Policy Summary

[↪ See Purpose](#)

Overview

This policy overview addresses molecular and genetic tests that have proven efficacy according to CMS, in the diagnosis or treatment of medical conditions, including but not limited to the following:

Gene Expression Assays for Breast Cancer Treatment

Examples include but are not limited to:

- Breast Cancer Index (BCI)® Genetic Assay
- EndoPredict®

- MammaPrint®
- Oncotype DX™
- Oncotype DX DCIS
- Prosigna™ Breast Cancer Prognostic Gene Signature Assay

Molecular Assays for Prostate Cancer

Examples include but are not limited to:

- ConfirmMDx
- Prostate Cancer Genomic Classifier Assay
- Oncotype DX™ Prostate Cancer
- PROGENSA® PCA3 Assay
- Prolaris™

Gene Identification

Examples include but are not limited to the following genes:

- | | | |
|------------|--------|---------|
| • APC | • EGFR | • MUTYH |
| • BCR/ABL1 | • JAK2 | • NRAS |
| • BRAF | • KRAS | • SF3B1 |
| • CYP2C19 | • MGMT | • TP53 |
| • CYP2D6 | • MPL | |

Circulating Tumor Cell (CTC) Assay

CTCs represent the point in the metastatic process of solid tumors when cells from a primary tumor invade, detach, disseminate, colonize and proliferate in a distant site. Detection of elevated CTCs during therapy may be an accurate indication of subsequent rapid disease progression and mortality in breast, colorectal and prostate cancer, noting that FDA labeling includes each of these neoplasms. As a result of limited acceptable study data, CTCs are considered not medically necessary, for all indications.

Bladder Tumor Markers

Examples of Bladder Tumor Markers tests include but are not limited to:

- BTA TRAK®
- Nuclear matrix protein 22 (NMP - 22)
- NMP - 22 BladderChek®
- The UroVysion®
- BTA (bladder tumor antigen) stat®
- Cxbladder™
- The ImmunoCyt™.

Transplant Recipients

AlloMap® Molecular Expression Testing is a non - invasive gene expression test used to aid in the identification of heart transplant recipients.

Assays for Rheumatoid Arthritis

Examples include but are not limited to:

- Vectra® DA

Melanoma

Examples include but are not limited to:

- myPath® Melanoma Assay
- Melanoma Risk Stratification Molecular Testing
- Pigmented Lesion Assay

Thyroid

Examples include but are not limited to:

- ThyraMIR[®]
- ThyGeNEXT[®]
- Afirma[™]
- ThyroSeq[®]
- RosettaGX Reveal[™]
- thyroid MicroRNA test

Genetic Testing for Myeloproliferative Disease

Myeloproliferative disorders are a group of conditions that cause abnormal growth of blood cells in the bone marrow. They include polycythemia vera (PV), essential thrombocytosis (ET), primary myelofibrosis (PMF), and chronic myelogenous leukemia (CML). The World Health Organization (WHO) further classifies PV, ET, and PMF as Philadelphia chromosome negative myeloproliferative neoplasms (MPNs). MPNs are characterized by an increase in the number of blood cells.

Genesight[®]

Genesight is a combinatorial pharmacogenomic (PGx) test. A Combinatorial PGx test is a type of multi-gene panel that requires a proprietary algorithm to evaluate pharmacokinetic or pharmacodynamic relationships resulting in drug recommendations or warnings. The algorithms employed in combinatorial testing are also not currently considered reasonable and necessary components of multi-gene testing.

Genesight may be reported as a multi-gene panel, please see Pharmacogenomics Testing references below for information on medical necessity and documentation requirements for multi-gene panels.

Next Generation Sequencing (NGS)

Clinical laboratory diagnostic tests can include tests that, for example, predict the risk associated with one or more genetic variations. In addition, in vitro companion diagnostic laboratory tests provide a report of test results of genetic variations and are essential for the safe and effective use of a corresponding therapeutic product. Next Generation Sequencing (NGS) is one technique that can measure one or more genetic variations as a laboratory diagnostic test, such as when used as a companion in vitro diagnostic test.

- National Coverage Determination (NCD) 90.2 outlines coverage of applicable diagnostic lab tests using NGS for somatic (acquired) and germline (inherited) cancer.
- Local Coverage Determinations (LCDs) may determine coverage of diagnostic lab tests using NGS for RNA sequencing and protein analysis.

Guidelines

Based on the Centers for Medicare & Medicaid Services (CMS) Program Integrity Manual (100-08), this policy addresses the circumstances under which the item or service is reasonable and necessary under the Social Security Act, §1862(a)(1)(A). For laboratory services, a service can be reasonable and necessary if the service is safe and effective; and appropriate, including the duration and frequency that is considered appropriate for the item or service, in terms of whether it is furnished in accordance with accepted standards of medical practice for the diagnosis of the patient's condition; furnished in a setting appropriate to the patient's medical needs and condition; ordered and furnished by qualified personnel; one that meets, but does not exceed, the patient's medical need; and is at least as beneficial as an existing and available medically appropriate alternative.

Compliance with the provisions in this policy is subject to monitoring by post payment data analysis and subsequent medical review. Title XVIII of the Social Security Act, Section 1862(a)(1)(A) states " ...no Medicare payment shall be made for items or services which are not reasonable and necessary for the diagnosis and treatment of illness or injury...". Furthermore, it has been longstanding CMS policy that "tests that are performed in the absence of signs, symptoms, complaints, or personal history of disease or injury are not covered unless explicitly authorized by statute". Screening services, such as pre - symptomatic genetic tests and services, are those used to detect an undiagnosed disease or disease predisposition, and as such are not a Medicare benefit and not covered by Medicare. Similarly, Medicare may not reimburse the costs of tests/examinations that assess the risk for and/or of a condition unless the risk assessment clearly and directly effects the management of the

patient. However, Medicare does cover a broad range of legislatively mandated preventive services to prevent disease, detect disease early when it is most treatable and curable, and manage disease so that complications can be avoided. These services can be found on the CMS website at <http://www.cms.gov/PrevntionGenInfo/>.

Many applications of the molecular pathology procedures are not covered services given lack of benefit category (preventive service) and/or failure to reach the reasonable and necessary threshold for coverage (based on quality of clinical evidence and strength of recommendation). Furthermore, payment of claims in the past (based on stacking codes) or in the future (based on the new code series) is not a statement of coverage since the service was not audited for compliance with program requirements and documentation supporting the reasonable and necessary testing for the beneficiary. Certain tests and procedures may be subject to prepayment medical review (records requested) and paid claims must be supportable, if selected, for post payment audit. Tests for diseases or conditions that manifest severe signs or symptoms in newborns and in early childhood or that result in early death (e.g., Canavan disease) could be subject to automatic denials since these tests are not usually relevant to a Medicare beneficiary.

Documentation Guidelines

Documentation must be adequate to verify that coverage guidelines listed above have been met. Thus, the medical record must contain documentation that the testing is expected to influence treatment of the condition toward which the testing is directed. The laboratory or billing provider must have on file the physician requisition which sets forth the diagnosis or condition that warrants the test(s).

Examples of documentation requirements of the ordering physician/non-physician practitioner (NPP) include, but are not limited to, history and physical or exam findings that support the decision making, problems/diagnoses, relevant data (e.g., lab testing, imaging results).

Documentation requirements of the performing laboratory (when requested) include, but are not limited to, lab accreditation, test requisition, test record/procedures, reports (preliminary and final), and quality control record.

Documentation requirements for lab developed tests/protocols (when requested) include diagnostic test/assay, lab/manufacturer, names of comparable assays/services (if relevant), description of assay, analytical validity evidence, clinical validity evidence, and clinical utility.

Providers are required to code to specificity however, if an unlisted CPT code is used the documentation must clearly identify the unique procedure performed. When multiple procedure codes are submitted on a claim (unique and/or unlisted) the documentation supporting each code should be easily identifiable. If on review UnitedHealthcare cannot link a billed code to the documentation, these services will be denied.

When the documentation does not meet the criteria for the service rendered or the documentation does not establish the medical necessity for the services, such services will be denied as not reasonable and necessary under Section 1862(a)(1)(A) of the Social Security Act.

Applicable Codes

The following list(s) of procedure and/or diagnosis codes is provided for reference purposes only and may not be all inclusive. Listing of a code in this guideline does not imply that the service described by the code is a covered or non-covered health service. Benefit coverage for health services is determined by the member specific benefit plan document and applicable laws that may require coverage for a specific service. The inclusion of a code does not imply any right to reimbursement or guarantee claim payment. Other Policies and Guidelines may apply.

CPT Code/HCPCS Code

[Molecular Pathology/Molecular Diagnostics/Genetic Testing: CPT/HCPCS Code List](#)

CPT® is a registered trademark of the American Medical Association

Diagnosis Code

Refer to [Molecular Pathology/Molecular Diagnostics/Genetic Testing: Diagnosis Code List](#) for diagnosis codes for CPT codes 0005U, 0018U, 0026U, 0045U, 0047U, 0080U, 0089U, 0090U, 0228U, 81170, 81175, 81176, 81261, 81263, 81272, 81310, 81314, 81321, 81323, 81334, 81335, 81340, 81342, 81345, 81347, 81351, 81352, 81519, 81522, 81529, 81542, 81545, 81546, 81552, 81554, 88120, and 88121.

Non-Covered Diagnosis Code

[Non-Covered Diagnosis Codes List](#)

This list contains diagnosis codes that are never covered when given as the primary reason for the test. If a code from this section is given as the reason for the test and you know or have reason to believe the service may not be covered, call UnitedHealthcare to issue an Integrated Denial Notice (IDN) to the member and you. The IDN informs the member of their liability for the non-covered service or item and appeal rights. You must make sure the member has received the IDN prior to rendering or referring for non-covered services or items in order to collect payment.

Purpose

The Medicare Advantage Policy Guideline documents are generally used to support UnitedHealthcare Medicare Advantage claims processing activities and facilitate providers' submission of accurate claims for the specified services. The document can be used as a guide to help determine applicable:

- Medicare coding or billing requirements, and/or
- Medical necessity coverage guidelines; including documentation requirements.

UnitedHealthcare follows Medicare guidelines such as NCDs, LCDs, LCAs, and other Medicare manuals for the purposes of determining coverage. It is expected providers retain or have access to appropriate documentation when requested to support coverage. Please utilize the links in the [References](#) section below to view the Medicare source materials used to develop this resource document. This document is not a replacement for the Medicare source materials that outline Medicare coverage requirements. Where there is a conflict between this document and Medicare source materials, the Medicare source materials will apply.

Terms and Conditions

The Medicare Advantage Policy Guidelines are applicable to UnitedHealthcare Medicare Advantage Plans offered by UnitedHealthcare and its affiliates.

These Policy Guidelines are provided for informational purposes, and do not constitute medical advice. Treating physicians and healthcare providers are solely responsible for determining what care to provide to their patients. Members should always consult their physician before making any decisions about medical care.

Benefit coverage for health services is determined by the member specific benefit plan document* and applicable laws that may require coverage for a specific service. The member specific benefit plan document identifies which services are covered, which are excluded, and which are subject to limitations. In the event of a conflict, the member specific benefit plan document supersedes the Medicare Advantage Policy Guidelines.

Medicare Advantage Policy Guidelines are developed as needed, are regularly reviewed and updated, and are subject to change. They represent a portion of the resources used to support UnitedHealthcare coverage decision making. UnitedHealthcare may modify these Policy Guidelines at any time by publishing a new version of the policy on this website. Medicare source materials used to develop these guidelines include, but are not limited to, CMS National Coverage Determinations NCDs, Local Coverage Determinations LCDs, Medicare Benefit Policy Manual, Medicare Claims Processing Manual, Medicare Program Integrity Manual, Medicare Managed Care Manual, etc. The information presented in the Medicare Advantage Policy Guidelines is believed to be accurate and current as of the date of publication and is provided on an "AS IS" basis. Where there is a conflict between this document and Medicare source materials, the Medicare source materials will apply.

You are responsible for submission of accurate claims. Medicare Advantage Policy Guidelines are intended to ensure that coverage decisions are made accurately based on the code or codes that correctly describe the health care services provided. UnitedHealthcare Medicare Advantage Policy Guidelines use Current Procedural Terminology CPT®, Centers for Medicare and Medicaid Services CMS, or other coding guidelines. References to CPT® or other sources are for definitional purposes only and do not imply any right to reimbursement or guarantee claims payment.

Medicare Advantage Policy Guidelines are the property of UnitedHealthcare. Unauthorized copying, use, and distribution of this information are strictly prohibited.

*For more information on a specific member's benefit coverage, please call the customer service number on the back of the member ID card or refer to the [Administrative Guide](#).
