DON'T LET EDI PRODUCTIVITY AND SAVINGS GET AWAY!

Electronic data interchange (EDI) can help care providers increase efficiency and save money. The advantage to using EDI is submitting single or batch transactions for multiple members and multiple payers, eliminating the need for manual data entry, phone calls and numerous logins for payer websites.

Here are some of the ways you can make EDI work better for you:

- 1 Use the enhancements applied to 270/271 eligibility and benefits transactions to get more benefit information about UnitedHealthcare members.
- 2 Get tips on how to reduce errors with your 270/271 transactions.
- 3 Activate 276/277 claim status transactions in your practice management or hospital information system and search claims by patient account number or claim number.
- 4 Verify that transaction enhancements and capabilities are visible in your system. If not, contact your vendor or clearinghouse.
