled or inadequately controlled as defined by at least ONE of the following:</p> <p>    <b>2.1</b> Poor symptom control [e.g., Asthma Control Questionnaire (ACQ) score consistently greater than 1.5 or Asthma Control Test (ACT) score consistently less than 20]</p> <p style="text-align: center;"><b>OR</b></p> <p>    <b>2.2</b> Two or more bursts of systemic corticosteroids for at least 3 days each in the previous 12 months</p> <p style="text-align: center;"><b>OR</b></p> <p>    <b>2.3</b> Asthma-related emergency treatment (e.g., emergency room visit, hospital admission, or unscheduled physician's office visit for nebulizer or other urgent treatment)</p> |                                                                     |

**OR**

**2.4** Airflow limitation [e.g., after appropriate bronchodilator withhold forced expiratory volume in 1 second (FEV1) less than 80% predicted (in the face of reduced FEV1/forced vital capacity [FVC] defined as less than the lower limit of normal)]

**OR**

**2.5** Patient is currently dependent on oral corticosteroids for the treatment of asthma

**AND**

**3** - Submission of medical records (e.g., chart notes, laboratory values, etc.) confirming asthma is an eosinophilic phenotype as defined by a baseline (pre-treatment) peripheral blood eosinophil level greater than or equal to 150 cells per microliter

**AND**

**4** - Nucala will be used in combination with ONE of the following:

**4.1** ONE maximally-dosed (appropriately adjusted for age) combination inhaled corticosteroid (ICS)/long-acting beta2 agonist (LABA) [e.g., Advair/AirDuo Respiclick (fluticasone propionate/salmeterol), Symbicort (budesonide/formoterol), Breo Ellipta (fluticasone furoate/vilanterol)]

**OR**

**4.2** Combination therapy including BOTH of the following:

**4.2.1** ONE maximally-dosed (appropriately adjusted for age) ICS product [e.g., ciclesonide (Alvesco), mometasone furoate (Asmanex), beclomethasone dipropionate (QVAR)]

**AND**

**4.2.2** ONE additional asthma controller medication [e.g., LABA - olodaterol (Striverdi) or indacaterol (Arcapta); leukotriene receptor antagonist - montelukast (Singulair); theophylline]

**AND**

**5** - Patient is not receiving Nucala in combination with ONE of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE (immunoglobulin E) therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**6** - Prescribed by ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

**AND**

**7** - ONE of the following:

- Failure to a 4 month trial of Fasenra (benralizumab) as confirmed by claims history or submitted medical records
- History of contraindication or intolerance to Fasenra (benralizumab) (please specify intolerance or contraindication)

|                                                          |                     |
|----------------------------------------------------------|---------------------|
| Product Name:Nucala auto-injector and pre-filled syringe |                     |
| Diagnosis                                                | Severe Asthma       |
| Approval Length                                          | 12 month(s)         |
| Therapy Stage                                            | Reauthorization     |
| Guideline Type                                           | Prior Authorization |
| <b>Approval Criteria</b>                                 |                     |

**1** - Documentation of positive clinical response to Nucala therapy as demonstrated by at least ONE of the following:

**1.1** Reduction in the frequency of exacerbations

**OR**

**1.2** Decreased utilization of rescue medications

**OR**

**1.3** Increase in percent predicted forced expiratory volume in 1 second (FEV1) from pretreatment baseline

**OR**

**1.4** Reduction in severity or frequency of asthma-related symptoms (e.g., wheezing, shortness of breath, coughing, etc.)

**OR**

**1.5** Reduction in oral corticosteroid requirements

**AND**

**2** - Nucala is being used in combination with an inhaled corticosteroid (ICS)-containing maintenance medication [e.g., Advair/AirDuo (fluticasone/salmeterol), Breo Ellipta (fluticasone furoate/vilanterol), Symbicort (budesonide/ formoterol), Trelegy Ellipta (fluticasone furoate/umeclidinium/vilanterol)]

**AND**

**3** - Patient is not receiving Nucala in combination with ONE of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]

- Anti-IgE (immunoglobulin E) therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

| Product Name:Nucala auto-injector and pre-filled syringe |                                                                 |
| Diagnosis                                                | Hypereosinophilic Syndrome (HES)                                |
| Approval Length                                          | 12 month(s)                                                     |
| Therapy Stage                                            | Initial Authorization - Transitioning from UHC medical benefits |
| Guideline Type                                           | Prior Authorization                                             |

**Approval Criteria**

**1** - Patient has been established on therapy with Nucala under an active UnitedHealthcare medical benefit prior authorization for the treatment of hypereosinophilic syndrome (HES).

**AND**

**2** - Documentation of positive clinical response to Nucala therapy as demonstrated by at least one of the following

- Reduction in frequency of HES flares
- Maintenance or reduction in background HES therapy requirements

**AND**

**3** - Patient is not receiving Nucala in combination with ONE of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor therapy [e.g., Tezspire (tezepelumab)]

**AND**

**4** - Prescribed by ONE of the following:

- Allergist
- Cardiologist
- Hematologist
- Immunologist
- Pulmonologist

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                     |

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Diagnosis of Hypereosinophilic Syndrome (HES) greater than or equal to 6 months ago</p> <p style="text-align: center;"><b>AND</b></p> <p><b>2</b> - Both of the following:</p> <p style="padding-left: 20px;"><b>2.1</b> There is no identifiable non-hematologic secondary cause of the patient's HES [e.g., drug hypersensitivity, parasitic helminth infection, HIV (human immunodeficiency virus) infection, non-hematologic malignancy]</p> <p style="text-align: center;"><b>AND</b></p> <p style="padding-left: 20px;"><b>2.2</b> HES is not FIP1L1-PDGFR alpha (gene) kinase-positive</p> <p style="text-align: center;"><b>AND</b></p> <p><b>3</b> - Submission of medical records (e.g., chart notes, laboratory values, etc.) documenting both of the following:</p> <p style="padding-left: 20px;"><b>3.1</b> Baseline [pre-Nucala (mepolizumab) treatment] blood eosinophil level greater than or equal to 1000 cells/microliter within the past 4 weeks</p> |                                                                     |

**AND**

**3.2** Patient is currently receiving a stable dose of background HES therapy (e.g., oral corticosteroid, immunosuppressor, or cytotoxic therapy)

**AND**

**4** - Patient is not receiving Nucala in combination with ONE of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE (immunoglobulin E) therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor therapy [e.g., Tezspire (tezepelumab)]

**AND**

**5** - Prescribed by ONE of the following:

- Allergist
- Cardiologist
- Hematologist
- Immunologist
- Pulmonologist

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Patient has been established on therapy with Nucala under an active UnitedHealthcare medical benefit prior authorization for the treatment of chronic rhinosinusitis with nasal polyps (CRSwNP).</p> <p><b>AND</b></p> <p><b>2</b> - Documentation of positive clinical response to Nucala therapy</p> |                                                                 |

**AND**

**3** - Patient will continue to receive Nucala as add-on maintenance therapy in combination with intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)

**AND**

**4** - Patient is not receiving Nucala in combination with any of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor therapy [e.g., Tezspire (tezepelumab)]

**AND**

**5** - Prescribed by ONE of the following

- Allergist
- Immunologist
- Otolaryngologist
- Pulmonologist

**Product Name:**Nucala auto-injector and pre-filled syringe

|                 |                                                                     |
|-----------------|---------------------------------------------------------------------|
| Diagnosis       | Chronic Rhinosinusitis with Nasal Polyps (CRSwNP)                   |
| Approval Length | 12 month(s)                                                         |
| Therapy Stage   | Initial Authorization – Not transitioning from UHC medical benefits |
| Guideline Type  | Prior Authorization                                                 |

### Approval Criteria

**1** - Diagnosis of chronic rhinosinusitis with nasal polyps (CRSwNP) defined by ALL of the following:

**1.1** Two or more of the following symptoms for longer than 12 weeks duration:

- Nasal mucopurulent discharge
- Nasal obstruction, blockage, or congestion
- Facial pain, pressure, and/or fullness
- Reduction or loss of sense of smell

**AND**

**1.2** One of the following findings using nasal endoscopy and/or sinus computed tomography (CT):

- Purulent mucus or edema in the middle meatus or ethmoid regions
- Polyps in the nasal cavity or the middle meatus
- Radiographic imaging demonstrating mucosal thickening or partial or complete opacification of paranasal sinuses

**AND**

**1.3** ONE of the following:

- Presence of bilateral nasal polyposis
- Patient has previously required surgical removal of bilateral nasal polyps

**AND**

**1.4** ONE of the following:

**1.4.1** Patient has required prior sinus surgery

**OR**

**1.4.2** Patient has required systemic corticosteroids (e.g., prednisone, methylprednisolone) for CRSwNP in the previous 2 years

**OR**

**1.4.3** Patient has been unable to obtain symptom relief after trial of TWO of the following classes of agents:

- Nasal saline irrigations
- Intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)
- Antileukotriene agents (e.g., montelukast, zafirlukast, zileuton)

**AND**

**2** - Patient will receive Nucala as add-on maintenance therapy in combination with intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone).

**AND**

**3** - Patient is not receiving Nucala in combination with ONE of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE (immunoglobulin E) therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor therapy [e.g., Tezspire (tezepelumab)]

**AND**

**4** - Prescribed by ONE of the following:

- Allergist
- Immunologist
- Otolaryngologist
- Pulmonologist

|                                                          |                                                   |

| Product Name:Nucala auto-injector and pre-filled syringe |                                                   |
| Diagnosis                                                | Chronic Rhinosinusitis with Nasal Polyps (CRSwNP) |
| Approval Length                                          | 12 month(s)                                       |
| Therapy Stage                                            | Reauthorization                                   |
| Guideline Type                                           | Prior Authorization                               |

### Approval Criteria

1 - Documentation of positive clinical response to Nucala therapy

**AND**

2 - Patient will continue to receive Nucala as add-on maintenance therapy in combination with intranasal corticosteroids (e.g., fluticasone, mometasone, triamcinolone)

**AND**

3 - Patient is not receiving Nucala in combination with any of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE (immunoglobulin E) therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor therapy [e.g., Tezspire (tezepelumab)]

### Approval Criteria

**1** - Diagnosis of chronic obstructive pulmonary disease (COPD)

**AND**

**2** - Submission of medical records (e.g., chart notes) documenting all of the following:

- Post-bronchodilator forced expiratory volume (FEV1) / forced vital capacity (FVC) ratio less than 0.7
- Post-bronchodilator FEV1 % predicted greater than or equal to 30% and less than or equal to 70%

- Patient has an eosinophilic phenotype defined by a baseline (pre-mepolizumab treatment) peripheral blood eosinophil level at least 300 cells/microliter

**AND**

**3** - Uncontrolled or inadequately controlled COPD demonstrated by both of the following:

**3.1** ONE of the following:

- Two or more COPD exacerbations in the previous year requiring treatment with systemic corticosteroids and/or antibiotics
- One or more COPD exacerbation(s) that resulted in hospitalization or observation for over 24 hours in an emergency department or urgent care facility in the past year

**AND**

**3.2** COPD exacerbation(s) occurred while receiving maintenance therapy with one of the following:

- Triple therapy with a long-acting muscarinic antagonist (LAMA), long-acting beta agonist (LABA), and inhaled corticosteroid (ICS) (e.g., Breztri Aerosphere, Trelegy Ellipta)
- Dual therapy with a LAMA and LABA (e.g., Anoro Ellipta, Bevespi Aerosphere, Stiolto Respimat) and a failure, contraindication, or intolerance to an ICS

**AND**

**4** - Symptoms of chronic productive cough for at least 3 months in the past year

**AND**

**5** - Nucala will be used as add-on maintenance therapy in combination with one of the following:

- Triple therapy with a long-acting muscarinic antagonist (LAMA), long-acting beta agonist (LABA), and inhaled corticosteroid (ICS) (e.g., Breztri Aerosphere, Trelegy Ellipta)
- Dual therapy with a LAMA and LABA (e.g., Anoro Ellipta, Bevespi Aerosphere, Stiolto Respimat) and a failure, contraindication, or intolerance to an ICS

**AND**

**6** - Patient is not receiving Nucala in combination with any of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE (immunoglobulin E) therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**7** - Prescribed by ONE of the following:

- Allergist
- Immunologist
- Pulmonologist

| <p><b>Approval Criteria</b></p> <p><b>1</b> - Documentation of positive clinical response to Nucala therapy as demonstrated by at least ONE of the following:</p> <ul style="list-style-type: none"> <li>• Reduction in the frequency of chronic obstructive pulmonary disease (COPD) exacerbations</li> <li>• Increase in percent predicted FEV1 from pretreatment baseline</li> <li>• Reduction in severity or frequency of COPD-related symptoms (e.g., dyspnea, wheezing, cough, sputum volume, decrease in sputum purulence)</li> <li>• Reduction in oral corticosteroid requirements</li> </ul> |                                              |

**AND**

**2** - Nucala is being used as add-on maintenance therapy in combination with one of the following:

- Triple therapy with a long-acting muscarinic antagonist (LAMA), long-acting beta agonist (LABA), and inhaled corticosteroid (ICS) (e.g., Breztri Aerosphere, Trelegy Ellipta)
- Dual therapy with a LAMA and LABA (e.g., Anoro Ellipta, Bevespi Aerosphere, Stiolto Respimat) and a failure, contraindication, or intolerance to an ICS

**AND**

**3** - Patient is not receiving Nucala in combination with any of the following for treatment of the same indication:

- Anti-interleukin 5 therapy [e.g., Cinqair (reslizumab), Fasenra (benralizumab)]
- Anti-IgE (immunoglobulin E) therapy [e.g., Xolair (omalizumab)]
- Anti-interleukin 4 therapy [e.g., Dupixent (dupilumab)]
- Thymic stromal lymphopoietin (TSLP) inhibitor [e.g., Tezspire (tezepelumab)]

**AND**

**4** - Prescribed by one of the following:

- Allergist
- Immunologist
- Pulmonologist

## 1 . Criteria

|                         |                             |
|-------------------------|-----------------------------|
| Product Name:Nurtec ODT |                             |
| Diagnosis               | Acute Treatment of Migraine |
| Approval Length         | 12 month(s)                 |
| Therapy Stage           | Initial Authorization       |
| Guideline Type          | Prior Authorization         |
|                         |                             |

## Approval Criteria

1 - Used for acute treatment of migraine

**AND**

2 - One of the following:

**2.1** Failure (after at least 3 migraine episodes and a minimum of a 30-day trial) to TWO of the following as confirmed by claims history or submission of medical records:

- eletriptan (generic Relpax)
- naratriptan (generic Amerge)
- rizatriptan (generic Maxalt/Maxalt MLT)
- sumatriptan (generic Imitrex)
- zolmitriptan (generic Zomig)

**OR**

**2.2** History of contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

- eletriptan (generic Relpax)
- naratriptan (generic Amerge)
- rizatriptan (generic Maxalt/Maxalt MLT)
- sumatriptan (generic Imitrex)
- zolmitriptan (generic Zomig)

**AND**

3 - One of the following:

**3.1** Patient is currently treated with ONE of the following prophylactic therapies or classes as confirmed by claims history or submission of medical records:

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol)\*
- Candesartan\* (generic Atacand)
- A calcitonin gene-related peptide receptor (CGRP) antagonist or inhibitor for preventive treatment of migraine [i.e., Aimovig, Ajovy\*, Emgality, Qulipta\*, Vyepti\*\*] \*\*\*
- Divalproex sodium (generic Depakote/Depakote ER)
- OnabotulinumtoxinA\*\* (generic Botox)
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]

- Topiramate (generic Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**OR**

**3.2** Patient has less than 4 migraine days per month

**OR**

**3.3** Patient has greater than or equal to 4 migraine days per month and has contraindication or intolerance to TWO of the following prophylactic therapies or classes (please specify contraindication or intolerance):

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol)\*
- Candesartan\* (generic Atacand)
- A calcitonin gene-related peptide receptor (CGRP) antagonist or inhibitor for preventive treatment of migraine [i.e., Aimovig, Ajovy\*, Emgality, Qulipta\*, Vyepti\*\*] \*\*\*
- Divalproex sodium (generic Depakote/Depakote ER)
- OnabotulinumtoxinA\*\* (generic Botox)
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- Topiramate (generic Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**AND**

**4** - Medication will not be used in combination with another acute calcitonin gene-related peptide receptor (CGRP) antagonists (e.g., Ubrelvy, Zavzpret)

|       |                                                                                                                                                                                                                                                                                                                                |

**AND**

**3 - One of the following:**

**3.1** Patient is currently treated with ONE of the following prophylactic therapies or classes as confirmed by claims or submission of medical records:

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol)\*
- Candesartan\* (generic Atacand)
- A calcitonin gene-related peptide receptor (CGRP) antagonist or inhibitor for preventive treatment of migraine [i.e., Aimovig, Ajovy\*, Emgality, Qulipta\*, Vyepti\*\*] \*\*\*
- Divalproex sodium (generic Depakote/Depakote ER)
- OnabotulinumtoxinA\*\* (generic Botox)
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- Topiramate (generic Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**OR**

**3.2** Patient has less than 4 migraine days per month

**OR**

**3.3** Patient has greater than or equal to 4 migraine days per month and has contraindication or intolerance to TWO of the following prophylactic therapies or classes (please specify contraindication or intolerance):

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol)\*
- Candesartan\* (generic Atacand)
- A calcitonin gene-related peptide receptor (CGRP) antagonist or inhibitor for preventive treatment of migraine [i.e., Aimovig, Ajovy\*, Emgality, Qulipta\*, Vyepti\*\*] \*\*\*
- Divalproex sodium (generic Depakote/Depakote ER)
- OnabotulinumtoxinA\*\* (generic Botox)
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- Topiramate (generic Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

| Therapy Stage                                                                                                                                        | Initial Authorization |
| Guideline Type                                                                                                                                       | Prior Authorization   |
| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of migraine consistent with The International Classification of Headache Disorders, 3rd edition</p> |                       |

**AND**

**2** - ONE of the following:

**2.1** Patient has 4 to 7 migraine days per month and at least ONE of the following:

**2.1.1** Less than 15 headache days per month

**OR**

**2.1.2** Provider attests this is the member's predominant headache diagnosis (i.e., primary driver of headaches is not different, non-migrainous condition)

**OR**

**2.2** Greater than or equal to 8 migraine days per month

**AND**

**3** - One of the following:

**3.1** Failure (after a trial of at least two months) to TWO of the following prophylactic therapies as confirmed by claims history or submission of medical records:

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol\*)
- Candesartan\* (Atacand)
- Divalproex sodium (Depakote/Depakote ER)
- OnabotulinumtoxinA\*\* (generic Botox)
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- Topiramate (Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**OR**

**3.2** History of contraindication or intolerance to TWO of the following prophylactic therapies (please specify contraindication or intolerance):

- A beta-blocker (i.e., atenolol, metoprolol, nadolol, propranolol, or timolol\*)
- Candesartan\* (Atacand)
- Divalproex sodium (Depakote/Depakote ER)
- OnabotulinumtoxinA\*\* (generic Botox)
- A serotonin-norepinephrine reuptake inhibitor [i.e., duloxetine (Cymbalta), venlafaxine (Effexor/Effexor XR)]
- Topiramate (Topamax)
- A tricyclic antidepressant [i.e., amitriptyline (Elavil), nortriptyline (Pamelor)]

**AND**

**4** - One of the following:

**4.1** Failure (after a trial of at least three months) to Nurtec ODT as confirmed by claims history or submission of medical records

**OR**

**4.2** History of contraindication or intolerance to Nurtec ODT (please specify contraindication or intolerance)

**AND**

**5** - Medication will not be used in combination with another CGRP antagonist or inhibitor used for the preventive treatment of migraines (e.g. Aimovig, Ajovy, Emgality, Nurtec ODT, Vyepti)

Notes

\* Timolol, candesartan are non-preferred and should not be included in denial to provider

\*\*OnabotulinumtoxinA is a medical benefit and should not be included in denial to provider.

Product Name: Qulipta

Approval Length 12 month(s)

Therapy Stage Reauthorization

Guideline Type Prior Authorization

**Approval Criteria**

1 - Documentation of positive clinical response to therapy

**AND**

2 - Medication will not be used in combination with another CGRP antagonist or inhibitor used for the preventive treatment of migraines (e.g., Aimovig, Ajovy, Emgality, Nurtec ODT, Vyepti)

## 1 . Criteria

|                             |                     |
|-----------------------------|---------------------|
| Product Name:Nuzyra tablets |                     |
| Guideline Type              | Prior Authorization |

### **Approval Criteria**

**1** - For continuation of therapy upon hospital discharge

**OR**

**2** - As continuation of therapy when transitioning from intravenous antibiotics that are shown to be sensitive to the cultured organism for the requested indication

**OR**

**3** - ALL of the following:

**3.1** Diagnosis of community-acquired bacterial pneumonia (CABP)

**AND**

**3.2** Infection caused by an organism that is confirmed to be or likely to be susceptible to treatment with Nuzyra

**AND**

**3.3** ONE of the following:

**3.3.1** Failure to THREE of the following antibiotics or antibiotic regimens, as confirmed by claims history or submission of medical records:

- Amoxicillin
- A macrolide
- Doxycycline
- A fluoroquinolone
- Combination therapy with amoxicillin/clavulanate or cephalosporin AND a macrolide or doxycycline

**OR**

**3.3.2** History of intolerance or contraindication to ALL of the following antibiotics or antibiotic regimens (please specify intolerance or contraindication):

- Amoxicillin
- A macrolide
- Doxycycline
- A fluoroquinolone
- Combination therapy with amoxicillin/clavulanate or cephalosporin AND a macrolide or doxycycline

**OR**

**4** - ALL of the following:

**4.1** ONE of the following diagnoses:

**4.1.1** BOTH of the following:

**4.1.1.1** Acute bacterial skin and skin structure infections

**AND**

**4.1.1.2** Infection caused by methicillin-resistant *Staphylococcus aureus* (MRSA) documented by culture and sensitivity report

**OR**

**4.1.2** BOTH of the following:

**4.1.2.1** Empirical treatment of a patient with acute bacterial skin and skin structure infections

**AND**

**4.1.2.2** Presence of MRSA infection is likely

**AND**

**4.2** ONE of the following:

**4.2.1** Failure to linezolid (generic Zyvox) as confirmed by claims history or submission medical records

**OR**

**4.2.2** History of intolerance or contraindication to linezolid (generic Zyvox) (please specify intolerance or contraindication)

**AND**

**4.3** ONE of the following:

**4.3.1** Failure to ONE of the following antibiotics as confirmed by claims history or submission medical records:

- Sulfamethoxazole-trimethoprim (SMZ-TMP)
- A tetracycline
- Clindamycin

**OR**

**4.3.2** History of intolerance or contraindication to ALL of the following antibiotics (please specify intolerance or contraindication):

- Sulfamethoxazole-trimethoprim (SMZ-TMP)
- A tetracycline
- Clindamycin

**OR**

**5** - ALL of the following:

**5.1** Diagnosis of acute bacterial skin and skin structure infections

**AND**

**5.2** Infection caused by an organism that is confirmed to be or likely to be susceptible to treatment with Nuzyra

**AND**

**5.3** ONE of the following:

**5.3.1** Failure to THREE of the following antibiotics confirmed by claims history or submission medical records:

- A penicillin
- A cephalosporin
- A tetracycline
- Sulfamethoxazole-trimethoprim (SMZ-TMP)
- Clindamycin

**OR**

**5.3.2** History of intolerance or contraindication to ALL of the following antibiotics (please specify intolerance or contraindication):

- A penicillin
- A cephalosporin
- A tetracycline
- Sulfamethoxazole-trimethoprim (SMZ-TMP)
- Clindamycin

**OR**

**6** - The drug has been recognized for treatment of the indication by the Infectious Diseases Society of America (IDSA)

|       |                                                                                                                                                                                                                                                                     |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Notes | Authorization duration for CABP and acute bacterial skin and skin structure infections will be issued for up to 14 days. For all IDSA recognized indications, authorization duration is based on provider and IDSA recommended treatment durations, up to 6 months. |

## 1 . Criteria

|                                     |              |
|-------------------------------------|--------------|
| Product Name:generic tolterodine IR |              |
| Approval Length                     | 12 month(s)  |
| Guideline Type                      | Step Therapy |
| Approval Criteria                   |              |

**1** - Failure to treatment with oxybutynin immediate release as confirmed by claims history or submission of medical records

**OR**

**2** - History of contraindication or intolerance to oxybutynin immediate release (please specify contraindication or intolerance)

**Product Name:**generic tolterodine ER

**Approval Length** 12 month(s)

**Guideline Type** Step Therapy

**Approval Criteria**

**1** - Failure to treatment with oxybutynin extended-release as confirmed by claims history or submission of medical records

**OR**

**2** - History of contraindication or intolerance to oxybutynin extended-release (please specify contraindication or intolerance)

**Product Name:**Brand Detrol LA, Brand Ditropan XL, darifenacin ER, Gelnique, Gemtesa, trospium ER, Brand Vesicare

**Approval Length** 12 month(s)

**Guideline Type** Prior Authorization

**Approval Criteria**

**1** - Failure to a trial of THREE of the following confirmed by claims history or submission of medical records:

- oxybutynin extended-release tablet (generic Ditropan XL)
- tolterodine extended-release capsule (generic Detrol LA)

- trospium tablet
- solifenacin tablet (generic Vesicare)

**OR**

**2** - History of contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

- oxybutynin extended-release tablet (generic Ditropan XL)
- tolterodine extended-release capsule (generic Detrol LA)
- trospium tablet
- solifenacin tablet (generic Vesicare)

**Approval Criteria**

**1** - BOTH of the following:

**1.1** Diagnosis of overactive bladder (OAB)

**AND**

**1.2** ONE of the following:

**1.2.1** Failure to a trial of THREE of the following confirmed by claims history or submission of medical records:

- oxybutynin extended-release tablet (generic Ditropan XL)
- tolterodine immediate release (generic Detrol) or tolterodine extended-release capsule (generic Detrol LA)
- trospium tablet

- solifenacin tablet (generic Vesicare)

**OR**

**1.2.2** History of contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

- oxybutynin extended-release tablet (generic Ditropan XL)
- tolterodine immediate release (generic Detrol) or tolterodine extended-release capsule (generic Detrol LA)
- trospium tablet
- solifenacin tablet (generic Vesicare)

**OR**

**2** - BOTH of the following:

**2.1** Diagnosis of neurogenic detrusor overactivity (NDO) (neurogenic bladder)

**AND**

**2.2** ONE of the following:

**2.2.1** Failure to a trial of ONE of the following, as confirmed by claims history or submission of medical records:

- oxybutynin syrup
- oxybutynin tablet
- oxybutynin extended release tablet (generic Ditropan XL)

**OR**

**2.2.2** History of contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

- oxybutynin syrup
- oxybutynin tablet
- oxybutynin extended release tablet (generic Ditropan XL)

| Effective Date: | 3/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                      |                       |
|----------------------|-----------------------|
| Product Name:Ocaliva |                       |
| Approval Length      | 12 month(s)           |
| Therapy Stage        | Initial Authorization |
| Guideline Type       | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of primary biliary cholangitis

