INSTRUCTIONS FOR USE

This Coverage Determination Guideline provides assistance in interpreting UnitedHealthcare benefit plans. When deciding coverage, the federal, state or contractual requirements for benefit plan coverage must be referenced. The terms of the federal, state or contractual requirements for benefit plan coverage may differ greatly from the standard benefit plan upon which this Coverage Determination Guideline is based. In the event of a conflict, the federal, state or contractual requirements for benefit plan coverage supersede this Coverage Determination Guideline. All reviewers must first identify member eligibility, any federal or state regulatory requirements, and the contractual requirements for benefit plan coverage prior to use of this Coverage Determination Guideline. Other Policies and Coverage Determination Guidelines may apply. UnitedHealthcare reserves the right, in its sole discretion, to modify its Policies and Guidelines as necessary. This Coverage Determination Guideline is provided for informational purposes. It does not constitute medical advice.

UnitedHealthcare may also use tools developed by third parties, such as the MCG™ Care Guidelines, to assist us in administering health benefits. The MCG™ Care Guidelines are intended to be used in connection with the independent professional medical judgment of a qualified health care provider and do not constitute the practice of medicine or medical advice.

BENEFIT CONSIDERATIONS

Before using this guideline, please check the federal, state or contractual requirements for benefit coverage.

COVERAGE RATIONALE

Indications for Coverage

Panniculectomy

Panniculectomy is considered reconstructive and medically necessary when ALL of the following criteria have been met:

- Panniculus hangs at or below symphysis pubis;
- The Panniculus is the primary cause of skin conditions when present, such as cellulitis requiring systemic antibiotics or transdermal skin ulcerations that require medical treatment;
- There is presence of a Functional Impairment (interference with activities of daily living) due to the Panniculus;
- The surgery is expected to restore or improve the Functional Impairment.

Note:

- After significant weight loss, unrelated to bariatric surgery, in addition to the criteria listed above, there must be documentation that a stable weight has been maintained for six months.
- After significant weight loss following bariatric surgery, in addition to meeting the criteria listed above, there must be documentation that a stable weight has been maintained for six months. This often occurs 12-18 months after surgery.
Panniculectomy is not considered reconstructive, and is not a covered service, in the following situations (not an all-inclusive list):

- When performed to relieve neck or back pain as there is no evidence that reduction of redundant skin and tissue results in less spinal stress or improved posture/alignment.
- When performed in conjunction with abdominal or gynecologic surgery including but not limited to hernia repair, obesity surgery, C-section and hysterectomy unless the member meets the criteria for Panniculectomy as stated above in this document.
- Performed post-childbirth in order to return to pre-pregnancy shape.
- Performed for intertrigo, a superficial inflammatory response or any other condition that does not meet the criteria above in this document.

Documentation may be requested as part of the review, including but not limited to photographs and physician office notes.

**Abdominoplasty**

Abdominoplasty is not considered reconstructive, and is not a covered service. Repair of Diastasis Recti is considered a Cosmetic Procedure, and is not a covered service.

**Lipectomy**

Lipectomy is not considered reconstructive, and is not a covered service, in the following situation (not an all-inclusive list):

- Performed on any site including buttocks, arms, legs, neck, abdomen and medial thigh.

**Suction-Assisted Lipectomy of the Trunk**

Suction-assisted lipectomy of the trunk (CPT code 15877) is not considered reconstructive (unless part of an approved procedure), and is not a covered service.

For post-mastectomy patients, please refer to the Coverage Determination Guideline titled Breast Reconstruction Post Mastectomy.

**Coverage Limitations and Exclusions**

Some states require benefit coverage for services that UnitedHealthcare considers Cosmetic Procedures, such as repair of external Congenital Anomalies in the absence of a Functional Impairment. Please refer to the member specific benefit plan document.

- Cosmetic Procedures are excluded from coverage. Procedures that correct an anatomical Congenital Anomaly without improving or restoring physiologic function are considered Cosmetic Procedures. The fact that a Covered Person may suffer psychological consequences or socially avoidant behavior as a result of an Injury, Sickness or Congenital Anomaly does not classify surgery (or other procedures done to relieve such consequences or behavior) as a Reconstructive Procedure.
- Any procedure that does not meet the reconstructive criteria above in the Indications for Coverage section.

**DEFINITIONS**

Please check the definitions within the member specific benefit plan document that supersede the definitions below.

**Abdominoplasty**: Typically performed for cosmetic purposes, involves the removal of excess skin and fat from the pubis to the umbilicus or above, and may include fascial plication of the rectus muscle diastasis and a neoumbilicoplasty.

**Belt Lipectomy**: A circumferential procedure which combines the elements of an Abdominoplasty or Panniculectomy with removal of excess skin/fat from the lateral thighs and buttock. The procedure involves removing a “belt” of tissue from around the circumference of the lower trunk which eliminates lower back rolls, and provides some elevation of the outer thighs, buttocks, and mons pubis. Similarly, a Circumferential Lipectomy describes an Abdominoplasty or Panniculectomy combined with flank and back lifts.

**Circumferential Lipectomy**: Combines an Abdominoplasty with a "back lift," both procedures being performed together sequentially and including suction assisted lipectomy, where necessary.

**Congenital Anomaly**: A physical developmental defect that is present at the time of birth, and that is identified within the first twelve months of birth.

**Cosmetic Procedures**: Procedures or services that change or improve appearance without significantly improving physiological function.
**Diastasis Recti**: A thinning of the linea alba in the epigastrium and is manifested as a smooth midline protrusion of the anterior abdominal wall. The transversalis fascia is intact, and hence this is not a hernia. There are no identifiable fascial margins and no risk for intestinal strangulation. The presence of Diastasis Recti may be particularly noticeable to the patient on straining or when lifting the head from the pillow. Appropriate treatment consists of reassurance of the patient and family about the innocuous nature of this condition.

**Functional or Physical or Physiological Impairment**: A Functional or Physical or Physiological Impairment causes deviation from the normal function of a tissue or organ. This results in a significantly limited, impaired, or delayed capacity to move, coordinate actions, or perform physical activities and is exhibited by difficulties in one or more of the following areas: physical and motor tasks; independent movement; performing basic life functions.

**Liposuction Suction-Assisted Lipectomy**: Suction-assisted lipectomy (SAL), traditionally known as liposuction, is a method of removing unwanted fatty deposits from specific areas of the face and body. The surgeon makes a small incision and inserts a cannula attached to a vacuum device that suctions out the fat. Areas suitable for liposuction include the chin, neck, cheeks, upper arms, area above the breasts, the abdomen, flanks, the buttocks, hips, thighs, knees, calves and ankles. Liposuction can improve body contour and provide a sleeker appearance. Surgeons may also use liposuction to remove lipomas (benign fatty tumors) in some cases.

**Lower Body Lift**: A procedure that treats the lower trunk and thighs as a unit by eliminating a circumferential wedge of tissue that is generally, but not always, more inferiorly positioned laterally and posteriorly than a Belt Lipectomy.

**Mini or Modified Abdominoplasty**: Typically performed on patients with a minimal to moderate defect as well as mild to moderate skin laxity and muscle flaccidity and do not usually involve muscle plication, neoumbilicoplasty or flap elevation. A cosmetic Abdominoplasty is sometimes performed at the time of a functional Panniculectomy.

**Panniculus**: A medical term describing a dense layer of fatty tissue growth, usually in the abdominal cavity. It can be a result of morbid obesity and can be mistaken for a tumor or hernia.

**Reconstructive Procedures**: Reconstructive Procedures when the primary purpose of the procedure is either of the following:
- Treatment of a medical condition
- Improvement or restoration of physiologic function

Reconstructive Procedures include surgery or other procedures which are related to an Injury, Sickness or Congenital Anomaly. The primary result of the procedure is not a changed or improved physical appearance.

Procedures that correct an anatomical Congenital Anomaly without improving or restoring physiologic function are considered Cosmetic Procedures. The fact that you may suffer psychological consequences or socially avoidant behavior as a result of an Injury, Sickness or Congenital Anomaly does not classify surgery (or other procedures done to relieve such consequences or behavior) as a reconstructive procedure.

**Sickness**: Physical illness, disease or Pregnancy. The term Sickness includes Mental Illness or substance-related and addictive disorders, regardless of the cause or origin of the Mental Illness or substance-related and addictive disorder.

**Torsoplasty**: A series of operative procedures, usually done together to improve the contour of the torso, usually female (though not exclusively). This series would include Abdominoplasty with liposuction of the hips/flanks and breast augmentation and/or breast lift/reduction. In men, this could include reduction of gynecomastia by suction assisted lipectomy/ultrasound assisted lipectomy or excision.

### APPLICABLE CODES

The following list(s) of procedure and/or diagnosis codes is provided for reference purposes only and may not be all inclusive. Listing of a code in this policy does not imply that the service described by the code is a covered or non-covered health service. Benefit coverage for health services is determined by federal, state or contractual requirements and applicable laws that may require coverage for a specific service. The inclusion of a code does not imply any right to reimbursement or guarantee claim payment. Other Policies and Coverage Determination Guidelines may apply.
