## COVERAGE RATIONALE

 See [Benefit Considerations](#) ⓘ

### Description

This policy provides parameters for coverage of off-label and unproven indications of FDA-approved medications covered under the medical benefit for **one** of the following:\*

- Injectable specialty drug with a corresponding UnitedHealthcare policy that does not address the requested indication.
- Injectable specialty drug with a corresponding UnitedHealthcare policy that lists the drug as unproven for the requested indication.
- Injectable specialty drug without a UnitedHealthcare drug policy.

\* <http://www.uhcspecialtyrx.com/>

**This policy does not address coverage for medications covered under the pharmacy benefit. Please refer to pharmacy benefit coverage.**

This policy does **not** address coverage of injectable oncology medications (J9000-J9999) and select other medications used for oncology conditions [including, but not limited to octreotide acetate (J2353 and J2354) and leuprolide acetate (J1950)] covered under the medical benefit based upon the National Comprehensive Cancer Network (NCCN) Drugs & Biologics Compendium™. Please refer to the Medical Benefit Drug Policy titled [Oncology Medication Clinical Coverage](#) for more information.

This policy does **not** address coverage of vaccines. Please refer to the Medical Benefit Drug Policy titled [Vaccines](#) and the Coverage Determination Guideline titled [Preventative Care Services](#) for additional information on vaccines covered as preventive services.

### Indications of Coverage

A specialty drug may be determined medically necessary for the requested off-label or unproven indication when **all** of the criteria are met:

- I. The drug is approved by the U.S. Food and Drug Administration; **and**
- II. The requested drug has **NOT** been excluded from coverage by UnitedHealthcare due to lack of efficacy, clinical benefit, or administrative program (e.g., exclusion at launch, plan document); **and**
- III. **One** of the following:
  - A. The requested drug is considered 'unproven' per UnitedHealthcare drug policy, where applicable
  - B. The indication for the requested drug is not addressed by a UnitedHealthcare drug policy, where applicable
  - C. A UnitedHealthcare drug policy does not exist for the requested drug.

**and**

- IV. The drug is prescribed by a licensed health care professional; **and**
- V. The requested drug is intended to treat a chronic and seriously debilitating condition; **and**

- VI. Documented history of failure, contraindication, or intolerance to standard, conventional therapies to treat or manage the disease or condition, where available; **and**
- VII. Diagnosis is *clinically supported* as a use by at least **one** of the following:
- A. **One** of the following compendia:
    - 1. The American Hospital Formulary Service Drug Information (AHFS-DI) under the Therapeutic Uses section<sup>1</sup>; **or**
    - 2. The Elsevier Gold Standard's Clinical Pharmacology under the Indications section<sup>2</sup>; **or**
    - 3. (3) DRUGDEX System by Micromedex<sup>®</sup> has a Strength of Recommendation rating of Class I, Class IIa, or Class IIb under the Therapeutic Uses section<sup>3</sup>;
  - or**
  - B. MCG<sup>™</sup> Care Guidelines, Ambulatory Care <sup>8</sup>; **or**
  - C. **Two (2)** articles from major peer reviewed medical journals that present data supporting the proposed off-label use or uses as generally safe and effective unless there is validated and uncontested contradictory evidence presented in a major peer-reviewed medical journal.  
[Examples of accepted journals include, but are not limited to, *Journal of American Medical Association*, *New England Journal of Medicine*, and *Lancet*. Accepted study designs may include, but are not limited to, randomized, double blind, placebo controlled clinical trials.]

## U.S. FOOD AND DRUG ADMINISTRATION (FDA)

The U.S. FDA released an information sheet entitled 'Off-Label' and Investigational Use of Marketed Drugs, Biologics, and Medical Devices which states: "Good medical practice and the best interests of the patient require that physicians use legally available drugs, biologics and devices according to their best knowledge and judgment. If physicians use a product for an indication not in the approved labeling, they have the responsibility to be well informed about the product, to base its use on firm scientific rationale and on sound medical evidence, and to maintain records of the product's use and effects."<sup>5</sup>

## BACKGROUND

An off-label/unlabeled use of a drug is defined as a use for a non-FDA approved indication, that is, one that is not listed on the drug's official label/prescribing information. An indication is defined as a diagnosis, illness, injury, syndrome, condition, or other clinical parameter for which a drug may be given. Off-label use is further defined as giving the drug in a way that deviates significantly from the labeled prescribing information for a particular indication.