**AND**

**2** - ONE of the following:

- Patient does not have cirrhosis
- Patient has compensated cirrhosis without evidence of portal hypertension

**AND**

**3** - ONE of the following:

**3.1** BOTH of the following:

- Used in combination with ursodeoxycholic acid (e.g., Urso, ursodiol)
- Patient has failed to achieve an alkaline phosphatase (ALP) level of less than 1.67 times the upper limit of normal after at least 12 consecutive months of treatment with ursodeoxycholic acid (e.g., Urso, ursodiol)

**OR**

**3.2** History of contraindication or intolerance to ursodeoxycholic acid (e.g., Urso, ursodiol) (please specify contraindication or intolerance)

**AND**

**4** - Patient is not receiving Ocaliva in combination with Iqirvo (elafibranor) or Livdelzi (seladelpar)

**AND**

**5** - Prescribed by ONE of the following:

- Hepatologist
- Gastroenterologist

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                     |

| Effective Date: | 1/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                     |                       |
|---------------------|-----------------------|
| Product Name:Odomzo |                       |
| Diagnosis           | Basal Cell Carcinoma  |
| Approval Length     | 12 month(s)           |
| Therapy Stage       | Initial Authorization |
| Guideline Type      | Prior Authorization   |

### Approval Criteria

1 - Diagnosis of nodal metastatic basal cell carcinoma (BCC)

**OR**

2 - Diagnosis of diffuse basal cell carcinoma (BCC) formation (e.g., Gorlin syndrome, other genetic forms of multiple BCC)

**OR**

3 - BOTH of the following:

3.1 Diagnosis of locally advanced basal cell carcinoma

**AND**

3.2 ONE of the following:

- Cancer has recurred following surgery
- Cancer has recurred following radiation
- Patient is not a candidate for surgery
- Patient is not a candidate for radiation

### Guideline Note:

|                 |           |
|-----------------|-----------|
| Effective Date: | 12/1/2025 |
|-----------------|-----------|

## 1 . Criteria

|                        |                       |
|------------------------|-----------------------|
| Product Name:Ohtuvayre |                       |
| Approval Length        | 12 month(s)           |
| Therapy Stage          | Initial Authorization |
| Guideline Type         | Prior Authorization   |

**Approval Criteria**

**1** - Diagnosis of chronic obstructive pulmonary disease (COPD)

**AND**

**2** - Submission of medical records (e.g., chart notes) documenting BOTH of the following:

**2.1** Post-bronchodilator forced expiratory volume (FEV1) / forced vital capacity (FVC) ratio less than 0.7

**AND**

**2.2** Post-bronchodilator FEV1 % predicted greater than or equal to 30% and less than 80%

**AND**

**3** - BOTH of the following:

**3.1** ONE of the following:

**3.1.1** FEV1 is less than 80% of predicted but greater than or equal to 50% of predicted

**OR**

**3.1.2** ALL of the following:

**3.1.2.1** FEV1 less than 50% of predicted

**AND**

**3.1.2.2** History of chronic bronchitis

**AND**

**3.1.2.3 ONE of the following:**

- Failure to a selective phosphodiesterase 4 (PDE4) inhibitor [i.e., roflumilast (Daliresp)] as confirmed by claims history or submission of medical record
- History of contraindication or intolerance to a selective phosphodiesterase 4 (PDE4) inhibitor [i.e., roflumilast (Daliresp)] (please specify contraindication or intolerance)

**AND**

**3.2 ONE of the following:**

**3.2.1** Patient is on a stabilized dose and receiving concomitant therapy with ONE of the following as confirmed by claims history or submission of medical records:

- A long-acting beta-agonist [LABA (e.g., Serevent Diskus)]
- A long-acting antimuscarinic agent [LAMA (e.g., Spiriva Respimat/HandiHaler)]
- A LABA/LAMA (e.g., Anoro Ellipta, Bevespi Aerosphere, Stiolto Respimat)
- An ISC/LABA/LAMA (i.e., Breztri Aerosphere, Trelegy Ellipta)

**OR**

**3.2.2** Patient has a failure to ALL of the following as confirmed by claims history or submission of medical records:

- A long-acting beta-agonist [LABA (e.g., Serevent Diskus)]
- A long-acting antimuscarinic agent [LAMA (e.g., Spiriva Respimat/HandiHaler)]
- A LABA/LAMA (e.g., Anoro Ellipta, Bevespi Aerosphere, Stiolto Respimat)
- An ISC/LABA/LAMA (i.e., Breztri Aerosphere, Trelegy Ellipta)

**OR**

**3.2.3** Patient has a contraindication or intolerance to ALL of the following (please specify contraindication or intolerance):

- A long-acting beta-agonist [LABA (e.g., Serevent Diskus)]
- A long-acting antimuscarinic agent [LAMA (e.g., Spiriva Respimat/HandiHaler)]
- A LABA/LAMA (e.g., Anoro Ellipta, Bevespi Aerosphere, Stiolto Respimat)
- An ISC/LABA/LAMA (i.e., Breztri Aerosphere, Trelegy Ellipta)

**OR**

**3.2.4 BOTH of the following:**

**3.2.4.1** Patient is unable to use a metered-dose, dry powder or slow mist inhaler (e.g. Spiriva RespiMat) to control their COPD due to ONE of the following:

- Cognitive or physical impairment limiting coordination of handheld devices (e.g., cognitive decline, arthritis in the hands) (Document impairment)
- Patient is unable to generate adequate inspiratory force (e.g., peak inspiratory flow rate (PIFR) resistance is less than 60 liters per minute))

**AND**

**3.2.4.2** Patient requires the use of BOTH of the following as confirmed by claims history or submission of medical records:

- A nebulized LABA [i.e., arformoterol (generic Brovana), formoterol (generic Perforomist)]
- A nebulized long-acting antimuscarinic agent [LAMA (i.e., Yupelri)]

**AND**

**4** - Patient experiences dyspnea during everyday activities (e.g., short of breath when walking up a slight hill)

**AND**

**5** - Prescribed by or in consultation with a Pulmonologist

|                        |                     |
|------------------------|---------------------|
| Product Name:Ohtuvayre |                     |
| Approval Length        | 12 month(s)         |
| Therapy Stage          | Reauthorization     |
| Guideline Type         | Prior Authorization |
| Approval Criteria      |                     |

**1** - Documentation of positive clinical response to Ohtuvayre therapy demonstrated by BOTH of the following:

**1.1** Improved COPD (chronic obstructive pulmonary disease) symptoms (e.g., dyspnea)

**AND**

**1.2** Improved FEV1 (forced expiratory volume)

|                      |                       |

## **Approval Criteria**

**1** - Diagnosis of symptomatic lower-risk myelofibrosis

**OR**

**2** - All of the following:

**2.1** Diagnosis of higher-risk myelofibrosis

**AND**

**2.2** Presence of symptomatic splenomegaly and/or constitutional symptoms

**AND**

**2.3** One of the following:

- Used as continued therapy near the start of conditioning therapy in a transplant candidate
- Patient is not a transplant candidate or transplant not currently feasible

**OR**

**3** - Diagnosis of myelofibrosis-associated anemia

**OR**

**4** - Both of the following:

**4.1** Diagnosis of accelerated/blast phase myeloproliferative neoplasm

**AND**

**4.2** One of the following:

- Used for the improvement of splenomegaly or other disease-related symptoms

- Continued treatment as a single agent near to the start of conditioning therapy in transplant candidates for the improvement of splenomegaly and other disease-related symptoms

|-----------------|-----------|

## 1 . Criteria

|                        |                           |
|------------------------|---------------------------|
| Product Name: Olumiant |                           |
| Diagnosis              | Rheumatoid Arthritis (RA) |
| Approval Length        | 12 month(s)               |
| Therapy Stage          | Initial Authorization     |
| Guideline Type         | Prior Authorization       |
| Approval Criteria      |                           |

**1 - Diagnosis of moderately to severely active rheumatoid arthritis (RA)**

**AND**

**2 - Patient is not receiving Olumiant in combination with any of the following:**

- Targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Rinvoq (upadacitinib)]
- Potent immunosuppressant (e.g., azathioprine or cyclosporine)

**AND**

**3 - Prescribed by or in consultation with a rheumatologist**

**AND**

**4 - ONE of the following:**

**4.1 Patient is currently on Olumiant therapy as confirmed by claims history or submission of medical records**

**OR**

**4.2 BOTH of the following:**

**4.2.1 ONE of the following:**

- Failure to a 3 month trial of ONE non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at maximally indicated doses as confirmed by claims history or submission of medical records
- History of contraindication or intolerance to ONE non-biologic DMARD [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] (please specify contraindication or intolerance)
- Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of rheumatoid arthritis as confirmed by claims history or submission of medical records [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi

(golimumab), Orencia (abatacept), adalimumab, Xeljanz (tofacitinib), Rinvoq (upadacitinib)]

**AND**

**4.2.2 ONE of the following:**

- Failure to at least ONE TNF (tumor necrosis factor) antagonist therapy as confirmed by claims history or submission of medical records
- History of intolerance or contraindication to at least ONE TNF antagonist therapy (please specify intolerance or contraindication)
- Patient has a documented needle-phobia to the degree that the patient has previously refused any injectable therapy or medical procedure (refer to DSM-V-TR 300.29 for specific phobia diagnostic criteria)

## 1 . Criteria

|                                                                                                       |                             |
|-------------------------------------------------------------------------------------------------------|-----------------------------|
| Product Name: Brand Lovaza, generic omega-3-acid ethyl esters, Brand Vascepa, generic icosapent ethyl |                             |
| Diagnosis                                                                                             | Severe Hypertriglyceridemia |
| Approval Length                                                                                       | 12 month(s)                 |
| Therapy Stage                                                                                         | Initial Authorization       |
| Guideline Type                                                                                        | Prior Authorization         |

### Approval Criteria

**1** - Diagnosis of severe hypertriglyceridemia [pre-treatment triglyceride level of greater than or equal to 500 milligrams/deciliter (mg/dL)]

**AND**

**2** - Patient is on an appropriate lipid-lowering diet and exercise regimen

**AND**

**3** - ONE of the following:

**3.1** Failure to at least 90 days of a fibric acid derivative, as confirmed by claims history or submission of medical records

**OR**

**3.2** History of contraindication or intolerance to a fibric acid derivative (please specify contraindication or intolerance)

**AND**

**4** - If the request is for a non-preferred\* product, ONE of the following:

**4.1** Failure to omega-3-acid ethyl esters (generic Lovaza), as confirmed by claims history or submission of medical records

**OR**

**4.2** History of contraindication or intolerance to omega-3-acid ethyl esters (generic Lovaza) (please specify contraindication or intolerance)

Notes

\*Omega 3-acid esters (generic Lovaza) is preferred. Other omega-3 acid derivatives are non-preferred.

| Diagnosis                                                                                                                                                                                                                                                                                                                                                                                                                                       | Cardiovascular Risk Reduction |
| Approval Length                                                                                                                                                                                                                                                                                                                                                                                                                                 | 12 month(s)                   |
| Therapy Stage                                                                                                                                                                                                                                                                                                                                                                                                                                   | Initial Authorization         |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                                                                                                  | Prior Authorization           |
| <p><b>Approval Criteria</b></p> <p>1 - Diagnosis of hypertriglyceridemia [pre-treatment triglyceride level greater than or equal to 150 milligrams/deciliter (mg/dL)]</p> <p style="text-align: center;"><b>AND</b></p> <p>2 - Patient currently has or is considered high or very high risk for cardiovascular disease (CVD) as evidenced by ONE of the following:</p> <p>2.1 BOTH of the following:</p> <p>2.1.1 At least 45 years of age</p> |                               |

**AND**

**2.1.2** Established CVD confirmed by ONE of the following:

- Acute coronary syndrome
- History of myocardial infarction
- Stable or unstable angina
- Coronary or other arterial revascularization
- Stroke
- Transient ischemic attack
- Peripheral arterial disease

**OR**

**2.2** ALL of the following:

**2.2.1** Diagnosis of Type 2 diabetes

**AND**

**2.2.2** TWO of the following risk factors for developing cardiovascular disease:

- Men at least 55 years and women at least 65 years
- Cigarette smoker or stopped smoking within the past 3 months
- Hypertension [pretreatment blood pressure greater than or equal to 140 millimeters of mercury (mmHg) systolic or greater than or equal to 90 mmHg diastolic]
- HDL-C (high-density lipoprotein cholesterol) less than or equal to 40 mg/dL for men or less than or equal to 50 mg/dL for women
- High-sensitivity C-reactive protein greater than 3.0 mg/L (liter)
- Creatinine clearance greater than 30 and less than 60 milliliters/minute (mL/min)
- Retinopathy
- Micro- or macro-albuminuria
- Ankle-brachial index (ABI) less than 0.9 without symptoms of intermittent claudication

**AND**

**3** - Submission of medical records (e.g., chart notes, laboratory values) documenting ONE of the following (prescription claims history may be used in conjunction as documentation of medication use, dose, and duration):

**3.1** Patient has been receiving at least 12 consecutive weeks of high-intensity statin therapy (i.e., atorvastatin 40-80 mg, rosuvastatin 20-40 mg) and will continue to receive a high-intensity statin at maximally tolerated dose

**OR**

**3.2** BOTH of the following:

**3.2.1** Patient is unable to tolerate high-intensity statin as evidenced by ONE of the following intolerable and persistent (i.e., more than 2 weeks) symptoms:

- Myalgia [muscle symptoms without creatine kinase (CK) elevations]
- Myositis [muscle symptoms with CK elevations less than 10 times upper limit of normal (ULN)]

**AND**

**3.2.2** Patient has been receiving at least 12 consecutive weeks of low-intensity or moderate-intensity statin therapy [i.e., atorvastatin 10-20 mg, rosuvastatin 5-10 mg, simvastatin greater than or equal to 10 mg, pravastatin greater than or equal to 10 mg, lovastatin 20-40 mg, fluvastatin XL 80 mg, fluvastatin 20-40 mg up to 40 mg twice daily, or Livalo (pitavastatin) greater than or equal to 1 mg] and will continue to receive a low-intensity or moderate-intensity statin at maximally tolerated dose

**AND**

**4** - Submission of medical record (e.g., chart notes, laboratory values) documenting ONE of the following (prescription claims history may be used in conjunction as documentation of medication use, dose, and duration):

**4.1** Patient has been receiving at least 12 consecutive weeks of ezetimibe (generic Zetia) therapy as adjunct to maximally tolerated statin therapy

**OR**

**4.2** History of contraindication or intolerance to ezetimibe (please specify contraindication or intolerance)

**OR**

**4.3** Patient has an LDL-C (low density lipoprotein cholesterol) less than 100 mg/dL while on maximally tolerated statin therapy

**AND**

**5** - Used as an adjunct to a low-fat diet and exercise

**AND**

**6** - Prescribed by or in consultation with ONE of the following:

- Cardiologist
- Endocrinologist
- Lipid specialist

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 6/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                                 |                       |
|---------------------------------|-----------------------|
| Product Name: Omnipod 5, Twiist |                       |
| Approval Length                 | 12 month(s)           |
| Therapy Stage                   | Initial Authorization |
| Guideline Type                  | Prior Authorization   |

### **Approval Criteria**

**1 - ONE of the following:**

- For Omnipod 5 product: Diagnosis of diabetes
- For Twist product: Diagnosis of Type 1 diabetes

**AND**

**2 - ALL of the following:**

**2.1** Patient has done ONE of the following for at least 8 weeks:

- Regularly tests blood glucose at least 4 times/day
- Utilizes a continuous glucose monitor (CGM)

**AND**

**2.2** Patient has completed a diabetes management program

**AND**

**2.3** Patient injects insulin at least 3 times/day

**AND**

**3 - BOTH of the following:**

**3.1** Patient or caregiver is motivated to assume responsibility for self-care and insulin management

**AND**

**3.2** Patient or caregiver demonstrates knowledge of importance of nutrition including carbohydrate counting and meal planning

**AND**

**4** - Prescriber attests that there is a reason or special circumstance the patient cannot use external insulin pumps obtained on the medical benefit

### Guideline Note:

|                 |          |
|-----------------|----------|
| Effective Date: | 6/1/2025 |
|-----------------|----------|

## 1 . Criteria

|                       |                         |
|-----------------------|-------------------------|
| Product Name:OmvoH SC |                         |
| Diagnosis             | Ulcerative Colitis (UC) |
| Approval Length       | 12 month(s)             |
| Therapy Stage         | Initial Authorization   |
| Guideline Type        | Prior Authorization     |

### Approval Criteria

1 - Diagnosis of moderately to severely active ulcerative colitis

**AND**

2 - ONE of the following:

- Patient has been established on therapy with Omvoh under an active UnitedHealthcare medical benefit prior authorization for the treatment of moderately to severely active ulcerative colitis
- Patient is currently on Omvoh therapy for subcutaneous use as confirmed by claims history or submission of medical records

**AND**

3 - Patient is NOT receiving Omvoh in combination with another targeted immunomodulator [e.g., adalimumab, Cimzia (certolizumab), Enbrel (etanercept), Entyvio (vedolizumab), Olumiant (baricitinib), Orencia (abatacept), Rinvoq (upadacitinib), Simponi (golimumab), Skyrizi (risankizumab), ustekinumab, Tremfya (guselkumab), Xeljanz/Xeljanz XR (tofacitinib), Zeposia (ozanimod)]

**AND**

4 - Prescribed by or in consultation with a gastroenterologist

| Product Name:Omvoh SC |                         |
|-----------------------|-------------------------|
| Diagnosis             | Ulcerative Colitis (UC) |
| Approval Length       | 12 month(s)             |
| Therapy Stage         | Reauthorization         |
| Guideline Type        | Prior Authorization     |
| Approval Criteria     |                         |

**1 - Documentation of positive clinical response to Omvoh therapy**

**AND**

**2 - Patient is NOT receiving Omvoh in combination with another targeted immunomodulator [e.g., adalimumab, Cimzia (certolizumab), Enbrel (etanercept), Entyvio (vedolizumab), Olumiant (baricitinib), Orencia (abatacept), Rinvoq (upadacitinib), Simponi (golimumab), Skyrizi (risankizumab), ustekinumab, Tremfya (guselkumab), Xeljanz/Xeljanz XR (tofacitinib), Zeposia (ozanimod)]**

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                       |

## 1 . Criteria

|                       |                       |
|-----------------------|-----------------------|
| Product Name:Opzelura |                       |
| Diagnosis             | Atopic Dermatitis     |
| Approval Length       | 12 month(s)           |
| Therapy Stage         | Initial Authorization |
| Guideline Type        | Prior Authorization   |
| Approval Criteria     |                       |

**1 - Diagnosis of mild to moderate atopic dermatitis**

**AND**

**2 - ONE of the following:**

**2.1** Patient is currently on Opzelura therapy as confirmed by claims history or submission of medical records

**OR**

**2.2** For mild atopic dermatitis:

**2.2.1** Failure to TWO of the following topical therapeutic classes as confirmed by claims history or submission of medical records:

- A topical corticosteroid [e.g., DesOwen (desonide), hydrocortisone] (any potency)
- One topical calcineurin inhibitor [e.g., Elidel (pimecrolimus), Protopic (tacrolimus)]
- Eucrisa (crisaborole)

**OR**

**2.2.2** History of intolerance or contraindication to ALL of the following topical therapeutic classes (please specify intolerance or contraindication):

- A topical corticosteroid [e.g., DesOwen (desonide), hydrocortisone] (any potency)
- One topical calcineurin inhibitor [e.g., Elidel (pimecrolimus), Protopic (tacrolimus)]
- Eucrisa (crisaborole)

**OR**

**2.3** For moderate atopic dermatitis:

**2.3.1** Failure to TWO of the following topical therapeutic classes as confirmed by claims history or submission of medical records:

- A topical corticosteroid of at least a medium- to high-potency topical corticosteroid [e.g., Elocon (mometasone furoate), Synalar (fluocinolone acetonide), Lidex (fluocinonide)]
- One topical calcineurin inhibitor [e.g., Elidel (pimecrolimus), Protopic (tacrolimus)]

- Eucrisa (crisaborole)

**OR**

**2.3.2** History of intolerance or contraindication to ALL of the following topical therapeutic classes (please specify intolerance or contraindication):

