INTRODUCTION

The Supplemental Clinical Criteria to the American Psychological Association's (APA) Psychological and Neuropsychological Testing Billing and Coding Guide, provides further guidance regarding provider qualifications, coverage rationale and limitations, and developmental testing specific to behavioral health benefit plans managed by UnitedHealthcare®.

INSTRUCTIONS FOR USE

This Supplemental Clinical Criteria is used along with the American Psychological Association's Psychological and Neuropsychological Testing Billing and Coding Guide to make coverage decisions as well as to inform discussions about evidence-based practices and discharge planning for behavioral health benefit plans managed by UnitedHealthcare. When deciding coverage, the member's specific benefits must be referenced.

All reviewers must first identify member eligibility, the member-specific benefit plan coverage, and any federal or state regulatory requirements that supersede the member's benefits prior to using this supplemental criteria. In the event that the requested service or procedure is limited or excluded from the benefit, is defined differently or there is otherwise a conflict between this guideline and the member's specific benefit, the member's specific benefit supersedes this supplemental criteria. Other clinical criteria may apply. UnitedHealthcare reserves the right, in its sole discretion, to modify its clinical criteria as necessary using the process described in *Clinical Criteria Overview*.

This guideline is provided for informational purposes. It does not constitute medical advice.

UnitedHealthcare may also use tools developed by third parties that are intended to be used in connection with the independent professional medical judgment of a qualified health care provider and do not constitute the practice of medicine or medical advice.

UnitedHealthcare may develop clinical criteria or adopt externally-developed clinical criteria that supersede this guideline when required to do so by contract or regulation.

Psychological Testing:

Psychological Test Evaluation Services is a set of formal procedures utilizing reliable and validated tests designed to measure areas of intellectual, cognitive emotional, and behavioral functioning, in addition to identifying psychopathology, personality style, interpersonal processes, and adaptive skills. Service activities can include test selection, review of records, consultation with referral source, integration of clinical data, clinical decision making, preparation of the testing report, and reviewing the results of testing with member and/or caregivers.

- The provider’s professional training and licensure include any of the following:
 - A doctoral-level psychologist who is licensed to practice independently and demonstrates sufficient training and experience.
 - A masters-degreed behavioral health professional whose licensure specifically allows for provision of psychological testing services.
 - The masters-degreed provider has professional expertise in the types of tests/assessments being administered.
 - The masters-degreed provider is conducting test evaluation services in accordance with licensing standards and psychological testing professional and ethical standards.

Psychological Test Administration and Scoring is the formal process of administering reliable and validated tests selected by the doctoral-level psychologist or qualified masters-degreed provider according to standardized test manual instructions and scoring the respondents answers to test items.

- The provider’s professional training and licensure include any of the following:
 - A doctoral-level psychologist who is licensed to practice independently and demonstrates sufficient training and experience.
 - A psychometrist or psychometrician who administers and scores psychological tests under the supervision of a licensed doctoral-level psychologist, and whose services are billed by the supervising psychologist.
 - The supervising psychologist must have face-to-face contact with the member at intake and during the feedback session.
 - The supervising psychologist is also responsible for final test interpretation, report writing, and final signature of approval.
 - A masters-degreed behavioral health professional whose licensure specifically allows for provision of psychological testing services.
 - The masters-degreed provider has professional expertise in the types of tests/assessments being administered.
 - The masters-degreed provider is conducting test administration and scoring in accordance with licensing standards and psychological testing professional and ethical standards.

Neuropsychological Testing:

Neuropsychological Test Evaluation Services is a set of formal procedures utilizing reliable and valid tests specifically focused on identifying the presence of brain damage, injury, or dysfunction, and any associated functional deficits. Service activities can include test selection, review of records, consultation with referral source, integration of clinical data, clinical decision making, preparation of the testing report, and reviewing the results of testing with member and/or caregivers.

- Neuropsychological testing is within the scope of the provider’s professional training and licensure when the provider is any of the following:
 - A doctoral-level psychologist who is licensed to practice independently and demonstrates sufficient training and experience.
 - A credentialed psychiatrist who meets the following requirements:
 - Recognized certification in neurology through the American Board of Psychiatry and Neurology;
 - Accreditation in behavioral neurology and neuropsychiatry through the American Neuropsychiatric Association;

- State medical licensure specifically allowing for the provision of neuropsychological testing service(s);
- Evidence of professional training and expertise in the specific tests and/or assessment measures for which authorization is requested;
- Physician and supervised psychometrician(s) adhere to the prevailing national professional and ethical standards regarding test administration, scoring, and interpretation.