## BENEFIT CONSIDERATIONS

If the coverage review using the NCCN Compendium determines that the drug is unproven, then further review is indicated. Some Certificates of Coverage allow for coverage of experimental/investigational/unproven treatments for life-threatening illnesses when certain conditions are met. The member specific benefit plan document must be consulted to make coverage decisions for this service. Some states mandate benefit coverage for off-label use of medications for some diagnoses or under some circumstances when certain conditions are met. Some states also mandate usage of other Compendium references. Where such mandates apply, they supersede language in the benefit document or in the medical or drug policy. Benefit coverage for an otherwise unproven service for the treatment of serious rare diseases may occur when certain conditions are met. See the Policy and Procedure addressing the treatment of serious rare diseases.

## CLINICAL EVIDENCE

In order to meet the requirement that the use of the drug is medically necessary for the treatment of disease, the drugs must be safe and effective relative to other available treatments. Off-label drug prescribing may be determined medically necessary if scientific evidence and/or compendia support the regimen. A compendium is defined "as a comprehensive listing of FDA-approved drugs and biologicals (or a comprehensive listing of a specific subset of drugs and biologicals in a specialty compendium, for example, a compendium of anti-cancer treatment)."<sup>4</sup>

### **American Hospital Formulary Service Drug Information (AHFS-DI)**

AHFS-DI utilizes the following *levels of evidence rating system*:<sup>1</sup>

- Level 1:
  - High Strength/Quality as defined by at least one of the following:
    - Evidence consists of at least one randomized, double-blind trial without important limitations (i.e., large treatment effect); intent-to-treat analysis used, confidence intervals reported. If more than one trial is available, these trials have consistent results.
    - Evidence consists of a meta-analysis of such trials with consistent results (i.e., low heterogeneity).

- Evidence consisting of a non-blinded or single-blinded trial that meets study objective end points may be considered as Level 1 evidence in some cancer-related cases (e.g., NCI-sponsored cooperative group study or a multicenter trial).
- Level 2:
  - Moderate Strength/Quality as defined by at least one of the following:
    - Evidence consists of at least one non-blinded or single-blinded, randomized clinical trial.
    - Evidence consists of at least one non-blinded or single-blinded, non-randomized clinical trial.
    - Evidence consists of a meta-analysis of randomized, controlled clinical trials with heterogeneous results if reasons for heterogeneity in individual trials are adequately discussed.
    - Evidence consists of at least one randomized, controlled clinical trial, but with important methodological limitations (e.g., large number of patients lost to follow-up and/or no intent-to-treat analysis and/or important data not recorded).
    - Evidence is inconsistent (i.e., two or more randomized controlled trials with unexplained, widely varying estimates of treatment effects, even if results of individual trials would constitute strong Level 1 evidence when considered alone).
  - Evidence consisting of a non-blinded, non-randomized trial (e.g., a phase II study) may be considered as Level 2 evidence in some cancer-related cases (e.g., rare cancers or cancers with limited available treatment options).
- Level 3:
  - Low Strength/Quality is defined as:
    - Evidence consists of observational studies, case reports, or case series; may also include randomized clinical trials with multiple serious deficiencies or study limitations.
- Level 4:
  - Opinion/Experience is defined as:
    - Evidence consists of expert consensus panel reports or expert reviewers' comments.

AHFS-DI utilizes the following *grades of recommendation*:

- Recommended (Accepted): The drug or biologic should be used, is recommended/indicated, or is useful/effective/beneficial in most cases.
- Reasonable Choice (Accepted, with Possible Conditions) (e.g., treatment option): The drug or biologic is reasonable to use under certain conditions (e.g., in certain patient groups), can be useful/effective/beneficial, or is probably recommended or indicated.
- Not Fully Established (Unclear Risk/Benefit, Equivocal Evidence, Inadequate Data and/or Experience): Usefulness and/or effectiveness is unknown, unclear, or uncertain or is not well established relative to the standard of care.
- Not Recommended (Unaccepted): The drug or biologic is considered inappropriate, obsolete, or unproven; is not recommended, is not indicated, or is not useful/effective/beneficial; or may be harmful.

