Fixed Partial Dentures (FPD)

**Fixed partial dentures may be indicated for the following:**
- Replacement of missing permanent teeth in which the Retainer/Abutment teeth have a favorable long term prognosis
- Replacement of one to two missing teeth in a Tooth Bounded Space

In addition to the above, the following applies:
- Resin bonded appliances (e.g., Maryland Bridge) are indicated for the replacement of one missing tooth and unrestored/undamaged Retainer/Abutment teeth

**Fixed partial dentures are not indicated for the following:**
- Members with rampant caries and/or poor oral hygiene
- When Retainer/Abutment teeth have untreated endodontic pathology or periodontal disease or an unfavorable crown: root ratio
- When teeth intended as Retainers/Abutments have inadequate remaining tooth structure
- When a tooth to be used as a Retainer/Abutment has tipped or drifted into edentulous space
- Cantilever and resin bonded fixed partial dentures (Maryland Bridge) are not indicated for the following:
  - In an area with malocclusion, heavy occlusion or parafunctional habits (e.g., nail biting, bruxism, clenching)
  - A Pontic width discrepancy
  - Additionally, resin bonded appliances are not indicated in the following situations:
    - Compromised enamel
    - Deep vertical overlap

Provisional Fixed Partial Dentures

**Provisional fixed partial dentures may be indicated for the following:**
- When a permanent fixed partial denture does not have a favorable long term prognosis
- To replace a lost tooth in young members to allow maturity of the dentition and jaws before constructing a definitive fixed prosthetic appliance
- When a systemic medical condition prohibits the placement of a definitive fixed prosthetic appliance

Fixed Partial Denture Repair (Necessitated by Restorative Material Failure)

**Fixed partial denture repair may be indicated when the appliance to be repaired is functional and has a favorable long term prognosis.**

Precision Attachments

**Precision Attachments may be indicated for the following:**
- When aesthetics need to be considered
- For the redistribution of occlusal forces
- To minimize trauma to soft tissue
- Control of loading and rotational forces
• When it is not possible to prepare two Retainers/Abutments with a common path of placement

Connector Bar
Connector Bars may be indicated to brace individual Retainer/Abutment teeth with considerable coronal length for enhanced stabilization of removable partial dentures, complete dentures and overdentures.

Stress Breaker (a Non-Rigid Connector)
Stress Breakers may be indicated for the following:
• When it is not possible to prepare two Retainers/Abutments with a common path of placement
• When the prognosis of a Retainer/Abutment is uncertain
• Control of loading and rotational forces
• Redistribution of occlusal forces

Coverage Limitations
• Repairs or adjustments performed more than 12 months after the initial insertion; limited to 1 per consecutive 6 months
• Subject to a 12 month Waiting Period

Exclusions
• Replacement of fixed prosthesis previously submitted for payment under the plan is limited to 1 time per consecutive 60 months from initial or supplemental placement
• Limited to 1 time per tooth per consecutive 60 months
• Stress breakers, and Connector Bars are not covered
• Clinical situations that can be effectively treated by a less costly alternative procedure will be assigned a benefit based on the least costly procedure
• Any Dental Procedure performed solely for cosmetic/aesthetic reasons (cosmetic procedures are those procedures that improve physical appearance)
• Replacement of fixed prosthesis, if damage or breakage was directly related to provider error. This type of replacement is the responsibility of the Dentist. If replacement is necessary because of member non-compliance, the member is liable for the cost of replacement.
• Fixed prosthodontic restoration procedures for complete oral rehabilitation or reconstruction
• Attachments to fixed bridgework
• Procedures related to the reconstruction of a member’s correct vertical dimension of occlusion (VDO)
• Placement of fixed partial dentures solely for the purpose of achieving periodontal stability

DEFINITIONS

Abutment: That part of a structure that directly receives thrust or pressure; an anchorage 2: a tooth, a portion of a tooth, or that portion of a dental implant that serves to support and/or retain prosthesis. (AAP)

Cantilever Fixed Dental Prosthesis: A Fixed Dental Prosthesis in which the Pontic is cantilevered, (i.e., is retained and supported only on one end by one or more Abutments). (AAP)

Connector Bar: A device attached to fixed partial denture Retainer or coping which serves to stabilize and anchor a removable overdenture prosthesis. (AAP)

Fixed Dental Prosthesis: Any dental prosthesis that is luted, screwed or mechanically attached or otherwise securely retained to natural teeth, tooth roots, and (or dental implant Abutments) that furnish the primary support for the dental prosthesis. (AAP)

Pontic: An artificial tooth on a Fixed Dental Prosthesis that replaces a missing natural tooth, restores its function, and usually fills the space previously occupied by the clinical crown. (AAP)

Precision Attachment: An interlocking device, one component of which is fixed to an Abutment or Abutments, and the other is integrated into a removable dental prosthesis in order to stabilize and/or retain it. (AAP)

Resin-Bonded Prosthesis (e.g., Maryland Bridge): A Fixed Dental Prosthesis that is luted to tooth structures, primarily enamel, which has been etched to provide mechanical retention for the resin cement. (AAP)

Retainers: Any type of device used for the stabilization or retention of prosthesis. (AAP)

Terminal Dentition: A condition in which there are insufficient teeth to maintain function and the arch, as a whole, will transition to the edentulous state. (AAP)
**Tooth Bounded Space:** A space created by one or more missing teeth that has a tooth on each side. (ADA)

### APPLICABLE CODES

The following list(s) of procedure and/or diagnosis codes is provided for reference purposes only and may not be all inclusive. Listing of a code in this guideline does not imply that the service described by the code is a covered or non-covered health service. Benefit coverage for health services is determined by the member specific benefit plan document and applicable laws that may require coverage for a specific service. The inclusion of a code does not imply any right to reimbursement or guarantee claim payment. Other Clinical Policies and Coverage Guidelines may apply.

**DESCRIPTION OF SERVICES**

Fixed prosthodontics is the area of restorative dentistry that involves the replacement of missing teeth with custom made restorations that are permanently cemented and not removable. The term "fixed partial denture" is synonymous with "fixed bridge" or "bridgework". The restoration used to replace a missing tooth is called a pontic and the restorations placed on teeth on either side of it are called retainer restorations or abutments and are typically an onlay or a crown. A resin bonded bridge consists of a pontic that is bonded to an adjacent teeth/tooth that have not been restored with an indirect restoration.

INSTRUCTIONS FOR USE

This Dental Coverage Guideline provides assistance in interpreting UnitedHealthcare standard dental benefit plans. When deciding coverage, the member specific benefit plan document must be referenced as the terms of the member specific benefit plan may differ from the standard dental plan. In the event of a conflict, the member specific benefit plan document governs. Before using this guideline, please check the member specific benefit plan document and any applicable federal or state mandates. UnitedHealthcare reserves the right to modify its Policies and Guidelines as necessary. This Dental Coverage Guideline is provided for informational purposes. It does not constitute medical advice.