- A topical corticosteroid of at least a medium- to high-potency topical corticosteroid [e.g., Elocon (mometasone furoate), Synalar (fluocinolone acetonide), Lidex (fluocinonide)]
- One topical calcineurin inhibitor [e.g., Elidel (pimecrolimus), Protopic (tacrolimus)]
- Eucrisa (crisaborole)

**AND**

**3** - Patient is NOT receiving Opzelura in combination with another biologic medication [e.g., Dupixent (dupilumab), Xolair (omalizumab), Rituxan (rituximab), Enbrel (etanercept), Avsola/Inflectra (infliximab)] nor JAK inhibitor [e.g., Jakafi (ruxolitinib), Xeljanz (tofacitinib), Rinvoq (upadacitinib)]

**AND**

**4** - Patient is NOT receiving Opzelura in combination with a potent immunosuppressant medication (e.g., azathioprine, cyclosporine)

|                                                                                      |                       |
|--------------------------------------------------------------------------------------|-----------------------|
| Product Name:Opzelura                                                                |                       |

## 1 . Criteria

|                      |                           |
|----------------------|---------------------------|
| Product Name:Orencia |                           |
| Diagnosis            | Rheumatoid Arthritis (RA) |
| Approval Length      | 12 month(s)               |
| Therapy Stage        | Initial Authorization     |
| Guideline Type       | Prior Authorization       |

## **Approval Criteria**

**1** - ALL of the following:

**1.1** Diagnosis of moderately to severely active rheumatoid arthritis

**AND**

**1.2** One of the following:

**1.2.1** Failure to a 3 month trial of one non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] at maximally indicated doses as confirmed by claims history or submitted medical records

**OR**

**1.2.2** History of intolerance or contraindication to one non-biologic disease modifying anti-rheumatic drug (DMARD) [e.g., methotrexate, leflunomide, sulfasalazine, hydroxychloroquine] (please specify intolerance or contraindication)

**OR**

**1.2.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of rheumatoid arthritis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), Olumiant (baricitinib), Rinvoq (upadacitinib), Xeljanz/Xeljanz XR (tofacitinib)]

**AND**

**1.3** Patient is NOT receiving Orencia in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**1.4** ONE of the following:

**1.4.1 BOTH of the following:**

**1.4.1.1** Failure of one of the preferred adalimumab products\*, confirmed by claims history or submitted medical records

**AND**

**1.4.1.2** Failure of TWO of the following confirmed by claims history or submitted medical records:

- Enbrel (etanercept)
- Olumiant (baricitinib)
- Tyenne (tocilizumab-aazg)

**OR**

**1.4.2** History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- Olumiant (baricitinib)
- Tyenne (tocilizumab-aazg)

**AND**

**1.5** Prescribed by, or in consultation with, a rheumatologist

**OR**

**2 - ALL of the following:**

**2.1** Patient is currently on Orencia therapy as confirmed by claims history or submitted medical records

**AND**

**2.2** Diagnosis of moderately to severely active rheumatoid arthritis

**AND**

**2.3** Patient is NOT receiving Orenzia in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**2.4** Prescribed by, or in consultation with, a rheumatologist

| Therapy Stage                                                                                                                                                                                                                                                                                                                                                            | Initial Authorization |
| Guideline Type                                                                                                                                                                                                                                                                                                                                                           | Prior Authorization   |
| <p><b>Approval Criteria</b></p> <p><b>1</b> - ALL of the following:</p> <p><b>1.1</b> Diagnosis of active psoriatic arthritis</p> <p><b>AND</b></p> <p><b>1.2</b> ONE of the following:</p> <p><b>1.2.1</b> Failure to a 3 month trial of methotrexate at the maximally indicated dose confirmed by claims history or submission of medical records</p> <p><b>OR</b></p> |                       |

**1.2.2** History of intolerance or contraindication to methotrexate (please specify intolerance or contraindication)

**OR**

**1.2.3** Patient has been previously treated with a targeted immunomodulator FDA-approved for the treatment of psoriatic arthritis as confirmed by claims history or submission of medical records [e.g., Cimzia (certolizumab), adalimumab, Simponi (golimumab), ustekinumab, Tremfya (guselkumab), Xeljanz/Xeljanz XR (tofacitinib), Otezla (apremilast), Skyrizi (risankizumab-rzaa)]

**AND**

**1.3** Patient is NOT receiving Orencia in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz (ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**1.4** BOTH of the following:

**1.4.1** ONE of the following:

**1.4.1.1** Failure to TWO of the following as confirmed by claims history or submission of medical records:

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- One of the preferred ustekinumab products\*

**OR**

**1.4.1.2** History of intolerance or contraindication to ALL of the following (please specify intolerance or contraindication):

- One of the preferred adalimumab products\*
- Enbrel (etanercept)

- One of the preferred ustekinumab products\*

**AND**

**1.4.2** ONE of the following:

**1.4.2.1** Failure to Cosentyx (secukinumab) as confirmed by claims history or submission of medical records

**OR**

**1.4.2.2** History of intolerance or contraindication to Cosentyx (secukinumab) (please specify intolerance or contraindication)

**AND**

**1.5** Prescribed by, or in consultation with, ONE of the following:

- Rheumatologist
- Dermatologist

**OR**

**2** - ALL of the following:

**2.1** Patient is currently on Orencia therapy as confirmed by claims history or submitted medical records

**AND**

**2.2** Diagnosis of active psoriatic arthritis

**AND**

**2.3** Patient is NOT receiving Orencia in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), adalimumab, ustekinumab, Skyrizi (risankizumab), Tremfya (guselkumab), Cosentyx (secukinumab), Taltz

(ixekizumab), Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib), Otezla (apremilast)]

**AND**

**2.4** Prescribed by or in consultation with ONE of the following:

- Rheumatologist
- Dermatologist

| Guideline Type | Prior Authorization |
|----------------|---------------------|

### Approval Criteria

**1** - Diagnosis of moderate to severe polyarticular juvenile idiopathic arthritis

**AND**

**2** - Patient is NOT receiving Orenzia in combination with another targeted immunomodulator [e.g., Enbrel (etanercept), Cimzia (certolizumab), Simponi (golimumab), adalimumab, Xeljanz (tofacitinib), Olumiant (baricitinib), Rinvoq (upadacitinib)]

**AND**

**3** - ONE of the following:

**3.1** Failure to ALL of the following as confirmed by claims history or submission of medical records:

- One of the preferred adalimumab products\*

- Enbrel (etanercept)
- Tyenne (tocilizumab-aazg)

**OR**

**3.2** History of contraindication or intolerance to ALL of the following (please specify intolerance or contraindication):

- One of the preferred adalimumab products\*
- Enbrel (etanercept)
- Tyenne (tocilizumab-aazg)

**OR**

**3.3** Patient is currently on Orenzia therapy as confirmed by claims history or submitted medical records

**AND**

**4** - Prescribed by, or in consultation with, a rheumatologist