### **Clinical Pharmacology**

Off-label drug indication data are included within Clinical Pharmacology when identified as a clinically relevant or as emerging treatment that are adequately supported by a systematic review of the evidence. Off-label data are primarily identified for inclusion in the database through a regular and comprehensive review of:<sup>2</sup>

- Primary published literature
- New or updated national practice guidelines
- Surveillance of other accepted sources of medical information (e.g., FDA, CDC, NIH communications)
- Dialogue with customers or other external reviewers of the compendia content

The Grading of Recommendations Assessment, Development, and Evaluation (GRADE) system is used to evaluate and rate the quality of evidence to determine qualities of evidence levels and recommendations as follows:<sup>6-7</sup>

Grade of Recommendation	Clarity of Risk/Benefit	Quality of Supporting Evidence	Implications
<b>1A.</b> Strong recommendation. High quality evidence	Benefits clearly outweigh risk and burdens, or vice versa	Consistent evidence from well performed randomized, controlled trials or overwhelming evidence of some other form. Further research is unlikely to change our confidence in the estimate of benefit and risk.	Strong recommendation, can apply to most patients in most circumstances without reservation

Grade of Recommendation	Clarity of Risk/Benefit	Quality of Supporting Evidence	Implications
<b>1B.</b> Strong recommendation. Moderate quality evidence	Benefits clearly outweigh risk and burdens, or vice versa	Evidence from randomized, controlled trials with important limitations (inconsistent results, methodologic flaws, indirect or imprecise), or very strong evidence of some other form. Further research (if performed) is likely to have an impact on our confidence in the estimate of benefit and risk and may change the estimate.	Strong recommendation, likely to apply to most patients
<b>1C.</b> Strong recommendation. Low quality evidence	Benefits appear to outweigh risk and burdens, or vice versa	Evidence from observational studies, unsystematic clinical experience, or from randomized, controlled trials with serious flaws. Any estimate of effect is uncertain.	Relatively strong recommendation; might change when higher quality evidence becomes available
<b>2A.</b> Weak recommendation. High quality evidence	Benefits closely balanced with risks and burdens	Consistent evidence from well performed randomized, controlled trials or overwhelming evidence of some other form. Further research is unlikely to change our confidence in the estimate of benefit and risk.	Weak recommendation, best action may differ depending on circumstances or patients or societal values
<b>2B.</b> Weak recommendation. Moderate quality evidence	Benefits closely balanced with risks and burdens, some uncertainly in the estimates of benefits, risks and burdens	Evidence from randomized, controlled trials with important limitations (inconsistent results, methodologic flaws, indirect or imprecise), or very strong evidence of some other form. Further research (if performed) is likely to have an impact on our confidence in the estimate of benefit and risk and may change the estimate.	Weak recommendation, alternative approaches likely to be better for some patients under some circumstances
<b>2C.</b> Weak recommendation. Low quality evidence	Uncertainty in the estimates of benefits, risks, and burdens; benefits may be closely balanced with risks and burdens	Evidence from observational studies, unsystematic clinical experience, or from randomized, controlled trials with serious flaws. Any estimate of effect is uncertain.	Very weak recommendation; other alternatives may be equally reasonable

### **DRUGDEX (Micromedex)**

The DRUGDEX (Micromedex) efficacy, strength of evidence and strength of recommendation definitions are outlined below:<sup>3</sup>

<b>DRUGDEX (Micromedex): Strength of Recommendation, Strength of Evidence and Efficacy</b>		
<b>Strength of Recommendation</b>		
Class I	Recommended	The given test or treatment has been proven to be useful, and should be performed or administered.
Class IIa	Recommended, In Most Cases	The given test, or treatment is generally considered to be useful, and is indicated in most cases.
Class IIb	Recommended, In Some Cases	The given test, or treatment may be useful, and is indicated in some, but not most, cases.
Class III	Not Recommended	The given test, or treatment is not useful, and should be avoided.
Class Indeterminate	Evidence Inconclusive	
<b>Strength of Evidence</b>		
Category A	Category A evidence is based on data derived from: Meta-analyses of randomized controlled trials with homogeneity with regard to the directions and degrees of results between individual studies. Multiple, well-done randomized clinical trials involving large numbers of patients.	

**DRUGDEX (Micromedex): Strength of Recommendation, Strength of Evidence and Efficacy**

Category B	Category B evidence is based on data derived from: Meta-analyses of randomized controlled trials with conflicting conclusions with regard to the directions and degrees of results between individual studies. Randomized controlled trials that involved small numbers of patients or had significant methodological flaws (e.g., bias, drop-out rate, flawed analysis, etc.). Nonrandomized studies (e.g., cohort studies, case-control studies, observational studies).	
Category C	Category C evidence is based on data derived from: Expert opinion or consensus, case reports or case series.	
No evidence		
<b>Efficacy</b>		
Class I	Effective	Evidence and/or expert opinion suggests that a given drug treatment for a specific indication is effective.
Class IIa	Evidence Favors Efficacy	Evidence and/or expert opinion is conflicting as to whether a given drug treatment for a specific indication is effective, but the weight of evidence and/or expert opinion favors efficacy.
Class IIb	Evidence is Inconclusive	Evidence and/or expert opinion is conflicting as to whether a given drug treatment for a specific indication is effective, but the weight of evidence and/or expert opinion argues against efficacy.
Class III	Ineffective	Evidence and/or expert opinion suggests that a given drug treatment for a specific indication is ineffective.

**MCG™ Ambulatory Care**

Some MCG guidelines are designated as "Current Role Remains Uncertain." To help clarify the reasoning behind designating a given guideline as "Current Role Remains Uncertain," each area of uncertainty that is discussed (under the heading "Inconclusive or Non-Supportive Evidence") has been assigned a Recommendation Grade summarizing the evidence base for that indication. MCG utilizes the following recommendation grades:<sup>8</sup>

- RG B:
  - Evidence is insufficient, conflicting, or poor and demonstrates an incomplete assessment of net benefit versus harm; additional research is recommended.
- RG C1:
  - Evidence demonstrates a lack of net benefit; additional research is recommended.
- RG C2:
  - Evidence demonstrates potential harm that outweighs benefit; additional research is recommended.

The evidence presented in the Evidence Summary is graded according to level of authoritativeness. The evidence hierarchy is as follows:

- (EG 1) Evidence Grade 1:
  - Meta-analyses
  - Randomized controlled trials with meta-analysis
  - Randomized controlled trials
  - Systematic reviews
- (EG 2) Evidence Grade 2:
  - Observational studies; examples include:
    - Cohort studies with statistical adjustment for potential confounders
    - Cohort studies without adjustment
    - Case series with historical or literature controls
    - Uncontrolled case series
  - Published guidelines
  - Statements in published articles or textbooks
- (EG 3) Evidence Grade 3:
  - Unpublished data; examples include:
    - Large database analyses
    - Written protocols or outcomes reports from large practices
    - Expert practitioner reports

## POLICY HISTORY/REVISION INFORMATION

Date	Action/Description
03/01/2019	Reorganized policy template; simplified and relocated <i>Instructions for Use</i> and <i>Benefit Considerations</i> section. Archived previous policy version 2018D0054E.
07/01/2018	Annual Review. Updated references. Approved by National Pharmacy & Therapeutics Committee on 06/20/2018. Policy 2017D0054D archived.
08/01/2017	Annual Review. Revised Coverage Rationale. Updated References. Approved by National Pharmacy & Therapeutics Committee on 05/19/2017. Policy 2017D0054C archived.
01/01/2017	Updated policy. Revised instructions for use and program description to apply only to medical benefit review. Approved by the National Pharmacy & Therapeutics Committee on 12/21/2016. Policy 2016D0054B archived.
05/01/2016	Annual Review. Revised Coverage Rationale. Updated References. Approved by National Pharmacy & Therapeutics Committee on 02/26/2016. Policy 2015D0054A archived.
03/01/2015	New policy 2015D0054A. Updated Benefits Consideration. Approved by National Pharmacy & Therapeutics Committee on 01/02/2014.

## INSTRUCTIONS FOR USE

This Medical Benefit Drug Policy provides assistance in interpreting UnitedHealthcare benefit plans. When deciding coverage, the member specific benefit plan document must be referenced as the terms of the member specific benefit plan may differ from the standard benefit plan. In the event of a conflict, the member specific benefit plan document governs. Before using this policy, please check the member specific benefit plan document and any applicable federal or state mandates. UnitedHealthcare reserves the right to modify its Policies and Guidelines as necessary. This Medical Benefit Drug Policy is provided for informational purposes. It does not constitute medical advice.

This Medical Benefit Drug Policy may also be applied to Medicare Advantage plans in certain instances. In the absence of a Medicare National Coverage Determination (NCD), Local Coverage Determination (LCD), or other Medicare coverage guidance, CMS allows a Medicare Advantage Organization (MAO) to create its own coverage determinations, using objective evidence-based rationale relying on authoritative evidence ([Medicare IOM Pub. No. 100-16, Ch. 4, §90.5](#)).

UnitedHealthcare may also use tools developed by third parties, such as the MCG™ Care Guidelines, to assist us in administering health benefits. UnitedHealthcare Drug Policies are intended to be used in connection with the independent professional medical judgment of a qualified health care provider and do not constitute the practice of medicine or medical advice.
