Effective Date	5/1/2025

1. Background:

UnitedHealthcare benefit documents define Therapeutically Equivalent as when medications/products have essentially the same efficacy and adverse effect profile. This determination is made by the UnitedHealthcare Pharmacy and Therapeutics (P&T) Committee and is not intended to imply therapeutic equivalence as defined by the FDA Orange Book.

Benefit plan designs incorporate a clinical review for certain prescription medications if they are Therapeutically Equivalent, defined as similar outcomes and adverse events, to a covered medication or an over-the-counter medication. Members or providers may request a clinical review for these medications. This may include members with individual and small group, and members in some large groups due to state mandates or regulatory requirements. Coverage criteria will require history of failure, contraindication or intolerance to covered products or an over-the-counter medication. For additional information on coverage please see the Physician PDL posted to UHCProvider.com.

2. Coverage Criteria^{a, d}:

A. The following excluded medications may be approved based on the following criteria:
