Cosmetic and Reconstructive Procedures

Policy Number: SURGERY 035.39 T2
Effective Date: September 1, 2020

Coverage Rationale

Some states require benefit coverage for services that Oxford considers Cosmetic Procedures, such as repair of external congenital anomalies in the absence of a Functional Impairment. Refer to the member specific benefit plan document.

Indications for Coverage

For plans that include benefits for Cosmetic Procedures, the following are eligible for coverage as reconstructive and medically necessary when all of the following criteria are met:

- There is documentation that the physical abnormality and/or physiological abnormality is causing a Functional Impairment that requires correction; and
- The proposed treatment is of proven efficacy and is deemed likely to significantly improve or restore the patient’s physiological function

Microtia

- Microtia repair is reconstructive; although no Functional Impairment may be documented for Microtia, this has been deemed Reconstructive Surgery.

Coverage Limitations and Exclusions

Oxford excludes Cosmetic Procedures from coverage including but not limited to the following:

- Blepharoplasty, Blepharoptosis, and Brow Ptosis Repair
- Breast Reconstruction Post Mastectomy
- Breast Reduction Surgery
- Breast Repair/Reconstruction Not Following Mastectomy
- Gynecomastia Treatment
- In-Network Exceptions for Breast Reconstruction Surgery Following Mastectomy
- Omnibus Codes
- Orthognathic (Jaw) Surgery
- Outpatient Surgical Procedures – Site of Service
- Panniculectomy and Body Contouring Procedures
- Pectus Deformity Repair
- Plagiocephaly and Craniosynostosis Treatment
- Rhinoplasty and Other Nasal Surgeries
- Surgical and Ablative Procedures for Venous Insufficiency and Varicose Veins
Procedures that correct an anatomical Congenital Anomaly without improving or restoring physiologic function are considered Cosmetic Procedures; the fact that a Covered Person may suffer psychological consequences or socially avoidant behavior as a result of an Injury, Sickness or Congenital Anomaly does not classify surgery (or other procedures done to relieve such consequences or behavior) as a reconstructive procedure.

Procedures that do not meet the reconstructive criteria in the Indications for Coverage section:

- Pharmacological regimens, nutritional procedures or treatments
- Scar or tattoo removal or revision procedures (such as salabrasion, chemosurgery and other such skin abrasion procedures)
- Skin abrasion procedures performed as a treatment for acne
- Liposuction or removal of fat deposits considered undesirable, including fat accumulation under the male breast and nipple
- Treatment for skin wrinkles or any treatment to improve the appearance of the skin
- Treatment for spider veins
- Sclerotherapy treatment of veins (Note: Sclerotherapy in excess of 3 sessions per leg within 12 months from the date of the ablation procedure is considered cosmetic)
- Hair removal or replacement by any means

Documentation Requirements

Benefit coverage for health services is determined by the member specific benefit plan document and applicable laws that may require coverage for a specific service. The documentation requirements outlined below are used to assess whether the member meets the clinical criteria for coverage but do not guarantee coverage of the service requested.

### Muscle Flap Procedures

Medical notes documenting all of the following:

- **History of medical conditions requiring treatment or surgical intervention which includes all of the following:**
  - A well-defined physical/physiologic abnormality resulting in a medical condition that requires treatment
  - Recurrent or persistent functional deficit caused by the abnormality
- **Clinical Studies/tests addressing the physical/physiologic abnormality confirming its presence and degree to which it causes impairment**
- **Color photos, where applicable, of the physical and/or physiological abnormality**
- **Physician plan of care with proposed procedures including expected outcome**

### All Other Cosmetic Procedures

Medical notes documenting all of the following:

- **History of medical conditions requiring treatment or surgical invention which includes all of the following:**
  - To prove medical necessity, a well-defined physical/physiologic abnormality resulting in a medical condition that requires treatment
  - Recurrent or persistent functional impairment caused by the abnormality
- **Clinical studies/tests addressing the physical/physiologic abnormality confirming its presence and degree to which it causes impairment**
- **High-quality color photograph(s); all photos must be labeled with the date taken and the applicable case number obtained at time of notification, or member's name and ID number on the photograph(s)**
  - Note: Submission of color photos are required and can be submitted via the external portal at [www.uhcoprovider.com/paan](http://www.uhcoprovider.com/paan) or via email at CCR@uhc.com; faxes of color photos will not be accepted.
- **Physician plan of care with proposed procedures and whether this request is part of a staged procedure; indicate how the procedure will improve and/or restore function**
Definitions

The following definitions may not apply to all plans. Refer to the member specific benefit plan document for applicable definitions.

**Adjacent Tissue Transfer**: A random pattern local flap which is used to fill in nearby or local defect. To be considered an Adjacent Tissue Transfer an incision must be made by the surgeon which results in a secondary defect. Examples include; transposition flaps, advancement flaps and rotation flaps.

**Congenital Anomaly**: A physical developmental defect that is present at the time of birth, and that is identified within the first twelve months of birth.

**Cosmetic Procedures**: Procedures or services that change or improve appearance without significantly improving physiological function.

**Cosmetic Surgery**: Defined by the American Society of Plastic Surgeons, “is performed to reshape normal structures of the body in order to improve the patient's appearance and self-esteem.”

**Functional or Physical Impairment**: A Physical or Functional or Physiological Impairment causes deviation from the normal function of a tissue or organ. This results in a significantly limited, impaired, or delayed capacity to move, coordinate actions, or perform physical activities and is exhibited by difficulties in one or more of the following areas: physical and motor tasks; independent movement; performing basic life functions.

**Injury**: Damage to the body, including all related conditions and symptoms.

**Microtia**: The most complex congenital ear deformity when the outer ear appears as either a sausage-shaped structure resembling little more than the earlobe. It may or may not be missing the external auditory or hearing canal. Hearing is impaired to varying degrees.

**Reconstructive Procedures**: When the primary purpose of the procedure is either of the following:
- Treatment of a medical condition.
- Improvement or restoration of physiologic function.

Reconstructive Procedures include surgery or other procedures which are related to an Injury, Sickness or Congenital Anomaly. The primary result of the procedure is not a changed or improved physical appearance.

Procedures that correct an anatomical Congenital Anomaly without improving or restoring physiologic function are considered Cosmetic Procedures. The fact that you may suffer psychological consequences or socially avoidant behavior as a result of an Injury, Sickness or Congenital Anomaly does not classify surgery (or other procedures done to relieve such consequences or behavior) as a reconstructive procedure.

**Reconstructive Surgery**: Defined by the American Society of Plastic Surgeons, “is performed on abnormal structures of the body caused by congenital defects, developmental abnormalities, trauma, infection, tumors, or disease. It is generally performed to improve function, but may also be done to approximate a normal appearance.”

**Sickness**: Physical illness, disease or Pregnancy. The term Sickness includes Mental Illness or substance-related and addictive disorders, regardless of the cause or origin of the Mental Illness or substance-related and addictive disorder.

Prior Authorization Requirements

Prior authorization is required in all sites of service.

Exception: Prior authorization is not required in the office for CPT codes 14000, 14001, 14020, 14021, 14040, 14041, 14060, 14061, 14301, and 14302.
Notes:

- Participating providers in the office setting: Prior authorization is required for services performed in the office of a participating provider.
- Non-participating/out-of-network providers in the office setting: Prior authorization is not required but is encouraged for out-of-network services. If prior authorization is not obtained, Oxford will review for out-of-network benefits and medical necessity after the service is rendered.

Applicable Codes

The following list(s) of procedure and/or diagnosis codes is provided for reference purposes only and may not be all inclusive. Listing of a code in this policy does not imply that the service described by the code is a covered or non-covered health service. Benefit coverage for health services is determined by the member specific benefit plan document and applicable laws that may require coverage for a specific service. The inclusion of a code does not imply any right to reimbursement or guarantee claim payment. Other Policies may apply.

Coding Clarification

**Flaps (Skin and/or Deep Tissues) Procedures: 15570-15738**

- Codes 15733–15738 are described by donor site of the muscle, myocutaneous, or fasciocutaneous flap.
- A repair of a donor site requiring a skin graft or local flaps is considered an additional separate procedure.
  - For microvascular flaps, see 15756–15758.
  - For flaps without inclusion of a vascular pedicle, see 15750–15756.
  - For Adjacent Tissue Transfer flaps, see instruction for CPT codes 14000–14302 below.
- The regions listed refer to the recipient area (not the donor site) when a flap is being attached in a transfer or to a final site.
- Codes 15570–15738 do not include extensive immobilization (e.g., large plaster casts and other immobilizing devices are considered additional separate procedures).

**Other Flaps and Grafts Procedures: 15740-15777**

- Neurovascular pedicle procedures are reported with 15750. This code includes not only skin but also a functional motor or sensory nerve(s). The flap serves to reinnervate a damaged portion of the body dependent on touch or movement (e.g., thumb). Repair of donor site requiring skin graft or local flaps should be reported as an additional procedure.
- Code 15740 describes a cutaneous flap, transposed into a nearby but not immediately adjacent defect, with a pedicle that incorporates an anatomically named axial vessel into its design. The flap is typically transferred through a tunnel underneath the skin and sutured into its new position. The donor site is closed directly.
- For random island flaps, V-Y subcutaneous flaps, advancement flaps, and other flaps from adjacent areas without clearly defined anatomically named axial vessels, see instruction for CPT codes 14000–14302 below.

**CPT Coding Tips**

- For codes 15570, 15734, 15736, 15738 and 15740, please refer to the following CPT assistant monthly newsletter for additional coding guidelines for flap procedures:
