Item/Service Description

Nesiritide (Natrecor®) is Food and Drug Administration (FDA) approved for the intravenous treatment of patients with acutely decompensated congestive heart failure (CHF) who have dyspnea (shortness of breath) with minimal activity or at rest.

Guidelines

Nationally Non-Covered Indications

The Center for Medicare & Medicaid Services (CMS) has determined that there is insufficient evidence to conclude that the use of Nesiritide for the treatment of congestive heart failure is not reasonable and necessary for Medicare beneficiaries in any setting.

Other

This determination applies only to the treatment of congestive heart failure for patients in an inpatient setting and does not change contractor discretion to cover other off-label uses of Nesiritide or use consistent with the current FDA indication for intravenous treatment of patients with acutely decompensated congestive heart failure who have dyspnea at rest or with minimal activity.

Applicable Codes

The following list(s) of procedure and/or diagnosis codes is provided for reference purposes only and may not be all inclusive. Listing of a code in this guideline does not imply that the service described by the code is a covered or non-covered health service. Benefit coverage for health services is determined by the member specific benefit plan document and applicable laws that may require coverage for a specific service. The inclusion of a code does not imply any right to reimbursement or guarantee claim payment. Other Policies and Guidelines may apply.