Neuropsychological Test Administration and Scoring is the formal process of administering reliable and validated tests selected by the doctoral-level psychologist or qualified provider according to standardized test manual instructions and scoring the respondents answers to test items.

- Neuropsychological Test Administration and Scoring is within the scope of the provider's professional training and licensure when the provider is any of the following:
 - A doctoral-level psychologist who is licensed to practice independently and demonstrates sufficient training and experience.
 - A psychometrist or psychometrician who administers and scores psychological tests under the supervision of a licensed doctoral-level psychologist, and whose services are billed by the supervising psychologist.
 - The supervising psychologist must have face-to-face contact with the member at intake and during the feedback session.
 - The supervising psychologist is also responsible for final test interpretation, report writing, and final signature of approval.
 - A credentialed psychiatrist who meets the following requirements:
 - Recognized certification in neurology through the American Board of Psychiatry and Neurology;
 - Accreditation in behavioral neurology and neuropsychiatry through the American Neuropsychiatric Association;
 - State medical licensure specifically allowing for the provision of neuropsychological testing service(s);
 - Evidence of professional training and expertise in the specific tests and/or assessment measures for which authorization is requested;
 - Physician and supervised psychometrician(s) adhere to the prevailing national professional and ethical standards regarding test administration, scoring, and interpretation.

Automated Testing and Result:

*Automated Testing and Result is primarily a method of screening for potentially clinically significant intellectual, cognitive, emotional, and behavioral symptoms or functional deficits that utilizes a **single** reliable and validated instrument that has fully automated administration, scoring and interpretation. Automated Testing may also be used to quickly estimate changes in clinical status over time either as a method of obtaining an objective measure of progress in treatment or periodic objective surveillance of known risk issues.*

- Automated Testing and Result is within the scope of the provider's professional training and licensure when the provider is any of the following:
 - A doctoral-level psychologist who is licensed to practice independently and demonstrates sufficient training and experience.
 - A masters-degreed behavioral health professional whose licensure specifically allows for provision of psychological testing services.
 - The masters-degreed provider has professional expertise in the types of tests/assessments being administered.
 - The masters-degreed provider is conducting test administration, scoring and interpretation in accordance with licensing standards and psychological testing professional and ethical standards.
 - A credentialed psychiatrist who meets the following requirements:
 - Recognized certification in neurology through the American Board of Psychiatry and Neurology;
 - Accreditation in behavioral neurology and neuropsychiatry through the American Neuropsychiatric Association;

- State medical licensure specifically allowing for the provision of neuropsychological testing service(s);
- Evidence of professional training and expertise in the specific tests and/or assessment measures for which authorization is requested;
- Physician and supervised psychometrician(s) adhere to the prevailing national professional and ethical standards regarding test administration, scoring, and interpretation.

COVERAGE RATIONALE/LIMITATIONS

- Neuropsychological testing is unproven and not medically necessary for the following:
 - Baseline neuropsychological testing in asymptomatic persons at risk for sport-related concussions
 - Computerized neuropsychological testing when used alone for evaluating concussions
 - Neuropsychological testing for the following diagnoses alone without other covered conditions as noted above:
 - Headaches, including migraine headache;
 - History of myocardial infarction;
 - Intermittent explosive disorder.
 - Computerized cognitive testing, such as Mindstreams® Cognitive Health Assessment, BrainCare™ and QbTest.

DEVELOPMENTAL TESTING, ASSESSMENT OF APHASIA, COGNITIVE PERFORMANCE TESTING

- Assessment of Aphasia (96105) is the evaluation of expressive and receptive speech and language function, language comprehension, speech production ability, spelling or writing with interpretation and report per hour. This procedure is often conducted by a speech language therapist. It is not considered a form of psychological testing and is not typically covered under the behavioral health benefit.
- Standardized cognitive performance testing (96125) is an occupational therapy assessment used to assess capacity to function in activities of daily living. It is not considered a form of psychological or neuropsychological testing and is not typically covered under the behavioral health benefit.
- Developmental Testing (96110, 96112, 96113, 96127) is an adjunct to the routine surveillance for developmental delays in young children. This procedure is often conducted by a developmental pediatrician, or a speech, language, physical or occupational therapist. It is not considered a form of psychological testing, and is not typically covered under the behavioral health benefit.
